Public Library

The Nation

VOL. LXXIX—NO. 2036. THURSDAY, JULY 7, 1904. PRICE TEN CENTS.

Appletons' Spring and Summer Fiction

Nancy Stair

By ELINOR MACARTNEY LANE

"'Nancy Stair' is certainly one of the best novels of the season. It is original in theme and treatment, dramatic in plot, delightful in style, and satisfactory in denouement. It grasps one's interest from the start and holds it with increasing intensity to the last page."—*Chicago Record-Herald.*

Frontispiece from a miniature by Sara N. Bartle.
12mo, Cloth, $1.50

Dorothea

By MAARTEN MAARTENS

"The book is not one to be read hastily or superficially. There are a great number of characters, and they are all living, breathing, thinking men and women, stimulating in their contrast to the sawdust puppets of so much of our contemporary fiction. Mr. Maartens writes from the viewpoint at once of humorist, philosopher and man of the world."—*New York Sun.*

12mo, Cloth, $1.50

The Vineyard

By JOHN OLIVER HOBBES

"She has lost nothing of her power to appeal to us on grounds of feeling for the weakness, the poor humanity, always to be encountered in everyday life."—*New York Tribune.*

Illustrated, 12mo, Cloth, $1.50

Sylvia's Husband

By Mrs. BURTON HARRISON

"A pleasing mixture of pathos and comedy—materials which the author handles with the skill of an adept."—*Washington Post.*

12mo, Cloth, $1.25.

The Imperialist

By Mrs. EVERARD COTES

"The author has with great care and faithfulness drawn a picture of middle-class provincial life in Canada, and one that is worth having."

Illustrated, 12mo, Cloth, $1.50

The Close of the Day

By FRANK H. SPEARMAN

"Not since John D. Barry wrote his clever study of stage life, 'A Daughter of Thespis,' has any novel shown such real appreciation of the persons whose work is behind the footlights."—*St. Louis Democrat.*

12mo, Cloth, $1.25

In Which a Woman Tells the Truth About Herself

By an Anonymous Author

"The book as a whole is, and ought to be, recognized as one of the notable works of fiction of the year."—*Philadelphia Ledger.*

12mo, Cloth, $1.50

Nature's Comedian

By W. E. NORRIS

"A type, a perfect representative, of the men who go through life as though the world were literally a stage, and pursue their selfish aims in such good faith that it does not occur to them to imagine that there is anything about them to be found out."—*New York Tribune.*

12mo, Cloth, $1.50

The Mother of Pauline

By L. PARRY TRUSCOTT

An unusual and interesting story, so original in conception and so dignified in its treatment as to commend itself unreservedly to every thoughtful reader of fiction.

12mo, Cloth, $1.50

My Li'l' Angelo

By ANNA YEAMAN CONDIC

"A story to touch the heart of hardened novel-reader. Like ody, it seems to flow from of smiles and tears."—*N*

Marriage and Divorce

THE growing interest in marriage and divorce legislation throughout the country and the determined efforts put forth in the various denominations to make the marriage relation permanent, when once it is entered into, have provoked a great deal of discussion of the family and its place in our modern social organization. The importance of the home as an institution cannot be appreciated without understanding its historical development and its dependence upon sound matrimonial practice. Professor George E. Howard, in a three-volume work entitled

A History of Matrimonial Institutions

has given us a complete survey of the subject from earliest times down to the most recent legislation. The work is divided into three parts and each contains an exhaustive treatment of its appropriate topic. The general chapter headings follow:

PART I. THEORIES OF PRIMITIVE MATRIMONIAL INSTITUTIONS

The Patriarchal Theory
Theory of the Horde and Mother-Right
Theory of the Original Pairing or Monogamous Family
Rise of the Marriage Contract
Early History of Divorce

PART II. MATRIMONIAL INSTITUTIONS IN ENGLAND

Old English Wife-Purchase Yields to Free Marriage
Rise of Ecclesiastical Marriage
Rise of Ecclesiastical Marriage (Continued)
The Protestant Conception of Marriage
Rise of Civil Marriage
History of Separation and Divorce

PART III. MATRIMONIAL INSTITUTIONS IN THE UNITED STATES

Obligatory Civil Marriage in the New England Colonies
Ecclesiastical Rites and the Rise of Civil Marriage in the Southern Colonies
Optional Civil or Ecclesiastical Marriage in the Middle Colonies
Divorce in the American Colonies
A Century and a Quarter of Marriage Legislation in the United States, 1776-1903
A Century and a Quarter of Divorce Legislation in the United States
Problems of Marriage and the Family

The Nation

Was established in 1865 as a weekly review of literature, science, art, and politics, and its editorial management has been unchanged from the first. It is conducted in a spirit of complete independence The list of contributors includes most of the leading names in literature, science, art, philosophy and law at home, and many of corresponding eminence abroad. THE NATION presents a complete and accurate record of the world's current history, with impartial comment on questions which would occupy the attention of intelligent men. To the scholar, the student, the thinker and to all professional men it is confidently recommended as an aid to sound thinking.

Subscription, $3.00 a year, post-paid. Shorter term at a proportionate rate.

Publication Office, 206-210 Broadway, New York.

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Annual Register

A Review of Public Events at Home and Abroad for the Year 1903. 8vo. $6.00.

The first part of this volume is devoted to a *résumé* of the Political History of England during the year 1903. The events of Parliamentary Life are noted, and the principal Speeches summarized. Foreign and Colonial History are also dealt with.

In the second part a Chronological Summary is given of the principal events of the year, both foreign and domestic; this is followed by a Restrospect of Literature, Science, and Art, and an Obituary of Eminent Persons.

A full Index is an important feature of the book.

***Volumes of the ANNUAL REGISTER for the years 1863-1902 can still be had.

The United States and Porto Rico

With Special Reference to the Problems arising out of our Contact with the Spanish-American Civilization. By LEO S. ROWE, Ph.D., Professor of Political Science in the University of Pennsylvania, President of the American Academy of Political and Social Science, Member of the Commission to Revise and Compile the Laws of Porto Rico (1900-1901), Chairman of the Porto Rican Commission (1901-1902). Crown 8vo, pp. 280. $1.30 *net*. By mail, $1.40.

The concrete problems of government presented by the acquisition of Porto Rico are made the basis for a discussion of the general principles involved in the position of the United States on the American continent. Professor ROWE as Chairman of the Porto Rican Commission was closely identified with the formative period in the government of our new possessions. In devising a political system for Porto Rico it was necessary to deal with questions that are certain to present themselves on a larger scale in the near future. The work therefore presents an immediate interest to all those interested in the public policy of the United States.

Lectures on European History, 1519-1648

By WILLIAM STUBBS, D.D., formerly Bishop of Oxford and Regius Professor of Modern History in the University. Edited by ARTHUR HASSALL, M.A. 8vo. $4.00 *net*. By mail, $4.20.

I. CHARLES V. (11 Lectures).—II. THE POLITICAL HISTORY OF EUROPE FROM THE RESIGNATION OF CHARLES V. (11 Lectures).—III. THE POLITICAL HISTORY OF EUROPE DURING THE THIRTY YEARS' WAR. (10 Lectures).—Also Two Supplementary Lectures: SURVEY OF THE REIGNS OF LOUIS XIII. AND PHILIP IV.; THE PEACE OF WESTPHALIA.

Sons o' Cormac,

an' Tales of Other Men's Sons.

By ALDIS DUNBAR. Crown 8vo. $1.50.

"Mr. DUNBAR has presented the legends properly in *The Sons o' Cormac*. . . . The truth is that, by a fortunate inspiration, he has hit on the right method of narrative. . . . I rank these with *Tales from the Norse*, and Kingsley's *Heroes*, which do for the Greek what Mr. DUNBAR does for the old Celtic. . . . ."—ANDREW LANG.

"Jolly stories are these of the remote time when 'the little people' still lurked in the emerald grass of old Erin. . . . Readers young and old will find pleasure in these bright sparkling bits of fanciful humor."
—*Chicago Evening Post.*

With the Inniskilling Dragoons:

The Record of a Cavalry Regiment during the Boer War, 1899--1902.

By Lieut.-Colonel J. WATKINS YARDLEY, B.A., Trinity College, Cambridge, late Inniskilling Dragoons. With Map and 96 Illustrations. 8vo. $6.00.

Gunpowder and Ammunition:

Their Origin and Progress

By Lieut.-Colonel HENRY W. L. HIME, late Royal Artillery. 8vo. $3.50.

In this work the author attempts first to answer the question "Who discovered gunpowder?" The claims of the Greeks, Arabs, Hindus, Chinese, and English are examined and discussed. The second part traces the origin and progress of the various kinds of ammunition. Tables are also given to illustrate the gradual evolution of various mixtures, such as Greek Fire, Rockets, etc.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

AN EDUCATIONAL DIRECTORY.

I.—*The Nation* stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in *The Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, JULY 7, 1904.

The Week.

Probably no ex-President ever had quite the sort of compliment implied in the rising demand, in so many parts of the country, that Mr. Cleveland be made again the Democratic nominee for the Presidency. Vilified by the majority of his party during his last term; out of office for eight years; the object still of the most intense personal hostility on the part of hundreds of thousands of Democrats—the tradition of his rugged character and great services persists in such power that the eyes and hopes of many of his former followers are turning to him. Under the shadow of his mighty name even discredited and unscrupulous bosses like Murphy, and Smith of New Jersey, and John R. McLean of Ohio, are, for their own purposes, seeking to take refuge. This, of course, tends to discredit the seriousness of the movement. Those dishonest politicians cannot really want that honest man. The call for Mr. Cleveland is, besides, in the face of his own announcement that his decision not to accept another nomination is "unalterable." It goes dead against the apparently settled conditions of practical politics. None the less is it a remarkable tribute to a great public figure. President Roosevelt has said that the reëlection of Mr. Cleveland in 1892 was, under the circumstances, the most extraordinary personal triumph known to our political annals. He might rank the present beseeching of the old leader to emerge from his retirement as still more extraordinary.

Congressman Lucking of Detroit, a Democrat, makes one or two interesting points regarding the Republican platform. He says that it is silent on the President's "biggest and longest fight," Cuban reciprocity, and that this fact alone "proves the absolute control of the stand-patters." If the platform makes any allusion at all to Cuban reciprocity, it is certainly veiled. It states that we freed the island, and then gave it to its inhabitants with order restored, and "connected with the United States by wise provisions for our mutual interests"; which can be construed any way you please. The Convention had much to say about the confidence of the people in that quality in Roosevelt which enabled him "to render personally inestimable service" to the country, and it mourned that "great statesman and patriotic American, William McKinley." But never a specific word about Cuban reciprocity, to which both were sincerely committed. Mr. Lucking also points out that, with business depression and a Treasury deficit staring the country in the face, the Republican platform had nothing to say about economy in Government expenditures. But how could it? Did Mr. Lucking think the party was going to admit publicly that times were hard, and that it had been squandering the people's money?

The special invitation extended by Mr. Roosevelt to "Lou" Payn, the very type and flower of the baser Republicanism, and the "satisfactory" conference had by the two, cannot be overlooked by students of that interesting subject, Mr. Roosevelt's psychology. Coming upon the heels of his recognition of Addicks, his laudation of Quay, his choice of that dearest foe of his, ex-Gov. Black, as his chief eulogist at Chicago, the Payn incident is highly illuminative. Does he forget the past? Is his former undying opposition to Black and Payn, so tearfully celebrated by Mr. Riis, already forgotten? Do his efforts to undo their evil work and rid the party of them count for nothing? They only make his present attitude more sublime. The lower he has to stoop to compromise, the loftier does he feel his political virtue to be. For is he not doing a thing personally most disagreeable, a thing from which his nature instinctively shrinks, in order to compass the "larger good"? It is, indeed, Mr. Roosevelt's doctrine of the larger good, combined with his passionate devotion to compromise as the chief of political virtues, that makes him capable of doing with a fine moral enthusiasm things which would stagger a hardened politician.

Secretary Shaw has substantially got his predicted surplus of $14,000,000 for the fiscal year—that is, after excepting the Panama and St. Louis Fair payments from the account. The exact sum is $13,247,674, resulting from receipts of $541,186,745 and expenditures of $527,939,071. The Treasury has accomplished this feat by a spurt on the home-stretch. The surplus accumulated in June was, on the night of June 27, only about $7,500,000, and on June 29 it was about $8,400,000. On the last day of the fiscal year, however, there was a jump of about $2,500,000, the total excess for the month being $10,919,513. This was accomplished by withholding payments on that day in a wholesale fashion. The total receipts for June 30 were $2,990,872, but only $647,000 was paid out, leaving Secretary Shaw $2,343,872 to help make good his estimate of last December. This is not a new policy for the Treasury Department. The receipts are apt to exceed expenditures heavily on the last day of the year. In 1903 there was a balance for the day of about $1,900,000, and in 1902 one of about $2,900,000.

No exhibit at St. Louis can be half so startling or instructive as the display of public corruption which that city offers to the world. It was again unfolded last week in the confession of one of the guilty officials, made in the fear of Folk. By it we are let inside the whole system. We see shameless corporations willing to buy legislation, and calloused public servants ready to sell it. The member of the House of Delegates, C. A. Gutke, who now turns State's evidence, declares that no ordinances affecting public franchises in any way could be passed without bribery, large or small. His specification of names, dates, and sums appears complete. What is most alarming, however, is his statement that the unblushing gang of thieves still hope, in spite of all that Mr. Folk has done to break them up and jail them, to escape unwhipped and entrench themselves in power again politically. They plan to circumvent the courts and "fix" juries. As Mr. Folk's successor, they propose to elect a man who will not be so "unreasonable" in running down rich criminals. All told, therefore, the municipal situation in St. Louis is still full of peril. The boodlers are only biding their time. They hope to defeat justice by means of politics. And no doubt every thief of them, together with the directors of the wicked corporations that bought illegal privileges, will rally with tremendous patriotism under the banners of their respective parties, and go into raptures of enthusiasm over the republic which they are doing their best to destroy.

To the latest lynching of a negro in Mississippi, for assaulting a white girl, columns of space were given in the newspapers, with the customary lamentations over the fearful degeneracy of the colored race. But at almost the same time in New Jersey five men were arrested for having lured a young woman to a secluded spot and there cruelly maltreating her; and of this item of news barest mention was made in the press. There seemed to be a general desire to hurry over it and forget it as one of those manifestations of brutal passion which remind human beings of their bestial origin. But why was this, except for the reason that these particular beasts were white men? If they had been black, it is safe to say that their crime would have been ventilated in the most sensational way, lynching would have been

threatened, and all kinds of morals drawn to the discredit of negroes. Let us be fair in such matters. Let us not condemn either the white or the black race for the deeds of its exceptionally fiendish members; and let us bear in mind the part which newspaper partiality and lack of due proportion in the treatment of such crimes has in doing practical injustice to the colored race.

An interesting situation has been created by a court decision in Milwaukee enjoining a certain tailoring company from discharging the members of a labor union. It was shown that the company was under contract to employ only union men for a specified time. The proceedings certainly show the hollowness of the position of organized labor as regards "government by injunction." It seems that the injunction is a perfectly proper means when it can be used to the advantage of the labor unions. But the recent decision has other curious features. The head of the tailoring establishment explains that there are two unions among the tailors in Milwaukee, and that his contract was with only one, which agreed to furnish him all the labor he needed. As it was unable to do so, he hired some men of the other organization. Thereupon the first union brought suit, charging that the defendants had entered into an agreement with other custom tailors of the city to break up the organization. If the facts are correctly stated, labor is apparently at war as much against itself as against capital. The Milwaukee decision, however, is in sharp contrast to one handed down on June 28 by a Massachusetts court in a similar case. The owner of a Boston tailor-shop contracted to employ only union labor, and agreed to regulate wages, hours of work, and apparently everything else, in accordance with the demands of the local union. In this case the court went beyond the mere question of whether the parties had lived up to the agreement, and held that the contract itself was "null and void because of such terms, and illegal and contrary to good conscience and public policy."

Capital and labor may differ in many ways, but they are fundamentally very much alike in the kind of rascals they produce. The Housesmiths and Bridgemen's local unions have in particular been prolific of officials who knew a "dead sure thing" when they saw it. Local 2 distinguished itself by producing Sam Parks, who was a sort of Napoleon in his line, and who made short work of such representatives of organized capital as caused any fuss in handing over the spoils. Local 52 has now the stage. Unlike Sam Parks, its treasurer has not preyed chiefly upon the Egyptians, but has gone through the strong-box of the chosen people themselves. He has just been arrested for devoting to his own use $1,854 of the union's funds, and, according to the police, he says he lost the money playing a "dead sure system of beating the races." Such instances are getting to be so common that people will soon begin to ask seriously, "How much better are the labor leaders than many of our Wall Street promoters and underwriters, or of our bank officials who use public funds for private speculation?" Seriously, if large investors and bank depositors are fair prey for tricksters, labor unions are very much more so. Their members are more easily gulled; and the worst of it is that slippery fellows whose only object is to rob the unions, and who care not a farthing for the real interests of labor, are often the ones to determine their policies.

Mr. Frank Cochran has pointed out the real defect in the "scabs." They are without the fear of God, and it was to remedy this that fourteen of them were blown into eternity at Independence, Col., on June 6. Cochran, who is secretary of the Victor Miners' Union No. 32, states under oath that the outrage was planned by representatives of organized labor. He says that a Mr. Haywood, who is described as secretary of the Western Federation of Miners, came to him and declared that "we have got to put the fear of God into these fellows," and then sent him to talk the matter over with two other men by the name of Parker and Easterly. The explosion was directly caused by one Victor Poole. These names are significant. Cochran, Haywood, Parker, Easterly, and Poole have neither a Slavonic, an Hungarian, nor an Italian sound. They are the kind of names we have always been in the habit of associating with sober Americanism. And yet the dastardly act that has just brought them into prominence differs only in degree, and not at all in kind, from the intimidation practised by the labor unions in the East. The accepted theory on the part of organized labor is that the "scab" should "get off the earth." A favorite means of getting him off is to starve him. When this has failed, his house has been burned, and his wife and children maltreated. But in Colorado they do things with frontier roughness. Dynamite is the best sermonizer out there.

By its sweeping verdict fixing criminal responsibility for the slaughter of the innocents on board the *Slocum*, the coroner's jury has lived up to a sense of public duty. The evidence before it fully warranted its finding. Never was there so gigantic a calamity so plainly due to gigantic carelessness. Somebody ought to be punished for it if justice is not to be mocked. Of course, the coroner's inquiry is only preliminary. It remains now for the District Attorney and for the United States prosecuting officers to press on the trials of those responsible. The most striking part of the arraignment by the coroner's jury is the severe condemnation of the United States inspector for "criminal negligence." Indeed, the whole system of inspection under Federal authority is denounced as inefficient, and the Secretary of Commerce is called upon to see to it that his force of local inspectors is overhauled and made to do their work "efficiently and *honestly*." In that last word we are put on the track of the one great political moral of the whole affair. Behind "graft" stalks murder. Corruption in the public service means a literal striking at the very life of the people. This is the burden which the Administration at Washington has to bear. It must explain to a mourning city how it came to allow the guardians of public safety to become so lax or rotten that they permitted 1,000 women and children to be needlessly burned to death or drowned.

The first batch of Chinese coolies for the Transvaal mines was expected to reach South Africa June 18. But on that very day *South Africa*, a London weekly, containing the following: "The substantial increase shown in the gold output of the Transvaal during May, despite decreased labor, is eloquent testimony of the marvellous possibilities of the future." Even more eloquent are the increased dividends which the mines are paying. During the week prior to June 18 one company declared 112½ per cent., following a distribution of "similar noble dimensions" in December. Another announced a payment of 100 per cent., as against one of 80 per cent. These are only two of a long list of companies showing gains. The fact is, the Transvaal mines have, by a natural process, been recovering as fast as could be expected from a long and disastrous war. But the South African miners propose to do nothing by halves. Great as have been their profits in the past, they can be heavily increased by a reduction in the cost of labor. The importation of Chinese coolies will bring the Kaffir to his senses. When he realizes what is taking place, he will, in the language of South Africa, "quickly show the healthful effects of competition." In short, the stockholders in mines that have been paying 100 per cent. or more every six months can flatter themselves that they will not long have to be content with such a meagre return.

Mr. Chamberlain must now think that the Canadians are like the deaf adder, which harkens not to the voice of the charmer, charm he never so wisely. His passionate appeal last year to the colonies to abandon their "secondary" industries is regarded as mere chatter

north of the St. Lawrence. There is, says a Canadian correspondent of the London *Economist*, a general disposition to launch into those higher manufactures which Mr. Chamberlain, "in his innocence, thought we ought to reserve for Englishmen." One hears of projected yarn, cutlery, and carpet factories, of shipbuilding plants on the Great Lakes, and of other industries capable of reducing British Exports. Most of these schemes are likely to come to nothing, but there is no mistaking the growing determination to make the preference with the mother country of no practical benefit. A Canadian trade paper says: "The question of fealty to the mother country does not, and should not, enter into the consideration of our fiscal relations. But even if it did, there is no good reason why the mills of the Dominion should be sacrificed in favor of British manufacturers." The fact is, the Canadians feel that Chamberlain is playing a sly game, "and we are only bettering the lesson taught us of late from Birmingham."

By the withdrawal of the free-trade members of the Liberal Unionist Association, that moribund body falls completely under Mr. Chamberlain's control. A very valuable political asset it cannot be considered, but it has the possibilities of all dormant franchises. An organization is always worth something, and should Home Rule again come to the fore, Mr. Chamberlain's capture of the Liberal Unionists might conceivably justify his pains. It should be recalled, however, that among those he loses is the Duke of Devonshire, and in general he retains only the obscurer members. In fact, imperial reciprocity seems so dead—the Canadian tariff scheme smites it in the house of its friends—that there ought to have been some way of avoiding the split; for it is entirely possible that Mr. Chamberlain may never rally his Liberal Unionists for the tariff fight, but rather for the next political alarum that seems worth his while. The estimable gentlemen who make up the Liberal Unionists, not content with throwing overboard their best shipmates, are embarking, in the words of a South Sea Bubble prospectus, upon "a project the nature of which will be later divulged."

It is not unusual to closure all bills at the end of a crowded Parliamentary session, but Mr. Balfour's application of that rule looks uncommonly like a signal of distress. The party whips have been overtaxed to maintain a majority. The new rule will allow matters to be brought to a vote before the dinner hour draws the Unionist members away from Westminster. Of Mr. Balfour's manipulating his majority to please himself no one can complain; it is better after all to pass the minor bills wholesale while there is a majority, than to turn on the Unionist timekillers until the reluctant members can be haled to the turnstiles. Should the Licensing Bill be passed under closure, however, the Liberals and the country would have a just grievance. To indemnify publicans for non-renewal of licenses is a fairly revolutionary measure, involving the creation of a new kind of property right, and carrying with it enormous possibility of expense. Such a measure should be thoroughly debated. Evidently, Mr. Balfour does not mean to be caught, as on previous occasions, with a number of important bills unpassed. But his popularity to-day will hardly bear that mode of railroading the Licensing Bill, even on the theory that previous to liquidation he is setting his political house in order.

German stupidity never seemed more laughable than in all the outcry now making in Germany about our tariff laws. What is particularly objected to is our Customs Administrative Law—really the greatest monument of human or, at any rate, protective intelligence. Tariffs can be circumvented, but by clever administration we circumvent the circumventors. That is where the joke comes in. The Germans complain that we will not take the oath of their exporters, or admit invoices sworn to before our own consuls. Certainly not. Protection is the great provocative of perjury, and has to be on its guard against it; besides, we know how easily our consuls may be fooled or bribed. Then the Germans go on to protest that we have so arranged the law that there is no appeal to the courts, and that even a manifest injustice cannot be redressed. This is positively delicious. When did the Germans discover that protective tariffs had anything to do with justice? But the Germans cease to be funny and begin to talk in a highly offensive fashion when they make threats about keeping American exports out of their own market. They even have the effrontery to complain of our "dumping" iron and steel manufactures upon them, at prices far below those exacted in this country. But this is both foolish and unfriendly. Haven't the pig-headed Teutons read Secretary Shaw's explanation of American dumping? He made it clear to the humblest intellect—even to the German mind, we should hope—that our practice of selling cheaper abroad than at home is purely an evolution of modern business, and perfectly justified. It keeps our mills busy when otherwise they would have to shut down; and what we ask is if a nation like Germany, professing to be friendly, proposes to do all it can to bankrupt our manufacturers? Besides, it ought to be glad to get our goods cheap. Nor should it dare to go behind our invoices and ask what our prevailing market rates are. All those privileges of protection were never intended for a country so young in the faith as Germany. They are reserved for that aged saint, Uncle Sam.

There is no abating the zeal for polar exploration. It was announced on Friday that the German South Polar ship *Gauss* is shortly to start for the North Pole with a Canadian expedition under Government auspices, coming close upon a new French plan for attaining the farthest north. Unlike some other expeditions which have started for the Arctic in recent years, the French undertaking has received at the outset a very striking scientific endorsement, more than fifty of the best-known men of science in France having signed a memorandum declaring that it would be of great scientific utility. As explained by M. Charles Bénard, the expedition should follow a route a little to the north of that taken by the *Fram*, starting from a Norwegian port and crossing the southern portion of Barents Sea. Passing the summer along the Peninsula of Taimyr, it should arrive at the islands of New Siberia by the end of autumn. Instead of going north from there, as the *Fram* did, the ships—for there are to be two, specially built and equipped with wireless telegraphy—are then to make every effort to reach a point on the one hundred and fiftieth degree of east longitude, whence they need only drift with the ice. Three years is to be the duration of the expedition, which is to be provisioned for five. As the cost is estimated at only $300,000, it ought not to be very difficult to find a wealthy patron, particularly in view of the weighty scientific approval the proposal has received.

The rains have brought the northern military operations to a standstill. The Japanese hold all the important passes, but are apparently suffering from interrupted transport service and from insufficient shelter. In these respects the Russians, who are concentrated in the larger towns along the railway, have a considerable advantage. Seemingly, the campaign has ended in a stalemate. The rains came a week too soon for an effective juncture of Kuroki and Oku near Kaiping. North of the Hai-Cheng road it is doubtful if the Japanese have been strong enough to deliver a formidable attack. Kuropatkin, too, must be far weaker than has been supposed. He would hardly have given up Mo-tien Pass, on the high-road from the Yalu to Liaoyang, unless the call for troops to the south had been imperative. Delay plays so obviously into the hands of the Russians that we may yet see a desperate attempt to secure a base at Yinkow. Such a movement, though it would be undertaken at great risk, would settle the transport problem for the Japanese.

SENTIMENT VS. LAW.

Mr. Olney, speaking before the Harvard Law School Association last week raised the important question whether the United States is not unconsciously substituting a sentimental principle of authority for the rigid code of law. It was a pertinent issue to present to a body of lawyers, for if law is gradually to yield to the humanitarian instincts of our rulers, the legal profession must lose authority. The challenge was timely, for, just before, ex-Secretary Root, speaking at Yale Law School, had sounded the same warning against official usurpation of the rights of the nation. The occasion was dramatic, for Secretary Taft had been telling the Harvard Law graduates that Mr. Roosevelt's gentlemanliness was the ultimate warrant of his administrative acts, and Mr. Taft himself, as Mr. Olney did not fail to point out, stood before the audience as the personification of a benevolent despotism wholly foreign to the spirit of our laws.

Against the willingness to substitute sentiment for law Mr. Olney forcibly protested:

> "A new school of thought has arisen," he said, "and the American lawyer of to-day finds himself grappling with ideas for which he will search in vain any writings or utterances of the great American jurists of two generations ago. . . . The orator of the day [Mr. Taft], for example, with a laudable frankness which ignored any claim of benefit to the people of the United States from its present Oriental experiment, defended it a few days since on humanitarian grounds. According to him, we are rich enough and can afford it, and therefore it is our duty to sacrifice American lives and American treasure indefinitely and without stint for the education and elevation of Filipinos according to American standards.
>
> "But out of any such proposition at once issues another legal puzzle for the modern American lawyer—to find in the National Constitution the principle of altruism; to find in a frame of government declared on its face, by the people adopting it, to be designed to 'secure the blessings of liberty to ourselves and our posterity' any authority for purely philanthropic enterprises."

Now, Secretary Taft and all of Mr. Roosevelt's followers wave aside such an argument impatiently. They perceive an imperative duty, they set about its accomplishment like men; let the law take its lagging course. Time enough after our duty is done for Congress to validate our acts by law. Time enough, when Congress has cut the law to suit our actions, for the Supreme Court to cut the Constitution to fit both. This is the real attitude of those who plead for a kind of higher law. Virtually they make of law a secondary convenience, and for emergencies fall back upon morals as interpreted by a strong and virtuous ruler; and this school of thought admits the possibility of only such.

No body of lawyers certainly could question the propriety of challenging so loose a theory of government. For what, practically, does the gentlemanly or the humane rule of a just man mean? It means at best his instinctive decision, subject to all the fallibility of individual judgment; at worst it means a decision influenced by the less worthy motives of those to whom he is beholden. Or, to return to the legal aspect of the matter, no lawyer can consistently regard government as anything but a trust—a trust under a broad deed, perhaps, but still under definite limitations of power. Now, where would the law be if trustees generally disregarded their charter and fell back upon their gentlemanliness, their high ideals, their irrepressible humanity? What would Mr. Taft say to a trustee who invested in, say, Hackensack Meadows to relieve a distressed speculator with a sick wife and eight small children? How would the courts treat an animal-loving trustee who, deeply affected by the tortures inflicted on horses in Southern Italy, gave 10 per cent. of his trust to the Naples Society for the Prevention of Cruelty to Animals? Such conduct by individuals would be grotesque, yet we accept this conduct in a President, we applaud it in the nation. When Mr. Root hints at the evil, we turn it off as an academic lucubration; when Mr. Olney speaks out plainly, he is in imminent danger of being dismissed as an impracticable pessimist.

Yet he exposes a real peril. There is no bottom to this doctrine of the good man above the law. Robespierre was such a good man in his time. No individual is strong or safe enough to exercise among his neighbors the kind of surveillance which we are assured this country must keep upon less enlightened peoples. In practice, this philanthropic opportunism has always broken down, leaving only the opportunism behind. It is very well for Secretary Taft to glorify retrospectively the motives that led to the retention of the Philippine Islands. The facts are otherwise. A vague hope of exploitation, unwillingness to withdraw from a possibly profitable game—these were the real grounds of our inaction. Senator Beveridge was the prophet of that evangel, not Judge Taft. So it always is; greed attaches itself to all the fair phrases; conquest in the name of humanity seldom fails to develop into an argument for political promotion or commercial spoliation. Law, on the contrary, has this great advantage—that it assumes that men are selfish and need to be restrained, grants no roving commissions, safeguards the individual's right to live his own life against the opinions of stronger neighbors. On this sound basis of reality people live at peace; on any other theory a democratic society dissolves under the intolerable regimen of compelling the many to obey the will of the few.

Indeed, the hollowness of this new theory that a strong nation has missionary duties is displayed in the fact that, though preached broadly as a general principle, its very champions hesitate to apply it in particular cases. Mr. Roosevelt dared not frankly cast himself upon the welfare of humanity in the Panama *coup;* he appealed pathetically to the treaty of 1846—to law, that is. Mr. Taft to-day would as little venture to tell the Filipinos that they are to be ruled by us indefinitely for their own good, as he would let the anti-Imperialists inform them that they are to be made independent for our good. In every case there is some shrinking from the full admission that the instinct of our higher officers transcends the law that creates them. It is a significant thing when jurists of Mr. Root's and Mr. Olney's parts, when two ex-Secretaries who have been the right-hand men of masterful Presidents, solemnly warn the lawyers of our two oldest universities that law itself is in danger of falling before the rule of the Executive, which is then most arbitrary when it professes to be most humane.

"PLACES."

The Secretary of the Panama Canal Commission announces that he is receiving something like a thousand applications a day for positions. In self-defence he issues the public statement that there are no "places" at the Commission's disposal. All the work to be done is of an especial kind requiring peculiar aptitude; and he warns aspirants that it will do them no good to write to him or to attempt to secure influential political backing. Everything is to be put upon the basis of specialization and efficiency.

If the Secretary believes that this will make any great difference in the rush for Panama jobs, or that political magnates will not insist upon sinecures on the Isthmus for their protégés, he must be singularly ignorant of the present theory and practice of our Government. To multiply "places," and to endeavor to retain power by their adroit manipulation, is the very beginning of political wisdom. We talk easily about efficiency, but we do not really mean it. Why should the spoils-hunters think for a moment that the Administration intends to construct the Panama Canal without favoritism and with an eye strictly to business? They see that it begins by disregard of efficiency. Economy is an essential part of efficiency; yet the President, by extending the Dingley tariff to the Panama strip, has thrown economy to the winds. He did it, of course, to put money in the pockets of American contractors; but it is only a step from doing that to permitting American politicians to stuff the Commission's working force with their ne'er-do-weel dependents.

Just at present we have before us a ghastly illustration of the working of the doctrine of "places" in the Steam-

boat Inspection Service. Certified to as fully equipped and safe by a United States official, a death-trap carries a thousand women and children to destruction. Inspection that really inspects was evidently not dreamed of in the Government philosophy. So dismayed and staggered is the Secretary of Commerce when the disaster bursts upon him, so distrustful is he of the capacity or integrity of his subordinates, that he orders them to do their work over again, and this time to do it thoroughly and honestly. Yet this is the very branch of the service which, we were told a year ago with a great flourish, was reformed root and branch by a vigorous and fearless Executive. An incompetent head was removed instanter, and thereafter nothing but skill and honesty was to be tolerated in that important service. It was presently observed, however, that the inefficient officer who was dismissed with so much unction was soon "taken care of." He was, in fact, put in charge of the local inspection service in New York, and was thus technically responsible, as superior officer, for the lamentable failure in official duty in the case of the *Slocum*. He was, if our information is correct, kept in office by the power of his "pull." Potent Senators went to the President and said that they could never consent to seeing an old friend thrown out upon a cold world. Consequently, demonstrated inefficiency was given a new field in which to make mischief. The offices were thought of simply as berths to be filled, not as positions to be well administered. It was really the theory of government by "places" which destroyed the *Slocum* and filled this city with mourning.

A Chief Executive with the fear of place-holders before his eyes is paralyzed in his best-meant activities. Lincoln described, half-humorously, half-pathetically, the immensely greater difficulty of filling the fourth-class post-offices than of carrying on a titanic war. We are convinced that the President is greatly hampered in his Philippine policy by the horde of American office-holders in the islands. It is possible for Mr. Root to breathe a pious hope that, some day, American rule may be withdrawn from the Philippines, but if Mr. Roosevelt were to echo it, he would have a swarm of alarmed and angry politicians about his ears. What! surrender all those well-paid offices, throw upon their own resources, in an unfeeling world, all those handy men of ours whom we have provided for as secretaries and treasurers and auditors and judges in those isles of the blest, where nothing but detected embezzlement can lead to dismissal? In Cuba, the problem was simpler. There the work of administration was in the hands of the army. A soldier obeys orders, and gives up a job when commanded to; but meet a bear robbed of her whelps rather than a civilian office-holder threatened with the loss of his salary. He cries to high heaven; he looks to the political great ones, whence his help cometh; they fly to his rescue, and the beleaguered President finds it easier to make a change in his policy than in the offices.

It is vain to talk of efficiency in the public service so long as its nerves are cut by the spoils system. Lord Rosebery, the great apostle of efficiency in England, once described a certain kind of official as being "plush tied up with red tape." What we too often see in office is insolent incompetence, kept there by defiant politicians. Easy-going Americans smile at such lax or corrupt service as just a custom of the country, until they see it blaze out into wholesale murder. Then they cry out in shame and horror, not seeing how their own careless acquiescence in the use of public office as political rewards has brought calamity upon them.

FUTILE LAWS.

A great gulf is fixed between the theory and the practice of civil government. Theoretically, the legislature expresses the will of the people. As a matter of fact, the laws it enacts have all sorts of origin. Most of them are carried through in the interest of a small number of persons. It is absurd to suppose that the power of the community is available for the enforcement of such laws. The legislature depends upon the executive to carry out its mandates. This the executive may or may not do. "John Marshall has got his judgment," sneered President Jackson; "now let him enforce it."

In the current number of the *Yale Law Journal*, Mr. Charles G. Morris of the New Haven bar points out the extent of this divergence between theory and fact in the legislation of Connecticut. Under the title "The Inefficient Statute," he considers the causes and the varieties of inefficiency. A statute may be well-meant and be favored by public opinion, and yet not be enforced. The coroner's jury that investigated the fire at the Iroquois Theatre in Chicago found "adequate statutory provisions for the builders' work being thorough and safe, for ample exits, for fireproof curtain and scenery, for the separation of stage and auditorium by fireproof devices, for a supply of fire-extinguishing apparatus, and even for the drilling of employees, and not least in the statutory provisions are requirements of periodical, thorough inspection, with authority in the executive to close the house if it fails to comply with these requirements. Yet with every statutory provision ample for enforcing the law, we find non-enforcement of the most glaring type." No great surprise will be felt should the investigation of the slaughter on the *Slocum* result in some such pitiful conclusion.

Statutes are not enforced for various reasons. The law may be satisfactory to a portion of the community, but displeasing to the remainder, and the refractory element may be practically the more powerful. Some laws are favored in one place, disliked in another, and where they are disliked they will be ignored. Not a few laws express merely a vague general opinion, and are universally disregarded. In some cases infringement is so difficult of detection as to make it impossible to procure a conviction; in others the machinery of enforcement is weak, or the wording of the law is such as to defeat the supposed intent of the Legislature. Finally, according to Mr. Morris, are to be included statutes the enforcement of which is left entirely to the individual harmed by their violation.

Of laws representing the opinion not of the public, but of an active part of the public, a type is to be found in the acts passed when bicycling was at its height. The wheelmen induced the Legislature to enact laws forbidding the injury of bicycle paths, and the throwing of articles injurious to bicycles on the highway. But these laws have seldom been enforced, and, with the decline of the influence of the bicyclists, have fallen into contempt. Where public sentiment is actively opposed to a statute, local or even general nullification may follow. The law of Connecticut provides that all male citizens between the ages of eighteen and forty-five shall be enrolled in the militia, and that the towns and cities shall collect two dollars from every one not exempted, and pay the amount to the State. The number of voters paying no taxes is, however, so large that the officers of the municipalities do not dare to enforce the law. They accordingly obtain the amount due the State from the proceeds of other taxes, thus throwing an illegal burden on a certain class of citizens.

Like other States, Connecticut has a law against profane language—"Every person who shall use any profane oath or shall wickedly curse another, shall be fined one dollar." A law like this has the mild endorsement of public opinion, and it would probably be impossible to repeal it, although it is almost never enforced. So there is a law which makes it a misdemeanor for any one to go on the land of another to hunt or to gather berries or nuts. The most that can be said in favor of such a law is that it enables an owner who has suffered from wanton trespassers, or who has special reasons for excluding the public, to defend himself; which, however, he ought to be able to do under the common law. There is a law forbidding the defacement of trees by placards, which is not enforced; but here there may be hope of eventual support from public opinion.

Of laws whose infringement cannot be easily discovered or proved, Mr. Morris mentions that which forbids the rooting up or injuring creeping fern and arbutus. Such acts are crimes in Connecticut, and it is a crime "to permit fowls (after notice) to trespass on a neighbor's land, to pick a huckleberry or a cranberry on another's waste land, to walk in another's orchard in the dead of winter, or to fish in Farm River, which is leased from the owners of the land by a private fishing club; and there are many other crimes of like significance."

This mass of futile laws is due to the propensity of men to force others to conform to certain standards. Murder, arson, and robbery are universally condemned, and every one aids the officers of the law in the detection of such crimes. But when an act is not universally condemned, or is commonly regarded as a venial offence, it is not wise to stigmatize it as a crime. This throws work on a frightfully overloaded institution — government — which it cannot properly perform; and by placing trivial acts in the same category with highway robbery, it brings the law into contempt. No one should call for a law unless he knows that it can be, and will be, enforced. The knowledge that laws are not enforced is a direct encouragement to lawlessness, and men come to regard obedience as a matter of calculation. Finding they can disobey one law with impunity, they are tempted to break others.

Men are restrained from evil deeds by conscience, by regard for public opinion, or by fear of punishment. The last motive should be appealed to only when the others are inefficacious; and when it is invoked its operation should be certain. Reformers would do well to concentrate their efforts on the machinery of justice; we need fewer laws and more punishments. We frequently see offences committed which we know that we ought to bestir ourselves about. Our own cowardice and disposition to avoid what is disagreeable account in part for our failures; but if policemen and magistrates would do their duty, the public would coöperate with them more vigorously. Yet the chief lesson taught by Mr. Morris's examples is that our aim should be to make nothing a crime which will not be punished as a crime; and, conversely, when we find that certain acts cannot be punished, to repeal the laws that declare them crimes.

ADMINISTRATION BY CARD CATALOGUE.

The report of the Tenement House Department for 1902 and 1903, just published in two large volumes, is a solid contribution to the science of municipal government. It is the record of the organization of a new administrative service, having more than 400 employees, a budget of $500,000, and duties altogether unique and far-reaching. Not since Col. Waring cleaned the external city has anything been done comparable to the success of Mr. De Forest and Mr. Veiller in applying similar methods to its hidden recesses—the yards, the alleys, the cellars, the living-rooms of the poor.

In the organization of their department Mr. De Forest and Mr. Veiller applied a new theory of administration. In some branches of the city government too much is left to the individual. There is a conspicuous lack of method; the enforcement of the laws depending not so much upon rule or regulation as upon the efficiency of the staff in charge. The loosest systems of administration prevail. An extreme instance is the Building Department. The Building Code itself, permitting the head of the bureau to suspend practically all the building laws at will, centres upon him all the responsibility for honest work. To what lengths we go was illustrated in the ordinance recently passed authorizing the superintendent summarily to stop work on any building when, in his judgment, public safety requires. The Tenement Department, however, is conceived on precisely opposite lines. The tenement law is specific in all its details. It stipulates the exact width of fire-escape stairs; the area, to an inch, of light and air courts. Likewise, the duties of the Commissioner are laid down in unambiguous terms. In organizing the department Mr. De Forest and Mr. Veiller generally applied this same principle. The discretion the law denied to them, they denied to their associates. In their hands the 400 employees became simply intelligent machines. A most elaborate system of regulations was adopted intended to apply to every case; and, by a remarkable plan of checks and balances, the men were kept rigidly in line.

A striking instance is furnished in the general forms of orders issued to inspectors. The latter are required, after reporting violations, to frame recommendations for their correction, these recommendations being sent in the form of orders to offending owners. In the Health Department, in which the inspectors have similar duties, they are required, for the most part, to write these letters themselves. As a result, the phraseology varies according to the inspector's literary powers, and likewise to the demands made upon property owners. In the Tenement Department, however, the 180 inspectors all write as one man. Each receives a volume containing blank forms for nearly 500 violations. If he finds that the windows in a certain tenement are not readily opened, he has, all prepared, the precise notification to the derelict owner. If an airshaft needs whitewashing, the form of the needed warning is ready to his hand. All his comings and goings, as well as all the work of the Tenement Department, are recorded on the card-catalogue plan. Thus the closest supervision is kept over employees. Their personal history and characteristics are recorded on a white card. On a blue pasteboard are detailed all their lapses from discipline; on a yellow card their assignments; on a salmon card an accurate history of their attendance, tardiness, and so on; on a chocolate card a detailed notation of all their mistakes. A strict account of their wearing apparel, of their tools, of even their brass buttons, is duly kept on file.

In addition, a vast amount of invaluable sociological data is piling up in the Bureau of Records. Here a detailed history of every tenement house can be readily found. By an ingenious color scheme its character is instantly ascertained. If it is constantly neglected, its card is ornamented with a flaming red tag. And not only is the card system used for records, but for administrative work. The Department is organized in several bureaus, with the executive force at the head. All employees receive their assignments by card, and make their reports in the same way. If they are investigating fire escapes, they are given a list of questions. This is known as the "F" card. If they are looking into bakeries, a large number of printed questions is furnished on the "B. F." card. If cellars are under investigation, they make all returns on the "B" card. Nothing is left to the inspector except making observations. Every possible question he might ask is thought out for him and furnished in printed form. Every conceivable situation in which he might find himself has been provided for.

Whatever objections may be made to this system, it has at least worked admirably in the Tenement Department. Its advantages are obvious. It economizes time and saves the duplication of work. It fixes responsibility more effectually than methods of administration prevailing elsewhere. The Commissioner is frequently importuned to ignore the rules, but is able to escape by pointing out that the law leaves him absolutely without discretion. Likewise, in the case of the inspectors, it tends to eliminate corruption. In this elaborate card system the inspector's work is constantly checked, and his slightest lapses at once discovered. Several inspectors in Mr. De Forest's time went astray, and were dismissed on the basis of the evidence furnished by the card catalogue. Unquestionably, the Tenement Department is an effective administrative machine, and many of its features might with profit be applied elsewhere.

THE SURVIVAL OF THE MASK IN NAPLES.

NAPLES, May 5, 1904.

Of all the survivals in southern Europe of ancient and mediæval life none is more seductive or less well known to the foreign passer-by than the flourishing and hodiernal continuance of the mask in comedy at Naples. This province has played a highly important part in Italian dramatic history. The Atellan farces spring from a part of Campania only a score of miles remote from Naples. And, indeed, many who have enquired into the derivation of the mask to which I refer—namely, that of Pulcinella—believe that this Neapolitan tutelary of buffoonery can be traced back in a direct line to pre-Plautan days, when country festivals drew out the mimic eloquence of some comic rustic, who, mounted on an inverted wine keg, would harangue a gawky knot of tavern loafers with strings of Oscan doggerel, tagged with sallies too broad even for Carnival merriment nowadays. However, neat conceits like these are vague fancyings, too remote from sober fact to give them solid support in the face of an absolute lack of direct evidence.

Time was when Pulcinella was favored in circles of lofty rank. Naples has ever had an inordinate passion for the drama. The late sixteenth-century entertainments, on a scale so lavish as to recall the Saturnalian routs of Roman days, whetted the grandees to continually greater efforts; and the gorgeously costumed dandies who recited elegant translations of Plautus and Terence led to the manufacture of plays of spicy intrigue, which in their turn were pettishly tossed aside when captivating Pulcinella leaped upon the boards, winning all hearts alike of noble and bourgeois and lazzarone by the novelty of his broadly colloquial, wholly unstilted phrases epitomizing the mob. In those days of exaggerated lust for displays of all sorts, the people, jaded by pageantry of dramatic spectacles well-nigh Oriental in splendor, went wild over the scintillant Pulcinellesque farces which wittily though inelegantly portrayed the every-day life of the vulgar. In this connection one can cite almost as a typical example the Count of Monterey, viceroy at Naples, an enthusiast of whom it is related, in Von Reumont's account of the Carafas of Maddaloni, that at the Christmas of 1632 he stayed at a play till the last possible minute before he had to rush to communion. He it was who used to pleasure up and down in a felucca from Mergellina to Posilipo, actually taking with him a Pulcinella famous in those days; and, upon the occasion of his joining the campaign in Portugal against the Duke of Braganza, King John IV., he is reputed to have deprived his soldiers of their pay in order to pay his actors!

What is it in the character of Pulcinella that, when it is well played, elicits to-day an enthusiastic applause as it did two hundred years ago? What commingling of traits does he exhibit which can sustain popular interest over so long a period? In short, what makes him so immortal a character—for immortal he is, even though fallen from his once high fortune to the not inglorious estate of being the idol of the bourgeois and of the *popolo basso?* Surely it cannot be enough to entrance an audience merely to see a mummer in a black mask, a white felt hat peaked like an attenuated sugar loaf, baggy white trousers, and a flowing smock loosely girded in. To any one who has the patience to read over a sheaf of Pulcinellesque plays and farces which so often are mere skin and bones, no less certain is it that the text (usually mumbled out from the prompter's box in tones that jar upon the sensitive ear) by no means makes the play. Every little provincial town of Campania—almost every hamlet, I was about to say—has its Ciccio or Peppino or Torillo who, though he may not be able to read, much less to write, can render Pulcinella's part with surprising verve and originality.

To get at the answer to our question wherein consists Pulcinella's eternal charm, one need not fritter away his time on investigation into his genesis. It is idle to toss back and forth untenable theories, such, for example, as that which asserts that a buffoon, one Paolo Cinelli, deformed by a large port-wine-colored birth-stain, and distinguished by a remarkably hooked nose, masked the upper half of his face to conceal the disfigurement; or that delightfully vague derivation of the type from the Latin *pullicanus*, owing to Pulcinella's fowl's beak and the cackle of his call. According to Prof. B. Croce's authoritative opinion, the overwhelming weight of evidence makes for Pulcinella's having originated early in the seventeenth century in the fertile brain of the valiant comedian Silvio Fiorillo, better known as "Il Capitan Matamoros." From that day to this, though represented by scores of actors, "Policinella de Gamaro de Tamaro Coccumato de Napole, nasciuto a Ponteselece, figlio de Marco Sfila e de Madama Sbignapriesto" (to give his full name, the recorded spellings of which are legion as well as those of his additional appellative of Cetrulo) has shown pretty much the same nature. He elastically impersonates characters as diverse and slightly related as a necromancer, *podestà*, feigned statue, jouster, captain, feigned physician, gamester, jealous woman (in which connection is found the odd diminutive Pulecenellessa), painter, dupe, lover, and ever so many beside in as many different comedies, scores of which I have had occasion to run over in the large collections at Naples. Always duped and forever frustrated in love is the luckless wight whose vices never seem to lose him the complete sympathy of the audience, which may laugh at him when he is in trouble, but which is ready enough to laugh with him when occasion serves him and he routs his enemies.

For a figure to adopt such a variety of rôles shows a mobility of makeup which hints at the ample lines upon which it was created. He is a composite individual—that is to say, one Neapolitan type after another rolled and welded together. He is altogether the most paradoxical bundle of contradictions imaginable, far more so than, for instance, the quaintly humorous and wholly charming Stenterello of Florence, whose amiable harelip and stiff queue one sees so seldom any more, or the waggish Pantalone of Venice. Pulcinella's usual applauders see in him a kaleidoscopic likeness of themselves. He is never quite the same two minutes in succession. With whirling rapidity he changes from one situation to another, so that one's mental and physical vision becomes dazzled. Instantaneously you like, loathe, contemn, admire, despise again. But on the whole he forces your sympathies to jump with him. He is a compound of coarseness and good nature, ignorance and cunning, cowardice and chivalry, stupidity and shrewdness. He is a schemer, a gossip, not to say slanderer, egoist, boor—what you will. But, despite these traits, he has at bottom a kindly heart, and usually gets the better of the rascal in the play even though some one else may get the better of him, Pulcinella. He is forever falling into love and out; always on the verge of success in his amatory ventures, at the critical moment the cup is dashed from his lips. So true is this that there is an Italian proverb apposite to unhappy endings: "Come le nozze di Pulcinella, finiscono sempre in bastonate." Like his diminutive English descendant Punch, he is never far from a severe trouncing. But upon these, as upon all other occasions, even when in the midst of some stupid scrape, he never loses his ability to utter characteristic observations, pithy, spirited, and to the point. He is absolutely never at a loss for a ready retort. Even if he waits an instant in comic bewilderment before speaking with his black beak tilted in the air, and his pointed hat tweaked well forward, the effect thereby is only heightened; and then one expects a more dashing sally than ever. His unpuritanic language finds ample compensation in the longheaded apothegms in which he indulges.

Considerations of space forbid a category of classic Pulcinelli. More than fifty years ago there played at the very tiny but favorite San Carlino theatre at Naples one Petitot, who, with his family, created a tradition still fondly cherished by the older generation of bourgeois. San Carlino is now no more; but one of its products, Giuseppe De Martino, still nightly plays Pulcinella before enraptured audiences. However, De Martino is not the sole notable Pulcinella of Naples. There are a dozen resorts wherein Pulcinella figures. Indeed, a highly interesting account of the *teatrini* of Naples and the environs might be written; but as Pulcinella does not appear in all of them, they do not fall within the limits of this letter. However, it is worth noting that a *teatrino* which is falling behind in its box-office receipts often plays a winning card by importing for a night, or even for an engagement, an irresistible Pulcinella. I call to mind a relevant instance that came under my notice only a day or so ago, in the town of Pozzuoli, a compact little suburb of Naples. A circus with a pair of trick ponies has been quartered here nearly all winter. As the limited amusement it could offer began to pall, the so-called director found it expedient, at least once a week, to send a brass band (composed of four husky-throated horns and a huge bass drum) parading about town with elaborately bepostered sandwichmen heralding a stupendous Pulcinella for the evening.

The mask, then, practically extinct out of Naples, save for fluttering revivals at carnival time or on other rare occasions, would seem to survive only in the personage of Pulcinella, who yet holds his magnetic sway over Campanian audiences. That Pulcinella's greatest living representative is an actor of much ability is curiously proved by the fact that last year, during a sojourn in Naples of several weeks, the elder Salvini went nightly to the

Teatro Nuovo to applaud De Martino, at a season when the other theatres offered excellent plays both in Italian and in dialect. Let us hope that some worthy successor to the genial De Martino may come forward to continue the time-honored tradition of Pulcinella. THOMAS D. BERGEN.

A THEBAN ROCK TOMB.

CAIRO, April 26, 1904.

Mr. Robert Mond, M.A., of England, who has excavated more than forty tombs in the Theban district, has recently opened several to which the public was first admitted on March 26. One of these is of special incial interest to the traveller and general student, although the Egyptologist may find little in it that is absolutely new. In the style and character of its decorations it resembles the smaller and exquisite tomb of Nakht near by, and, like the latter, probably dates from the eighteenth dynasty, or the time of the enterprising Queen Makere, the explorer of Punt and builder of the terraced temple under the cliffs of Dêr el-bahri. If so, it is 3,000 years old.

The most interesting paintings in the vestibule of this new tomb are on the northeast wall to the left of the entrance. Beside the door, in the size of life, sit the deceased and his wife, before whom slaves and retainers have piled a rich funeral feast, the products of the fields and of the chase. From these proceed four partly double bands of figures, representing in panoramic succession that life and labor in the fields which contributed to the support of the deceased during life, supplying him with bread and meat and wine, and which, by the aid of prayer and magic, must continue to spread a banquet for both him and his guardian Ka, or double, after death. He sits on a folding stool, over which is thrown a leopard's skin, and is clad and girt in white. His right hand holds a fillet, his left a wooden wand, the emblem of sovereignty. The black ringlets of a dense wig fall loosely over his shoulders, while a brilliant necklace, in several concentric bands over the breast, is set off by the clear coffee color of his skin. The offerings embrace clusters of lotus lilies, a pigeon's nest with eggs, and still another nest full of naked but very lively squabs, the significance of which will be presently seen. There are, besides, plates of bread and cakes, bowls of grapes, and bottles of wine.

These bands of figures illustrate in exquisite detail the continuous life of the fields from seedtime to harvest during the dry season, the sources of the offerings made to the dead, and their production by nature and art, which is often expressed in many stages, and involves the help of many hands. Low down on the wall men are ploughing, each with a yoke of oxen; and each holds the familiar wooden plough, consisting of a bent narrow foot and two upright forks fastened to a long pole. Beside them walk the sowers, who carry the grain in bailed wooden pails of graceful design. Then come a squad of men tilling —or possibly covering seed—making use of a short-handled hoe or pick resembling a pair of partly opened dividers with crossbar, such as one sees in the hands of the Pharaoh on the walls of the temple at Edfu. Others are busy shelling the seeds of a plant by drawing it in bundles through the teeth of a comb, which is tilted on a wooden support. Here, again, a man has hurt his foot, while another is applying a bandage.

Passing a large figure, doubtless the superintendent of the fields, we notice a small peak-roof house, painted yellow, and finished neatly at angles and gable, possibly for the use of that official, and beside it a small, open shed. Between these diminutive structures rises a remarkable tree, in which are shown, in different although in superimposed planes, the foliage, the trunk with its system of branches, and a vine bearing large clusters of purple grapes. In the branches, moreover, we behold birds' nests containing eggs, while high up on the left is a larger nest, with four young birds nearly full fledged. This last is a spirited drawing, and shows the young at the critical moment of being fed. The parent, a wild pigeon, is represented in full flight, bearing food, while the young, with necks upstretched, mouths agape, and wings a-quiver, are calling eagerly. The conventional type of nest has been retained, and the eggs, two to three in number, are shown resting upon it, as upon a saucer. Three other birds and five other nests appear in this or in adjoining trees. Since pigeons lay but two eggs, the artist has overstepped the bounds of ornithological accuracy, but the picture is one of remarkable interest, especially to naturalists, and is the oldest carefully elaborated drawing of the home-life of wild birds which has come down to us, and probably the best to be seen on the Egyptian monuments. The conventional form of the birds' nest (a crescentic figure with rounded horns), which had been in use for nearly fifteen hundred years (as in the mastaba of Ti at Sakkara), is retained, but cross-hatching is added, while the drawing of both young and adult birds is taken directly from nature. This picture is thus seen to be the work of a man competent to observe and skilful with the brush, but without the motives of scientific accuracy, and hampered by those curious conventions of art which the Egyptians were never able to shake off. They were good observers of nature, but only in a casual way, and could not be depended on. Natural science seems not to have been truly born before the time of Aristotle.

The upper and middle bands of figures take us at once to the wheat fields, where we encounter slaves measuring the plots of waving grain with cords, on which the units are marked with disks or rings, and scribes with wooden tablets under arm or in hand ready to register the amounts told off. The common device of expressing the higher rank by the greater size of figure is here very marked, and slaves are further distinguished by yellow, possibly shaven, heads. Other slaves carry the writing tablets of the scribes, or are bearing food and drink to the workmen in the fields. One of these, a girl, might have just walked in from the Theban plain, but for the white apron held in place by a white band which passes over her right shoulder; in one hand she holds a dish of food, and with the other steadies a full basket borne on the head. Another slave, stretched on the ground, is being brutally flogged by a man armed with a stout stick, while a poor woman kneels beside him and with uplifted hands begs for mercy.

In the second band a number of priests, in white, short-sleeved shirts and aprons, and each with a large key of life around his neck, are presenting offerings to the deceased, while close by a slave has drawn up his master's two-wheeled carriage and spotted pair. Entering again the standing grain, we see the reapers bending to their tasks, as with short, sharp-curved sickles they cut the stalks midway to the ground. Others are carrying the wheat in great purse-shaped baskets, made of cord netted in coarse hammock-stitch, and suspended from their shoulders by means of long poles. We come then to the threshing-floor, where four patient oxen are treading out the grain, and where men standing on the piles of wheat, with three-tined, modern-looking forks, are handing it down to the cattle. Beyond are still others in white caps and aprons, and each with the winnowing fan in hand is tossing the grain to the breeze. Next to these are a number of slaves filling the measuring buckets—cylinders, probably of wood, with the circular ribs or divisions plainly marked on the outside. Clerks are busy taking down the numbers, while four additional scribes, kneeling on the ground, each with a sheet of paper, brush, and wooden palette in hand, check the results. Farther away a workman is drinking from a jug, which a girl has just handed to him, and in another place two men are chatting in the shade of a tamarisk tree, on which hangs a goatskin for water or wine.

As we enter the tomb-chamber, we are drawn at once to a pretty scene, what indeed looks like a festal procession of comely maids, who, clad in white, with long hair falling to their shoulders, are bearing in their hands jars of water and beautiful clusters of drooping lotus. The coloring on both walls is very rich and in perfect preservation. On the middle of the right wall is a remarkable representation of one of the oldest and most conventional pictures found in Egyptian tombs—the hunting scene in the marshes, supposed to represent one of the pastimes of the deceased, or, rather, to provide this sport as well as the food which it brings for the dead man and his Ka. In two small boats, on the right and left, stand the hunters, in colossal proportions, while the water all around swarms with wild ducks, some of which are pecking at the lotus blossoms, with fish of many kinds, besides a conspicuous crocodile. Between the boats the water seems to mount up in a fountain, carrying with it a miraculous draught of fishes, while over all rises a papyrus thicket, on which climb the mongoose and a diminutive jackal(?). Many birds nest in the reeds and fly excitedly over them, being struck in all directions by the curved bird sticks, one of which the hunter in the boat on the left is about to hurl, while he to the right has pierced two splendid fish with the barbed prong of his spear. This curious picture is readily interpreted with a very elementary knowledge of Egyptian mural designs, and the older tombs illustrate the gradual evolution of the motives involved.

The mastaba of Ti at Sakkara, dating from the fifth dynasty, has the largest and most celebrated of these hunting scenes. Ti is here being rowed through a papyrus thicket of gigantic proportions, on the flowers of which, four feet above his head, sit

birds of many kinds on their conventional saucer-shaped nests, while here and there a mongoose is climbing up a stem. Fish, hippopotami, and alligators are being slaughtered in the water below.

Between this simpler design and the more elaborate painting at Thebes, we find various transitional stages in certain tombs at Assuan and Sakkara, both of the sixth dynasty, and in one of the Benihasan tombs, which dates from the Middle Empire. What the artist intended to show was a pool, filled with fish, and *enclosed* on three sides by rushes, in which birds were nesting, and over the tops of which many were taking flight. The various elements are represented in different registers, and must be read beginning with the plane nearest the observer—that is nearest the floor of the chamber. The hunting scene, as finally developed in Egyptian art, is one of the most striking illustrations of the absurdity to which both convention and ignorance of the laws of perspective could lead an artist who had the ability to draw animals and plants almost to perfection.

On the opposite wall are men bearing beds, chairs, and other articles which the deceased is likely to need, while on the left the gods are inspecting and weighing his heart.

Some of the friezes in this tomb are in excellent taste, and could advantageously replace many of the better designs seen in modern wall papers. It is a strange fate to find the sands of the African desert concealing from view works of decorative art from three thousand to four thousand years old, but in some respects more beautiful than much of the ornament to be seen in the better houses of the twentieth century.

FRANCIS H. HERRICK.

Correspondence.

MILTON AND SHAKSPERE.

TO THE EDITOR OF THE NATION:

SIR: In view of the guarded acknowledgment paid to Shakspere by Milton, "L'Allegro," 134, it may be worth one's while to note the similarity, scarcely accidental, between

> "High on a throne of royal state, which far
> Outshone the wealth of Ormus and of Ind,
> Or where the gorgeous East with richest hand
> Showers on her kings barbaric pearl and gold."
> (Par. Lost, ii, 1-4).

and

> "Who sees the heavenly Rosaline,
> That, like a rude and savage man of Inde,
> At the first opening of the gorgeous east,
> Bows not his vassal head . . ."
> (L. L. L., iv, 3, 221-224).

Again:

> 'The *star* that bids the shepherd fold,
> Now the top of heaven doth hold"
> (Comus, 93-94)

is interpreted, by all editors known to me, to signify the "evening star," *i. e.*, Venus. To this interpretation there are two objections: first, Venus appears too seldom to be of use as a pastoral *horloge;* second, by no stretch of imagination can Venus be described as in "the top of heaven." I am indebted to one of my students for the information that there is a *fixed star*, of the first or second magnitude, which becomes visible near the zenith soon after sunset, and which is used by shepherds for marking the folding time. Can any of your readers supply the name of this star? A further question naturally suggests itself in connection with "Measure for Measure," iv., 2, 218: "Look, th' unfolding star calls up the shepherd." Can this be Venus as the morning star? If Venus is too infrequent to be relied upon for "folding," she is no less infrequent for "unfolding." J. M. HART.

CORNELL UNIVERSITY, June 27, 1904.

Notes.

'Traffics and Discoveries,' a new volume of short stories by Rudyard Kipling, will be published by Doubleday, Page & Co. in the autumn.

The late Laurence Hutton was, at the time of his death, engaged upon the proofs of his 'Literary Landmarks of the Scottish Universities,' which Messrs. Putnam will publish in the autumn, along with a new illustrated series of "French Classics for English Readers," edited by Prof. Adolphe Cohn and Dr. Curtis Hidden Page. The authors first in line are Rabelais, Montaigne, Beaumarchais, George Sand (one volume each), and Molière (two volumes).

The University of Chicago Press has in preparation President Harper's sequel to his brother's text 'Code of Hammurabi,' being a comparison of that code with the more important laws and usages of the Hebrew codes.

Paul Elder & Co., San Francisco, will make a limited edition, in the fall, of 'Upland Pastures,' out-door essays by Adeline Knapp.

The Anthropological and Geographical Society of Stockholm, of which Andrée was a member, has decided to publish, at its own expense, a biography of the lost aeronaut. The book will, in addition, contain the unpublished works of Andrée, and a description of the balloon in which he and his companions set out on their last journey.

The chief purpose of the eighty-page book on 'Koreans at Home' (Cassell & Co.), by Constance J. D. Tayler, besides giving "the impressions of a Scotswoman," seems to be to float the five plates in color and the score or more of the author's original drawings or reproductions of photographs taken by her. The priming for the text is from Dallet and from 'Corea, the Hermit Nation,' and, except a few experiences in the region of the old and the new capitals and a visit to Ping Yang, the Scots lady saw little of the country or its unbeaten tracks. Both the color plates and the drawings are spirited and very suggestive. Under this artist's pencil the native noses and mouths take on more character and variety than those in any pictures from Korean life that we know of. Of the language of hats, of the ways of the ginseng cultivators, of popular superstitions and customs, the author chats pleasantly. One of her not unalloyed pleasures was an introduction to the "Emperor," followed by a dinner in the palace. She saw few attractive faces among the women.

We have before us two volumes relating to Venice, each belonging to a series of illustrated monographs which have been already noticed in these pages. One is No. 8 of the series "Italia Artistica," 'Le Isole della Laguna Veneta,' by P. Molmenti and D. Mantovani (Bergamo: Istituto Italiano d'Arti Grafiche). The authors are both Venetians born, knowing and loving every nook and corner of the island city and the Lagoon, ardent students of Venetian art, Venetian history, Venetian life, and well known in the world of letters. To have them as ciceroni for that enchanting region which extends from Chioggia in the south to Torcello in the north, is an inestimable privilege. They are not mere guides; they are at home and do the honors of the house for you, chatting about the family patrimony past and present in a way that gives you cheering sense of first-hand information. The volume, like others of the series, is exceedingly well illustrated (though we could wish that it had also a map of the Lagoon), and may be recommended as a companion to the traveller who is not in a hurry.

The second work, 'Venice,' by Gustav Pauli, translated by P. G. Konody, is No. 2 of the series of "Famous Art Cities" (London: H. Grevel & Co.; New York: Charles Scribner's Sons). As this is of the nature of an art guide, it has nothing to do with any Venetians later than Tiepolo and Canaletto, but is a good book in its way and well worth reading. After a brief summary of the history of Venice, it devotes itself to a description of the architecture, sculpture and painting of the city. Save for one or two slips (as where I Gesuati is mentioned as a church of the type of the Madonna dei Miracoli and San Michele di Murano), these three divisions are done with clearness, correctness, and judgment; less Delphic and more persuasive than art criticism is wont to be. It is matter for regret that the translation, which sometimes flows easily enough, is generally rather wooden; that the English is only too frequently "aftur the scole of Stratford atte Bowe"; and that the crop of misprints is an unusually rich one. The illustrations are generally excellent, and there is a good index.

Americans who have had commercial or intellectual dealings with Leipzig—the number is not small—will be pleased to have their attention called to 'Leipzig im Jahre 1904,' a stately volume published in connection with the city's exhibit at St. Louis. The publisher is J. J. Weber (*Illustrirte Zeitung*). Paper, type, and press-work are sumptuous; the illustrations, some in color, are numerous, and are intended chiefly to give one an idea of the city as it is now and of its representation at St. Louis. In music the busts of Bach, Schumann, Beethoven, Liszt, Wagner, are, of course, significant of Leipzig as a musical centre; the view of the interior of the Gewandhaus is very attractive. The same may be said of the Alte Börse, the New Theatre, Conservatory, and University. Less impressive is the new Rathhaus; the (projected) Battle Monument is ugly, expressive of the least pleasant side of German art. Altogether, the volume is an honor to the city.

The official 'Deutscher Universitätskalender' has made its appearance in its sixty-fifth semi-annual edition intended for the present summer semester, and with the name of a new editor on the title-page. The founder and long-time editor, Prof. Dr. F. Ascherson, died some months ago, and his work is continued by Dr. Scheffer of Leipzig, connected with the publishing firm of G. Th. Scheffer. The Kalender is still published with the financial and official assistance of the University authorities, and is without a rival.

The April-June number of the *American Journal of Archæology* (Macmillan) is, for the body of it, wholly given up to a lucid and highly interesting account (on behalf of the American School at Athens) of the study of Œniadæ in Acarnania, by Benjamin Powell and Joshua M. Sears, jr., with numerous illustrations, particularly of gateways, some true-arched. Mr. James M. Paton supplies the bibliography of archæological books for 1903.

Part 4 of volume iv. of Mr. Edward W. James's *Lower Norfolk County (Virginia) Antiquary*, among other soundly selected matter, continues its census lists of local slaveowners, one being as late as 1840 (Princess Anne Co.), and containing this footnote: "The wife owned the husband. It was not an uncommon thing in the Southern States for enterprising negro women to own their husbands." The editor adduces a case at the outbreak of the civil war, when an industrious huckstress in the Norfolk market not only owned her husband, but had in him an ardent secession sympathizer, imprudently maintaining this allegiance after Federal occupation of the city. "No slave trader was ever more fully convinced that the negroes were made for slavery." One wonders which of the pair repined at emancipation dissolving one of the ties of matrimony.

France adopted the Code Civil in 1804, and its centenary has been observed by the Société d'Economie Sociale, the proceedings being reported in the *Réforme Sociale* of June 1. All the speakers regarded any reconstruction of the Code as impracticable, but they specified certain reforms as not hopeless. The technicalities of the civil-marriage law were shown to promote illicit unions, and to prevent marriage altogether in some cases. The law of personal property needs revision, on account of the growth of that form of wealth. When the Code was adopted, real estate was of so much more importance as to cause personalty to be treated as insignificant. But the chief subject of criticism, as might have been expected, was the system of petty entails, which has torn to pieces so many homesteads. The hostility to everything called "feudal" was so bitter at the Revolution as to destroy the right of testamentary disposition. Under the influence of the dogma of equality, the framers of the Code went to the length of authorizing every co-heir to demand his share of the estate in kind. Where an exact division is not practicable, the property must be sold; and this is necessary in cases of infancy. But the taxes on sales are confiscatory when the properties are small, and the system is disastrous in its consequences. Nothing shows the political incapacity of the French people so strongly as the fact that they have endured this abuse for a hundred years, although the number of small proprietors is so great as to enable them to obtain, one would suppose, any reform which they united in demanding.

Of the "Cornell Studies in Philosophy" (The Macmillan Co.) five numbers have already appeared, the latest being on Maine de Biran's 'Philosophy of Will.' Those which are most likely to be of interest to the somewhat general reader are the one on "Nietzsche's Philosophy," by Miss Dolson, and that on the ethical aspect of Lotze's metaphysics, by Vida F. Moore. All are theses accepted for the doctor's degree, or more prolonged studies carried on by graduate students of the Sage School of Philosophy.

Mankind, in its present estate, finds it more admirable that Japan should outmatch Russia in the art of destruction than that her men of the closet and the laboratory should be joined on equal terms with Western science in the pursuit of truth. For our part, it gave us a peculiar pleasure, in reading Mr. Samuel Garman's monograph on the Chimæroids (Bulletin of the Museum of Comparative Zoölogy, vol. xli., number 2), to come upon a reference to the first mention of the species *Rhinochimæra pacifica* by Prof. K. Mitsukuri in the Tokyo *Zoölogical Magazine*. This savant's description awaited to be checked by an examination of a specimen of the fish purchased in Tokyo by Dr. Alexander Agassiz, and thoroughly presented, with figures, in the publication named above. We cannot enter into particulars here. Mr. Garman is high authority for saying that few marine animals, "on account of structure and relationships to other forms living and extinct, have as great interest for zoologists and palæontologists as the Chimæroids."

The floods of the Mississippi and Missouri in the spring of 1903 are well described and illustrated by H. C. Frankenfield, in Bulletin M of the Weather Bureau. The flood of the Mississippi rose so nearly to the crown of the levees near Greenville that the river boats were required to run at reduced speed, so that the waves from their paddlewheels should not begin a dangerous overflow. Even after this precaution, Greenville was invaded by backwater spreading up the valley from a crevasse in the levee some miles to the south. The successful prediction of the flood by the Weather Bureau was truly remarkable. On March 9 it was announced that the flood, already within 1.4 feet of the highest water ever recorded, would continue to rise for three or four weeks, and that a stage of 21 feet at New Orleans should be prepared for. As a matter of fact, a stage of 20.4 feet was reached at New Orleans on April 6 and 7. Many of the full-page plates are of exceptional interest; notable among them are those of the Missouri Pacific Railroad bridge at Kansas City, loaded with locomotives, and the only one of seventeen bridges that was not carried away; a levee restraining the high flood waters from the lower plain; the rush of the waters through the Holly Bush crevasse. A remarkable instance of foresight is presented. The Fort Jackson and Grand Isle Railway follows the right bank of the Mississippi for a stretch below New Orleans, and a train loaded with repair materials was kept in the yard at one of the stations ready for prompt dispatch. A break occurred in the levee at Magnolia, thirty-six miles below New Orleans, on April 5, and the water was soon 60 feet deep where the levee had stood. The train was at once sent to the spot, and, after ten hours' of hard labor, the break was closed. "A further delay of one hour would have precluded any hope of closing this crevasse," according to one of the State engineers, and then some of the finest sugar plantations in Louisiana would have been flooded.

Among the many topographical maps issued by the United States Geological Survey, mention should be made of the Chief Mountain quadrangle, which shows the main range of the Rockies in Montana next south of the international boundary. The district is one of remarkable scenic interest, inasmuch as the mountain forms are unusually bold, and as a number of moderate-sized glaciers are to be found among them; it is, moreover, of special physiographic interest in possessing a large number of cirques and hanging valleys, which the topographers, Messrs. F. E. Matthes and R. H. Sargent, have portrayed with great skill, and which must be taken as among the best examples of glacial erosion recorded in this country. The contrast between the bulky forms of these mountains, as carved by clumsy, thick-bodied, slow-moving ice streams, and the delicate ravining of such ranges as those of southern California, where slender, nimble water-streams alone have worked, is most instructive.

At a largely attended meeting of teachers in London the other day, Mr. Mosely said that "the broad-minded way in which American engineers in South Africa tackled the propositions brought before them was what first excited his interest in the system of education in the United States." He believed that it was the fourth "R" which was at the bottom of education in this country. "Children were taught not only how to read, but how to reason." This was the spirit which permeated the whole nation and largely helped to build up its commercial success. Professor Armstrong deprecated the tendency here to make our manual-training schools into trade schools—"a magnificent metal workshop here and a magnificent wood workshop there." What would be more useful was a training for a variety of occupations with reference to local requirements.

France is beginning to imitate the German academic innovation of "Vacation Lectures," the purpose of which is to keep professional and educated men and women in general in touch with the latest investigations of scientific workers. The University of Dijon is the first in France to announce such lectures, to cover four whole months, from July 1 to October 31. The theoretical and practical lectures and courses cover virtually all branches of university instruction. The prices are thirty francs for a six weeks' course, and ten francs for every additional two weeks.

In Finland, coeducational secondary schools have taken deeper root and have been tried longer than in any other country in Europe. Accordingly, a carefully prepared article in the *Bien Public*, by Miss Hanna Andersin, herself a prominent teacher in a school of this kind in Helsingfors, possesses considerable interest. The writer declares that Finland is more than satisfied with the twenty-one years of trial it has given to these schools, and would not think of making any changes. Since the establishment of the first in 1883, in Helsingfors, fully fifty other like schools have been founded, the majority with courses covering eight or nine years, and all leading up to entrance to the University. Miss Andersin declares that these schools are the outgrowth of necessity in Finland, where the sparsely settled population and financial reasons would admit of no other ar-

rangement. Since then, necessity has become a virtue even in the larger villages. The writer declares that the coeducational system has had an excellent effect on both sexes, and that the girls have no more trouble in preparing for the University than the boys. The prejudices against the arrangement, which were originally strong, have practically disappeared altogether.

Swedish savants have effected the organization of an Archive Bureau in Stockholm which is managed by Dr. Rosman in connection with the Royal archives, and by G. Hedin, a recognized authority, Its purpose is very comprehensive—among other things, to furnish data from libraries and archives of all kinds, with historical and statistical résumés for scientific and practical purposes; to make genealogical, biographical, and heraldic researches, extracts from copies of old manuscripts, reproductions of charts, autographs, etc., etc. The association has already secured the coöperation of many of the ablest scholars in Sweden, and offers its help to the scholarship of the world. The cost is the subject of special agreement in each case.

The Swedish Government, in connection with Parliament, has undertaken a rather thorough revision of the course of studies in the secondary schools. The most notable feature of the new scheme is probably the substitution of German for French as the leading foreign modern language, the Parliamentary committee insisting upon the reform "because our relations with Germany are much more intimate and frequent than those with France."

—From the Clark University Press, Worcester, Mass., we have the first number of the *American Journal of Religious Psychology and Education*. There are to be three numbers a year, each containing about 100 pages, under the editorship of Dr. G. Stanlay Hall, President of the University. We must not, we are told, infer "that the opinions it contains represent that institution in any sense or degree, or that any of them are taught there." The first number is not well conceived, if it is meant to be conciliatory in its approach to the traditional religionists. The leading article, by the editor, has for its subject "The Jesus of History and the Passion *versus* the Jesus of the Resurrection," which is treated in a manner as much at variance with traditional opinion as with the optimistic rhetoric of the writer's forecast of the wonders that the psychological study of religion is to work. The article, though described by Dr. Hall as an "imperfect and sketchy conflation of psychological viewpoints," and though disfigured and obscured by a surplusage of technical expressions, is a very able and interesting study of the resurrection of Jesus and its various explanations. It exhibits at once a wide and yet imperfect acquaintance with New Testament criticism. The conclusion is, that "the resurrection cannot mean for us to-day the reversal of all the processes of physical death." What then? Ghost-seeing? No, but some purely subjective visionary appearance. Prof. Jean du Buy's "Stages of Religious Development" compares the leading ideas of five great religions, and, finding Mohammedanism to be the religion of childhood, Confucianism that of boyhood, and Christianity that of adolescence, advises the teaching of these religions respectively to children, boys, and youth and to races of corresponding development. We seem to have heard that a parent who tried this method found his son sticking fast in some provisional stage of the ideal development. There are twenty pages of book notices, of which the writings of Professor Leuba of Clark University have the lion's share. His, too, is the third of the three articles which exhaust the principal matter of this number—a discrimination of "Faith" from belief, and an attempt to fix its pyschological status.

—The *Atlantic* opens with a few pages from the journal of Emerson, recording with very little admixture of philosophic comment the incidents of a visit to Washington city early in 1862, whither he had been called to deliver a lecture before the Smithsonian Institution. It has been stated that the President and Cabinet heard his lecture, which contained an urgent plea for emancipation, but the editor, Edward W. Emerson, questions the accuracy of the statement, on the authority of Mr. Spofford, supported by both the President's secretaries and indirectly by the silence of the Washington newspapers. The third instalment of the Ruskin-Norton correspondence covers the period of the civil war. Ruskin's failure to get a proper point of view in respect to the war, together with his mental ill-adjustment in various other lines of thought, makes rather painful reading of these letters, in spite of their absorbing interest. John Burroughs contributes still another chapter to his endeavor to hold nature writers up to more scientific standards in their treatment of birds and animals. We should not find all our own complicated thoughts and emotions in these lower forms of life, but merely "a humbler manifestation of the same psychic power and intelligence that culminates and is conscious of itself in man." The true literary gift in this direction is that of Burns, for instance, whose mouse "at once strikes a sympathetic chord in us without ceasing to be a mouse." The approaching six hundredth anniversary of the birth of Petrarch suggests two articles, a sketch of his life, with some critical comment, by Henry D. Sedgwick, and a short paper on his Illustrators, by George Santayana. Herbert Spencer's Autobiography calls forth a discriminating essay by Prof. William James. We have not room here to outline his judgments upon the great philosopher, but we cannot resist the temptation to quote the closing words of the initial paragraph: "Greatness and smallness surely never lived so closely in one skin together."

—Thomas Nelson Page discusses the disfranchisement of the negro in the July *Scribner's*, exhibiting the common Southern tendency to discredit as doctrinaires those who disagree seriously with the Southern attitude. If the belief that an important political problem should be settled in harmony with the fundamental principles that shaped the Declaration of Independence and the Constitution stamps one as a doctrinaire, then there are a great many American citizens who will bear any reproach attaching to the term with entire equanimity. A little more of the doctrinaire's liking for logical consistency would have spared Mr. Page's argument the radical contradiction of maintaining at one point that the negroes should be treated as individuals, not as a class, while supporting vigorously at other points the recent changes in Southern constitutions, based squarely on class distinction along the line of color. One may readily agree with Mr. Page that the policy of the Reconstruction period proved disastrous to both races in its actual working. The fault, however, was not that of the "doctrinaires" who forced their ideas of liberty and political equality into the Reconstruction measures, but of the "practical politicians" who were allowed to warp those measures to personal and party ends. We grant Mr. Page's earnest desire to see the tangle straightened out, but the American people are not so constituted that a policy which demands for its success the silent sacrifice of principle on the part of a large portion of our citizens can permanently settle a Filipino problem, a negro problem, or any other problem which touches vitally the general interest. The "Field of Art" is devoted this month to a discussion of "criticism," by Harry W. Desmond, who pleads in the interest of art itself for a broad interpretation of the term, against the contention of Mr. Taft that it is "better business" to learn to appreciate an artist's sincere contribution than to point out features in which it may be considered defective.

—It is difficult to understand exactly what was proposed in 'Painters since Leonardo,' by William Pattison (Chicago: H. S. Stone & Co.), or exactly what were the qualifications of the author for his task. The subject is a vast one, yet no general view of it is given. The arrangement is chronological, without regard to school or country—perhaps the worst and most confusing of possible arrangements; yet in the final chapter, on "Schools," the confusion is worse confounded when one finds Giorgione figuring in the "Early Florentine School" and Luini in the Venetian. The choice of painters for mention is sometimes inexplicable, as when, *e. g.*, Berghem, Wouvermans, and Netscher each have a paragraph, while the index does not contain the names of De Hooge or Ver Meer of Delft. It would appear from certain allusions that the author has been a practical student of painting, but he seldom gives us anything but the utter commonplaces of criticism, while he is conspicuously lacking in the virtues of the mere compiler, the lists of "principal works" being always inadequate and often wrong, as when, under Leonardo, "La Gioconda" and "Mona Lisa" are entered as separate pictures, and "La Belle Ferronnière" is given to the National Gallery. The illustrations are chosen apparently for their appeal to the popular taste, and are very carelessly catalogued, the full title or present place of the picture being seldom indicated. One of Tintoret's pictures in the Anticollegio of the Doge's palace—the only Tintoret reproduced in the volume—figures as "The Creation of Eve" by Michelangelo! Finally, Andrea del Sarto is indexed under neither A nor S, but under D, as similarly are Melozzo da Forlì and Antonello da Messina, in each case without cross-references. In fine, there are few faults which the book does not possess and fewer merits which it does.

—Mr. Mortimer Menpes begins his book on 'Whistler as I Knew Him' (London: Adam & Charles Black; New York: Mac-

millan) with the statement that "the cry of Whistler's life was 'Save me from my friends!'" and it is evidently his intention to do some of the saving. He believes that these friends are harming Whistler's reputation now by foolish exaggerations, as in his lifetime they harmed his work by foolish adulation; and, as one of the friends who was made an enemy by the 'Gentle Art,' he is an expert on the subject. The picture he gives of his own relations with Whistler is extraordinary, and if "the Master" was really surrounded by such abject and grovelling adoration, it is a wonder he did not become entirely insane with megalomania. Mr. Menpes still professes great admiration for Whistler the artist and great love for Whistler the man, yet it is difficult to avoid the suspicion that there is a point of malice in his description; or is it only the little exaggeration that comes of the desire to be amusing and to tell a good story at any cost? Amusing the book certainly is, but its tendency is only to deepen the impression that the truest saying about Whistler is that attributed to Degas (whose name, by the way, Mr. Menpes persistently spells Digars). That artist, whose disposition is as retiring as his talent is great, is said to have remonstrated with Whistler in words to this effect: "My dear fellow, you act like a chap that couldn't paint." That there was a better side to Whistler's character than that of the self-advertising egotist here depicted is most probable, but we must wait for its revelation. There are in the book some reports of Whistler's opinions and of his methods of work which possess a more serious interest, but most interesting of all are the many reproductions, in black and white and in colors, of his work in several materials. These are unusually well executed, are, for the most part, of unhackneyed subjects, and give as good an idea of the merits, the limitations, and the weaknesses of the artist as could well be conveyed in reproduction, though the avoidance of the best-known works renders the selection a trifle unjust and makes his achievement seem slighter, if no less charming, than it really was. It is these illustrations that will give the volume a permanent value for those unable to acquire original works by Whistler.

—Neither men nor angels can make the annals of the House of Hanover as interesting to the public as those of the House of Stuart. We refer here to the biography of individual princes rather than to the development of Great Britain under the one dynasty or the other. But while Mr. Lang and a host of others continue to pour forth volumes on the Stuarts, Mr. W. H. Wilkins has taken it for his mission as an historian to prove that romance exists, if it does not flourish, among the archives of the Hanoverian line. By a series of works entitled 'The Love of an Uncrowned Queen,' 'Caroline the Illustrious,' and 'A Queen of Tears,' he has constituted himself a volunteer Historiographer Royal. These studies extend from the days when George I. was Elector of Hanover to the period of George III., and are so arranged that the one leads up to the other—the three covering four generations. We say nothing about 'The Love of an Uncrowned Queen,' which we have already noticed. The title 'Caroline the Illustrious' (Longmans) refers to Caroline of Anspach, Queen Consort of George II., and an able, upright woman, who lived without reproach in a society brutalized by coarse corruption. Mr. Wilkins's life of this princess is most exhaustive, and has reached a new edition wherein the original two volumes are published in one. Unfortunately the early Hanoverians were very plain-visaged people, who had no brilliant artists to idealize them. Moreover, the existing portraits are not well reproduced in Mr. Wilkins's books. Thus, 'Caroline the Illustrious' lacks the attractiveness supplied to many modern biographies by the illustrations. For the rest it is a long and somewhat over-appreciative account of a capable princess.

—A 'Queen of Tears' (Longmans) is the biography in two volumes of Caroline Matilda, posthumous daughter of Frederick, Prince of Wales, youngest sister of George III., and wife of Christian VII. of Denmark. In her case the elements of romance and tragedy are undeniably strong. Married at fifteen to a base and incapable profligate, she soon found herself entangled in a liaison with his physician, aided her lover to become all-powerful at court, provoked national hostility, and was eventually sent off to Celle in Hanover, where she died at the age of twenty-four. An emotional nature and freedom from restraint were the chief causes of her undoing, but the interest of her career centres in the political consequences of her relations with her lover, Struensee. This man was a German physician who had been engaged by Christian VII. as a professional attendant. He was possessed of great ambition and a certain amount of talent, but showed profound ignorance of human nature as represented by the Danish Church and aristocracy. Owing to the King's incapacity and the Queen's affection, Struensee had every opportunity to make his influence felt in the conduct of public affairs. As he was a foreigner of no social standing, elementary prudence should have shown him the necessity of keeping in the background, but, afflicted by incredible want of tact, he embarked on a course of radical legislation while at the same time permitting himself to assume the air of a dictator. After a brief period of triumph, in 1771, Struensee incensed the official classes of Denmark to such an extent that a coalition of overwhelming strength was formed against him. Having no party of personal adherents, and rendered vulnerable by the nature of his relations with the Queen, he fell the easy victim of a palace plot. It was of little avail that many of his administrative changes had been in the truest sense reforms. The result of his political aspirations, quite as much as of his intrigue with the Queen, was his trial and execution. Matilda was at once divorced and condemned to perpetual imprisonment. At this stage George III. interfered on his sister's behalf, and threatened war if the King of Denmark undertook to carry out the decree regarding imprisonment. Under such pressure the Queen's humiliation was lightened, though she was not permitted to return to England. Exiled to Hanover, her life closed before her character was fully developed or she had the chance of assuming a fresh rôle in the history of Denmark. It is a sad story, which Mr. Wilkins has told with much detail and considerable effect.

—Under the title 'The Middle Eastern Question, or Some Political Problems of Indian Defence,' the author of 'The Far Eastern Question,' Valentine Chirol, has published a work of five hundred pages (E. P. Dutton & Co.), which has grown out of a series of letters written for the London *Times*. As a special plea for the need of just such missions as that now occupying the mind of Col. Younghusband, this book is written for the times in both senses. But, though ephemeral in its nature, no work more strikingly shows in just what position England stands as regards Russian encroachment on British territory. Beginning with Persia, the author gives a detailed account of the stealthy but steady undermining of British influence, and the growth of Russian power which is inevitably taking its place. German aggressiveness also receives due attention at this point; but in the subsequent chapters Russia alone is considered, as Mr. Chirol depicts the encroachments of the Slav in Afghanistan and Turkestan; while Russia and France together from the point of view of Burmah are considered in the final chapters of the survey. The author does not wish to pose as an alarmist, but he sees clearly enough that the British *laissez-faire* doctrine and the serene hope that the *status quo* will remain unchanged are confronted with an untiring activity and ambition on the part of Russia. He deprecates the "wholesale and hasty surrender of legitimate interests" on the one hand and the mixture of "bragging and nagging" which in the past has taken the place of any well-defined English policy. Russia has practically ousted British trade from the whole of Central Asia by a policy of rigid exclusiveness; she has usurped England's place both commercially and politically in Persia; she has intrigued in Afghanistan, and it is an open question whether in the event of war the Amir would care to play the part of a buffer. Russia is also drawing Tibet within her "sphere of influence." In Chinese Turkestan, Russian competition is driving out English goods, and a foreign "and possibly hostile" Power is making itself appreciably felt "all along the northeastern border of India." There is certainly food for anxious thought in this volume for both the tradesman and imperialist politician of England, while the American reader will find in it a very clear statement of present conditions, marred by no display of temper, but capable of improvement in point of style.

LEWIS AND CLARK.

The Trail of Lewis and Clark. By Olin D. Wheeler. G. P. Putnam's Sons. 2 **vols., 8vo. 1904.**

Mr. Olin D. Wheeler of the Northern Pacific Railroad has for some years, as part of his duty, prepared "Wonderland," the interesting and beautifully illustrated annual relating to the region which that road traverses. In 1900 "Wonderland" was largely taken up with the expedition of Lewis and Clark. Many years before this, in his youth indeed, Mr. Wheeler had begun the studies and travels which make him at the present moment probably the most accomplished Lewis and Clark scholar living. The important book, the title of which is

given above, a development from the small nucleus in the "Wonderland" of 1900, makes it plain that Mr. Wheeler has read with care the literature of the subject, including the original journals of the captains and their men, which have remained in manuscript up to the present moment; and also that he has done much more than this. Trained as an explorer in his youth, in the seventies by Powell—in the expeditions that brought to light the wonders of the Grand Cañon of the Colorado and its neighborhood—he is an accomplished frontiersman; and, with faculties quickened by much experience of the wilderness, he has passed over every mile of the Lewis and Clark trail, in some parts several times, identifying every mountain, stream, plain—indeed, every camping place—reproducing, meantime, to a large extent for himself the old conditions, hunting, canoeing, riding as they did. So far as the old tribes still exist, he has paid them visits, and sometimes lived among them. Once, in a remote desert, he talked with the squaw Petówya, more than one hundred years old, who distinctly remembered the coming among her tribe of Lewis and Clark. How a writer could investigate his field more thoroughly than Mr. Wheeler has done, it would be hard to say. What he has gathered is presented in these two handsome octavos, illustrated by many maps, and photographs of all the more noteworthy scenes. The style, as may be expected from one who has come up into active business from the frontier, is not always square with academic standards; it is, however, always frank, breezy, picturesque, an excellent medium for the presentment of his material. The amount of new information afforded is very considerable.

Faithful to our critical function, we shall specify some cases in which Mr. Wheeler comes short, premising that the cases are few and not of great importance. It was Fielding Lewis, *great*-uncle of Captain Lewis, not his uncle, who married the sister of Washington; at least, that is the statement of Jefferson. Sergeant Patrick Gass was not "wounded at Lundy's Lane." The story told by his biographer is that a ball passed through his hat, his shortness of stature standing him in good stead. That he was quite unharmed he gave proof only a few days later in the "Sortie from Fort Erie," a feat of arms once very famous. Personally directed by Gen. Jacob Brown, standing on a log, in the light of the cannon flashes, he spiked the British twenty-four-pounders, his pocket full of rat-tail files which he drove into the vents. We surmise, too, that Gass should rather be described as a Scotch-Irishman than as an Irishman, though here Mr. Wheeler has the support of authorities in general. Gass is a family name in Annandale, Scotland; and we believe that oatmeal must have had something to do with the doughty grit of Patrick's composition.

Rather more serious than these errors is the omission, in the account given of the rank and file of the party, of the neat story relating to Robert Frazier, told, we believe, for the first time in our own pages, a decade since, by Prof. J. D. Butler in his review of the 'Lewis and Clark' of Dr. Elliott Coues (*Nation*, 57: 312, 331). The story is good enough to be told again. Robert Frazier was a fencing master in Rutland, Vermont, who, obtaining a hat of Professor Butler's uncle, a trader in Rutland, ran away without paying for it,—this about the year 1803. Uncle Butler, soon after failing in business, too trustful perhaps to thrive in the Vermont of those days, went West and at last began tavern-keeping in St. Louis. September 23, 1806, who should walk into his doors but Robert Frazier, one of the men of Lewis and Clark, just arrived at the levee across the continent from the mouth of the Columbia. Uncle Butler recognized his debtor at once, tanned, moccasined, and befringed after the Indian fashion though he was, and straightway presented the unpaid bill for the hat. This the pioneer, now in funds from the sale of his land claim, straightway paid; on his part now presenting to Uncle Butler a neatly penned prospectus for the publication of a journal he had kept, a subscription for which might presumably be met out of the proceeds of the hat. Uncle Butler took the prospectus, but unloaded the matter of subscribing upon his brother in Vermont. Professor Butler in due time inherited the prospectus, and still retains it—the sole extant memorial of Robert Frazier, for his book never saw the light. He is one of that part of the band whom oblivion has utterly swallowed. His journal, could it be recovered, would easily bring its weight in gold.

Such errors and omissions, however, are of small account in the general excellence of the work. As to information afforded relating to the personnel of the party, good service is rendered by an elaborate discussion, based upon the testimony of descendants and of persons living on the ground, of the long unsolved question whether Meriwether Lewis came to his death by suicide in a wild spot in Tennessee in 1809. For the fairness of the explorer's fame the world will be glad to find that the theory of suicide is improbable, and that with scarcely a doubt Lewis was murdered at the lonely tavern where his body was found, and near which, in what is still a remote solitude, he lies buried.

Excepting as to the two captains, Dr. Coues was able to give, in 1893, only scanty details of the subsequent careers of the party. Sergeant Gass, indeed, has always stood in a clear historic light, a revised form of his journal having appeared a few months after the return, and the sergeant himself having been made the subject of a biography by an intelligent man. Dr. Coues of course knew his story. As to his fellow-sergeants, Pryor and Ordway, however, of the latter Coues knew nothing, and of the former scarcely more. As to the privates, excepting George Shannon and John Colter, he had no information. He greatly admired the fine fellows, picked men as they were at the outset, and justifying most amply their selection by constant faithfulness and courage. Coues's monotonous comment, "No more known of him," affixed to name after name as he goes down the list, comes to seem like a melancholy groan over the heedlessness of a world which will let the memory of such men die. But Mr. Wheeler shows that within a decade much additional knowledge has come to light. Sergeants Pryor and Ordway are now distinct in their after-careers. Mrs. Eva Emery Dye of Oregon, author of the 'Conquest,' and one of the most meritorious workers in this field, has rescued the important figure of Alexander H. Willard.

Mr. Wheeler himself has done a similar service for William Bratton, and has especial desert for what he has accomplished in behalf of the one woman in the enterprise and the "historic pappoose." The most picturesque and touching figure in the whole story of the undertaking is Sacágawea, the bird-woman. The expedition found her a Shoshone captive among the Minnetarees, a girl of sixteen, the slave and wife of a French interpreter. The man, Chaboneau, was engaged to go with the party; the Shoshone squaw, too, the captains thought might be useful among the mountains whence she had been taken; so, although she bore at her back her baby, born scarcely two months before, she had no choice but to follow with the white men. Handicapped with her motherhood, she underwent all that her companions did, rendering service indeed of the greatest value. Repeatedly, when the expedition was on the brink of disaster that might have frustrated it, she saved it, now by her quickness and presence of mind, now by conciliating the good will of the shy mountain-tribes, her kindred; horses, and guides from whom were indispensable to success. When all others were at fault, she proved a certain path-finder through the most tangled gorges; and through all her ministration showed herself sweetly amiable and patient. This real heroine had nearly sunk out of memory, and much credit is due to Dr. Coues, Mrs. Dye, and Mr. Wheeler for securing to her a recognition which, though late, seems likely to be hearty. The women of the great States of the Northwest into which Sacága-wea smoothed the way will, under the lead of Mrs. Dye, erect a proper memorial in her honor; and at the instance of Mr. Wheeler the Government has named a noble height overlooking the scene of her chief service, Sacága-wea Peak. He has also traced out the career of the Indian baby. The little brown waif got back safe and sound from its far journeying, grew to manhood, and became a stout hunter and pioneer. He was a character well known in Idaho in the thirties, and figures as the hero of an adventure the story of which Mr. Wheeler has recovered from the notes of a backwoodsman of that region.

Our debt to Mr. Wheeler for information as to tribes and localities is not less great than for information as to persons. Whenever a remnant has survived of tribes which the explorers met, he has made their acquaintance, and in some instances sojourned among them. Every noteworthy locality mentioned in the records is described as it appears to-day, and a clear sketch, based upon observation and a study of good authorities, furnished of such change as has come in. We remark as particularly interesting the account of the Mandans, and the tragedy of their extermination by the smallpox in 1837-8. The account of the development at the Great Falls of the Missouri is interesting; so, too, of the immense industries that have come to pass in the neighborhood of the Three Forks and the Gates of the Mountains, out of whose mines treasure many hundred millions in amount has been drawn and poured into the coffers of the world. The exact locating of the route of the expedition across the "continental divide," never until now satisfactorily ascertained, does much credit to Mr. Wheeler's sagacity and perseverance. In

great part the trail is scarcely less wild than it was in 1805-6; but our author, with the records in his hand, has traversed it foot by foot, charting it at last minutely. He must, indeed, have felt a sense of triumph when, in the spring of the present year, Dr. Thwaites, after comparing Mr. Wheeler's work with the lately discovered map of Clark, pronounced that the identification had been exact, a complete correspondence existing between the earliest and the latest maps. Nor is our author less at home in the valley of the Columbia than in the valley of the Missouri; his identifications there, too, are as painstaking, his sketches and summaries in like degree adequate.

This centennial year of the expedition of Lewis and Clark will be signalized by the publication of much important literature relating to that enterprise. First in importance, of course, must stand the seven monumental volumes of the "Original Records," which Reuben Gold Thwaites, the eminent secretary of the Wisconsin Historical Society, is on the point of issuing. A. C. McClurg & Co. of Chicago will reprint for the first time in nearly sixty years the Journal of Patrick Gass, the picturesque and venerable book which first gave authentic information of the undertaking, and remained for seven years the sole source of knowledge. Interest in the old pathfinders from Coronado down, indeed, is much quickened, and their stories are appearing in fresh presentments. In a high place among books of this class must stand the 'Trail of Lewis and Clark,' the work as it is of one who is at the same time a well-read scholar and a good frontiersman; and who devotes himself enthusiastically to supplementing the records of an achievement among the manliest and most beneficently fruitful in American history.

MR. HEWLETT'S LATEST STORY.

The Queen's Quair. By Maurice Hewlett. The Macmillan Co. 1904.

'The Queen's Quair' is the story of the six years intervening between the departure from France of Mary Stuart, Queen Dowager of France, Queen of Scotland, and heir apparent to the throne of England (ill-fitted both by temperament and education for such greatness), and the night when, broken in heart and spirit, accused of most of the crimes of the decalogue, she rode, a prisoner, from Holyrood to Lochleven. These were the years in which she really lived; all that followed was monotonous existence, varied only by perpetual, futile attempts of the caged bird to break the bars and take wing once more in the open. No short space of time has more deeply engaged the attention of historians, poets, and romance-writers; and, after all the research, controversy, and imaginative guesses, we are still in doubt, not only about many things that may or may not have happened, but, more still, about the character of the Queen and the degree of her responsibility for the most shocking of all the crimes attributed to her.

No matter, however, what view one may take of her, one thing is certain, that the history of those years is the history of Scotland's shame—shame of her lords as of her fishwives, shame above all of her preachers, so sure of the will of their compassionless Calvinistic God, and so hot to visit His wrath upon the woman whom they still recognized as their divinely appointed Queen. From the confused and contradictory records of abominable open crime and more abominable secret infamies one impression must be clearly received—that the thin, fair girl with the sidelong glance and pointed chin of the Stuarts was always, at the lowest estimate of her worth, better than the fierce, lying, pitiless men who held her crown, her honor, and her life in their hands. Some of these men she justly hated; some she as justly scorned; some she mistakenly loved, and one, Bothwell, she loved most, and feared. Always by all she was regarded as an instrument to advance or obstruct personal interests, used for selfish purposes, mostly base; insulted, betrayed, driven to do and be the worst that a wild girl who was also a royal Stuart could do or be. Never among them all was one man found to help her to the better way. In her own kingdom she stood alone, except for one or two faithful women and a few boys to serve her and die for her.

This view of the Queen's case, so clearly derivable from history, comes out finely in Mr. Hewlett's version—a version so discriminating as to matters of fact and so keen and deep in matters of inference that one feels it to be uncommonly like a direct inspiration. The narrative, following historical outline and sequence, presents a plot unrivalled by invention, and a series of dramatic situations pitiful, terrible, and not poor, in touches, of a high sort of satirical comedy. Through a labyrinth of conflicting statements Mr. Hewlett has found a way to conclusions generally consistent with the greatest probability. If he had done nothing more than construct a strong, straightforward story out of stuff that has been so often gathered and sifted, his book would be noticeable and valuable. But he has gone much farther. He has penetrated and exhibited the wild heart of the Queen and the black hearts of the miscreants who destroyed her. His vision of the Queen is wonderfully complete and vivid. He sees the intellectuality so often ascribed to her as nothing more impressive than a taste for poetry and intrigue and a wit ready in emergency. Her intellect, indeed, was never of any practical use, because its decisions could be reversed instantly by a gust of passion or even a caprice. Personal passion was the mainspring of action, the secret of her power as a woman and of her abysmal failure as a queen.

Mr. Hewlett's characterization is by no means a vindication. He has not wasted himself in vain labor to prove that she was either a virtuous woman or an exemplary sovereign, but he makes one feel unmistakably that, with a little encouragement, she would have seriously striven against the fatal faults of her blood, and, at least, not wandered so far from a desirable regard for a measure of good fame. His Mary Stuart is neither the pathetic, romantic figure born of Sir Walter Scott's chivalrous imagination, nor the cruel, corrupt wretch depicted by Swinburne. She is just a mixture of good and evil, frank and false, loving and revengeful, fascinating and repellent; every common natural quality exaggerated, almost distorted, by the great circumstance that she was a queen of the House of Stuart.

The principal figures of her wonderful entourage are similarly vivid, though not similarly enchanting. One sees them all, false counsellors, false friends, false lovers. A perfect rogues' gallery is open to inspection—tortuous, sleek Maitland of Lethington, pronounced by Mary's "good sister," Elizabeth, the finest wit in Scotland; profoundly hypocritical, canny Lord James Stuart, Earl of Moray; cynical Riccio, familiarly called "Davy"; vain, vicious Harry Darnley, King Consort, well dubbed the "Young Fool"; silly, singing, prancing Chastelard; and, killing here, betraying there, dominating everywhere, stalwart, red-headed James Hepburn, Earl of Bothwell, with his troop of black sheep, Hay of Tala, Hob Ormistoun, and the rest, ragged rascals, "Bothwell's Lambs." Most infamous of all, Bothwell; not because he broke the Queen's heart, which had a natural tendency to break and mend, but because he crushed her high spirit and destroyed forever her princely courage. Diplomatic Sir James Melville shows himself not devoid of sympathetic emotion, and George Gordon, Earl of Huntly, son of that Huntly harried and slain by Mary at the instigation of Lord James Stuart, who wanted an earldom, stands out conspicuously gallant and faithful. There is not much authority for this portrait of Huntly, and it is highly improbable that he managed to have Darnley murdered before the house of Kirk o'Field was blown up, out of love for the Queen and to save her from deadly sin. Darnley, of course, was murdered before the explosion, but his taking off was no expression of love for or by any one. Whether or not Huntly loved the Queen, his sister Jean, Bothwell's wife, divorced by him as soon as he was sure of royal favor, hated her steadfastly. Mr. Hewlett draws a terrible scene between the two women, after the divorce at the Castle of Crichton, where, says his page, Des Essars, who has a large part in the tale, his mistress showed "that old, sweet guile of hers, inveterate still and at work," but came away contrite and humble, stricken with the "most terrible secret sorrow, which broke her heart and ends my plea for pity upon her who loved so fondly."

The mere writing of the 'Queen's Quair' is a literary achievement of high order. The author has worked with brain and heart, and by a perfect sincerity his style has been strengthened and chastened. His language loses that conspicuousness as language which smothers the subject in some of his books. There is a pervading quaintness, an occasional preciosity, but no hesitation about plain speaking when the moment calls for it. The man who would tell such a tale aright must not be mealy-mouthed, and Mr. Hewlett was never that.

Before leaving the 'Queen's Quair' a word must be said about another book to which the author is deeply indebted. His dedication is a graceful acknowledgment of this debt to Mr. Andrew Lang, whose 'Mystery of Mary Stuart' contains the substance of his tale. Mr. Lang's book is hard to read, but every one who wishes fully to appreciate Mr. Hewlett's manipulation of evidence should read it.

TURNER'S HISTORY OF PHILOSOPHY.

History of Philosophy. By William Turner, S.T.D. Boston: Ginn & Co. 1903. 8vo, pp. 674.

Some apology may be due to our readers for giving more than a line or two to a book which professes merely to be a one-volume text-book of the whole history of philosophy. But this is no ordinary third-hand compilation. The thorough reader of philosophy will find himself here confronted by a peer whose judgments are his own (barring in a sense those that touch dogma) in a larger proportion than is usual, the principal exceptions being that, in ancient and early mediæval history, imaginations of German higher critics are too easily assented to. As one goes through the volume, one becomes interested in considering the views of the author, and finds them mostly acceptable. Stöckl's various writings, the manuals that have emanated from Stonyhurst, and sundry other books and articles had already produced upon us the impression that Leonine Thomism was a decidedly favorable standpoint from which to survey the course of philosophy; and the present volume bears out that impression. There is a reason why it should be so: the adherent of any modern school is a nominalist—that is, he believes in only a single fundamental mode of being, and his power of conceiving other modes has become atrophied from disuse. But a true Aristotelian, of whatever stripe, must recognize a germinal mode of being, a positive, substantial possibility, or potentiality, over and above actual existence, or *exsistence.* He is thus in a condition to understand both nominalistic and realistic conceptions of the universe. The most favorable standpoint, on this principle, should be that of the Scotist, who is habituated to thinking of three modes of being—matter, or the positively possible; form, or that whose being consists in its general governing of what in any way is; and hecceities, or positive elements of individual existence. Unfortunately no considerable Scotistic school of thought is now extant. Only a pragmatist, here and there, has a sort of affinity to Scotus.

Apart from all this, it has long been coming home to the philosophical world that a more thorough appreciation of the realistic theory is one of the prerequisites to philosophy's ever developing into a stable science. It is a chief merit of this little book that it furnishes a more intelligible and truer account of the development of scholastic realism than can be found in many a more pretentious history of philosophy. The system of St. Thomas Aquinas, beyond dispute one of the greatest that have ever been formed, is here expounded with accuracy and in some detail. The modification of that doctrine by Scotus—departing from it, roughly speaking, about as much as Aristotelianism departs from Platonism—is less sympathetically treated. The reasons for the modification are not explained, nor is the essential characteristic of it clearly set forth. What is said of it, however, is true enough; and that is more than the Scotist is accustomed to find in compendiums or even in books devoted to explaining the doctrine he follows.

Father Turner's account of the rise of scholasticism is particularly comprehensible, and in the main points just. During the three centuries and more that elapsed between the 'De Divisione Naturæ' of Erigena and the granting of the first distinctly recorded privilege to the University of Paris by Philip Augustus, A. D. 1200, we hear of some sixty teachers of philosophy; and of most of them we barely learn their existence. About a third of them, including all the most important, receive separate treatment by Father Turner, thus affording a tolerably definite idea of one side—the internal side—of the line of generation of scholasticism proper, the scholasticism of the University of Paris. The account given of the philosophy of the fourteenth and two following centuries does not satisfy us nearly so well. It is difficult to conceive that a person who had ever made any serious study of Ockham could have given so colorless a portraiture of that strong and singular thinker, whose subsequent influence has been so mighty that a close examination of his thought was called for. The decay of scholasticism is largely attributed to nominalism; and no doubt there is some truth in that. For not only does nominalism render any religious philosophy impossible or absurd, but the empty formalism, oppressive triviality, and soporific verbosity of the mediæval nominalists—especially the later ones, though Ockham himself is hard to beat in the last particular—was calculated to disgust every lively mind. Yet, after all, the Scotists retained the upper hand in the most important centres to the last; it was not the Ockhams but the Dunses that most excited the resentment of the humanists; and it was, in part, because of this resentment that the modern world became nominalistic. Yet it should not be forgotten that the study of the Stoic and Epicurean philosophies was an important factor in this.

Besides nominalism, Father Turner holds the chief cause of the decay of scholasticism to have been Averroism, especially the proposition that what is true in philosophy may not be true in theology. Is it not singular how most men regard this proposition as simply abominable, while another proposition, differing from it chiefly in being more general, is by many if not most men considered as the capstone of good sense—we mean the proposition that what is true in theory may be false in practice? The meaning of this is, of course, that a correct deduction from a theory may, in consequence of the impossibility of any general theory taking into account all the factors which affect experience, be found quite contradicted by experiment. Nobody will be more alive to this than modern mathematicians. What, then, is it that Averroes adds to this that makes his proposition so abominable? It is that if a deductive conclusion is so abhorrent to one's most intimate conscience that to accept it would be to break up one's whole system of moral habitudes, it is better to adhere to natural or quasi-natural sentiment, and to suppose that some undetected error affects the philosopheme, although it appear evidently to follow from axioms. Averroes advanced his proposition on the occasion of such a contradiction presenting itself in his own experience. He was in a situation similar to that of one of those religious speculators whom we sometimes read of in the newspapers, who reason it out that it is their duty to burn their children alive or commit some other enormity. Is it really so abominable, in such a case, to do as Averroes did rather than to follow apparent reason to the destruction of all that one has been accustomed to hold sacred? Father Turner says that the proposition of Averroes is contrary to the basic principle of scholasticism. Undoubtedly it is so, in so far as the general proposition that what is true in theory may be false in practice is contrary to the basic principles of the theory. But that is not to say that the acceptance of the proposition is unfavorable to further and closer study of the theory. Would it not be a truer account of the decadence of scholasticism to say that any purely deductive theory, like those of scholasticism, must eventually exhaust its interest owing to all the important consequences having been already made out? Pure mathematics is saved from exhaustion only by starting new sets of hypotheses as the former ones become uninteresting.

However, there was an entirely different order of causes tending to disintegrate scholasticism which Father Turner perhaps considered beyond the scope of this manual. Namely, there are certain incongruities necessarily accompanying a priesthood, sacred things—such as masses and intentions of masses—being bought and sold like railway securities; a court, like profane courts, a hotbed of vice and iniquity, etc., etc., which seem natural enough to a barbarian like the European of the ninth or tenth century. Now scholasticism itself, together with other agencies, had cultivated men's minds up to the point where such sordid and vile things, interwoven with the most holy, inevitably produced upon the lay mind an intense disgust which, where there was a certain degree of intellectual strength, made a readiness for unbelief, if not unbelief itself. Then, just as we all know that crude forms of punishment may answer well for very young children, but would have disastrous effects at a later age, so the barbaric manner in which the Church always treated heresy prevented its expression, and so not only rendered unbelief invulnerable, but added to it a cynical hypocrisy which disinclined minds to any philosophy like scholastic realism. For this hypocrisy said to itself, with a shrug of the shoulders, "I believe what I see, and nothing else." There is enough of it eating the bread and butter of the Catholic Church to-day to illustrate what we mean (not without force) to anybody who is at all acquainted with that communion. Combine causes such as these, and the æsthetic fashion of mind that the Constantinopolitans imported into the West, with the inevitable exhaustion of a deductive treatment of theology, and causes for the dissolution of scholasticism seem only too abundant.

We regret that the limits of our columns forbid our considering Father Turner's interpretations and criticisms of modern philosophy, which are always interesting, and under a good teacher will prove stimulating to the thought of the student. This effect will only be heightened by there being occasional little exceptions to be taken. We will illustrate these by two instances, one of criticism and one of interpretation. Namely, Father Turner calls Locke "superficial." Now, it is hardly conceivable that anybody, in the light of modern psychology, should deny what Father Turner probably means. But how will the neophyte under-

stand the word "superficial"? Superficiality is the opposite of penetration. It is the effect of not having thought much about the propositions one enunciates. One of Locke's most remarkable traits, shown on every page of his masterpiece, is that every section brings the fruit of enough thought to furnish forth a considerable essay. Not defective penetration, but the failure to take into consideration other circumstances than those which he has studied—that is the characteristic fault of Locke.

The other instance to which we shall refer is that Father Taylor says that Descartes, in his reply to Gassendi, "protested that the [*Cogito*] *ergo sum* is not an inference." This was Dugald Stewart's notion; but it is not tenable. Descartes often said that the *Cogito ergo sum* was not a syllogism or an enthymeme, nor founded on the syllogistic theory of reasoning. Yet even that hardly gibes with his version of it in the 'Principia.' It is true that he calls it "tanquam rem per se notam simplici mentis intuitu." But what he means is that when one considers that one thinks, one at once perceives thereby that one exists. He thus makes the knowledge of one's existence an effect of the knowledge that one thinks. As Cousin said, "Le *donc je suis* n'indique-t-il pas un lien logique? Comme Descartes emploie toujours ce mot quand il raisonne, n'est-il pas naturel de croire que ce même mot a ici le même sens que partout ailleurs, et ce rapport des termes ne marque-t-il point celui des procédés intellectuels? Si le *donc* n'a pas ici un sens logique, pourquoi Descartes ne l'a-t-il pas dit?"

We have found so much fault with the book that our readers may not understand why we like it so much. It is because it is neither a machine-made compilation nor a vague essay, but is the work of a real student of the history of philosophy. We may add that its statements are formally distinct and explicit, as befits a book for beginners and a text-book. There is a thirteen-page index of proper names, and of such subjects as Absolutism, Academies, Accadian traditions, Æsthetics, Agnosticism, Air currents of the Stoics, Antinomies, Arabian philosophy, Arianism, Astronomy, Atomists.

The Tempest. Edited by Mark Harvey Liddell. (The Elizabethan Shakspere.) Doubleday, Page & Co. 1903.

From the printer's note at the end, it appears that this volume had been already several months in process of manufacture before "Macbeth," the first volume of the edition, was published in April, 1903. The adherence of the editor to every detail of the form and method of the previous volume is, then, not to be regarded as a wilful ignoring of the very considerable mass of criticism which greeted the result of the first stage of his labors. It is none the less to be regretted that the serious faults already pointed out should continue to mar one of the most costly and elaborate productions so far attempted by American scholarship. Some of these, of course, inhere in the very conception of the work. The distribution of the comment round three margins of the text, the failure to restrain it within the limits of the same page as the corresponding text, and the absence of paragraphing in the notes, continue to puzzle and bewilder the reader; and these cannot well be altered without changing the character of the edition. The absence of line-numbers, except at the top of the page, however, is a defect which could easily be remedied.

On the less mechanical side, the treatment of the text remains open to serious criticism. The arbitrary spelling of the First Folio is retained throughout, and the editor frequently implies that this has the authority of Shakspere himself. This, of course, is not certain or even probable; and a good defence for troubling the reader with the eccentricities of an unknown seventeenth-century type-setter exists only when an exact reprint of the Folio is being attempted. But no such attempt is here made. The stage directions, the arrangement of verses, the punctuation, the capitals and italics, and even the dialogue itself, are all tampered with; so that one has many of the disadvantages of a facsimile without its authority.

The material in the notes has the same merits and defects as were to be found in Mr. Liddell's "Macbeth." Learning and ingenuity are here in abundance, and the professed student of Elizabethan English grammar and idom will find much interesting material brought together; but he will constantly find himself wishing that Mr. Liddell had written a dictionary, and not buried his findings among masses of elementary and irrelevant comments on Shakspere.

In the more erudite parts of his work the editor is unduly dogmatic at times. Explanations which the scholar would gladly take as suggestions become annoying as absolute assertions. Thus, on the line, "What cares these roarers for the name of king?" the note says, "ROARERS, 'rioters,' for the boatswain's use of the word in this connection implies the EL. meaning 'riotous person,' cp. 'to roare, . . . to murmur, to show themselves discontented' Alvearie; 'roarer' is also a regular term for 'blustering fellow,' 'bully.'" This use of "roarer" is, of course, well known, but in the present passage it is quite as likely to mean just "roarer."

In the Introduction, Mr. Liddell's work is much more intelligent and better proportioned. The discussion of the sources of the play is clear and scholarly. In the matter of the date he accepts with a modification the view of Tieck and Garnett. These scholars have argued that "The Tempest" was written for the marriage of the Princess Elizabeth and the Elector Palatine in February, 1613. Mr. Liddell, impressed by the autumnal spirit of the play and the masque of Ceres in the fourth act, and by the fact that Ferdinand and Miranda are betrothed but not married, concludes that Shakspere prepared it for the betrothal ceremonies planned for the previous autumn. Owing to the death of Prince Henry, the betrothal was postponed, and later performed without public festivities; so it is argued that Shakspere would merely hold over his betrothal play and touch it up for the wedding itself in the beginning of the following year. But neither these reasons nor Garnett's attempts to identify the characters of the play with personages at court seem sufficiently to discount the statement of the cautious and learned Malone, based upon documents now lost, that the comedy "had a being and a name in the autumn of 1611."

The more purely literary criticism contained in the Introduction and scattered through the notes is often interesting and suggestive. The weakness here, as in the "Macbeth," is in Mr. Liddell's persistent attempts to trace a parallelism in the motives of the greater plays. The following paragraph gives an instance, and not an extreme one, of the tendency.

"It was Macbeth's fervent wish to net up the train of consequence flowing from his act, and through this suspension of cause and effect gain at one stroke success. It seems as if this poetic thought, this intervention of the human will into the designs of God, had suggested itself to Shakspere as the theme for a play in which 'the trammelling up' would be to a nobler end. Unlike Macbeth, Prospero justifies his usurpation. The 'Tempest' is thus, though so brief and shadowy, one of the most suggestive of Shakspere's plays; and, being a comedy in the Elizabethan sense of a tale ending happily, it belongs with the great tragedies—'Hamlet,' 'Macbeth,' 'Othello,' and 'Lear,' making for them a kind of complementing Epilogue in which the poet hints at the proper interpretation of his greatest work. For in it is answered the question which the tragedies put: Is life necessarily bound in shallows and in miseries, all cheerless, dark, and deadly? Will man, then, like the base Indian, throw his pearl away? Is it a question of to be or not to be, the latter alternative only prevented through respect of what dreams may come when we have shuffled off this mortal coil? Is it a tale of sound and fury signifying nothing? Are we only such stuff as dreams are made of, our little life rounded with a sleep—a sleep and a forgetting?"

It is to be observed that it is here assumed that the great tragedies are questions, the answers to which are to be sought outside themselves. This is silently to impeach the conclusions of the great mass of critics, who have found in these dramas an attempt to solve as well as to raise profound problems as to the significance of life. Further, it is assumed that each tragedy is simply a different form of the same question. But an examination of the succession of statements of it will show that this identity can be made out only by an unwarrantable straining, and this straining is constantly evident in the further attempts to work out the idea stated in the passage which has been quoted. In the interpretation of individual plays a wise caution is called for in the attributing to Shakspere of conscious and deliberate metaphysical purpose in the choice and treatment of his subject. In dealing with groups of plays this necessity for caution is greatly increased. What Mr. Liddell has to contribute would be no less useful to the Shakspere student if it were given as suggestion rising out of the play, without dogmatic assertion about what the dramatist meant to put into it.

The Opening of the Mississippi: A Struggle for Supremacy in the American Interior. By Frederic Austin Ogg, Instructor in History in Indiana University. The Macmillan Co. 1904. Pp. xi., 670.

The title of Mr. Ogg's book is not altogether an accurate indication of its contents. That he realizes this is apparent from the explanation which he feels bound to offer in the preface, where he says: "This book is intended primarily to be a

history of the discovery, exploration, and contested rights of navigation of the Mississippi River" (p. vii.). Nor, it seems to us, does this tell precisely what is in the book, for, notwithstanding the author's disclaimer of any such purpose, his work really comes nearer to being simply a history of the Mississippi Valley down to the close of the War of 1812.

Mr. Ogg has unquestionably made careful preparations for his task. All, or nearly all, of the secondary works have been examined with great care, and, so far as we can judge, all the printed sources have been consulted. It does not appear that manuscript material has been used. In so extended a period, it was not to be expected that our knowledge of the subject should be enlarged; the author, in fact, makes no claim to have done that. What one might expect is a clearer and a fuller account of the whole subject than has hitherto been given. This the author has aimed at, and, in the main, we think he has succeeded. Nowhere else can one find so full an account of the whole period in a single work. The story is told clearly, dispassionately, with full knowledge of what has been done by others (with one notable exception), with reasonable knowledge of some of the sources, and with a good, though by no means a profound, grasp of the subject in its entirety.

The first eight chapters, which bring the narrative down to 1783, are better worked out than the last six. This seems to be due partly to the fact that the author has had more printed sources to work with, partly to the fact that he has taken more pains in elaborating them, partly, again, to the fact that the subject is less difficult and complicated. The first chapter, on the "Importance of the Mississippi Valley," seems conventional and perfunctory, written, if one may hazard a guess, with the feeling that an introduction of this sort would be looked for, rather than for any more vital reason. The two chapters on the explorations of the Spanish and of the French in the lower Mississippi region are very good presentations of the best knowledge we have with respect to these events. The story of La Salle and his work, in chapter four, is well enough, though it is naturally somewhat disappointing in comparison with the brilliant work of Parkman. The two chapters on "The Beginnings of Louisiana" and "English and French Neighbors after 1763" will prove, we think, the most useful parts of the book. In the latter chapter, however, the treatment of the diplomatic negotiations leading up to the treaty of 1783 is neither very full nor very clear.

Indeed, it is precisely at this point, where the author passes over into the period which above all others is full of diplomatic complications and treasonable intrigue, that the work becomes least satisfactory, when it might have proved most serviceable. For whatever reason, Mr. Ogg appears to have failed to take advantage of his opportunity. Not only has he given us no new information here, but he has failed in large measure to refashion what knowledge we have as carefully as in the earlier period. In at least one case Mr. Ogg has failed to examine, or at least to be at all guided by, the conclusions of recent investigations. We refer to the Burr conspiracy. Mr. McCaleb's 'Aaron Burr Conspiracy' appeared in May, 1903. Whether or not he succeeded in wholly disproving the conclusions of Henry Adams, he certainly made it seemingly impossible for any later writer to limit himself to a mere summary of these conclusions. As Mr. Ogg's preface bears date of September, 1903, he must have had ample time to make himself familiar with Mr. McCaleb's book. Indeed, at page 626 he includes it in a list of secondary works that "may be mentioned" as dealing with the Burr conspiracy. Yet he has made no use whatever of this scholarly work. If this is due to the assumption, which we can quite understand, that it is well nigh impossible to improve upon Adams, the result has been unfortunate in this case. We fear, however, that this method has been resorted to throughout the later chapters. In dealing with the Louisiana purchase, for instance, he might have found something to take from 'Lucien Bonaparte et ses Mémoires' not already "quoted in Adams." Likewise, in the chapter on "Establishing the American Régime," the references indicate very few if any excursions on the part of the author beyond the limits of Martin, Gayarré, and Grace King.

We have noticed but few errors of fact or questionable statements. At page 288 the author conveys the impression that the secret treaty by which the territory west of the Mississippi was conveyed to Spain, and the Treaty of Paris, bear the same date. The preliminaries of the Treaty of Paris and the secret treaty were both signed November 3, 1762; but the final treaty, known as the Treaty of Paris, bears date of February 10, 1763. That the possessions of England after the Treaty of Paris "included all the lands east of the Mississippi" is, of course an error (p. 294). The lists of works containing important documents, which the author gives in the footnotes, are ordinarily not complete. Generally, this is of no consequence, but certainly the 'Treaties and Conventions' should be mentioned in any bibliography of the Treaty of 1783 (p. 397). The statement (p. 548) that "the devotion of the Federalists to the theory of strong national powers precluded them from attacking the purchase at the point which Jefferson considered the most vulnerable—the constitutional—and threw them back upon arguments of expediency and national interests," is wholly misleading, since the change of front which both parties made on the constitutional question is precisely the most obvious, and one of the most significant, features of the whole Louisiana debate. This statement is the more extraordinary in view of Mr. Ogg's apparent devotion to Henry Adams, who, in this matter perhaps above all others, leaves nothing to be desired. Is it altogether fair to impute to Napoleon alone the fault of breaking the Peace of Amiens (p. 586)? Victor C. Coffin (p. 356) should be Victor Coffin. The index is unsatisfactory, and there is no systematic bibliography.

History of the United States of America. By Henry William Elson. Macmillan. 1904. Pp. xxxii., 911, xl.

It is unquestionably a difficult thing to write a good "popular" history. To begin with, your popular historian must have an unusually ample store of facts, sufficient in quantity and character to justify a much more pretentious work; for no one is fit to write an elementary book who could not, if he chose, write a more advanced one. Again, your popular historian needs altogether exceptional judgment and discrimination, a sure sense of the relative importance of things, a clear notion of what is essential for the reader who has not time to know a great deal. And, finally, the successful popular history will have distinct merits of style, for with the unlearned public it is manner as much as matter that counts. No audience is so hard to win and hold by legitimate effort as a popular audience, because a popular audience always assumes to pass a scholar's judgment without, of course, the scholar's knowledge. Moreover, a book which meets with wide acceptance in an historical field performs a distinct service, good or bad, for citizenship, sets many political ideals, fortifies many opinions, affects no small amount of conduct. It is not unfair, therefore, to judge with some strictness a book which professes to open to the masses a large and vital subject, and to offer within its covers all of the information on the subject which the public at large imperatively needs to know.

Mr. Elson has aimed at popularity. He has felt sympathy for the many who have no time to read the "large" and "comprehensive" histories of the United States, and has tried to give a well-written, clear, and justly proportioned account in a single volume. He has aimed to make an interesting book, too, one which shall eschew "dry details," and deal with incidents of general or permanent importance. In the treatment of controverted topics, such as the Revolution, slavery, and the civil war, he has earnestly sought impartiality. He modestly disclaims pretence of original scholarship, but has drawn freely on the best secondary material. The result of his labors is an attractively printed volume of over nine hundred pages, about equal in bulk of matter to Green's 'Short History of the English People,' the work in a related field with which it will most naturally be compared. Whatever its shortcomings, it is the most notable attempt yet made to tell in moderate compass the whole story of American history.

It would be gratifying indeed if Mr. Elson's book fulfilled without serious lapse the promise of its title and preface; for of a good popular history of America there has long been need. So far as information goes, the promise is fairly well kept. There is an abundance of data, and most of the leading events from the earliest times to the present are accurately and intelligently set down. One may learn a great deal from Mr. Elson's pages. In other respects, however, praise must be much qualified. To begin with, the book is ill written. Mr. Elson's style has fluency, but neither grace, dignity, nor good form. "Fine writing" and colloquialisms, trivialities and awkward phraseology jostle one another on the same page, and that repeatedly. Again and again a passage otherwise creditable is spoiled by some weak or graceless expression. There are, doubtless, proper differences of opinion as to the precise characteristics of a good historical style, but we fancy that all would agree that accuracy, clearness, balance, naturalness, and dignity are indispensable; and it is precisely these characteristics that Mr.

Elson has failed, on the whole, to attain. Where one would welcome lightness and grace, we find jauntiness; where the subject calls for dignity and breadth, there is too often exaggerated emphasis of phrase. It is difficult, accordingly, to read the book without weariness. "Popular" historical writing ought to be particularly good writing, and Mr. Elson's writing is not good.

Again, the general treatment of the subject shows nothing distinctive in the point of view, and no originality in method of presentation. At a number of important points the treatment is either conventional or else inadequate. The descriptions of colonial life, for example, emphasize the time-honored hardships and inconveniences of the people. There is no adequate account of the causes of the Revolution or of the popular feeling in regard to it, though we are glad to note in Chapter X. a commendable section on the Acts of Trade. The importance of Otis's speech on writs of assistance is, as usual, overestimated, and there is no hint that the writs were not a new thing. To say, as on page 348, that "to construe the Constitution loosely or broadly meant to give the general Government larger powers than the letter of that document would indicate; to construe it strictly meant to confine Congress to the strict letter, leaving all other powers to the States or to the people," is to give but a hazy notion of the grounds of a controversy on whose issue the structure of American constitutional law is mainly built. We are accordingly not surprised to find Mr. Elson's account of the Nullification movement slight. The same inadequacy appears in the references to the general social life of the people, the development of the West, the condition of the South during and after the civil war, the finances of the civil war, and the Reconstruction period. There are some idiosyncrasies of method, too. Thus, Chapter III., entitled "Explorations," is wholly given up to the exploits of De Soto; and as this comprises the larger part of what is said about the period before 1600, the reader gets no idea of the ceaseless effort during the sixteenth century to chart the Atlantic coast and bring the country under European control. Certain topics not deemed important enough for the text are discussed in notes at the end of the several chapters, and among these we find the Florida treaty of 1819 and the Clayton-Bulwer treaty.

We point out these more striking defects of Mr. Elson's book, not because they are necessarily fatal in themselves, but rather because in place of them we are not offered any compensating advantages. An author who, in a much worked field, departs from accustomed lines, is bound, we think, to make clear his reasons; but in this case the reasons are not evident. We could spare the narratives of early voyages if in their place we could have an account of the Spanish system of colonial administration; but Mr. Elson gives us neither. We could welcome an abridged account of the attempted restriction of the slave trade if instead we could be told something about the economic aspects of domestic slavery; but on this latter subject, so urgently in need of exposition, Mr. Elson has nothing new to say. The work before us sheds no fresh light on any part of the field of American history, nor does it so group familiar material as to gain helpful interest or emphasis.

Mr. Elson has frankly relied for his facts mainly on secondary sources; and while his authorities, if we may judge from the footnote references, have usually been good ones, he has not wholly escaped error. A curious example of transformation of figure occurs on page 179, where Parkman's striking comparison of Braddock's army on the march to "a thin, long, particolored snake," becomes in Mr. Elson's hands the simile of "a gigantic centipede." The whole account of the taking of Quebec, for which Parkman is again the authority, is marred by numerous inaccuracies which a more careful use of Parkman's volumes would have prevented. A similar inattentiveness is doubtless the reason for bringing the Free Soil party into the field in 1840, and for speaking of the rejection by the Senate of Tyler's treaty for the annexation of Texas as though it followed promptly upon the submission of the treaty, instead of being delayed to await the result of the party conventions. At times the reader is left in doubt about the facts. In the first chapter, on Columbus and his age, several positive statements in the text are shown by footnotes to be of doubtful validity. In a note on page 39 the author virtually takes back—quite advisedly, we venture to think—much that he has just said about the incapacity of the Indian for civilization. At other points there is healthy outspokenness. We have firm reprobation of the policy which brought on the Mexican war, and of the course of the Republican party during Reconstruction. If the appreciation of Washington is disparaging, it is at least frank. There are sympathetic words for the abolitionists and John Brown, and uncommon attention to the workings of the Fugitive Slave law of 1850 in the North.

We anticipate a considerable sale for Mr. Elson's volume, and certainly few can read the book without profiting by it. If its language could have been carefully revised and its more glaring omissions and defects made good, its success would, we think, have been deservedly large. We cannot regard the work in its present form, however, as other than an ill-digested performance, and for that reason must withhold from it other than a qualified approbation.

Present-Day Japan. By Augusta M. C. Davidson. Philadelphia: J. B. Lippincott Co.

This English lady's account of her travels in Japan, or more particularly what she felt and thought under the camellia and camphor trees, is perhaps all the more interesting because digested from letters which were not originally intended for publication. The book gives to a careful reader the impression of things seen and enjoyed, but with the inevitable illusions arising from first notions corrected by reflection and wider opportunities. It is indeed refreshing to find a tourist frankly acknowledging the necessity of previous study in order to appreciate. The vice of the average traveller in Japan is in vehemently insisting that the present is all, and that the surface of things is reality. Here is a woman who seriously attempts to understand the achievements of the Japanese in 1904 by considering them in the light of their past, and with reference to those ethical forces which have acted upon them for centuries. Having retained and amplified the notes gathered on the spot, she far outranks the bookmaker who travels by rail. Of the eight chapters, four treat of places each one of which represents a phase of national history and development—Yokohama, Kioto, Nikko, and Tokio.

In her travels, Miss Davidson sees with a woman's eye much that a man might not notice, for we hear not a little about sleeping arrangements, meals, ventilation, and the omnipresent rat, which over the thin boards of plasterless Japanese ceilings holds perpetual and noisy carnival. In picturing "the national faith," which is Shinto, she is struck with the sense of emptiness, with the absence of ornament and color in the shrines, and with the total lack of ethical sentiment, though not of moral responsibility to the incarnation of the nation's life, the Emperor, while she is surprised at the spectacular contrasts shown in the popular forms of lively processions and "the play which makes the gods laugh," the Kagura. "The shadow land of Shinto" seems to be as empty of dogma or fixed truth as is the shrine of idols, and only the popular demonstrations seem concrete. Nevertheless, on reading her chapters, one can understand how certain natives of Mikado-land, while holding Shinto as essentially a religion of the family and of the hearth, and of the nation at home, are yet almost fanatical in their determination not only to accept neither metaphysical nor alien theology, but to bear forward their creed of simple rationalism throughout Asia and the world. Yet the author mistakes, we think, in supposing that ancestor worship is a primordial and necessary part of Shinto. No scholar, native or alien, has yet proved that the worship of ancestors is a genuine product of Japanese soil, while some learned foreigners believe, and a few of the higher critics among the Japanese have, as we think, demonstrated, that worship of ancestors was not a part of primitive Shinto. Of course such teaching in Japan, being both a political offence and also schismatic, cannot as yet be tolerated, but secures at once for any one in Government pay, after what looks very much like a heresy trial, either retirement or official decapitation. In fact, in this procedure, the Japanese are quite equal to their ecclesiastical brethren in America.

Though the chapter on Buddhist rites and sects is readable and shows plenty of first-hand observation, Miss Davidson is less informing and interesting, for here she has borrowed too much from general writers, and moreover reveals not only her own but the poverty also of even the Transactions of the Asiatic Society of Japan concerning the indigenous Buddhism and the tremendous transformation of the Aryan faith wrought in these islands. In fact, she is quite English in forgetting to name American authors from whom she borrows ideas and coloring. Nevertheless, she shows clearly the tendency of the Japanese Buddhist sects "to bring the goal of eternal hope ever nearer to the individual soul; in other words, to find a short cut to Nirvana, and to make Nirvana itself rather more interesting by substituting for its negative peace something more like positive hap-

piness." In her lively sketch of Kioto she mourns the effect of photography in making the work of Japanese artists and artisans less full of life and vividness, and more slavish in literal detail. Like other British corrupters of the Japanese and English languages, she uses freely the abomination "rickshaw." She went to hear a story-teller, not to be thrilled by the story, for she was deaf to the intricacies of the tale, but to see how the Japanese like to get their novel-reading done for them without the trouble of brain or eye-strain. She noticed that the hat went round at various crises of the story, when the expender of breath for the crowd would rest his lungs while the coins jingled.

Of Nikko we have heard before, but from none who has seemed so steeped in the memories and associations of the place which nature and art have made so beautiful. The chapter on the city of Tokio is one very nearly up to date, for it has pictures in word and engraving of the Emperor's review (on his birthday) of his imperial guards. There is also a chapter on the drama which sets the actors, acting and themes very creditably against the background of national history, ethics and taste. There is an index, and the mechanical outfit of print, paper, illustrations, and binding is excellent.

Old Time Aldwych, the Kingsway and Neighborhood. By Charles Gordon. E. P. Dutton & Co. 1904.

London is the last of the great capitals of Europe to recognize the necessity of modernizing itself. What Paris, Berlin, and Rome have done, London is only at last commencing on a scale at all adequate. Till a time within the memory of old people central London stood almost exactly on the lines of the mediæval city. Unfortunately, a grand opportunity was missed when London was rebuilt after the great fire of 1666. Had Wren's plan of rebuilding been adopted, London would have been far in advance of all huge modern cities. But, from Wren's day till recently, nothing was done to improve communications within the largest city of Europe. Some of us recollect when the way from Newgate to Holborn ran down a steep decline to the valley of the Fleet, and when, further westwards, the road made a bend round by the church of St. Giles-in-the-Fields. The making of the viaduct, of Faringdon Road, of New Oxford Street, Cannon Street, and the Thames Embankment, are all more or less modern works. Still later came the driving of broad streets through Soho and the adjacent districts. Shaftesbury Avenue and Charing Cross Road are two of the most recent improvements.

A still greater improvement than these last is one now in progress. Any one who will look at a map of London will note a very curious feature. While London was developing itself longitudinally from east to west, along the quasi-parallel lines of the Strand and Holborn, no care was taken to bring the two lines into communication by thoroughfares running north and south. Between the new Charing Cross Road and Holborn Circus there is not a single wide street from north to south. The London County Council is now supplying the want of such a street by the widening of Southampton Row on the north of Holborn, and by making a wide street on the south to the Strand. The latter part of the work will for the most part give us a new street, Kingsway, terminating in Aldwych. The latter name is justified by the fact that part of the new thoroughfare absorbs the vanished Wych Street. The name of Kingsway lacks such a justification, and is open to the objection that formerly it was the name of a street immediately to the north of the garden of Gray's Inn. But the old name had long ago disappeared, and the question is of interest to none but lovers of old London, future generations of whom will have to be on their guard against this appropriation of a lapsed name to a new street. The new streets traverse a region once fashionable, but the glory has long departed; the neighborhood was for the most part squalid and noisome, sadly needing light and air. The district is rich in historical memories, and, as it was untouched by the great fire, it contained some of the most picturesque relics of Old London. In particular Wych Street and Holywell Street—the latter a favorite haunt of the bookworm—had many houses with gables on the street, a mark of London architecture of the sixteenth and seventeenth centuries.

It is of this region that Mr. Gordon tells us in his book. He has not always had due regard to proportion. We could well have spared long extracts from the reports of deliberations of the London County Council. These have, indeed, relevance to the subject, but our patience is sorely tried by the reproduction of a tirade of eight pages taken from the *Daily Mail*, inveighing against the British workman in the style only too familiar. We almost rise in rebellion when we find this screed followed by three mortal pages extracted from the *Globe* newspaper. Mr. Gordon's weak point is his excessive fondness for quotation at most inordinate length. At one point we have over five pages from Hone's 'Every-Day Book,' elsewhere two pages from *Punch*; elsewhere, again, whole pages from Dickens. But Mr. Gordon has, after all, collected with great industry a vast number of anecdotes about a most interesting quarter of Old London. As he has allowed himself considerable space in which to tell the story of Temple Bar, he might have told us more about the heads which decorated it. A drawing made in 1772 for Noorthouck's 'London' shows two heads stuck above the Bar. One of these fell on March 31 of this year, 1772; so far as we know, the fall of the last is not recorded. No account of Temple Bar is complete without some reference to the famous burning of a Pope in November, 1679, when the popish plot of Titus Oates was at its height.

Mr. Gordon has given a map showing the line of the new streets. The book contains also many illustrations, the interest of which would have been even greater had their origin been more frequently stated.

Liberal Christianity: Its Origin, Nature, and Mission. By Jean Réville, professor in the Protestant Theological Faculty of the University of Paris. [Crown Theological Library.] London: Williams & Norgate; New York: G. P. Putnam's Sons.

The substance of these chapters was delivered by Professor Réville in 1902 in Geneva in a course of lectures under the auspices of the Swiss Liberal Christian Union. The lectures went by the title "Liberal Protestantism," but the broader title of the book is of the writer's own choosing. A colleague of the late Auguste Sabatier in the University of Paris, Professor Réville's line of thought will be found to run closely parallel with Sabatier's recent 'Religions of Authority and the Religion of the Spirit,' but his book has the accent of a different personality, and his views are much more tersely expressed. In either work we feel the stress of those conditions of the religious world which are just now pressing so heavily on the French people, but in Professor Réville's we feel it much the more keenly. Like Newman in 1835, he is the champion of a *Via Media*, but in a very different fashion. What he pleads for is some middle course between the traditional orthodoxy, Romanist or Protestant, and the negation and destruction of the extreme secular party. This is the voice of one crying in the wilderness.

There are five chapters corresponding to the five lectures given in Geneva. The first, "Genesis of Liberal Protestantism," is an *argumentum ad Protestantem*, maintaining the thesis that Liberal Protestantism is "the modern expression of the principle of the Reformation," which was actually founded on freedom of inquiry and the religious supremacy of the individual conscience. Liberal Protestantism merely applies the principles of the Reformation with greater consistency than the first reformers. The contention that the Protestant Bible was nearly two centuries on its way to a position of infallible authority is in perfect keeping with the conclusions of the most careful scholarship. The infallibility of the Bible, as of the Pope, was developed by the logic of necessity, not by that of the pure intellect. There should be a lesson here for Mr. Balfour, who so hopelessly confounds the reasons why men *do* believe with the reasons why they *should* believe.

A second chapter argues that Liberal Protestantism is the modern expression of the Christian religion, as well as of the Protestant form of it. But, in furtherance of this claim, Christianity is reduced to its lowest terms—the spirit of its founder, whose theological equally with his scientific teachings are set aside as local and temporary forms of thought. The spirit of the founder was that of filial trust in God, fraternal love for all mankind. Professor Réville waxes eloquent in his insistence that we have not here "a reduced Christianity," but the most exalted. His appeal is wholly to religious experience. The third chapter amplifies this teaching, incidentally repudiating the doctrines of the Trinity, total depravity, and vicarious atonement. In the pages which reflect the personality of Jesus, we seem to have an advance upon Sabatier, for whom the dogma of the Trinitarian and the opinion of the Unitarian rationalist are alike fatal to the Religion of the Spirit. It is quite impossible to distinguish Réville's opinion from that of the Unitarian rationalist, but he is able to recognize the "fruits of the Spirit" on the same tree with the orthodox dogma.

The fourth chapter, having for its particular subject "The Church in the Modern World," confronts us with the religious situation in which the French people at present find themselves. At this point we should expect to find Professor Réville pleading

for disestablishment. the entire separation of Church and State; but, while he concedes that this is the ideal for new countries like our own, in France he would still have the Church fostered by the State. But the Church, as fostered by the State, he would have possess an exclusively religious and moral character. At this point his view lacks definition. Apparently his State Church would be exclusive of Roman Catholics—a position as doubtful as that of Gladstone when he wrote of the relations of State and Church in 1838. A final chapter deals with "The Ideal of Liberal Protestantism and its Mission in Modern Society." Its mission is to discredit external authority and supernaturalism, to harmonize religion and science. Professor Réville reserves his profoundest indignation for "those double-minded believers, those amphibians of the spiritual life," who, convinced of the irrationality of the traditional dogma and the ecclesiastical rite, still bring to these their public approval and support.

Professor Réville's book is significant preëminently because it is one of hundreds issuing from seats of theological learning in which the traditional scheme of Christianity has no part nor lot; and the wonder is how long we are to wait for some practical readjustment corresponding to this immense development of revolutionary ideas in the field of thought.

Scottish Reminiscences. By Sir Archibald Geikie. Glasgow: James MacLehose & Sons. 1904. Pp. xii., 448.

Not for a long time has Scotland, fertile mother of memories as she is, produced so many-colored, fresh, and rich a book of reminiscences as this. A lengthened life and a broad range of experience; familiarity with every class, and a literary instinct which has kept his descriptions and narratives alive and in tone with all situations and conditions; a tenacious memory and most varied sympathies, have all gone to make Sir Archibald Geikie no mere teller of good stories, or thin voice out of a past world, but a veritable picturer of that world—in great part, now, dead and gone—as it essentially lived and moved and had its being. North and south, east and west, into every parish his work on the Geological Survey led him, and gave him a right of way not simply over hills and fields, but into the most intimate life of the people. And in the period, too, which has fallen to him he has been happy. Born in an Edinburgh that was practically still the town of Scott, he has lived through the second great period of Scottish development and change which came in with the steam engine, and which seems to be gathering speed and moment with every year. It is characteristic of the geologist that he believes that this transformation is in great part external; that the land which has always made its people still abides and works; and that "the fundamental groundwork of national character and temperament continues to be but little affected." Those who knew the old Scotland and the old breed of men, of granite and hillside mist, must hope that this is true.

Travel, religion, law, medicine, professors and schoolmasters, lairds and farmers, crofters and shepherds, life in the Highlands, the Shetlands and the Lowlands, wayside life, town life, superstitions and survivals, the Sabbath and the devil, all go into this farrago and kaleidoscope. Of stories, in which Scottish literature is so rich—apparently because of the easy contact of all classes with equally easy independence—there are many here which are fairly new. Has this one appeared before?

"A country doctor, who was attending a laird, had instructed the butler of the house in the art of taking his master's temperature with a thermometer. On repairing to the house one morning, he was met by the butler, to whom he said: 'Well, John, I hope the laird's temperature is not any higher to-day?' The man looked puzzled for a moment, and then replied: 'Weel, I was just wonderin' that mysell. Ye see he deed at twal' o'clock.'"

Another goes back at least to Bunyan, but the close is the immortal, "Am I a goat?" of Ian Maclaren. "'My friends,' he said, 'look at the hens when they drink. There's not ane o' them but lifts its heid in thankfulness, even for the water that is sae common. O that we were a' hens.'" But will the following appeal equally to the American mind?

"A Fife shepherd who was in the Grass-market of Edinburgh on a week day, found that his dog had strayed to some distance and was making off in a wrong direction. He begged an acquaintance whom he met to whistle for the animal. 'Whustle on your ain dowg,' was the indignant reply. 'Na, na, man,' said the perturbed drover. 'I canna dae that, for you see it's our Fast Day in Kirkaldy.'"

Certainly, to some part of this last every heart will respond: "'This is no' a godly place at all, at all,' said a discontented laborer in the Perthshire Highlands. 'They dinna preach the gospel here—and they wahtter the whusky.'" The rest must be left untold—the tales of the "inferior clawret," "I wass not very fond of saalt," "Ye'll aiblins gang doun," of the catechizing, and many more. The wandering Scot whose stock is beginning to show threadbare will find a new and ample store here.

BOOKS OF THE WEEK.

As a Chinaman Saw Us. D. Appleton & Co.
Bérard, Victor. La Révolte de l'Asie. Paris: Armand Colin. 4 fr.

TIMELY AND IMPORTANT NEW BOOKS

OF THE HIGHEST IMPORTANCE IN ANY STUDY OF THE FAR EASTERN CRISIS

Mr. B. L. PUTNAM WEALE'S *interesting account of the*

Manchu and Muscovite

Mr. WEALE aims to prove, in brief, that the supposed Russification of Manchuria is a myth; that the occupation has been purely military with no element of permanence. The author has spent his life among the Chinese, and his whole picture of the evanescent Russian civilization in contrast with the rooted organism of Chinese agricultural and trading life stands out vividly. His forecast (dating from last February) of the Japanese war, of Russia's resources and Japan's chances, from the point of view of an Englishman who knows the East thoroughly, makes most curious and interesting reading.

Cloth, 8vo, $3.00 net. (*Postage extra.*)

Dr. T. J. LAWRENCE'S *valuable handbook*

War and Neutrality in the Far East

deals with all the disputed questions which have come up in the Japanese war; its causes, the charges of treachery in the opening of it, coaling in neutral waters, floating mines, the purchase of ships in neutral countries, the passage of the Red Sea, international law in Korea and Manchuria, etc., etc. It is an exceptionally useful book to all who desire to form an intelligent opinion of the conduct of the Eastern war. *Cloth, 12mo, $1.25 net.* (*Postage extra.*)

Mr. DAVID T. HANBURY'S *first-hand report of*

Sport and Travel in the Northland of Canada

"To the scientist and professional explorer the book is unquestionably valuable."—*The Outlook.*

"We have seldom perused a book of modern travel and exploration of such interest and value to sportsmen as this."—*Shooting and Fishing.*

Cloth, 8vo, illustrated, $4.50 net. (*Postage 21c.*)

VOLUME VIII. OF THE CAMBRIDGE MODERN HISTORY

The French Revolution

The fourth volume to appear of the great work planned by Lord Acton, and carried out by the best modern writers of history, which is being issued at the rate of two volumes a year appearing in parallel series. Now ready are:

Vol. I. The Renaissance **Vol. VII. The United States**
Vol. II. The Reformation **Vol. VIII. The French Revolution**

To be complete in twelve volumes, royal 8vo, each $4.00 net. (*Carriage 30 cts.*)

"A vast store of historical treasures, collected by those who are expert in detecting what is true and worth keeping."—*The Tribune.*

Professor OSGOOD'S *notable achievement in institutional history*

The American Colonies in the Seventeenth Century

By HERBERT L. OSGOOD, of Columbia University.

Vols. I. and II., now ready, $5.00 net. (*Postage 44c.*)

"The author of these volumes on American colonial history has long been known to scholars as one of our ablest and most scientific historical investigators . . . In the two volumes which have appeared the American side of the picture is presented; the English side is reserved for a future volume . . . . It is not, however, too early to say that the book will have a great effect upon the future study of Colonial history, and that it will be recognized as one of the foremost authorities."—*The New York Times.*

ELSON'S History of the United States of America

By HENRY W. ELSON. *In one 12mo volume, cloth, $1.75 net.* (*Postage 24c.*)

"We do not hesitate, in a final estimate, to award this book a very high, perhaps the highest, place, among works of its kind. It deserves and should receive careful attention and general applause."—*The New York Times' Saturday Review.*

Published by **THE MACMILLAN COMPANY,** 66 Fifth Ave., N. Y.

RENSEIGNEMENTS GÉNÉRAUX

L'Enseignement de l'École des Sciences Politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves sont admis sans examens, avec l'agrément du Directeur et du Conseil de l'École; il n'ont à justifier d'aucun grade universitaire.

L'enseignement comprend un ensemble de cours répartis en deux années, mais la durée des études peut être étendue à trois ans. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1904-1905.—L'année scolaire commencera le 7 novembre 1904 et finira le 5 juin 1905. On s'inscrira au Secrétariat à partir du 2 novembre 1904. **Inscription d'ensemble** donnant entrée à tous les cours et conférences reguliers et complémentaires et à la Bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers).....PAR ANNÉE: **300 fr.**

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'Ecole et sur les carrières auxquelles elle prépare.*

S'adresser à **l'ECOLE, 27, Rue Saint-Guillaume, PARIS.**

HARVARD UNIVERSITY.

HARVARD MEDICAL SCHOOL

Open only to Bachelors of Arts, Science, or Philosophy, and Persons of Equivalent Standing.

The course of study required for the degree of M.D. is of four years' duration. The next year begins Sept. 29, 1904, and ends on the last Wednesday in June, 1905.

COURSES FOR GRADUATES IN MEDICINE.

Courses of instruction are offered for graduates of recognized medical schools, and are given in all the subjects of practical and scientific medicine.

The extensive laboratories of the school are inferior to none, and the clinical advantages afforded by the hospitals of Boston are unequaled in quality and extent.

SUMMER COURSES.

During the summer, courses in many branches of practical and scientific medicine are given to both medical students and graduates.

Facilities for research work are offered in all of the laboratories.

For detailed announcements address
DR. WM. L. RICHARDSON, Dean,
Harvard Medical School, 688 Boylston St., Boston, Mass.

The Nation.

NEW YORK, THURSDAY, JULY 14, 1904.

The Week.

In selecting ex-Senator Henry G. Davis for the Vice-Presidency the Democratic Convention chose a candidate who should not have been considered, because of his age—eighty-one years. This fact despite his being phenomenally vigorous and active, must overshadow his undoubted abilities and his very honorable career. Had the party insisted upon the use of Judson Harmon's name he must have listened to its call, and in him the country would have recognized a man of honor, integrity, and soundness of view, in every way fit to succeed to the Presidency in the event of the election of Judge Parker and himself. Were Mr. Davis twenty years younger, his selection would have been hailed as fresh proof of the complete convalescence of the Democrats. The campaign will, however, not hinge upon the question of his age, however much Republican newspapers and orators may harp upon it. It must not be overlooked that the existing law in regard to the succession to the Presidency makes such a mistake of judgment less serious than it would have been some years ago. In case of the death of both Mr. Parker and Mr. Davis while in office—a hitherto unheard-of contingency—the Presidency would be assumed by the Secretary of State, and this fact would doubtless be considered by Judge Parker if called upon to select a Cabinet. Looked at purely from the politician's point of view, there can be no doubt that the addition of this octogenarian railroad man to the ticket will insure the return of Maryland and West Virginia to the Democratic column.

Unquestionably the highest tribute to Judge Parker is that paid him by our old stalwart Republican neighbor, the New York *Tribune*. We do not refer to its spontaneous admiration of Sunday, when it declared that his stand did "signal credit to the firmness and courage of his public character," and stated that Judge Parker "is widely respected in this State for the conspicuous ability he has shown in politics and on the bench, and for the purity and integrity of his private life." These phrases, like its opinion that the St. Louis message could surprise no one familiar with the Judge's "honorable achievements and honorable record," were doubtless merely the unpremeditated compliments of the frank mind ever to be expected of the early-morning leader writer. But, after sleeping on the matter, the *Tribune's* sages arrived at a sober second thought. They declared on Monday that the Judge "played a shrewd game of politics" to win an "improbable if not impossible nomination," and "cannot concede that the final dramatic act in a skilful performance entitles him to be acclaimed as a man of heroic mould." If this is an excellent rebuke of its own previous enthusiasm, it is also the plainest possible proof of the stunning effects of the Parker bombshell upon the Republican camp. It will undoubtedly take some days for the party to realize that the foremost figure in American politics is to-day residing not at Oyster Bay, but at Esopus.

Let us see—did not the Republican Convention also receive a telegram from its candidate? Oh, yes; it was that heroic, that dazzling and sublime message: "Perdicaris alive or Raisuli dead." Judge Parker, Judge Parker, how could you! You gave the real thing and left Roosevelt only the fustian. The telegram from Esopus killed more things than the silver issue. It did to death all the mock-heroics, all the clap-trap, all the loud boasting with which the only brave and truly terrible candidate was to split the ears of the groundlings. "Raisuli dead," indeed! Well, he is already the deadest thing the Republican campaigners have got in their extensive mortuary collection.

The real conviction of the Democrats was shown when John Sharp Williams asked the St. Louis Convention if there was a man there who believed that silver was a live issue. There was not one affirmative response. The delegates from the South might rage over the Parker telegram as an unprecedented proceeding, but over the subject-matter of the dispatch they could not get excited. The South has no desire for any standard but the present. Along with the rest of the country it was poor in 1896, and on the say-so of the Bryanites fancied that free silver would make it rich. The end, not the means, was what it cared for, and the end has been attained. What the South really wanted was a big bank account, and that it has acquired in the last few years, especially since last fall. Checks and drafts are now seen to be just as good and efficient as silver. Free silver could not have made that section any more prosperous than it is to-day, and in view of that fact the Democrats south of Mason and Dixon's line are not going to get excited over Judge Parker's gold-standard telegram. They are, in fact, hailing it as the utterance of a strong and brave man.

Mr. Williams, by the way, is historically accurate in saying that the price of wheat was the chief cause of McKinley's election in 1896. The average price of No. 2 red winter wheat in 1891 was $1.094, from which it declined to less than 51 cents on December 1, 1895. What more was needed to drive the farmers to Populism? Loaded with debt, and barely able, in cases without number, to provide their families with the mere necessaries, they were in a mood to welcome any kind of change. But in 1896 a remarkable transformation occurred in their condition. A great shortage developed in the wheat crop of Australia, Argentina, Russia, India, and other countries. In India there was an actual famine, and wheat had to be imported. Our crop of 1896 hit the market just at the right time. Long before election day the farmer began to see the end of the troubles which had been afflicting him for years, and also to discover that Bryan's "twin" theory for wheat and silver was nonsense. On December 1, 1896, wheat was worth 72.6 cents; a year later it was quoted at 80.8 cents. With half our population thrust suddenly into such prosperity, an industrial and speculative "boom" was inevitable. It is worth noting, however, that while in those days Providence was giving us prosperity, President McKinley was sending the Wolcott commission over Europe to see what could be done for silver.

Every one who remembers the keen political excitement over the wheat crop prospects in the autumn of 1896, and the rapid rise in price, will admit that harvest developments have some bearing on a Presidential contest. Their significance, however, is not always the same. In the majority of cases abundant crops are a help to the canvass of the party already in office—this on the general principle that all pleasant occurrences will be more or less blindly associated with the ruling powers. But the "wheat boom" of 1896 was not in this category; the Opposition claimed it as an argument for their campaign, and the erudite Mr. Bryan, it will be recalled, threw out dark hints that Wall Street was "putting up the price of wheat" in order to embarrass his plans. So far as indications go at this early date, there will be somewhat similar perplexity in reasoning from this year's crops to their political effect. The one salient fact in the harvest outlook is the extraordinary promise of the cotton crop.

Last week's monthly Government estimate of that crop, following June's estimate of a 10 per cent. larger acreage than last year's and a 9 per cent. better condition, showed the average condition to have further improved 5 per cent. If

this promise is made good by the season's later developments, a cotton crop larger by three-quarters of a million bales than any hitherto picked in the United States might be expected. To predict it thus early in the season would be rash, but it is still a chance to be reckoned with. Supposing a "bumper crop," however, at a time when the world's existing supplies are at a minimum, how should the outcome affect the political campaign? It will hardly be supposed that Texas, Mississippi, Georgia, Alabama, Louisiana, and the Carolinas will be swept from their Democratic moorings. Doubtless; resumption of work next autumn at mills which have shut down because of inadequate supplies would serve to help the Administration party; but here the resultant benefit falls chiefly to Massachusetts, to whose Presidential vote the Democrats have not yet aspired. There is one respect, however, in which the promised additional prosperity to the Southern planter will unquestionably affect the entire political situation, as it has been already affected by the prolonged prosperity of the grain belt. It will be the *coup de grâce* of the free-silver and cheap-money agitation.

From sources different as the independent Kansas City *Star* and the thick-and-thin Republican *Globe-Democrat* of St. Louis, comes the warning that Mr. Folk is to become the victim of the ring of boodlers that has ruled Missouri for so many years. The *Star* has observed a movement on the part of the Butler organization to make terms with the Republican party and accomplish the defeat of Folk at the polls. The "great opportunity" of the Republicans, which has been the subject of party essays, is taken to mean simply that the minority may combine with the anti-Folk Democrats. Butler is reported to be willing to tolerate the devil of Republican rule rather than fall into the deep sea of Democratic oblivion in the event of Folk's victory. The *Globe-Democrat* does not hint that any combination is to be made to defeat Folk, but it points out that the machine will, in the event of Democratic success, either capture Folk or make his term in office one long and futile contest with a State organization controlled by the old gang. Two State conventions have been held for the nomination of judicial officers and the selection of delegates to the National Democratic Convention—and the ring has easily dominated them both. The third, to be held on July 19, when Folk's nomination for Governor will be made, is expected to follow in the track of the others in endorsing and praising the State Administrations during the last thirty years. It is evident that Folk's fight is only beginning.

That the courts below Mason and Dixon's line may in the long run be depended upon to do justice to the negro appears from a recent decision of Judge Emory Speer of the United States District Court of Georgia. A colored man accused of disorderly conduct was twice sentenced for the same offence, by a police justice in Macon, Georgia, to seven months on the chain gang. Judge Speer, while declaring that it was not a color-line case, ordered the man released because of his having been punished without due process of law. That a color question was injected appears from the contention of the city of Macon that, while the penalty would be an infamous one for a white man, it could not hurt a negro's standing! To this Judge Speer replied with spirit: "Such considerations do not appeal to a court charged with the equal enforcement of the law. Nor do I believe they meet the approbation of the best people of the Southern States. Nor are such sentiments conducive to our welfare or hopeful for our future." Another cheering sign is the address made at the recent Democratic Convention in North Carolina by the retiring Governor Aycock, which the Raleigh *Biblical Recorder* characterizes as the noblest of his fine life. In it he defends his incessant championship of the new educational movement for negroes as well as whites, for which he had been bitterly attacked. In speaking of the negro, the Governor reminded his audience that the white men had taken charge of him and his destinies, and therefore must deal justly by him and make the most of him. He declared that the Almighty will not tolerate a people who, having power over a weaker race, will not protect it.

The Manila *Times* has little patience with the American college professors who are asking for the independence of the Philippines. This demand, it says, is not based on knowledge, but is a "misguided sentiment." And yet the college professors are not so very different from the *Times*. The latter says: "If the petitioners would really serve the Filipino people, let them press the demand of the islands for laws that will give commercial autonomy, instead of permitting the islands to be held at arm's length and throttled by a prohibitive tariff." Indeed, our transpacific contemporary gets fairly hot in talking about the "serious disappointment to all true friends of the Philippines" which has resulted from our five years' rule. The last session of Congress, it declares, was one of temporizing toward the archipelago, President Roosevelt "leading the van in passive submission to a do-nothing policy." In the face of a "bluff and bluster" many had hoped for better results. When the Manila *Times* talks of "a law that has throttled the products of the island for five years, that has been pronounced to be vicious and unwise by the most competent authority," it comes pretty near furnishing the college professors all the facts they need for renewed efforts in behalf of Filipino independence. The people of the islands, it seems, have placed too much reliance on "honeyed words"; in this way they have been "lulled to sleep." But if they are intelligent enough for the difficult task of "commercial autonomy," should they not be able to take care of themselves politically?

Licensed to carry 1,800 passengers, with lifeboat and raft accommodations for 247—this is the condition of affairs revealed by the reëxamination of the excursion steamer *Cepheus*. So far as could be observed, the ship's equipment was in excellent condition, although the inspectors did not insist upon the actual lowering of the lifeboats. Nor can it be alleged that the owners of the *Cepheus* were violating existing law in having so few boats. Indeed, she has more than are required by the Treasury rules approved in February, 1903. The question which arises is not an easy one to settle. Shall excursion steamers and ocean liners be compelled to furnish a seat in a boat for every passenger? At present there is no steamer afloat which even pretends to do this. Take the case of the *Oregon*, for instance. She sank hours after being struck, in broad daylight. There was perfect order and discipline. Yet many of her passengers and crew must have drowned had not outside aid come in the nick of time. As it is, many officers of steamships declare that it is impossible for excursion boats or liners to give up the requisite space to carry sufficient boats and rafts for all, and that any law requiring this would be an unnecessary hardship.

Here is a matter of world-wide importance which should be settled as soon as possible in some authoritative way. Must a large part of those who go down to the sea in ships be prepared to drown in case of accident? If so, it should be known, and travellers should begin to imitate the Japanese disregard of death. If it is possible to carry a sufficient number of collapsible boats and rafts to accommodate the legal number of passengers and the crew, the public should know it, and our inspection laws be so amended as to require every boat to come up to the standard. There are, of course, certain kinds of casualties—like collision at sea, in a severe storm—where loss of life is inevitable. But, none the less, nothing should be left undone to prevent the repetition of such disasters as the recent ones and to reduce the loss of life to a minimum. It would seem as if this were a great chance for the United States to do a really humanitar-

ian work and to set an example to other nations. Why should not the Secretary of Commerce appoint a committee of naval officers and marine experts to consider the question? It must be remembered that all improvements in the treatment of crews and passengers have been brought about only by legislative action. The abuse of seamen, the overcrowding of vessels, and their overloading were all stopped by this or that Congress or Parliament. The next step would seem to be the rigid safeguarding of the lives of passengers.

The Canadian Finance Minister will have a better knowledge of Yankee ingenuity after he has experimented a while with his anti-dumping policy. He says he will not let our goods be sold across the border for less than their market price in this country, but the Canadian manufacturers have not in the least ceased worrying over the situation. They have got wind of the fact that American firms are preparing to send their surplus goods into the Dominion at regular market invoices, and to employ salaried dealers there to sell them at slaughter prices. An Ottawa wholesale merchant, for instance, has just received four circular letters from manufacturers in the United States, who intimate that they will invoice goods into Canada at our prices and pay him for handling them a salary equal to the return obtained by American dealers. If German or British manufacturers should attempt to get their goods into the United States in such ways as this, we should regard it as a dirty trick. But in the present case it is only an evidence of legitimate enterprise and national shrewdness.

The preliminary figures of the Canadian Finance Minister for the fiscal year just ended show how far the Dominion has lagged behind this country in entering hard times. The total revenue is estimated at about $71,000,000, and the expenditures at about $54,500,000, leaving a surplus of $16,500,000. This is the largest revenue ever shown, and gains are recorded in nearly every department. Since 1899, in fact, there has been an increase in receipts of nearly 55 per cent., with no set-backs. On the other hand, expenses show an advance of only 30 per cent. Contrast this with our ups and downs. Since 1899, both in receipts and expenditures, Canada has had a boom, but, notwithstanding certain speculative collapses, her industrial situation is still an active one. Can it be that a lower tariff has had a healthier effect on Canadian finance than that produced by the Dingley law?

Mr. Balfour is not the only Premier who has been "booed" in the Commons; Mr. Gladstone occasionally had that misfortune. But Mr. Balfour can very ill afford to be shouted down; it is the sign of his waning popularity. Mr. Gladstone was frankly detested by the Tories; Mr. Balfour has enjoyed a singular personal popularity among the Liberals. Sacrificing that, not very much is left of him. It was the application of closure to the Licensing Bill which brought on the uproar on July 6. Undoubtedly there is a real feeling of outrage among the Opposition. Mr. Balfour has introduced a very radical and highly contentious matter, and declines to allow it to be properly debated. People see that, except for the need of placating "the trade" before the elections, there is no reason why the Licensing Bill should be made an urgent measure. In forcing it down the throat of Parliament, Mr. Balfour has done much to diminish that personal respect which has carried him over many rough places. Politically, he has fallen very low, lacking even the loyalty of his reluctant majority. His brave words that he will live out the year unless beaten earlier, seem the expression of a man who has made officeholding his highest good. It was some such sense that the politician had superseded the delightful gentleman and philosopher which provoked if it did not wholly justify the recent tumult.

The original surmise as to why the British expedition went to Tibet receives confirmation from the reply to the courteously apprehensive questions addressed by our State Department to the British Foreign Office. It was not a veiled attempt at land-grabbing, strategically begun when Russia's hands were full, but simply a display of force to save the pride of Viceroy Curzon, who thought his deputations to the Tibetans had not been welcomed with appropriate consideration. It is doubtless difficult for the Western mind to appreciate duly the importance of impressing with a show of force the imagination of Orientals, if they are to be kept in due subjection. But while allowance must be made for "ways that are not as our ways," the "fuss and feathers" part of governing alien races might be confined to territory which these races actually inhabit. The Tibetans, with their passion for isolation, might remain as unknown and as blameless as the Homeric Ethiopians, if the Viceroy's officials on the Indian frontier would only let them alone. If they must be objectively impressed with the worshipful character of Lord Curzon, the old-fashioned plan of Gessler in the Swiss cantons would seem to be a much more humane device than slaughtering a few thousand ill-armed peasants and razing a jong. The disclaimer by Downing Street of anything that savors of impairing the integrity of China is followed by the somewhat naïve statement that, provided the Tibetans comply with their invaders' demands, the British will be only too ready to retire, since they are now satisfied from their own experience that the topography of the country amply protects it against Russian encroachments.

The process of benevolent assimilation goes bravely on in the Dutch East India possessions. The official record of Atcheenese "assimilated" in the last two battles is as follows:

Women killed	310
Children killed	218
Men killed	558
Wounded (not classified)	103
Captured (not classified)	45
Total	1,234

Details of this kind that may serve to encourage the patriotic love of war ought to be rigorously exacted of colonial governors. Since Dean Swift published his satire entitled "A Modest Proposal" for alleviating the woes of Ireland, nothing more brutal and gruesome than this laconic dispatch has ever been given publicity. It is also worthy of remark that this recent horror is not merely one of the inevitable but regrettable incidents of initiating a policy of colonial conquest. For three-quarters of a century has this guerrilla warfare in the Dutch colonial empire been in progress. It demonstrates sufficiently that the purpose of the Dutch is a war of extermination, and that they are willing in a brazen-faced way to make frank avowal of their intentions.

Through the taking of Kaiping (Kaichow) is minimized in the Russian dispatches, it is probable that there has been considerable fighting at that point, with serious losses on either side. Even a "strategic retreat" of 30,000 troops hard pressed by 60,000 can hardly have been conducted during three days with a mere handful of casualties. The possession of Kaiping leaves the Japanese free to move along the Liao-tung Gulf towards Yinkow—a movement that has already begun. Nodzu, on the road from Siuyen to Ta-che-kiao, is in a position to strike the retreating Russian columns, and to support Oku's further advance. Indeed, there are unconfirmed rumors that fighting has taken place near Ta-che-kiao. In any case, the Russians plainly must withdraw to Haicheng, where, in view of Kuroki's flanking positions on the Liaoyang road, they will be none too safe. Very soon one may expect to hear of transports off Yinkow. The landing of a strong force there would assure complete control of the coast and an admirable base. It would round out the most important operations of the war since the first attack on the Russian fleet. From Port Arthur comes only doubtful news—enough, however, to show that the Japanese are steadily driving the garrison in upon the city.

A MAN AT LAST.

A real man appeared above the American horizon on Sunday. Judge Parker had been represented as a veiled candidate; but at an intensely dramatic moment the curtain was dropped, and he was revealed as a figure of heroic proportions. Bryan had jeered at him as an interrogation-point, but it was another sort of point—the very tip of Ithuriel's spear—which pierced Bryanism to the heart when the Judge wrote his astounding, his exhilarating, his conquering telegram. Such clear and shining courage has not been seen in a Presidential candidate since Charles Francis Adams wrote, "Take me out of that crowd." In Judge Parker's person the man who would rather be right than President exists anew. Taking his political life in his hands, Alton B. Parker put away the Presidency unless it were offered to him on terms squaring with his own convictions. No wonder the country was thrilled. No wonder that Europe rubbed its eyes. A man had risen, towering above the puny politicians.

With no armor but his honest thought, no skill but simple faith, Parker quietly acted as an honorable gentleman. But what amaze he struck into the hearts of all the professional politicians! A plain citizen saying in plain language that he declined a Presidential nomination already made, unless his convictions and his honor were cleared—incredible! The telegram must be a forgery. Even the Associated Press questioned it. Nobody at St. Louis would believe it genuine till verified. Hill's first cry was, "Suppress it." As well try to suppress Pike's Peak. A man had stood forth. A "mystery," Senator Beveridge had sneeringly called him; the real mystery is why the expert and tortuous politicians do not yet, any more than in Burke's day, know their own trade. They plot and burrow and crawl and sneak and compromise, when along comes an unknown man with a clear gray eye and a square jaw, and, by one honest word, shatters their machinations, and leaves them covered with mortification and ridicule. It is bravery's simple gravitation drawing the whole world again.

Judge Parker's calmly heroic act burst so startlingly upon the country, was so bold in conception and so triumphant in execution, and was such an overpowering revelation of character, that we may not perceive at first how great a public benefit it wrought. It drove the last nail into the coffin of free silver. Better than an act of Congress does it establish the gold standard beyond cavil or dispute. The business world at last emerges from its long dread. Let the campaign run its course; let the tariff and taxation and Imperialism be discussed—in no event does the stability of our financial system hang upon the event. Judge Parker has removed the last doubt. Try as the Republicans may, they cannot flog that dead issue along the road.

One courageous utterance has instantaneously and magically changed the whole aspect of the campaign. It has transformed dejection into the highest hopes. To-day, it is the Republican party that is thrown into confusion. It sees its guns spiked and its ammunition hurled into Esopus Creek. The plan of campaign over which it was gloating, it already has to abandon. To talk one word more about danger to the gold standard would be to excite derision. And how about that other fond charge that Parker is "Hill's man"? Who could breathe that in the future? Look at Hill, rolled in the dust at St. Louis, and ask if that Liliputian will ever undertake to bind the mighty thews of the man who openly discomfited him. Let no Republican orator who does not wish to get himself hooted dare henceforth revive the slander that Judge Parker will be dominated by Hill. And note, too, the splendid guarantee we have that the man who, while only a candidate, could so nobly defy "pressure," would stand immovably for his convictions once elected President.

We suspect that the Republicans will not hereafter be so eager to challenge comparison of personalities. It appears that your charging colonels are not the only ones in whom civic courage may be bred. That product seems to thrive even better on the banks of the Hudson than on San Juan Hill. Woe to the Republican orator who ventures a rhetorical question—"Who is the candidate who thinks with lightning swiftness in an emergency, who takes counsel only of his own courage, who puts his political life at hazard, and does big things which set the country ringing?" The answer would come back like the sound of many waters, "Parker!" Honor bright, you lauders of Theodore Roosevelt, can you point to an act in his public career which shows anything approximating the moral courage displayed by Judge Parker on Saturday?

Such an exhibition of sheer manhood makes all parties kin. Republicans know a man when they see him, and thousands of them are to-day applauding the Democrat of whom they were preparing to speak slightingly. Judge Parker has inspired multitudes who had thought that nothing in politics could ever cause them to become enthusiastic again. Everywhere one encounters the thrill. "We have a man. We have a leader." Already it is plain that the kindling hope and zeal put into the hearts of young men by Grover Cleveland are to be renewed under the inspiration of Judge Parker's leadership. At the first flash of his sword his party is marvellously heartened, the Republicans correspondingly dismayed. But it is, after all, the personal more than the political aspect of Judge Parker's magnificent act that we wish most to emphasize to-day. He has given fresh hope to America. Democratic government wears a fairer face for the discovery of such civic virtue as his held in reserve for the day of great need. Judge Parker has removed a reproach not only from his party, but from his country. Too many were saying of the United States, as Disraeli did of France, that it had its chassepot and its mitrailleuse, but "of that third engine, called a man, it did not possess a single specimen." To-day we can point to the man, so towering that England sees and salutes him, so modest and unpretentious and simply courageous that his fellow-countrymen are rejoicing in him as in a new national possession.

> "Brave men are born into the land,
> And whence, the foolish do not know."

THE DEMOCRATIC CONVENTION.

Ineptitude is the word that best characterizes the St. Louis convention. The continual uproar over a comparatively unknown candidate, the combination of senseless din in debate with sheer timidity in the votes—all these features of the gathering show the ineffectiveness of national conventions as at present organized. To-day we face this dilemma—a convention absolutely boss-ridden and farcical, or one delivered to the mercy of the galleries, the sharp practice of the wire-pullers, and the caprice of the rank and file of delegates. In either case the result expresses anything but the will of the party, and to-day the Democratic platform represents fairly neither branch of the Democracy. The trouble is that the attempt to float a candidate on sheer shouting affects all the deliberations of a national convention. The delegates are subject to irrational panic and to equally irrational enthusiasms. Disorder is infectious, and no other sort of deliberative body would so much as attempt to do business under the conditions of pandemonium such as prevailed at St. Louis. The situation calls loudly for reform. Conventions should be restricted to their own members, which would permit at least a semblance of debate and respect for parliamentary procedure. As things stand, it is difficult to say which is the more astounding spectacle—the emptiness of the cut-and-dried proceedings at Chicago or the bedlam at St. Louis.

Hill's crass mismanagement of the situation at St. Louis was only what might have been expected. To entrust to him any cause in which principles or morals are involved, is to invite betrayal. He was the last man to send into conference over the money plank with Mr. Bryan. That bold and fertile Robe-

spierre of the party was sure to daunt and defeat its most arrant truckler and coward. The result gives the country the full measure of Hill as a man and a professed leader. With more than two-thirds of the Convention ready to support him, he allowed himself to be frightened into surrender to less than one-third. The blunder of putting him on the Committee on Resolutions to stand for the gold plank was fatal. A real man in his clothes would have stood till doomsday before yielding to the impudent and destructive demands of a confessed minority, and suffering the platform to be silent on the currency.

Amid all the sound and fury of the Convention, one fact stands out clear: a convulsed party is casting out Bryanism. Mr. Bryan chose his battleground most adroitly. He had a much stronger case in contesting the Illinois delegation than he could have upon any financial issue. There seems to be no question that the Hopkins machine in Illinois had been brutally high-handed in its manipulation of delegates. Mr. Bryan was able to secure support, in his contention, from several States whose votes were pledged to Parker. Yet, even so, he could not muster one-third of the Convention. In other words, on a test vote shrewdly forced by him, he simply demonstrated that his power even as an obstructionist is gone. More than two-thirds of the Convention was against the Bryan-Hearst alliance.

Chairman Williams's "keynote" speech at the opening had some highly effective passages. Being in the nature of a rejoinder to Mr. Root and a dissection of the Republican platform, it necessarily lacked a continuity of rhetorical sweep. In this respect it suffers by comparison with Mr. Root's speech. Mr. Williams is too much subdued to the manner of the House of Representatives to omit personal retorts or to cultivate a concise style. Still, on the main questions at issue between the two parties, he was acute, able, and convincing. He had this great advantage over Mr. Root, in the controverted positions about the tariff and finance, that the truth of history was on his side. Mr. Williams could afford to concede the rhetoric if granted the facts.

In his lancing of Republican tergiversations about the tariff, Mr. Williams showed how completely the party is at the mercy of private interests. But in what he had to say on the subject of negro disfranchisement, he went even further in taunting it with being hopelessly commercialized. He asserted that the plank in the Republican platform calling upon Congress to inquire into the conditions of the suffrage in the South was the emptiest sham, and that the Republicans would dare do nothing effective in behalf of the political rights of the negro. Why? Because "business" is everything. The South would make the "mercantile class" of the North suffer; therefore the Republicans will not stir in the negro's cause. In saying this, Mr. Williams is only echoing what the Southern press is filled with. The same arguments are employed that Northern doughfaces used to be plied with in slavery days. "The South is the best customer of Northern factories," and so on. And who is the Republican to resent the imputation and take up the challenge? Not Secretary Hay. He has just said at Jackson that the Republican party in its beginnings was willing to put "questions of finance, of political economy, out of sight for the moment," in order to devote itself to the great cause of human rights; but he ventures no hint that the party is ready to do that to-day.

The platform, as adopted, is, like most human things—and nothing is more "human" than a party platform—a mixed product, often admirable, frequently timid, in spots strong, in places weak. Its general doctrine of government is unexceptionable. "Local self-government" is insisted upon as the distinctive feature and great strength of the American system. The demand of the platform for strict economy and for retrenchment in governmental expenditures, to the end of lightening taxes, goes well with its promise of removing tariff burdens in order to aid industry and prevent the oppression of the consumer. In regard to tariff revision and Trusts, the platform roars gently. Greater energy and explicitness would have carried more conviction, and we should have hailed a determined and definite pledge to repeal specified duties that bear with gross injustice upon the people. Naming schedules and promising repeal would not have been out of place, though, we admit, most unusual, in a platform. Still, there is the precise undertaking to do away with all tariff bulwarks behind which hide monopoly and discrimination against American purchasers, and the avowal of the general principle that the only warrant for laying tariff taxes, as all others, is the need of raising revenue to carry on the government.

The deliverances on the civil service are more emphatic and satisfactory than we have had from the Democratic party in recent years. It declares itself committed to "the principles of civil-service reform," and calls for their "honest, just, and impartial enforcement." And the Philippine Independence Committee, turned away empty-handed by the Republican Convention, had its petition granted at St. Louis. The platform proposes to "set the Filipino people upon their feet, free and independent, to work out their own destiny." According to Secretary Taft, that will give joy to "agitators" in the Philippines; but will it not also give joy to the 10,000 petitioners, including the most distinguished names in America, who asked that such a promise might be made? The "party of intelligence" rejected this appeal of American intelligence. The Democrats did not think so meanly of the lights in our universities, nor of our judges and clergymen and philanthropists.

As an extract from a stump speech, the reference to the race question in the Democratic platform would read very well. As a plank, it is feeble enough. Although the Southerners had more influence in this convention than in any held for years past, the party did not dare come out openly for the repression and disfranchisement of the negro. Knowing that any other course would put the strongest kind of weapon into the hands of their opponents, they confined themselves to vague generalities which may mean anything or nothing, and expressed their deprecating views in the language of a village orator. We doubt very much whether the Southern press will like this appeal to the country to share the burden of this problem fraternally, for Southern editors have generally insisted upon being allowed to settle the "peculiar" question for themselves, without interference from North, East, or West. For this recognition that the issue is a national one we should be duly thankful, as well as for the dropping of the plank suggested by Chairman Williams, which would have been a far greater menace to national concord than the utterance of the Republican platform upon this question.

ARMY PROMOTIONS ONCE MORE.

The retirement last week of Brig.-Gen. Peter C. Hains has given the Administration another opportunity to promote and retire as brigadier-generals officers whom it deems worthy of this honor. It has therefore selected for advancement one colonel, four lieutenant-colonels and a major—the latter of only twenty-five years' service. Their claims for this distinction vary from injuries received in the line of duty in the case of the major, to long service in the case of the colonel. Not one of the officers chosen has done anything more than the duties required of him by the various positions he has had to fill. But the object of the Administration has been to transfer to the retired list as many of the older officers as possible in order to infuse new blood into the higher grades. It has, moreover, had the sanction of Congress in this procedure, despite the fact that, previous to 1898, no one ever dreamed of using one vacancy for the advancement of many officers, in order to give them a larger pension on retirement and a higher title. But it is a noteworthy fact that President Roosevelt is now going further than ever before, two of the newest generals having entered the army a decade after the

close of the civil war. Where is this business to stop?

Unquestionably, the motive which induced Presidents McKinley and Roosevelt to resort to this method of promoting officers was a creditable one. They desired to reward a few worthy officers of long service for their gallantry in Cuba and the Philippines, and with this intention Congress sympathized from the first. Later on, Senators and Representatives were quick to see the political advantages resulting from the bestowal of such favors. Whether the responsibility rests with them or with the executive branch of the Government, the original motive has been entirely lost sight of, and many officers have been retired as generals who in no way merited the distinction save on the ground of length of service. This in itself does not entitle a servant of the Government to special consideration, particularly if the service has been inefficient or of that unintelligent and routine character to be found in so many of the branches of the Government.

Soon after Mr. Roosevelt began the policy of retiring large batches of civil-war veterans as generals, there was a loud outcry from those who had been retired with lower rank since 1898, but whose services were of the same general character. The demand for recognition and equal treatment became so great that the War Department fell back upon Congress, which responded by passing, on April 23 last, a law giving the President the right to advance by one grade every officer of civil-war service on the retired list who had not already been promoted for retirement purposes. As a result 90 colonels have become generals, and 42 lieutenant-colonels full colonels, while 49 majors, 136 captains, and 45 lieutenants have each been advanced one grade.

The large increase in salaries which this law necessitates is obvious. But this is not the most important consideration. As in every case where promotions are made *en masse*, so many black sheep have been advanced with the deserving officers as to nullify the purpose of the act—to reward worthy public servants who had been discriminated against by an abuse of the appointing power. For instance, among the officers favored are several forcibly retired by the President for the good of the service, others who retired voluntarily in order to escape courts-martial, and still others who have been punished for offences committed since retirement. In addition, there are a number of officers on the list whose previous rank was more than sufficient reward for their undistinguished service.

Far from being a stimulus to worthy officers, the latest action of President and Congress must be characterized as against the true interests of the army. Together with the advancement of such Presidential or political favorites as Grant, Funston, Wood, and Mills, it must be looked upon as certain to inculcate false ideals. Frederick the Great once utterly exposed the fallacy that merit consists in field service alone. Being urged to appoint a certain general to an exalted and much coveted post, he was told that the general in question had seen much active service. "Pooh," replied the King; "that is no recommendation. The mule that carries my baggage has gone through a dozen campaigns." Moreover, no one can maintain that all of the hundreds of officers specially advanced since 1898 actually saw field service. Many of them may have been miles from the front because their duty was elsewhere, like one of the latest batch of generals—an officer whose sole merit lay in being an efficient superintendent of transports in 1898 and 1899, in New York or San Francisco.

Not only has this wholesale promotion made every officer insist that he be retired as a general, but it has put a wholly false emphasis on length of service. This alone places the drone on the same footing with the worthy and able and scholarly officer. Upon pure merit almost no stress has been laid, or so little that the lesson has not been borne in upon the army as a whole, while many of the older generals, of the type of Gen. Schofield, feel that their rank has been so cheapened by its widespread and often unmerited bestowal as to have lost its value in a large degree. How great the loading up of the retired list with high-titled officers has been appears from the following figures: On January 1, 1898, there were 661 retired officers, of whom one was a lieutenant-general, seven were major-generals, and thirty-four brigadier-generals. By the middle of this week there will be 901 retired officers, of whom three are lieutenant-generals, eighteen major-generals, and no less than 248 brigadier-generals. Thus there have been created fully 221 generals in six years in an army ranging in size from 28,000 to 112,000 men, and now numbering less than 70,000. When the mortality of the same period is considered, the number seems even larger and in still more striking contrast with the handful of distinguished generals of the civil war who spent their last days on the retired list with titles corresponding to those they bore in the volunteer armies of the North.

TOLSTOY ON THE WAR.

Count Tolstoy's ten-column article in the London *Times* on the war between Russia and Japan is extraordinary in many aspects. As a mere literary production it is impressive. The analytic skill, the perfect command of material, the intellect, like Burke's, winding itself into its subject like a serpent, the realistic grasp upon the elusive phenomena of national passion and, rising above all, the magnificent idealism of this great writer, were never more wonderfully displayed. In 'War and Peace' Tolstoy gave us an unrivalled account of the psychology of an army in battle. In this article, he lays bare the complex motives, the mingled brutalities and mistaken aspirations, which drive a people into setting an army in battle array. The whole is so remarkable that one is not surprised at the glowing tribute from a brother in letters, Mr. Thomas Hardy. He writes that, making every allowance for Count Tolstoy's "extravagance of detail" and occasional "incoherence," "surely all objectors should be hushed by his great argument, and every defect in his particular reasonings hidden by the blaze of glory that shines from his masterly general indictment of war as a modern principle, with all its senseless and illogical crimes."

To say that Tolstoy is exceeding bold in lifting his single voice against a war to which 130,000,000 of his countrymen are madly committed, might seem exaggerated. He is perfectly safe. No Russian official would dare lay a hand on him. That is testimony to his moral elevation, now so great that it is a possession of the whole world; but a part of it lies in the transparent sincerity of the man, and his willingness to suffer for the truth. He would go without a murmur from Yasnaya Polyana to Siberia. Nor could exile dim his light. In any case, the courage to face a huge and unreasoning unpopularity is greater than is required to storm entrenchments, and that serene courage Tolstoy has. He knew well what it would mean to speak of the Czar as he does, at a moment when that monarch is the object of frantic adoration. "The unfortunate, entangled young man" Tolstoy calls him; and elsewhere speaks with indignation of "Nicholas Romanoff and Alexis Kuropatkin" deciding to kill thousands of "deluded Russian peasants . . . in support of those stupidities, robberies, and every kind of abomination which were accomplished in China and Korea by immoral, ambitious men now sitting peacefully in their palaces."

Tolstoy is especially severe upon the diplomatists who by their blunders and their lies brought on the war. He is merciless in his references to those journalists who first deceived the people, then wickedly excited them to fury and urged them on to death, at the same time that they themselves stay securely at home to coin money out of the blood of their fellows. So, too, the great nobles and the Korean concessionnaires come in for castigation; while especial scorn is reserved for the type of military man who hails war, as Roosevelt did, as a "crowded hour"—meaning thereby the glutting of savage instincts; with hope, all the while, of rewards and

promotions through the death of superior officers.

It is, however, in his depiction of the onset and sweep of the war mania that this master of realism writes with a pen which pierces through the current pretences on that subject. First among the horrors of war he places, for enlightened men, "the consciousness of the impotency of human reason." All that raises us above the beasts is thrown away in red fury. In a moment of national obsession, the whole work of civilization, the progress of science, the teachings of religion, are suddenly declared to be not merely useless, but pernicious, simply impeding action, "like a bridle fallen from a horse's head and entangled in his legs and only irritating him." The cumulative stupefaction and brutalizing of the national mind by war madness are described with appalling power:

"The Assyrians, Romans, or Greeks might be persuaded that in fighting they were not only acting according to their conscience, but even fulfilling a righteous deed. But we are Christians; and however Christianity may have been distorted, its general spirit cannot but lift us to that higher plane of reason whence we can no longer refrain from feeling with our whole being not only the senselessness and the cruelty of war, but its complete opposition to all that we regard as good and right. Therefore, we cannot do as they did, with assurance, firmness, and peace, and without a consciousness of our criminality, without the desperate feeling of a murderer who, having begun to kill his victim, and feeling in the depths of his soul the guilt of his act, proceeds to try to stupefy or infuriate himself, to be able the better to complete his dreadful deed. All the unnatural, feverish, hotheaded, insane excitement which has now seized the idle upper ranks of Russian society is merely the symptom of their recognation of the criminality of the work which is being done."

One must read the whole of Tolstoy's blasting arraignment of the war spirit to appreciate its withering effect. Of course, his own position is the same as that of the 'Biglow Papers'—"As fer war, I call it murder"; but he brings out with terrific force its senselessness, its gross futility, its tendency to cause society and nations practically to commit suicide, and to reduce men at last to the condition of "spiders in a jar," destroying each other. Upon the folly of hoping to prevent war by heaping up the implements of war, he pours out his sarcasm. That way, at best, universal bankruptcy lies.

Powerful in diagnosis, Tolstoy seems to offer a weak remedy. He bids men do away with war by becoming mystics. Let them reflect on the meaning of life, on the love of God, on the brotherhood of man; then they will fight no more. This is, undoubtedly, in line with the exhortations of the sublime Galilean mystic; but as they have gone unheeded for 1,900 years, it is not probable that Tolstoy's echo of them will produce any immediate effect. From the Christianity of the churches he draws back, everybody knows, as from a hateful superstition. This naturally diminishes by so much his chance of a hearing. But, however far the world may be from accepting his doctrines, it cannot deny the justice and frightful veracity of his account of that national madness which we call war. He lights up its murky horrors with startling flashes of description. He shows it to be so bestial, so anti-social, so destructive of civilization, that he makes his breathless readers willing to agree with him in thinking it the sum of all villanies.

ACTIVE LIBERALISM IN RUSSIA.

One of the most interesting questions raised by the war in the East is the effect it may have on the internal organization of Russia. An ultimate success would reëstablish, and even enhance, the prestige of Russian arms within the Empire, as well as before the rest of the world, and would thus lend the Government further strength in suppressing all opposition. On the contrary, serious military reverses might easily provoke grave popular upheavals. Whether such disturbances would have permanent effects, would depend mainly on the extent to which moral opposition to the autocracy has now spread in the practical middle class.

Any independent concerted action on the part of the illiterate lower classes is out of the question; the muzhiks, and even the factory workmen, can be flogged into submission one by one. Furthermore, the young revolutionists, with their desire to transform Holy Russia at one stroke into a kingdom of heaven on earth, are probably too emotional to be capable of acting as efficient organizers and leaders of a large popular movement. Beyond the occasional assassination of a reactionary official, the Government has little to fear from them. But the moderate, level-headed men of the active middle class, with their fund of experience in the affairs of practical life and consequently their influence on other classes of the population, would, if thoroughly aroused to opposition, constitute a formidable enemy of the autocracy. What then, is the present political attitude of Russia's middle class? Numerous occurrences of the past few years indicate that, while the principles of constitutional monarchy have all but universal acceptance, a large majority have arrived at the conviction that the arbitrary autocracy of the Czar hampers the healthy progress of national life, and in one form or another thwarts the public or private career of practically every Russian.

This year's "Third Congress of Technical Educators," convened by the Minister of Public Instruction, was attended by over 3,000 persons from all parts of Russia. The dominant feeling of the congress is described by one of its members as "the high-strung, nervous, joyous feeling of men who had suddenly been thrown into contact with a mass of others sharing their own views, and had learned that the pulse of public indignation is beating high all over the country, that the present political régime has reached a state of profound decay everywhere, and that the scattered malcontents are, not companionless units, but soldiers of a whole army ready to fight the autocracy." As soon as this spirit had become evident, the Government authorities decided to adjourn the congress at the earliest possible opportunity. A pretext was presently found in the expulsion, by the congress, of two of the most conspicuous instigators of the Kishineff massacres—whereby the congress intended to show that Russia proper had been appalled by the infamous brutalities no less than the rest of the civilized world. At the final meeting of the executive committee, composed largely of Government officials, M. Zernoff, president of the St. Petersburg Institute of Technology, proposed to file a formal protest with the Minister of Public Instruction against the interference of the police and the adjournment of the congress. Another member of the committee stated the true reason of the adjournment frankly: "We all know," he said, "that there is throughout Russia a growing dissatisfaction with the existing order, and that this dissatisfaction is manifesting itself in a very broad social movement. The congress was adjourned because it reflected, as it inevitably must, the extraordinary elevation of public temperature which has now spread all over our country."

The Ninth Congress of Physicians and Surgeons, held shortly after the congress of educators, showed a similar "elevation of temperature." Thus, the sections for public medicine, mental and nervous diseases, internal diseases, and bacteriology, adopted the following joint resolution: "A systematic and rational struggle with infant mortality, alcoholism, tuberculosis, syphilis, and other widespread diseases, which form in Russia a public evil of enormous extent, is possible only under conditions enabling a broad dissemination of enlightenment concerning the true causes of their development and the methods of combating them, the necessary conditions being complete freedom of the individual, of speech, of the press, and of assembly." The members of the sections for medical statistics, hygiene, and children's diseases had similarly come to the conclusion that the public practitioner as such can, under the present Russian régime, accomplish very little toward the alleviation of physical suffering among the people. Here is one of their resolutions: "Believing that the extraordinarily high infant mortality of Russia is due mainly to the poverty and ignorance of her population, the congress expresses the profound conviction that a successful struggle with this evil is possible only by way

of broad social reforms." Another section of the congress resolved that "corporal punishment should not exist in Russia; and the assistance of a physician, in the capacity of witness or expert, in the administration of such punishment, is inadmissible." These resolutions were naturally distasteful to the reigning bureaucracy, and at the instance of the St. Petersburg municipal authorities the presiding officer of the congress refused to read them publicly at the last general session. The members protested vehemently, flung chairs among the orchestra which endeavored to drown out the demonstration, and after an hour of indescribable confusion were dispersed by the police.

We have, finally, before us a copy of a recent confidential circular from the Minister of the Interior to several district governors. The zemstvos of their districts had agreed to take joint action in the matter of sending sanitary aid to the wounded and sick at the front. The members of the zemstvos, which represent what little local self-government there is in Russia, come from a naturally conservative class of the population, their eligibility being based on the ownership of considerable property. But the Government evidently realizes clearly how little conservatism there remains anywhere outside of its own bureaucracy. The circular in question expresses the fear that similar joint action might some time be taken by the zemstvos "in certain other cases," and directs the governors to prevent any future agreement whatsoever between the zemstvos of different districts.

Plainly, the Government is losing support among the most influential and responsible classes, and has learned to fear them. Friends of the country of Tolstoy and Turgeneff can only hope that its rulers, instead of inventing further measures of repression, will yield to the needs and reasonable demands of the people before the reverses in the war, or some other spark, may set off an explosion of incalculable magnitude.

THE GEORGE SAND CENTENARY.

Literary commemorations are often of the frigid order. Concerning our own Emerson and Hawthorne, for example, it is amazing how little centenary critics have found to say. Vividly remembered these great authors are not, and their celebration passes with perfunctory respect. In France, on the contrary, the one-hundredth anniversary of George Sand's birth has been an event of passionate interest. One may doubt the taste of the mass of reminiscence and comment that has filled the Parisian reviews; one cannot doubt the sincerity of the writers. George Sand is quite as vivid to-day as she was when, to Robert Browning's chagrin, Mrs. Browning did obeisance to a sibyl who flaunted lovers and by no means scorned cigars. To-day France takes sides eagerly in her love affairs; and if no duels have come off in the Bois de Vincennes, it is because the frankest criticism of this inconstant genius has been tempered with affection. To find a parallel for the cult of George Sand one must go to Dr. Johnson. In either case the persons have attained a kind of individual immortality, though time has largely corroded their works.

Why George Sand should haunt the world when her greater contemporaries are paling, is not immediately apparent. One ingenious critic has explained that she had a masculine mind and heart; but the charm of so sincere a person can hardly have been that of masquerade. Nor is it at all likely that her memory rests on a continuous *succès de scandale*. There was, in fact, in her adaptability to varying sentimental temperatures nothing which might not be illustrated a hundred times in fairer women now clean forgotten. We doubt, also, if she is remembered by her books. 'Consuelo,' 'The Duchess of Rudolstadt'—what are they? "Are they mine?" she once asked. Where her memory failed, that of her latter-day readers will scarcely burden itself. She lives unquestionably not in literary, but in personal tradition. She is the most interesting woman of to-day because she was the most interesting woman of her time. Something bold and expansive in her condoned the dubious chapter of her loves; an instinctive wisdom makes her to all literary people what she was to Flaubert, the counsellor and patron saint—the St. George of letters.

Her expansiveness, her absence of pose or self-consciousness of any kind, are perhaps the commonest virtues, as they are the most agreeable social qualities. They are virtues rare in her class. One of her lovers, Musset, represented perfectly the artist's character. Complexity, irritability, self-consciousness, fear of life, scorn of the commonplace—these were his traits. His experience of the disease of the century has become so typical that serious observers have regarded the artistic temperament as a neurosis, and have virtually revived the ancient belief that inspiration is perilously akin to insanity or diabolical possession. Against such a theory George Sand's life makes strikingly. Her dominant note was courage and simplicity; her sins were of the downright, uncomplicated kind, and from them she emerged into practical, almost *bourgeois*, beneficence. She had no sense of isolation as an artist, no fear that any contact with life was beneath her dignity as a genius. Utterly lacking the vanities of her craft, she is in many respects the consummate example of the expansive temperament, and she represents on an imposing scale the qualities that win affection among ordinary people. Examples of her gallant attitude towards life could be multiplied indefinitely from her correspondence. We content ourselves with characteristic extracts from letters newly published by M. Doumic in the *Revue des Deux Mondes*. Thus, she writes to her daughter Solange encouraging her to undertake the literary career:

> "With or without talent, with or without profit, with or without reputation, is not this an immense result—to gain the victory over the boredoms, the deceptions, the wearinesses, and the chagrins of life? Life cannot change about us for our sake. We are all condemned to suffer more or less, but we can influence ourselves, we belong to ourselves, we can transform and fortify ourselves, making of work and reflection our sword or our breastplate."

Again writing to her daughter, George Sand urges as the only resource against the sadness of life allegiance to duty—a difficult word she says, but resumed in the maxims "to be generous and good, to do nothing for love of self, fear of suffering or desire of happiness, but to do everything in justice, kindness, and greatness of soul." A life conceived on these lines would naturally escape those poignant tragedies which result from the egotism of the artist, and it was without doubt such simple maxims, coupled with George Sand's patent errors, that led an ovver-subtle critic to maintain that she was at bottom an *honnête homme*, and only by chance a woman to boot, and a genius.

As to that, the will to live is probably stronger among women than among men, and the tragedy of a broken life correspondingly greater. George Sand never appears more feminine than when she bids a weakling like Musset or a hypochondriac like Flaubert look at life unterrified. That is woman's habitual ministry to men perplexed by the will to feel, or over-burdened by the will to do. George Sand's distinction is probably that she brought this passionate faith in life into a literature clouded by the peculiar melancholy of the artist and chilled by the pessimism of the rationalist. Her case reminds us how completely artistic effect is a matter of emphasis. Her expansiveness is, one might say, only the normal fervor of the average woman raised to the altitude of genius. So what was mere Toryism in a generation of county squires became Dr. Johnson's best gage of immortality. George Sand's ultimate literary position may still be more or less in doubt; her preëminent distinction as a brave champion of the worth of life seems established for all time.

LORD GOSCHEN AT THE OXFORD ENCÆNIA.

OXFORD, June 22, 1904.

Within the last forty years we have had the 700th anniversary of Bologna University, the 600th anniversary of the founding at Oxford of Merton College, the 300th of Sir

Thomas Bodley's Library, the 250th celebration of John Harvard's foundation, the 200th anniversary at New Haven, and the 150th at Princeton. Decimal notation, older itself than any foundation, learned or unlearned, seems unlikely to yield us further occasions for academic festivity in the near future; but meanwhile a very impressive mediæval ceremonial, annually observed except in times of tribulation, has just been illustrated and enhanced at Oxford by the first official appearance in Convocation of the new Chancellor, Lord Goschen, inaugurated not long since at Seacox Heath, Hawkhurst, from which place derives his full title, Viscount Goschen of Hawkhurst.

The powers of the Chancellor are presumably too vast to allow of their frequent exercise by him in his own person. Normally he acts by his deputy, the Vice-Chancellor for the time being, and the most indispensable of his duties would seem to be the annual delegation of his powers. A Chancellor's personal attendance to preside over the Encænia—*i. e.*, that meeting of Convocation annually held late in the month of June by way of commemorating founders and benefactors, and giving the University a new start on the way in which it should go—involves among other things the creation of many honorary doctors, many more than are created when the Vice-Chancellor presides as usual. This is but logical, since the Chancellor, academically speaking, is the very fountain of honor. When personally presiding in Convocation, indeed, he is like the King in Council, or the Pope speaking *ex cathedra*. Hence there is no ground for surprise that when Lord Goschen's predecessor, the late Lord Salisbury, was first in this case, such floods of greatness fell from him that sixty honorary doctors were created, including the then Speaker of the House of Commons, who had to ask for a special vote of the House in order to absent himself. To fulfil ceremonial requirements on that occasion two meetings of Convocation were of course required, and were held on two successive days. Lord Goschen, on the other hand, contenting himself with one meeting of Convocation, has created 37 doctors; 16 in Civil Law (D. C. L.), 13 in Science (D. Sc.), and 8 in Letters (D. Litt.). In these creations the Chancellor acts as the chosen exponent of the mind of the University, which consists technically of 13,000-odd matriculated members, whose prerogatives are lodged with the members of Convocation—*i. e.*, 6,000 Doctors and Masters. These are in turn chiefly made visible by the 500 more or less from among their number who reside in Oxford and not only are qualified members of Convocation, but also constitute the smaller body called Congregation. It is therefore interesting to note that, before presiding at Convocation, the new Chancellor held a levee in Oriel College to which all members of Congregation were invited.

At Oriel College, the academic home alike of the Chancellor and of the present Vice-Chancellor, was formed the procession. After the bedells walked the Chancellor, in the singularly majestic robes of his office, made resplendent with gold embroidery, and in themselves so weighty that the office of two train-bearing pages, Lord Goschen's grandsons, was no sinecure. Next came a long line of doctors and heads of colleges, with the proctors, senior and junior. Then followed those who were to receive honorary degrees. These last halted in the Divinity School under that part of the Bodleian known as Duke Humphrey's Library, while the first part of the procession moved on into the Sheldonian Theatre, and, once within it, proceeded through the assemblage of masters of arts to the raised seat of the Chancellor. He, having enthroned himself with his two pages near at hand, the two proctors on either side of him, opened Convocation as soon as the rest of his company had disposed themselves in the doctors' places, close by. He began by enumerating with a word or two of graceful comment the names of those to be honored and their several proposed degrees. Convocation having audibly assented to the proposed honors, the bedells sallied forth and led in first the procession of sixteen doctors of civil law. Professor Goudy introduced each one of them with a brief eulogium, and the Chancellor hailed each in order with a well-turned vocative salutation, into which was distilled the wit and wisdom of his mature appreciation. After a hand-shake he then invited each to an appointed seat in the rows of the doctors. The Professor of Natural Philosophy, Dr. Love, similarly introduced each of the thirteen doctors of science, who appeared next, and Dr. Bywater, Regius Professor of Greek, performed the same office for the doctors of letters, who were introduced last. The genuine mediæval character of the whole ceremonial and stage-setting appeared best when most of the recipients of degrees had been eulogized and taken their appointed places. The ocular effect of the whole assemblage, with its varied reds and grays and blacks, each accentuated by the appointed combination required by the regulations as to academic costume, was irresistibly suggestive of well-known mediæval pictures of the Court of Heaven with its rows of prophets, saints and doctors rising rank upon rank on either side of the throne of grace. Nor was the brilliant assemblage, chiefly of ladies, which surrounded the Chancellor, the proctors and the doctors, without its analogue in those familiar Old World representations. They recalled the hosts of the blessed—and blessed they may well have accounted themselves on this much frequented occasion in securing cards of admission.

Professor Goudy introduced the French ambassador, M. Cambon, with feeling allusions to the *entente cordiale* and praises of the ambassador's Greek scholarship, and the Chancellor hailed him as "amicitiæ interpres." The Vice-Chancellor, who has hitherto successfully eluded all attempts to illustrate the Oxford Doctorate by persuading him to accept it, was eulogized for devotion to the University and preëminent Greek learning, and then saluted by the Chancellor as Provost of Oriel, "collegii mei inter præpositos." The Archbishop of Canterbury was eulogized as his father-in-law's (Archbishop Tait's) worthy successor, ruling the Church with firmness and benignity, and then saluted as "grandissime." Professor Goudy and the Chancellor both made happy allusion to the 'Lux Mundi' of the Bishop of Worcester (Gore). Lord Balfour of Burleigh's services to Scotch education were enlarged upon. Lord Tennyson was addressed by the Chancellor as "poetæ præstantissimi fili," and Lord Curzon as "illustrissimus," with a reference to the "lustrum" just spent by him in India "non sine gloria." The Speaker of the House of Commons was amusingly introduced with fear and trembling by Professor Goudy, who felt nervous lest he should "name" some member of Convocation, and took refuge in a happy quotation from Horace, while Lord Goschen, less overawed, hailed him as "senatus orator sapientissime." Horace again supplied a happy turn in Professor Goudy's description of the Admiral of the fleet, whom he characterized as "tenacem propositi virum," while the Chancellor greeted him as "patriæ amantissime." Gen. French's greeting as "vir fortissime" was followed by a splendid recognition of his relief of Kimberley in the words "urbium in Africa obsessarum servator et vindex." Mr. John Sargent, already described before his entrance as "Apellem nostrum" (the possessive implying that Mr. Sargent was the common possession of England and America), was wittily apostrophized as "vir spectatissime, splendide audax." Last, but by by no means least, among the sixteen doctors of civil law, came Mr. Charles Booth, formerly President of the Royal Statistical Society, whose unprecedented labors for the poor of London were acclaimed alike by his most enthusiastic reception, by the eulogium of Professor Goudy, and by the feeling tribute of the Chancellor's discriminating superlative, "probissime."

Among the thirteen doctors of science introduced by Professor Love were Signor Marconi, Sir William Crookes, Sir David Gill, Astronomer Royal of the Cape of Good Hope; Sir John Murray, a Canadian famous in connection with the *Challenger* reports; Mr. Alfred Marshall, and Mr. James Dewar. Among the eight doctors of letters presented by Professor Bywater, Mr. W. D. Howells came third, after Lord Reay and Sir Spencer Walpole. Professor Bywater introduced Mr. Howells as a representative of America, the people united to England by ties of blood-relationship, which it was England's desire to draw even closer. He then described him as "literatissimus," dwelt upon the graces of his diction and the quiet glow of his style, particularizing his faithful portrayal of character, and finally adducing his pictures of Italian manners and monuments drawn in the spirit of genuine love and contagious appreciation. The Chancellor hailed him as a poet and welcomed him as an American. Prof. Lewis Campbell was eulogized as the learned interpreter alike of Sophocles and of Plato, Mr. W. L. Newman as a memorable lecturer at Oxford on ancient history, and as a translator of Aristotle. Mr. Andrew Lang's versatility was playfully insisted upon, and he was welcomed as "eximium doctrinæ cum humanitate, sale, lepore conjunctæ specimen." Finally, Mr. Walter Leaf, already a Litt.D. of Cambridge, was saluted as an Oxford D.Litt. and described as a distinguished citizen of London and one of the ornaments of Cambridge learning. His edition of the Iliad was most happily pronounced an "opus magnum ac non uno nomine memorabile."

One noteworthy feature of this year's Encænia has been the almost entire disappearance of that traditional horseplay from undergraduates in the galleries, so dear to old-time frequenters of commemoration at Oxford. No doubt this relic of the pranks performed anciently by the *terræ*

filius, the chartered academic libertine of the Middle Age, has in its day served to relieve the Encænia from dulness, but the wit so plentifully lavished this year upon the stately Latin speeches of introduction, and even more plentifully present in the Chancellor's welcoming words to each honored guest, made the unfledged essays of undergraduate raillery so obviously superfluous that the galleries were practically silent. No doubt respect for Lord Goschen also played its part here, for he has been fittingly described as "one who was a typical embodiment of all that was most enlightened and progressive in the Oxford of his youth, and whose subsequent career has shown that political and economic thinking of a high order is not incompatible with statesmanship of the most severely practical kind." At all events, the Creweian oration delivered by the public orator (Dr. Merry, rector of Lincoln) was a very eloquent tribute alike to the present Chancellor and to his lamented predecessor. Convocation thoroughly enjoyed the Creweian oration, and even had attention left for the double prize man, Mr. C. C. Martindale of Pope's Hall—a flourishing institution ruled by one who is a native of the United States and a member of the Society of Jesus. Mr. Martindale gave portions of his Gaisford prize version from Virgil into Greek, and of his Chancellor's prize poem in Latin upon Sertorius. Mr. Roome of Merton also read from his Stanhope prize essay on "James Edward, the Old Pretender." Finally, Mr. Bell of Christ Church recited portions of his Newdigate prize poem on Delphi, a production so finished and felicitous that it deserved a less exhausted audience than the one which listened to it as the closing feature in proceedings which had already lasted two hours and a half. It is a noteworthy fact that from this year onward the conditions of Sir Roger Newdigate's prize revert to what they were not very many years ago, and no longer strictly confine those competing to the use of the rhymed couplet

LOUIS DYER.

BONAPARTE AND ENGLAND, 1803-1813.

PARIS, June 24, 1904.

Another volume has recently been added to the Napoleonic literature of our time. It is of a purely historical character, and has been written from inedited documents in the Archives of our Foreign Affairs Office, the National Archives, and the papers of the English Foreign Office. The author, M. P. Coquelle, has entitled his work 'Napoléon et l'Angleterre, 1803-1813.'

"It seems," he says in his preface, "as if everything had been said concerning Napoleon's relations and difficulties with England. One point, however, has never been thoroughly made clear; viz., the history of the diplomatic relations between the Emperor and the British Cabinet from the rupture of the Peace of Amiens in 1803 to the first abdication in 1814. Notwithstanding the constant state of war, there were always relations between the two Cabinets, which had in view a *rapprochement*, either direct or indirect. The principal historians of Napoleon gave a few pages to these, but put them in the background, as military events efface all others in the career of Napoleon. Even the writers at Saint-Helena and the Emperor himself made but few allusions to these diplomatic relations."

M. Coquelle will have it that these relations are important, first, as revealing a side of Napoleon still imperfectly known, and, secondly, as showing how a *rapprochement* became gradually quite impossible. Most French historians have held England responsible for the rupture of the Peace of Amiens. Among them we may cite Thiers, Bignon, and more recently M. Albert Sorel, in his book on Europe and the French Revolution. M. Coquelle is not quite so positive: he considers Holland the true cause of the war. In continuing to occupy Flushing and Utrecht, contrary to the formal engagements entered into under the Treaty of Lunéville and the convention of The Hague, he maintains that Bonaparte gave to England the right to keep Malta as an equivalent. "In vain," he says, "was an arrangement proposed to him; he never consented to evacuate Holland, notwithstanding the just reclamations of the British Cabinet, and thus forced it to recall Lord Whitworth."

The articles of the Peace of Amiens had been fixed by Lord Addington and by M. Otto, who, though he was born in the Duchy of Baden, had been employed in the French Foreign Office before the Revolution, and had been chargé d'affaires in Berlin in 1799, and sent to London in 1800 to negotiate a convention relative to prisoners of war. Otto was replaced by Gen. Andreossy in 1802. Born of an old Italian family, Count Andreossy had participated in the wars of the Revolution; in Italy he became a friend of Bonaparte, and he took an active part in the eighteenth Brumaire. Andreossy's letters to his Government treat chiefly of the occupation of Switzerland, of Piedmont, of Holland by France, of Alexandria and Malta by England. We find here and there passages concerning the French *émigrés* and the French princes living in England. Bonaparte desired that the French bishops who had left France, and the Chouans, should be expelled; that the *émigrés* should not be allowed to wear the old French decorations. "It would be fitting," Talleyrand wrote to Andreossy on December 2, 1802, "that the Bourbons should be sent away, or at least that they should not be allowed to wear decorations which show a perpetual want of consideration for the Republic." Agents were sent to Edinburgh to watch the Count of Artois, who was living in Holyrood Palace. Military honors were paid to him.

"Bonaparte," says M. Coquelle, "did not understand the laws of hospitality towards important personages; his pretensions on this point were absurd; he covered himself with ridicule in the eyes of the courts, for have not people always the right to wear a decoration regularly given, even when the Government which gave it has ceased to exist?"

Bonaparte had a conversation with the English ambassador on the 18th of February, 1803. He made violent reproaches on the subject of the occupation of Malta and the conspiracies of the *émigrés;* Lord Whitworth spoke in his turn of the annexation of Switzerland and Piedmont and the non-evacuation of Holland. The First Consul used expressions so trivial and vulgar that they could not be repeated in a dispatch. Napoleon ended by threatening England with invasion. "Instead," says M. Coquelle, "of entering into a discussion, to which Lord Addington invited him, on the subject of the acquisition of Piedmont and the conservation of Holland by France in exchange for the occupation of Malta, Bonaparte sent a sort of ultimatum, in which he increased his exactions." This ultimatum was formulated by Talleyrand in a dispatch written the day after the Emperor's conversation with Whitworth. Talleyrand wrote to Gen. Andreossy and ordered him to ask verbally, but positively, (1) that Alexandria and Malta should be evacuated; (2) that Georges and his Chouan friends should be expelled from British territory; (3) that the English papers should not be allowed to indulge in outrages, repugnant to public decency, to the law of nations, and to the state of peace, against France and the First Consul.

It is clear that Bonaparte's policy was to drift into war. It is not surprising that he should have felt war necessary to the accomplishing of his projects. He had done much to pacify revolutionary France after her long agitations; nothing can be more interesting than to read the successive numbers of the official paper following the *coup d'état* of Brumaire—it seemed as if a new world was in creation. The Concordat; the reconciliation of France with the old Church; the Code Civil; the organization of the departments—all these measures were, so to speak, the consummation of the work begun in 1789, and so unfortunately interrupted by the drama of the Revolution; but Napoleon felt that the revolutionary party could not be thoroughly vanquished if he did not occupy France with great enterprises. He felt, also, that he owed everything to war; that if he was to create a new dynasty he must be a new Cæsar. War was to him a necessity, the instinctive need of his nature.

We cannot overlook this psychological aspect of Napoleon's nature. Individuals obey a sort of law of development; Napoleon was bound to continue as he had begun. The negotiations with England were a mere veil, and could end only in war. When Napoleon had resolved to make war on England, though the British Cabinet had finally offered to evacuate Malta after ten years, he made a scene with Lord Whitworth before the whole diplomatic corps. (His nephew, Napoleon III., in imitation of him, made an apostrophe to Baron Hübner at the reception of the diplomatic body on the eve of the Italian war.)

"So," said Napoleon to Lord Whitworth, "you are determined to make war?"

"No, First Consul," calmly answered the ambassador; "we know too well the advantages of peace. We have already been at war for fifteen years. It is something too much."

"But," said Bonaparte, "you wish to be at it fourteen years longer, and you force me to it." Then, speaking to the diplomatic body, he added: "The English want war; but if they are the first to draw the sword, I shall be the last to put it in the scabbard. They do not respect treaties. We must cover them therefore with a black veil."

He went on in this way, in a great state of agitation. The English Ambassador preserved his calm. Napoleon's last word before leaving the room was: "Woe to those who do not respect treaties."

The inedited letters of Andreossy to Bonaparte at that period are given by M. Coquelle, and are a valuable addition to history. Andreossy says that the English viewed with great jealousy the recovery of France after the Revolution, and her economical development; still, he believed that they did not desire war, and a system

of mutual compensations might be found and ought to be adopted. He speaks of Hanover as furnishing a ground for such compensations. Meanwhile England was making preparations, enlisting seamen. France had five hundred thousand men under arms. Andreossy went to Talleyrand: "The second thought of the Britannic Government is not to keep Malta. Lord Hawkesbury said to an acquaintance of mine, in these words: 'We cannot evacuate Malta before we can assure Parliament and the nation that the discussions have taken a pacific turn; but we do not say "Malta or war."' " Andreossy made a supreme appeal to Bonaparte in a private letter. "Everybody here wants peace; by keeping Europe at peace you will crush this country." In another letter Andreossy writes: "Never, in any circumstances, has there been a more general desire for the maintenance of peace, and you will find yourself placed in the most advantageous position for fixing invariably the destiny of the world."

These letters, which have never been published, seem to throw on Bonaparte the entire responsibility for the rupture of the Peace of Amiens.

"It is impossible," says M. Coquelle, "to have any doubt as to the experience or the character of Andreossy. Having numerous relations in the aristocratic spheres of London, a friend of Addington and Hawkesbury, he was not ignorant of the aspirations of England for peace, nor the desire of the Cabinet to preserve it. Napoleon, if he neglected his warnings, rendered justice to him afterwards, by confiding to him the important diplomatic posts of Vienna and of Constantinople."

It seems quite clear that Bonaparte wished for war; it is not so clear to us, notwithstanding what M. Coquelle says, that England desired peace. She was, whatever may have been said in diplomatic conversations or written in diplomatic dispatches, determined to keep Malta. The veil of negotiation covered on both sides preparations for war. The *Times* is now giving us daily extracts of what was written for the English public a hundred years ago; they show clearly the deep hostility of the English Government to an upstart régime in France, which was threatening to become the arbiter of Europe.

Correspondence.

THE MINING LABOR UNION.

To the Editor of The Nation:

Sir: If no press statute of limitations applies, a word may be in order touching a remark made editorially in your issue of June 16, on the labor situation in Colorado. You there say (p. 462), concerning the President's intervention in the Pennsylvania coal strike, "But, in the first place, that was not strictly a local disorder. It threatened misery to the people of a score of States."

I call attention to this because, to one having to help fight the battles for law and order and respect for right in the Far West, your words have almost the sound of a foreigner's criticism—well-meaning and sincere, but none the less the result of observations made through glasses of insufficient focal distance. It is not that those facing the struggle in the West desire interference on the part of the Federal Executive, but that they deem it important that all our people should know that the Western Federation of Miners controls the acts and opinions of the great bulk of the miners from Colorado to the Pacific, and that every advantage gained by the Federation in Colorado but strengthens and emboldens the men in every camp in the West; that every "martyr," so-called, made by mistaken policies in Colorado, only adds fuel to the flames, and increases the burdens of every mine manager, and endangers the property of every mining company, in at least ten States. It is as far as possible from being a local disorder; and to one in constant touch with the situation through the control of large bodies of men feverish with excitement over what they call the crime against labor in Colorado, openly accusing the good people of Cripple Creek of dynamiting the ill-fated train and station in order to make it seem an act of the Miners' Union, so as to cast reproach upon them, and earnestly preaching the later Socialistic doctrines as enunciated by Eugene V. Debs and that incendiary paper, the *Appeal to Reason*—to one living in such an atmosphere, fifteen hundred miles from Cripple Creek, it seems a very general disorder indeed, meriting the inauguration of effective policies sustained and encouraged by all lovers of freedom and of republican institutions in America to preserve from destruction the right to labor and to enjoy the fruits of labor without let or hindrance from one's fellows.

Although for the most part the Western Federation of Miners presents the same aspects as trade unionism in the East, there is this difference: it is perhaps the most generously comprehensive of all labor organizations, embracing miners and all collateral help, including surface shovellers, millmen, carpenters, machinists, engineers, even to teamsters. The merchants and saloonkeepers, of course, who desire to "stand in" with the union, have to take out their "union cards." Reaching thus into every detail connected directly or remotely with mining, this organization is in a position to powerfully affect the political complexion of the large district it has covered, and it has officially declared for Socialism and the Socialist party's nominees, the campaign being marked by a most energetic propaganda of Socialistic doctrine.

I have chosen your remarks merely as a text to accentuate the fact, too generally overlooked in the East, that Gov. Peabody is not engaged in adjusting a mere family jar, but is actually by his procedure shaping events for good or ill over an immense portion of these United States. I am not guilty of any suspicion of intentional misrepresentation by the *Nation*, which no one could entertain who has watched the bold championship of the rights of free labor for which your editorial pages have been conspicuous.

In conclusion, I may venture the opinion that there was fully as much justification for interference by the President in Colorado as there was in Pennsylvania; but the wisdom of such interference would have been questionable. The hope of the Socialist miners is that President Roosevelt may lift his hand against labor as represented by the Western Federation, and that the Democrats may nominate a man distinctly of the conservative, capitalistic class, so that both parties may be held up as evils and monsters, seeking the life-blood of the laboring people. C.

San Francisco, Cal., July 4, 1904.

THE AYER COLLECTION OF PHILIPPINA.

To the Editor of The Nation:

Sir: In your issue of May 26 your reviewer of the Philippine bibliography recently published by the Library of Congress says: "He [*i. e.*, Dr. T. H. Pardo de Tavera] possesses in Manila what is undoubtedly the largest library of Philippina in existence, with the exception of that of Señor Retana, which numbers, or once numbered, 2,697 titles, including manuscripts."

The following facts in regard to Philippina in our own country are interesting and gratifying. First, however, in regard to the magnificent collection laboriously and enthusiastically amassed by W. E. Retana of Madrid: that collection is no longer intact, having been sold several years since, far below its present value, to the Compañía de Tabacos de Filipinas of Barcelona, whose director, Señor Don Clemente Miralles de Imperial, is also an enthusiastic collector of Philippina, and whose collection, so far as printed books are concerned, is the largest in existence, although it is poor in original manuscripts. By the acquisition of the Retana collection the above library numbered many duplicates, most of which have been sold.

There are two other notable collections in Spain, namely, that of Rev. Eduardo Navarro, O. S. A., of Valladolid, which includes a number of rare books and several precious manuscripts, among the latter being San Agustin's 'Conquistas,' Zúñiga's 'Estadismo' (a more complete copy than the one used by Retana in his edition), and Ortiz's 'Practica,' which has never been published in full; and the collection of the Rev. Pablo Pastells, S. J., of Barcelona, which contains but few rare books, but a number of fine original manuscripts, among them an unpublished history by Chirino, and thousands of copies of valuable manuscripts from Madrid, Seville, and other points. A fine collection is said also to exist in St. Petersburg, Russia.

But, coming to the Philippina of our own country, besides the excellent collection in the Library of Congress, which is steadily growing, and those at Lenox, Harvard, and Boston Public libraries, it is gratifying to know that we have one private collection, that of Mr. Edward E. Ayer of Chicago, the well-known collector of Americana, which bids fair to rival the largest of those mentioned above, both in the number and the rarity of its titles. The writer has recently had an opportunity to examine thoroughly this collection, which includes both books and manuscripts.

In his acquisition of printed books, Mr. Ayer has been singularly fortunate, and his shelves show such rare titles as the following: Gonzales de Mendoza's 'Historia . . . del gran reyno de la China' (several early editions in Spanish and Latin, among them a 1586 edition); Vaez's 'Litteræ Annuæ Insularum Philippinarum' (in Hay's 'De rebus Japonicis,' Antwerp, 1605); Chirino's 'Relacion de las islas Filipinas' (Rome,

1604); Morga's 'Sucesos de las islas Philipinas' (Mexico, 1609), also, the only copy ever bound of the Zaragoza reprint (Madrid, 1887), the rest of the edition unfortunately having been sold as waste paper because of the above editor's death before completing his preface and annotations; Leonardo de Argensola's 'Conquista de las islas Malucas' (Madrid, 1609); three of the series of four volumes of the Dominican Chronicles, 'Historia de la provincia del Sancto Rosario,' namely, the volumes by Diego Aduarte (Manila, 1640; and the second edition, Saragossa, 1693), Baltasar de Santa Cruz (Saragossa, 1693), Vicente Salazar (Manila, 1742) —the fourth volume, by Domingo Collantes (Manila, 1783), is exceedingly rare; Colin's 'Labor evangélica' (Madrid, 1663); two of the series of four volumes of the Recollect or discalced Augustinian chronicles, 'Historia de los religiosos descalzos,' namely, the volumes by Andres de San Nicolas (Madrid, 1664), and Luis de Jesus (Madrid, 1681); Garcia's 'Vida y martyrio de . . . Diego Luis de Sanvitores' (Madrid, 1683); San Agustin's 'Conquista de las islas Philipinas' (Madrid, 1698); 'Extracto Historial' (Madrid, 1736; one of a hundred copies printed); San Antonio's 'Chronicas de la . . . provincia de San Gregorio' (Sampaloc, 1738-44); Mozo's 'Noticia historica' (Madrid, 1763); Concepcion's 'Historia general' (1778-92); Malo de Luque's (pseud. of the Duke of Almodovar) 'Historia política' (Madrid, 1784-95); Martinez de Zúñiga's 'Historia de las islas Philipinas' (Sampaloc, 1803); besides many printed ordinances, decrees, *informes*, pamphlet relations, etc. One of the chief features of the collection is the linguistic department, which contains about 350 distinct titles of the various languages and dialects of the different peoples and tribes of the archipelago.

The manuscript division is one in which the owner can justly take pride, for Philippina manuscripts are offered for sale much less frequently than printed books. The greater part of the manuscript material relating to the Philippines is conserved in the archives of Spain, mainly in Seville; the various religious orders still own a number; as also do Dr. T. H. Pardo de Tavera and Señor Zulueta of Manila, the latter of whom was recently commissioned by the Philippine Government to collect copies of valuable manuscripts in Spain and other countries. The Ayer collection of manuscripts contains various originals and some valuable copies. The originals consist of reports, *informes*, letters, etc., some of them written on the perishable rice paper. Among the most important may be mentioned the following: 'Relacion del viaje e jornata que larmada de su mag. hizo del descubrimiento de las islas del poniente' (1565), one of the original duplicates sent to Spain and printed in 'Documentos inéditos relativos al descubrimiento' (Madrid, 1886), second series, ii. pp. 217-351; 'Cedulas reales dirigidas à estas yslas Filipinas' (containing decrees and instructions from the time of Legazpi to 1603); a series of letters officially copied from the Seville archives for Señor Zaragoza, which give important details of the life of Dr. Morga; documents regarding the English invasion of Manila in 1762; 'Demonstracion del misero deplorable estado de las Islas Philipinas . . . por Don Francisco de Viana' (Manila, 1765), originally of the Retana collection, and a very important social and economic document; and 'Documentos, datos y relaciones para la historia de Filipinas' (copied from originals in Spanish archives by Ventura del Arco, a Spanish Government official, in 1859, in five volumes, octavo).

Thus, as is seen, this collection forms a good working library of original sources, which offers many rich nuggets to the student; and students in general may well take pride that America has citizens of sufficient public spirit to amass such collections.

JAMES ALEXANDER ROBERTSON,
Co-editor 'The Philippine Islands: 1493-1898.'

MADISON, WIS.

"BALLOT."

TO THE EDITOR OF THE NATION:

SIR: It is with hesitation and trembling that I intrude into these affairs of high statecraft with an inquiry on a mere matter of linguistic usage, but can you tell me by what authority the word "ballot" is used of a vote shouted in the ears of several thousand people? H. W. H.

NEW YORK, July 9, 1904

[May not a "ballot" be what is "bawled"?—ED. NATION.]

Notes.

That excellent manual of reference, William F. H. King's 'Classical and Foreign Quotations,' has long been at our elbow, and we are glad to learn that it is again to be revised and improved, in large measure by the diligence of the scholarly Ferdinand Hoffmann of Stockbridge, Mass. The new edition will be published by J. Whitaker & Sons, London.

Forthcoming from Macmillan Co. are 'The Alps,' by Sir W. M. Conway, with 75 plates in color after paintings by A. B. McCormick; 'The Burns Country,' by Charles S. Dougall, with 50 full-page photographic illustrations; 'Edinburgh and its Story,' by Oliphant Smeaton, with numerous illustrations, a part in color; 'The Diversions of a Music-Lover,' by C. L. Graves; 'Methods and Aims in Archæology,' by Prof. Flinders-Petrie; 'Shakspere Documents,' a chronological catalogue of extant evidence relating to the poet's life and works, by D. H. Lambert; and 'The Mother of Washington and her Times,' by Mrs. Roger A. Pryor.

The fourth volume of Dr. Reuben Gold Thwaites's reprints of "Early Western Travels, 1748-1846" (Cleveland: The Arthur H. Clark Co.) consists of Fortescue Cuming's 'Sketches of a Tour to the Western Country,' 1807-1809. Cuming was a cultivated and travelled Englishman, able to cheer an elderly couple from Dijon by speaking French to them, and to inspirit a shoemaker by playing the fiddle during his mendings. He was a good and a friendly observer of nature and manners and customs from Philadelphia to New Orleans, and his journal has a decided historical value. The thunderstorms of the Ohio and Mississippi valleys outcrashed all the naval broadsides in his experience. He has pictures of Indian life, of white drunken battles royal in which the man whose nose had been bitten off solaced himself with the gouged-out eye of his antagonist; of barrack-like inn bedrooms in which married couples and single men slept without scruple, and of much else of curious and permanent interest. How forcibly Western disillusion is conveyed in the outburst of a British seaman in a Mississippi bayou, stagnant, gloomy, airless, infested with mosquitoes: "And is it here you stop, and is this the country to which so many poor ignorant devils remove to make their fortunes?—D—n my precious eyes if I would not rather," etc.

The story of the trial of John Peter Zenger has never been so fully told as in Livingston Rutherfurd's volume on Zenger (Dodd, Mead & Co.). The arbitrary acts of Gov. Cosby and the attempt to plunder Rip van Dam led up to the persecution and trial of the poor New York printer, whose crime was a somewhat free expression of opinion on the conduct of the King's representative. Similar examples of attempts to muzzle the press may be found in the history of any of the colonies of North America, but the Zenger incident will always possess a special interest by reason of the ability of the defendant's attorney, Andrew Hamilton, and the general interest in the trial, which found expression in a fairly extensive "literature" of the subject. Hamilton's speech may still be read with pleasure for its quaint expression and good legal substance, and Mr. Rutherfurd's clear summary of the events and arguments is a telling restatement of this local contest, which aided freedom of speech and developed the law of libel in the direction of a freer press. A full reprint of the first edition of the 'Brief Narrative,' a bibliography of the issues of Zenger's press, including the New York *Weekly Journal*, and seventeen reproductions of portraits, manuscripts, broadsides, and title-pages, make a very attractive volume, worthy to rank with the same publishers' 'Hugh Gaine.'

'The Watchers of the Trails' (Boston: L. C. Page & Co.) is a series of entertaining animal sketches by Mr. Charles G. D. Roberts. The stories are full of action, the brute heroes have a vivid personality, and the style is graceful and convincing. The author says of the book: "The stories of which this volume is made up are avowedly fiction. They are at the same time true, in that the material of which they are moulded consists of facts." One may wonder whether this statement wholly fits the story of a bear cub, captured during its very first stroll with its mother out from the den where it was born. It becomes a trick bear in a circus, and five years later, while travelling through the region where it was captured, it escapes, recognizes the lay of the land, and, with a tenacity of memory surpassing that of man, makes its way back to the old den. The author is evidently interested in the relation between the instincts bred by domestication and those native to the wild, and several of the most striking stories turn on that idea.

Mr. Clifton Johnson's art of pictorial bookmaking, hitherto employed in illustrating contemporary customs in many countries, has been used to good effect in the magazine articles now gathered together under the title 'Old-Time Schools and School Books' (Macmillan). Hundreds of facsimiles pertinent to the subject accompany a text not exactly read-

able, but crammed with curious information about school buildings and appliances, and above all about text-books in our American experience. Massachusetts is Mr. Johnson's principal quarry, and he has had access to the most extensive text-book collections extant. He discourses on colonial schools of the eighteenth century, on district schools, grammar schools and academies, the New England Primer, Noah Webster's and other spelling-books, readers, arithmetics, geographies, and grammars. Numerous examples of the contents of these books are given. The survey is full enough to demand an index, but none is furnished. A line of inquiry not suggested here is the provenance of the designs in vogue. The peacock on page 369 is after Thomas Bewick (it appeared in the year following his death); so, probably, are the frog on page 228, and the mad bull on page 224.

Mr. Horace Hart's 'Rules for Compositors and Readers at the University Press, Oxford' (New York: H. Frowde), a little sixpenny manual for the leading English printing-house, has just reached its seventeenth edition (its third for public sale). Any house or person wishing to follow a first-rate authority in matters never wholly settled or to be settled, should possess themselves of this guide. Dr. Murray and Mr. Bradley of the Oxford English Dictionary have revised the list of spellings, and H. Stuart Jones and Robinson Ellis have supplied the rules for dividing Greek and Latin words. (Mr. Ellis's occasional doubts seem to indicate that he has made no extensive study of early printed Latin texts.) Dr. Murray is now and again at variance with the usage of the Press, as in spelling "Shakspere," and in writing "4 July, 1904," preferring *ax* to *axe*, etc. We ourselves forbear to italicise mêlée, naïveté, plébiscite, résumé, and some others in the list recommended on page 21; hyphenate fellow-men; make one word of headquarters; and are at no pains to "avoid such divisions as" star-vation, exaltation, etc. But one may safely err with Mr. Hart.

Much has been written concerning New Zealand; perhaps as much as the world requires. No single book, however, contains so complete an account of the country and its people as that of M. André Siegfried, entitled 'La Démocratie en Nouvelle-Zélande' (Paris: Armand Colin). M. Siegfried writes admirably; his style is charming, and he is dispassionate without being unsympathetic. Of course his account of the political experiments that the New Zealanders are trying is of most interest; but what he has to say of the land and the manners of its inhabitants deserves attention. So far, according to M. Siegfried, socialism answers well. The few rich do not like to be deprived of their possessions, but the people find it pleasant to participate in them. If there is no increase in population and no corruption in the government, the present system may endure indefinitely.

The discussion as to the comparative childlessness of college educated women receives a new turn in the current *Popular Science Monthly*. A graduate of only a few years' standing writes that of her classmates none who has married has failed to become the mother of a healthy child within two years of marriage. Her thesis is that the type of the average college girl has undergone an important change within a very few years, and that this change warrants a very much brighter outlook for the future. The college girl of the older days was usually one whom some exceptional stress of circumstances forced to make the intellectual side of life predominant, to the sacrifice of other interests, from the grammar school up. This abnormal development of course tended to produce physical ill health and consequent unfitness for motherhood, even if it did not result in actual sterility. But with the rapidly increasing tendency of the sex to seek the higher education apart from any special stress of circumstances, the type of the college girl is ceasing to be abnormal, and in marriage and motherhood as in other things we may expect in the future to see the average college alumna just an ordinary woman, plus somewhat more than the ordinary amount of formal education. It is announced editorially that the *Monthly* has merged with itself the *Sanitarian*, which has done such good service in the prevention of disease, as the organ of its founder and editor, Dr. A. N. Bell, now in his eighty-fourth year, and anxious for rest.

In the latest issue of the *Nuova Antologia* Giovanni Livi publishes two entirely new documents which he declares contain the earliest mention of the 'Divine Comedy' of Dante. These documents were found among the writings of the old Memorial Institute of Bologna, in which all the contracts that were concluded in Bologna and its neighborhood are faithfully recorded. In a list of contracts made in the year 1325, a certain Antonio, son of Liculf of Padua, declares that he has received from Carlo, son of the Florentine Lapi, as the sixth in a series of articles, Dante's "Inferno," the entry reading: "A book which is called the Hell of Dante." Doubtless the "Purgatory" was included in this; the "Paradise" was published later.

Pius X. recently received in special audience the forty-two members of the Historical Institutes of Prussia, Austria-Hungary, France, England, and Belgium, and of the learned Catholic Goerres Society. The address to the Pope was delivered by Monsignor Dr. Fruknoi, of the Hungarian Institute, and consisted chiefly of thanks for his purpose to continue the liberal policy of his predecessor in opening the archives of the Vatican to the scholars of the world, which was done as early as 1880. The Pope replied that he had already at that date approved the policy of Leo XIII., and that this regulation was to become the fixed policy of the present reign.

Prof. Dr. von Grützner of the University of Tübingen, a vigorous protagonist of the temperance cause, recently addressed to all the academic societies of that university the question whether they would receive total abstainers as members. Of the thirty-two societies, with a total membership of 1,037, six, with a membership of 212, answered in the affirmative; eight, with a membership of 333, made the reception of such candidates dependent on certain conditions; nine, with 201 members, declared they would blackball such applicants; three societies, with 83 members, refused to commit themselves; and six societies, with 141 members, sent no reply. Professor Grützner concludes that the abstinence movement is making headway in university circles.

The revolution in education in China is still progressing. Within a few months the Government has established at Wuchang a school for the training of women as teachers. There are now eighty students in it. Of equal significance is the first annual report of the Imperial University of Shansi, a summary of which is given in the March-April number of the *South China Collegian*, published at Macao. This institution is, as it were, a memorial of the Boxer rebellion, for, instead of paying indemnities for the lives of the martyred missionaries, the Province has agreed to contribute 50,000 taels annually for ten years to its support, in order that the literati may secure a liberal education on modern lines. It consists of three departments—preparatory, Chinese, and Western. In this last the course is three years, during which the students give their whole attention to one subject, such as Law, Science, Medicine, Language, and Literature, or Engineering. Only the Chinese language is used, though there are six foreign professors, and tuition is free.

Moved by the letter recently published in these columns recommending the Italian time-table employment of the 24 hours, to the abolition of A. M. and P. M. and of consequent confusion, a Canadian correspondent sends us time-tables of the Canadian Pacific and Intercolonial Railways, exhibiting the Italian system in force there. The usage is fifteen years old, he informs us.

"Port Arthur-Mukden," on the whole the best war map we have seen, comes to us from Dietrich Reimer, Berlin (New York: Lemcke & Buechner). It includes, on a scale of about 20 kilometres to the inch, the whole of the Liaotung peninsula and Mantchuria to a point well north of Mukden. Passes are plainly marked, names of towns abound, but not at the cost of clearness. It exacts considerable ingenuity on the part of the English reader to turn over the German orthography into the current forms; witness Hsiu-jan (Siu-yen) and Wi-Dschu (Wi-ju), and we miss in it the variant Telissu for Wafanku. It is thoroughly up to date, and is based apparently on a new Russian service map.

—Prof. John Bassett Moore describes in *Harper's* the various steps by which modern commerce on the seas has been freed, first from the depredations of piracy, and then from such trammels as the assumed rights of impressment and search. Henry Loomis Nelson contributes another paper on the West, not confining himself to the middle section, as in the June number. The optimism of the Westerner, his enthusiastic way of pushing his dreams into the realm of reality, is the quality which he finds most noteworthy. "There is no wool in the Western mind, and there is no decadence in the Western conscience." Brander Matthews discusses American satires in verse, giving first place, of course, to Lowell. As to the treatment of Bryant in the 'Fable for Critics,' we prefer Lowell's own later judgment to that of Professor Matthews, who pronounces the passage a true portrait, in spite of its artificial rhymes and ingenious puns. The editor discusses optimistically the possibilities and actual achievement of short-story writing under present conditions. There has been a great advance, he thinks, over the stories

of a generation ago, nor has there been any real loss due to the unwritten laws which place a ban upon stories likely to offend religious, partisan, or moral sensibilities. The short story has not reached its best possibilities, has rarely met to the full the demands of the most cultivated readers, or rivalled successfully the greatest novels; but it has entered upon its highest estate, and attracted to itself an interest not yet wholly satisfied.

—'The Spanish Colonial System,' by Wilhelm Roscher (Henry Holt & Co.), a fifty-page pamphlet, is a translation into English of the chapter on this subject in Roscher's 'Kolonien, Kolonialpolitik und Auswanderung,' from the third Leipzig edition (1885). The publication is due to Prof. Edward G. Bourne of Yale, who has edited the translation and added some notes of a bibliographical character calculated to aid students dependent upon the English language. Professor Bourne states that this chapter, as "a broad historical and comparative treatment of the subject," has been of great aid to him, and he desired to make it available for class use and for collateral reading. He says, only too truly: "The treatments of [Spanish colonial history] in our ordinary text-books and in the popular narrative histories are at best inadequate and too often misleading, through the prejudice or lack of knowledge of their readers." Professor Bourne himself lately emphasized this fact in his introduction to Blair and Robertson's 'The Philippine Islands, 1493-1898.' If scant justice has been done by English and American writers to Spain and her generally humane aims (speaking of her *official* aims) in her early attempts at colonization, there is none the less a danger of going to the other extreme in judging too exclusively by the *letter* of the Spanish laws regarding treatment of the Indians, etc. It is precisely this danger which Roscher's pamphlet illustrates, and Professor Bourne himself has not escaped it. The chapter in question reeks of the library. Its author has drawn his data mainly from the Laws of the Indies (which are really less significant as illustrating the aims of the Spanish kings and of the ecclesiastics than as showing the multiplicity of abuses which had sprung up from the first, and which it was sought to remedy by high-sounding decrees from a distance) and from other expressions of official purpose. Moreover, not only do Roscher's researches among the sources need broadening by reference to the Spanish archives, which reveal more nearly what was the actual state of affairs in the colonies, but his authorities are also musty, and many of them discredited. The chapter is especially valuable in its paragraphs upon the economic policy of Spain, but it is by no means an adequate treatment of this subject, even for a monograph. Here, too, the bookishness of the German savant is very much in evidence; a little investigation would have shown Herr Roscher that the *situado* (appropriation, he translates it) annually sent to the Philippine Islands from Mexico was not a free subsidy granted to support the former colony, but the return to Manila of the share of her citizens in the Chinese goods shipped to Acapulco and of the duties collected at the latter port. This little pamphlet was well worth translating, and is especially valuable at this time, but it hardly deserves Professor Bourne's characterization of it.

—Gen. Herman Haupt, whose 'Reminiscences,' privately printed, are now given to the public (New York: John R. Anderson Co.), has been a striking figure in the history of railroad engineering in the United States. He had a strong belief in himself, a power of impressing his ideas on other people, and an ability to secure quick results. His rough and ready genius found its best opportunity in the days of the civil war, when for nearly a year and a half he had charge of the military railroads of the Government. Characteristic of this work was his feat of constructing in nine working days a bridge four hundred feet long and eighty feet above the bed of Potomac Creek. Lincoln described the structure as having "nothing in it but beanpoles and cornstalks." Numerous reproductions of photographs illustrate Haupt's devices for rendering useless the rails of a railroad, and the "blanket boats"—box frames covered with India rubber—used to ferry troops across streams. Gen. Haupt's narrative, which is made up largely of official correspondence, covers only the period of his military service. In the introductory biographical account by Frank A. Foster, the chief matter of importance is the explanation of Haupt's connection with the Hoosac Tunnel enterprise. His relations to this work, which were of many curiously different sorts, were terminated by the action of Gov. Andrew in 1861, and, in spite of the vigorous lobbying which Haupt carried on—an art in which he was past master—he never regained control of the work. Mr. Foster, of course, tells only one side of the story; even thus his narrative not only contains obvious self-contradictions, but is at variance with the facts as presented in Haupt's own memorial to the Massachusetts Legislature of 1863. Haupt's scheme was to get some sort of hole through the mountain, big enough for a single line of track, and he strove for speed rather than thoroughness. Work done on such terms, however, Massachusetts could hardly be justified in backing; and one need not go beyond this fact into investigations of Haupt's financial methods and the intrigues of the rival line of railroad, afterwards part of the Boston and Albany system, to decide that the State did well in refusing to allow him to continue the work.

—Prior to the publication in an English dress of Brandes's 'Romantic School in France' (Macmillan), the principal English aid to a study of French romanticism has been the translation of Pellissier's 'Le Mouvement Littéraire au XIXe Siècle.' But this excellent book, dealing with the realistic school as well, was confined in its view to France, while Omond's 'Romantic Triumph,' attempting to embrace romanticism in general, merely sketched the French school in one chapter. The work of Brandes is therefore welcome, as considering its subject first at adequate length, and second in relation to the European movement. Moreover, of the six volumes comprising the author's "Main Currents in Nineteenth Century Literature," this is by far the most sympathetic. It is written *con amore*. It is itself romantic in the French fashion. In sentences, in groupings of men, ideas, chapters, it has caught the antithesis so dear to the heart of Hugo. Beyle is contrasted with Sand, and Sand with Balzac, and Mérimée with Beyle. Of George Sand we are told, "Her page is always much superior to her word; Beyle's word is far better than his page"; or again, contrasting her with De Musset, "She 'knitted' her novels; he wrote his works in a brief, burning ecstasy." In its moral conceptions this book presents extreme romanticist views, unaffected by the erotic aberrations of every one of the group. It accepts Gautier's "l'art pour l'art," frankly declaring, "Life and art stand in entirely different relations to morality." It even compares poetry with physiology, "which certainly does not confine itself to subjects that are considered fit topics of conversation in polite society." From Brandes we get a vivid picture of personalities and productions, but no systematic account of ideas or their evolution. Something of the sort was tried in the volume dealing with the 'Romantic School in Germany'; here it is confined to a few remarks on changes in social and political notions. And in the larger work, as in this unit, there prevails the unwarrantable assumption that the terms "Romantic School" and "Romanticism" are interchangeable. Hence, perhaps, the failure to offer any comprehensive explanation of Romanticism itself, such, for example, as Herford has given by way of background in his admirable preface to 'The Age of Wordsworth.'

—Dr. D. Joseph, professor in the new University of Brussels, has published a history of architectural art in all ages in two octavo volumes with 773 illustrations—'Geschichte der Baukunst vom Altertum bis zur Neuzeit' (Berlin and New York: Bruno Hessling). Its characteristic is description, partly by printed text, partly in illustrations especially selected to give the reader a full sense of what the buildings discussed in the text are, and their scale is made very great that this kind of explanation may be more nearly perfect. If we should say that the proportion of text to pictures is about as one to one, we should not be far astray. No great attention is paid to plans and other measured or mechanical reproductions (sections and the like), and in this lies the chief objection to the book considered as a volume for serious study. In the early pages there are a few ground plans and plans of parts of buildings, the old-fashioned small-scale plans which are credited freely to different well-known books on architectural art; but when the subject is connected with the buildings that still exist nearly complete, nearly uninjured, good material for photography, plans and geometrical drawings disappear almost wholly in the crowd of half-tone prints as large as the page allows. Thus it happens that in volume ii., at the period of the Florentine Renaissance, there is a view of the Santo Spirito, one of the Pazzi Chapel, one of the Innocenti, one of the Palazzo Pitti, and a dozen more, all without any plan or section at all. It is not till we come to the very curious little church at Prato, whose plan elucidates also the better known churches at Montepulciano and at Cortona, that the plan and also a cross section taken from Laspeyres's book are called on to help out the photographic views. What little critical treatment is indulged in serves the purpose of tying together similar manifestations of art in dif-

ferent countries, for Dr. Joseph's attention is fixed rather strongly upon the relation between contemporary work in adjoining and more distant lands. In this comparative study it has been necessary to call upon little-known lands and towns, so that even students who have a good collection of pictures will find much here that is new. The inquiry stops, however, with the Neoclassic of the eighteenth century—with the "Barock, Rokoko und Klassizismus"; under which head buildings are given which even a considerable experience may still have left unfamiliar to the reader.

HERBERT SPENCER'S AUTOBIOGRAPHY.

An Autobiography. By Herbert Spencer. Illustrated. In two volumes. D. Appleton & Co. 1904.

On page 423 of the first volume of this book Mr. Spencer observes:

"Most people frame very untrue, and often very absurd, conceptions of those who write books. They expect to find them differ from average persons in conspicuous ways. One may say that as a rule no man is equal to his book, though there are, I believe, exceptions. All the best products of his mental activity he puts into his book, where they are separated from the mass of inferior products with which they are mingled in his daily talk. And yet the usual supposition is that the unselected thoughts will be as good as the selected thoughts. It would be about as reasonable to suppose that the fermented wort of the distiller will be found of like quality with the spirit distilled from it. Nor is it only in respect of intellectual manifestations that too much is looked for from authors. There are also looked for, especially from authors of philosophical books, traits of character greatly transcending ordinary ones. The common anticipation is that they are likely to display contempt for things which please the majority of people."

He then proceeds to illustrate this doctrine by anecdotes of a Frenchman who was astonished to see him playing billiards at the Athenæum Club, and of Mr. Andrew Carnegie, who expressed surprise on board an Atlantic steamer at his telling a waiter that he had asked not for Cheshire cheese, but for Cheddar.

In this passage there is a moral for the Autobiography itself which doubtless escaped its author. Mr. Spencer tells us more about himself in its pages, more about his personal habits and ways and the daily course of his ordinary thoughts, than any one meeting him in society could have gathered from many interviews. The author, and indeed the philosophical author, is brought down to the level of common humanity with unsparing and unceasing frankness. It is an old remark, that not only the author, but the preacher also, ought not to be seen close at hand, because it becomes hard to idealize them, hard not to feel the contrast which exists more or less in all men between preaching on the one hand and practice on the other. Oliver Goldsmith and Bishop Wilberforce are familiar English examples of the rule; to be with them brought them sadly down from the poem and the pulpit. Yet it is a rule not without exceptions, for Dr. Johnson, uncouth and rude as he was, impressed people quite as much by his talk as by his writings, and Dr. Phillips Brooks never sank, in the eyes of those who knew him well, an inch below the ideal they had formed of him from his sermons. Does, then, Herbert Spencer suffer from the wonderful piece of self-disclosure contained in these 1,200 pages? That in some measure depends on the conception of him which the readers of the Autobiography have brought to it. His special disciples and admirers, together with that large public which, without knowing much about him, has taken him, on the faith of his admirers, to be a profound thinker and a constructive moralist, will be mortified to find this eminent person so full of vanity and self-consciousness, so intensely and perpetually occupied with himself, so ignorant of a hundred things which an educated man ought to know, so wanting in respect for great thinkers in the past, so devoid of humor and of that sort of common sense which social tact gives, so incapable of distinguishing between the commonplaces which every fairly intelligent man can pour forth, and truths that lie below the surface. But those, on the other hand, who, well knowing beforehand his intellectual deficiencies, have been driven, by the undue claims made for him, into a sort of opposition and disparagement, will be led by the extraordinary candor and naïveté of these confessions to take a lenient view of, and even to cherish a certain tenderness for, a man so simple, so direct, so obviously anxious to say the truth —and neither more nor less than the truth— about himself.

Amiable, Mr. Spencer is not; at least he does not so paint himself. He dwells over and over again upon his neglect and disregard of other people's feelings. Here are some of his judgments on his own character. Discussing his inferiority to his father in the sentiment and habit of active beneficence, and attributing this to his greater inertia—for he always describes himself as naturally indolent—

"The infliction of pain or the witnessing of pain inflicted," he says, "has ever been repugnant to me—save, indeed, under the excitement of argument, when I have usually shown but little regard for the feelings of opponents" (vol. ii., p. 501).

"No one will deny that I am much given to criticism. And if this is a trait in my writing, still more is it a trait in my conversation. The tendency to fault-finding is dominant — disagreeably dominant. The indicating of errors in thought and speech made by those around, has all through life been an incurable habit—a habit for which I have often reproached myself—to no purpose" (p. 512).

"This abnormal tendency to criticise has been a chief factor in the continuance of my celibate life. Readiness to see inferiorities rather than superiorities must have impeded the finding of one who attracted me in adequate degree. But it is far from the fact that I have a deficient appreciation of physical beauty. Physical beauty is a *sine qua non* with me; as was once unhappily proved where the intellectual traits and the emotional traits were of the highest" (p. 520).

"Frequently, when prospects are promising, dissatisfaction follows marriage rather than satisfaction; and in my own case the prospects would not have been promising. I am not by nature adapted to a relation in which perpetual compromise and great forbearance are needful. That extreme critical tendency which I have above described, joined with a lack of reticence no less pronounced, would, I fear, have caused perpetual domestic differences. After all, my celibate life has probably been the best for me, as well as the best for some unknown other" (p. 540).

This pathetic passage is a good instance of the way in which a philosopher who seeks to investigate or pronounce upon social phenomena, may omit the most vital and decisive factor in the whole problem. He assumes that "perpetual compromise and great forbearance" are essential to a peaceful conjugal life, ignoring the influence of love, or forgetting that, where it is present in sufficient force, there are no occasions for compromise and no need for forbearance. (As he was never himself in love, his ignorance was natural. But where he was ignorant, he had no right to speak so positively.)

A reader who should take these and other passages literally might form a wrong impression of Mr. Spencer's character. Though incessantly occupied with himself, down to the recording of all those instances in which some passing ailment or some over-exertion weakened his powers of work, he was very far from being an unkindly man, or a selfish one in the common sense of the word. There is, indeed, in the book abundant evidence of his attachment to his friends. He was full of courage, a disinterested and pertinacious champion of the causes (usually unpopular causes) which he felt it his duty to advocate. He was not jealous of other reputations. He was entirely superior to the love of money or of public distinctions, and not more elated than even a philosopher is permitted to be, at the recognitions which came to him from his numerous admirers. He had a strong sense of justice and was perfectly loyal to truth. With all his vanity he could see the faults even in that point about which authors are usually most sensitive—his literary style. He writes:

"In so far as giving coherence and completeness [to my arguments] is concerned, I have generally satisfied my literary ambition; but I have fallen short of it in respect of literary form. The æsthetic sense has in this always kept before me an ideal which I could never reach. Though my style is lucid, it has, as compared with some styles, a monotony that displeases me. There is a lack of variety in its verbal forms and in its larger components, and there is a lack of vigor in its phrases. But the desire for perfection has in this, as in the building up of arguments, prompted unceasing efforts to remove defects" (vol. ii., p. 527-8).

After reading this, one is inclined to forgive Mr. Spencer not only for the dismal dulness of his way of writing, which has made so many people abandon the attempt to read any one of his books right through to the end, but even his extraordinarily assured judgments on the work of others, as when, after describing the failure of his efforts to read Plato, because he was "impatient with the indefiniteness of the thinking and the mistaking of words for things, being repelled also by the rambling form of the arguments," he adds: "Still, quotations from time to time met with lead me to think that there are in Plato detached thoughts from which I might benefit had I the patience to seek them out. The like is probably true of other ancient writings"(!!) (vol. ii., p. 517).

Nearly the whole of these bulky volumes is occupied either with the details, often very trivial, of Mr. Spencer's daily life, or with an account of the genesis of his principal books. Those who attach great importance to the so-called "Synthetic Philosophy" will, of course, value this account, and even for others it is not without interest. There are also three things less in

quantity, but better in literary quality, which deserve to be noted. One consists of the opinions he expresses on some of his eminent contemporaries. These opinions are but few, and we wish they had been more numerous, for they are written with vigor, and they throw a curious reflected light back upon Mr. Spencer himself. Of John Stuart Mill he writes with real appreciation of the elevation and generosity of soul which belonged to that excellent man; and he speaks in a warm and friendly strain of G. H. Lewes also, though in neither case does he give a finished portrait, nor show any special power of penetration. For Ruskin's writings he had, as might be expected, outspoken contempt.

"On opening Mr. Ruskin's 'Stones of Venice,' I found myself called upon to admire a piece of work which seemed to me sheer barbarism. My faith in his judgment was at once destroyed, and thereafter I paid no further attention to his writings than was implied by reading portions quoted in reviews or elsewhere. These, joined with current statements about his sayings and doings, sufficiently justified the opinion I had formed. Doubtless he has a fine style, writes passages of great eloquence, and here and there expresses truths; but that one who has written and uttered such multitudinous absurdities should have acquired so great an influence, is to me both surprising and disheartening" (vol. i., p. 403).

But his severest denunciations are reserved for Thomas Carlyle, whom, after having been taken to pay three or four visits, he found it best to see no more, because "I must either listen to his absurd dogmas in silence, which it was not in my nature to do, or get into fierce argument with him, which ended in our glaring at one another."

The second thing is his elaborate study of his various ancestors and relatives in the ascending line—a study conducted for the sake of showing what were the hereditary influences at work upon him. Among these are descriptions of his father, George Spencer, and his uncle, Thomas Spencer, which bring both men before us very clearly and vividly. They are as good as anything in the book, except perhaps the last part of it (the third of the noteworthy things above referred to). This part was written four years after the rest as a sort of postscript, and contains, under the title "Reflections," thoughts upon the relations of bodily constitution to mental phenomena, which pass into an analysis of his own intellectual and moral qualities, and end with a statement of the changes which his views on politics and religion underwent in later years. The last few pages are striking, and even rise into a sort of eloquence.

The book, taken all in all, will not raise its author's fame as an original thinker. There is, indeed, a curious want of fertility about it. He has, for instance, very little to say about America which is either novel or instructive, though he paid a tolerably long visit and saw people well worth seeing. But it gives the impression both of an extremely active mind, always searching for causes, and of an upright and firm character; and the very simplicity at which we smile leaves us in a frame of kindliness to one who was too serious to be ever cynical, and too bent on truth to be ever worldly. Even the composition of the book was not more due to the interest he felt in himself than to the belief he held that it is every man's duty to supply to science as many data for inquiry into psychological phenomena as his own experience can furnish. This he has certainly done; seldom has an autobiography better deserved to be called by the now popular name of a "human document," the complete unveiling of the things which most men conceal.

Manchuria: Its People, Resources, and Recent History. By Alexander Hosie, M. A., F. R. G. S., author of 'Three Years in Western China.' With map, diagram, and illustrations. New York: Charles Scribner's Sons. 1904. Pp. xii., 293.

The preface to this volume is dated December, 1900, but it deals so carefully and minutely with the conditions existing in Mantchuria that it is of great service in helping to an understanding of the questions at issue in the Russo-Japanese war, and of the probable progress of the campaign now going on. The volume is accompanied by a map which is a partial reproduction of the one prepared by the Chinese Eastern Railroad Company, substituting English transliterations for Russian. There are also thirty excellent photogravures, giving a vivid picture of many of the most interesting scenes and objects of the country. Though written by an Englishman, the volume bears no traces of antagonism to Russia, but seemingly treats all questions in an impartial manner. The chief value of the book consists in the fact that it is a detailed and painstaking account of the physical features of the country, of the agricultural and mineral products, and of the people themselves, with their special industries. The author also gives a detailed account of a journey from Newchwang to Kirin in the winter of 1895, as well as of his journey home through Siberia in 1900. In the volume will be found almost everything which the ordinary reader will wish to know concerning the region.

Mr. Hosie estimates the population to be about 17,000,000, nine-tenths of whom, however, are Chinese rather than Mantchus; and it is mostly confined to the southern province now occupied by the contending armies. As is often the case with other nations, so with the Mantchus—their success in war was the beginning of their decline. Following the conquest of China in the middle of the seventeenth century, the Mantchus remained in the conquered territory in large numbers to become a military caste. There, ever since, their descendants, in reward for slight military service rendered, are pensioned, as are also the majority of the Mantchus of mature age in their home country. This pension, while not sufficient to give them adequate support, is enough to take away from them that stimulus to earn a livelihood and to better their condition which, as the author says, "goes to make men and nations." The difficulty of drawing the Government pension while away from home prevents the pensioner from venturing out, as the Chinese do, to engage in enterprises of profit that might open to them elsewhere.

The area of Mantchuria is nearly 400,000 square miles, or about as large as the portion of the United States lying east of the Mississippi River and north of the Ohio, excluding New England. The country is full of undeveloped resources, since the Chinese Government has never established an orderly government over the northern provinces, and has, indeed, discouraged immigration into them. The result is that at the present time Russian settlers, to the number of nearly 2,000,000, are surrounding the northern half of Mantchuria upon three sides, and are led to cast wistful eyes upon its unoccupied land and upon the short lines of communication afforded by crossing this alien territory. The temptation is not unlike that which urges to unlawful aggression on the part of our own Western pioneers upon the Indian reservations. All these things should be taken into account in criticising the efforts of the Russian Government to open lines of communication across the country, and to secure such an orderly government that property could be protected and the regular settlement of the country encouraged.

For some years past, Niu-Chwang has been almost the only port open to commerce, and this because, before the construction of the railroad, there was no other port to which the produce of the country could be brought. The description given by the author of the traffic between Niu-Chwang and the interior is very interesting. During the spring, summer, and autumn the roads are so poor and the mud is so deep that extensive traffic by land is impossible. During that period, therefore, resort is had to boats of every sort, such as can descend the Liao River and its branches. Mr. Hosie estimates that 20,000 come down the river in a single season; but in the winters, which are very cold, the thermometer frequently falling below —30 degrees Fahrenheit, there is a constant stream of carts laden with the produce of the interior, bound for Niu-Chwang, where it will await the opening of navigation and the transfer to other countries by Chinese junks.

The unsettled condition of the territory is vividly described in the account which the author gives of the robber bands, of which such frequent mention is made in connection with the present war. These bands, well mounted and armed,

"swoop down on the villages, caravans of goods and travellers, and plunder and rob without mercy. Even the great trade highways of the province are infested with them. . . . Officials are sometimes carried off and held to ransom. There can be little doubt that these brigands have agents in the principal towns who keep them informed regarding the movement of treasure and valuables. . . . Indeed, brigandage in Mantchuria has given rise to the establishment of private insurance offices throughout the country. These undertake for a commission the safe conduct of goods and treasure from one place to another. Each office supplies the trader with its own distinctive triangular scalloped flag, which is planted on each cart in the caravan, and a few armed men are sent as a nominal guard. It is generally understood that the insurance offices have to pay blackmail to the brigands to insure respect for their flags, as the insurance guards are too weak to resist any determined attack. . . . Brigandage has practically become a profession in the central province; and even in the southern province, where it is less rampant, parents have been overheard discussing the advisability of fitting out their sons as highwaymen when everything else failed, and even a ragged mendicant bewailing his luck has been known to express the opinion that it would be far more profitable for him to be a brigand than a beggar, and that he only lacked the funds to secure an outfit" (pp. 169, 170).

It will be interesting to the critics of the present military situation who have ex-

patiated so much upon the inadequacy of the single-track Trans-Siberian Railroad to furnish supplies to a large Russian army in Mantchuria, to learn that 500,000 tons of beans are annually exported from the region—that is, a ton of beans for every Russian soldier if the army should be increased to half a million. The most important crop, however, is the tall millet (*Holcus sorghum*, L.), which furnishes food for both man and beast, and at the same time provides fuel and material for covering houses. But this is nearly all consumed in the country. Mantchuria is also an ideal wheat field, especially the northern provinces, so that flour is cheaper in Harbin than it is in Minneapolis. Indian corn, buckwheat, and barley are also raised in great quantities. The Russian army, therefore, is not likely to perish of starvation. Indeed, it is in an ideal situation for carrying on a prolonged contest with a Power advancing from the sea.

Encyclopædia Medica: Edited by Chalmers Watson, M. D., etc. Longmans, Green & Co. Vols. 7 to 13 inclusive. 1904.

The first six volumes of this important work have already been noticed in these columns, and the additional seven volumes to which we now call attention make the set complete. The whole may be taken as one of the fullest expressions of English thought on the nature, prevention, and cure of disease, and its contents are presented in such an excellent typographical form that the reading is easy and pleasant. If we might judge the Encyclopædia by its best articles, we could give it almost unqualified praise, and indeed it is well known that when a cultivated Englishman delivers himself upon a topic which he has really mastered, his exposition is certain to deserve attention both for its matter and for its style. Each one of the seven volumes contains papers which are of much importance and are likewise of interest to the general reader.

The reports of the Lunacy Commissioners of Scotland have always been regarded as authoritative, and the article by one of them, J. F. Sutherland, M.B., on the subject of "Lunacy" is therefore welcome. After a careful discussion of the question as to whether insanity is increasing, this writer says; "A full and fair consideration of the data available [for Great Britain] warrants the conclusion that the liability to insanity is not greater in the community now than formerly." He admits that the figures seem to tell another story, but gives four reasons to account for this: First, that the patients with relatively slight mental derangements are now classified in the official registers as insane; second, that aged persons are oftener treated in institutions and in private dwellings now than formerly; third, that well-to-do families are more ready than they used to be to hand over their insane members to the care of others; and, fourth, that the poorer portion of the community is more and more inclined to demand public aid. It is well known that the practice of boarding out the insane has obtained more fully in Scotland than in any other country, and in view of that fact the following statement is also noteworthy.

"From what has been written it will be apparent that the 'boarding-out' system of Scotland has had a long and successful history during the past forty-four years, and that such a system, *mutatis mutandis*, should have a distinct place in the lunacy administration of every country in which the individual treatment of the insane or the nearest possible approach to it, in which a normal existence as opposed to a conventional one, and in which the happiness and greater freedom of the patient among those of his own class, are aimed at. The present position of the system, as well as its extension, is also amply justified on economic grounds as well as by the singular immunity to the insane themselves from those accidents incidental to the general and to asylum populations, and from special accidents of the sexual, suicidal, and homicidal order, and by a remarkable immunity from similar accidents to the communities in which they reside, whose amenities and safety cannot really be said to have suffered during the forty-four years of its history."

"Malaria" is admirably dealt with by Dr. D. C. Rees of the London School of Tropical Medicine, in the light of the newer views respecting transmission of the disease by mosquitoes. This article is fifty pages in length, is excellently illustrated, and inspires the reader with a sense of entire satisfaction. "Maternal Impressions" are deposed from their pedestal as causes of mischief in an interesting paper by J. W. Ballantine. In spite of much popular belief to the contrary, it may be safely said that definite impressions have no power to perpetuate themselves as such. This has been the question really at stake, and since it is clearly shown that it can be answered in the negative, the scientific reasoner may be ready to admit in his turn that the state of the mind during pregnancy may in a very general sense affect the condition of the child. The article on the "History of Medicine," by E. F. Willoughby, is also one which the general reader as well as the practitioner can turn to with interest and profit. Francis Warner, well known for good work upon the diseases of school children, contributes an interesting paper of ten pages on the subject of "Physiognomy and Expression," and the statement which he makes fully justifies his claim that the facts here presented suggest principles by which we may be guided in making inferences as to mode of brain action in various mental states, as well as to the condition of brain disturbances. The descriptions and directions for examination which are here given should be familiar to every student of school hygiene. The important subject of "Tuberculosis" is also thoroughly discussed in an article of forty-five pages by Theodore Shennan, pathologist of the Royal Infirmary, Edinburgh, which seems to contain everything of fundamental importance relating to the scientific and clinical aspects of the problem. Especially timely is the full treatment of the subject of tuberculosis of animals as compared with men. This has been a topic of acute interest ever since Koch's pronouncement of two years ago denying the possibility of contagion through cow's milk. This opinion is not sustained by the evidence which Dr. Shennan has collected.

On the other hand, the standard of excellence represented by these articles is not maintained as uniformly as one might expect, and some of the papers are marked by a certain crudeness in both conception and execution and are occasionally lacking in accuracy. An illustration of this last criticism is afforded by a statement in the article, otherwise excellent in many respects, upon "normal and morbid sleep." The writer discusses a theory of sleep which is based on the assumption that the nerve cells have a certain power of expanding and retracting their processes and thus altering their anatomical relations to each other; but instead of attributing this power to the nerve cell, he gives it to the "neuroglia," and says, "It is supposed that the pseudopods of the neuroglia are possessed with the properties of extending and contracting. When extension or relaxation occurs, the pseudopods intervene between the cells and their protoplasmic processes and the nerve branches, so that the passage of nerve current is either entirely stopped or considerably impeded, the amœboid movement of the neuroglia thus acting as the isolation of the nerve current." The writer seems, here, to have confounded a theory once offered by Cajal with the amœboid nerve-cell theory of Rückhardt and Duval. We are surprised, in looking over the article on "Typhoid Fever," to see how inadequate is the discussion of the theory and mode of administration of the cold-bath treatment. It has long been apparent that the subject of hydrotherapeutics has hitherto been neglected in England, and we have here an illustration of the fact. The cold bath is, to be sure, favored, but its mode of action is assumed to be that of an antipyretic only, and practically nothing is said about the significance of the "reaction," as indicating a tonic improvement in the circulation and the metabolism, which the best authorities consider as the important element in the treatment.

The American publication which stands nearest to the Encyclopædia is the 'Reference Hand-Book of the Medical Sciences,' now in process of publication. The latter will occupy a somewhat smaller number of volumes than the former, but, as it is printed in smaller type and double columns and on thinner paper, it will contain considerably more material, and the topics which are made the subject of brief statement or cross-reference are very much more numerous than in the English work. This, as it seems to us, is a distinct advantage. One wishes an Encyclopædia to have, in some measure, the qualities of a dictionary—that is, to be a book where it is possible to find, in alphabetical order, at least a guiding word on a great variety of topics. For example, volume eight of the Encyclopædia contains the subjects between Liver and Menopause, and it happens that the number of words given to the subjects within this range is not very different from the number employed for the same purpose in the 'Hand-Book of the Medical Sciences'; yet in the latter work more than twice as many minor topics are dealt with, either by a few words or by reference to headings under which they are to be found treated of at greater length.

As regards the arrangement of the different articles, we feel inclined to repeat a criticism which was brought forward in our review of the first six volumes, namely, that sub-topics are too often, and, as it seems to us, unnecessarily, divorced from the main subject to which they are naturally related. Thus "Refraction" and "Retina and Optic Nerve" are made the subjects of good articles standing quite apart from the other

papers on diseases of the eye. So, too, "Sciatica" is rather scantily treated of in two pages, with little reference to other forms of neuritis, and much the same may be said of a paper on the "Lumbar Region." To sum up, in this large work we have a collection of articles which, in the main, are excellent and valuable, but which do not cover the whole subject of medicine quite as completely as one might wish, and are not always arranged in the manner best calculated to afford instruction.

New Hampshire: An Epitome of Popular Government. By Frank B. Sanborn. (American Commonwealths.) Boston: Houghton, Mifflin & Co. 1904. Pp. 354.

The late Mr. Justice Strong, after his retirement from the bench of the Supreme Court of the United States, being one day questioned as to a certain passage in one of his opinions, took shelter in the response: "Well, a judge, you know, always writes his opinion in a strait-jacket." In like vein we might speak of any one who has engaged to add a volume to this excellent American Commonwealths series. Material is so abundant that an author must possess, in addition to historical instinct, a fine sense of proportion, as well as the faculty of concise narration. Mr. Sanborn has achieved a literary success. He is the master of a style so charming, if not without its lapses,* that the reader who takes up this book will keep on reading until he finds that he is acquiring (if he had it not before) a personal liking for the author himself. In a frank and sweet-tempered tone the writer tells the story of the settlement, growth, and prosperity of his native State.

Mr. Sanborn is a man of letters, for when he would have you know that there are twenty mountains in the State that exceed 4,000 feet in height, he adds, "higher, that is, than Cithæron in Attica." But he is more: he has enjoyed an experience in the administration of public charities, has known intimately public men and measures. He has improved these opportunities to observe how far current history is shaped by leaders; and when he takes up the pen to write of the past, he sketches this or that public man and fixes his rank with a fair estimate of his influence. When Mr. Sanborn writes of institutions, such as hospitals, prisons, and the like, it is as one having authority; and he points to statistics which seem to settle the question—if there be a question.

New Hampshire has suffered from the fact that hitherto her history has been written chiefly from the Puritan standpoint. Dr. Jeremy Belknap's work is a classic, but the author was of Massachusetts birth and a clergyman, and was in some directions deprived of original material long since accessible to us. Half a century ago a new school of investigators, natives of New Hampshire, began to bring to light facts proving that much already written about the early settlement of the State needed to be corrected. Mr. Sanborn has judiciously availed himself of the labors of these local historians.

Having spoken of merits, we shall proceed to point out a few instances in which the writer has fallen into error, in the hope that in a second edition all such blemishes will have disappeared. At page 2 we read: "Captain Mason must be called the founder of New Hampshire, which it is doubtful if he ever saw, though he gave the Colony its name, and furnished a name for its first city, Portsmouth—deriving both from southern England, where for years he was governor of Portsmouth." Mason did *not* give the name to what is now Portsmouth, formerly Strawberry Banke. That name originated in a petition—the same that is referred to by Mr. Sanborn at page 44—from Puritan inhabitants of the settlement in 1653, addressed to the General Court at Boston. They asked to have the bounds of the place laid out, and gave reasons why it should be called Portsmouth. To honor Mason was farthest from their minds. Portsmouth is *not*, nor has it ever been, the "first city" of New Hampshire, either in point of population or date of charter. Capt. Mason certainly was not Governor of Portsmouth "for years." He was made Captain of Southsea Castle, a fortress at the entrance of the harbor of Portsmouth, in 1634, and he died in 1635. It is more than doubtful whether Mason was ever "Governor" at all. The records show that Sir Edward Cecil, Viscount Wimbledon, was Governor of Portsmouth from 1630 to 1638 (Robert East, 1891, p. 637). Spight prints a copy of an order by Wimbledon as Governor, dated October, 1635, and Mason did not die until November (or, some say, December) of that year. Besides, upon the tablet set up in the Garrison Chapel of Domus Dei by New Hampshire contributors (some of them heirs of Mason) the inscription recites that Mason was Captain of Southsea Castle. No mention is made of his having been Governor. In fine, we may say that all the evidence points to the conclusion that Mason never reached this greater distinction. It is fair to say that Mr. Sanborn here only follows Belknap and other writers.

Mr. Sanborn says that Mason or his friends sent over several persons who fell within the description of "a loyal clergy selected by careful English bishops, who should preach passive obedience" (p. 9). It would be difficult, we fancy, to name even three or four of these "several" clergymen so "sent over."

In his earliest mention of Webster, our author remarks: "His manly eloquence was first exhibited at Washington in opposing the administration of Madison and the war with England; his antagonists being Calhoun and Clay, with whom for more than thirty years afterward he was either in conjunction or opposition—seldom carrying his measures, but always superior in oratory" (p. 247). The allusion is to the speech delivered in January, 1814. Mr. Clay took no part in the debate. He was Speaker, but he resigned that office on the day Webster first spoke, and soon afterwards went on a diplomatic mission to Europe.

Of New Hampshire's conduct in the war for the Union we read:

"Among those who raised and commanded regiments of volunteers for the war were a nephew of President Pierce, two of the Congressmen, Gilman Marston and Mason Weare Tappan, T. J. Whipple, an eccentric officer of the regular army, and others who distinguished themselves in battle or siege. In the navy, conspicuous commanders were Admiral Winslow of the *Kearsarge*, which sunk the corsair *Alabama*; his lieutenant, Thornton, descended from Matthew Thornton; Admiral Belknap, and others" (pp. 310-11).

Marston was a Congressman, and he commanded, but he did not raise, a regiment. Tappan raised and commanded a regiment, but he was not a Congressman, his term having expired before the war began. Whipple was not an officer of the regular army. He was a brilliant ("eccentric" is an epithet that may or may not apply) lawyer, who had been a lieutenant in the Mexican war, but he resigned in 1848 and returned to the practice of his profession. Captain (not Admiral) Winslow commanded the *Kearsarge*. He was born in North Carolina and appointed from that State, and had no connection with New Hampshire. Thornton, the executive, was a lieutenant-commander, who deserves unstinted praise for fighting the ship. The fact should have been stated that nearly the entire crew were New Hampshire men, enlisted from Portsmouth and its neighborhood. Belknap was a lieutenant-commander during the war. Fully as conspicuous was John Grimes Walker, also a lieutenant-commander, now a rear-admiral on the retired list and the head of the Panama Commission. Not a word is said of Dix or Butler, both of New Hampshire birth.

Mr. Sanborn seems determined to keep John P. Hale out of the Senate during the war. At page 298 and again at page 311 he sends Hale to Spain in 1861. Of course, it should be 1865. Hale served a full term as Senator from New Hampshire, until March 4 of the latter year.

When our author touches upon the subject of public libraries, he omits to tell us that to his native State belongs the honor of being the first in the Union to pass a law authorizing towns to grant money to establish and maintain a free library.

The volume is handsomely printed and has a good index.

The Fall of Feudalism in Ireland, or the Story of the Land League Revolution. By Michael Davitt. Harper & Bros.

Mr. Davitt's name is pretty familiar all over the world. He was a principal actor in the events related in this book, and had exceptional opportunities of knowing the undercurrents of the movement he describes. Convicted of Fenianism at the age of twenty, he spent eight years in penal servitude. Released on ticket of leave, he devoted himself to the service of the Irish people, and took a leading part in the Land League revolution, which, he says, "sprang without leaders from the peasantry." Under the coercion régime with which the British Government sought in vain to repress the new spirit, Davitt served several short terms in prison for speeches in support of a constitutionally organized resistance against the Irish land system. He entered Parliament, and resigned after a few years as a protest against the South African war.

As far as possible for one who was a leader in the movement, Mr. Davitt sinks his own personality, and, though the story is told with intense bitterness, the bitterness is against the system, not against persons. The movement which commenced in 1879 by the establishment of the Land League of Mayo was

*Thus, at page 299 we read: "It is noteworthy that for a brief period in 1851-52, six of the most active statesmen and publicists of the nation, Webster, Cass, Greeley, Hale, Chase, and Pierce, were all born in the small State," etc.

the first organized resistance to "landlordism" in Ireland. The crash in agricultural prices in 1878-9 had left the rackrented peasantry at the mercy of the landowners and their agents. In former periods of distress, in the great famine of 1847, the people paid their rents, suffering starvation, or left their homes and died on the roads and in the ditches. With a few exceptions it had been the teaching of the clergy and the popular leaders that it was preferable to die rather than "defraud the landlord of his rent." Another gospel had been preached by a few. Archbishop Hughes in New York said: "There is no law of heaven, no law of nature, that forbids a starving man to seize on bread wherever he can find it, even though it should be the loaves of propitiation on the altar of God's temple." As a curate, Archbishop Croke had preached the same gospel, and, in spite of the unmeasured condemnation of the League by other Irish bishops, he was a stout upholder of Land League principles in 1880.

The Land League was inaugurated at a meeting held to protest against evictions threatened by a Catholic priest, acting as executor of his brother, who had raised the rents to an impossible figure. Archbishop McHall denounced those who held the meeting. In the House of Commons the chief secretary described the leaders as "a clerk in a commercial house, a discharged schoolmaster, and a convict on ticket of leave," and the meeting as of no importance. This was received with loud laughter and cheers, but "behold how great a matter a little fire kindleth." From the despised meeting sprang the Irish Land League, the National League, the National Federation, and the United Irish League. Each of these has in its turn been suppressed or "proclaimed." Special coercion acts administered by subservient "removable" magistrates were passed; thousands of citizens were imprisoned on suspicion, or for offences which were crimes only in Ireland; the guarantees of personal liberty under the British Constitution were suspended; juries were shamelessly packed; spies and *agents provocateurs* were employed by the Government; men and women were shot or bayoneted by the police in suppressing or dispersing otherwise peaceful meetings. For whistling popular tunes or singing Land League ballads, men, women, and children were arrested. By such means the Government kept the agitation alive, and occasionally revived it when almost dead. Such is the story told by Mr. Davitt with many graphic incidents, tragic, and sometimes humorous.

The cost of the struggle was heavy. The national organizations received not less than $6,000,000 at home and from abroad. It was spent in relief of distress, in supporting evicted tenants and their families, in Parliamentary and election expenses, on lawyers in state trials, in payment of organizers and publishing Land League literature. What the Government spent in combating the movement is beyond computation. Besides extra police, additional magistrates, heavy fees to lawyers in the state trials, and spies, there were many military expeditions, most of which were ludicrous fiascos. Towns and villages were often surrounded with police and soldiers, and every house searched, usually in vain, for arms. Two thousand soldiers were sent to Mayo to protect fifty emergency men sent down to save Capt. Boycott's harvest. This was one of the few sucessful military operations of the campaign. The career of Parnell, the conspiracy of the London *Times*, abetted by the Government; the trial of the Land Leaguers, at which the forgeries of Pigott were so dramatically exposed—are a political romance; a true story, stranger than any fiction, told by the person who best knew the plots and counterplots of the case, the chief actors, and spies so lavishly paid.

Much, but not all that was aimed at, has been won. The bonds of landlordism have been broken, and its political power crushed. The last chapter, "A Future Racial Programme," contains a fair statement of the present political and financial relations between Ireland and England, and points out in moderate language what Irish reformers still desire to accomplish, and the lessons that may be learned from what has been done in the last quarter of a century. The leaders in this prolonged and partially successful movement were poor, some very poor men. The offences for which they were prosecuted, fined, and imprisoned were committed not for private profit, but from a sense of public duty. Were they wrong? "Go into the length and breadth of the world," said Mr. Gladstone, "ransack the literature of all countries, find if you can a single voice, a single book, in which the conduct of England toward Ireland is anywhere treated except with profound and bitter condemnation."

Mr. Davitt's book will interest others besides Irish readers. Cobden's prophecy that the crash of feudalism would be first heard in Ireland has been fulfilled, and the lessons taught by the Irish movement are likely to bear fruit in England. Mr. Davitt's concluding chapter is an earnest appeal for home rule in the interests of the British as well as of the Irish people.

Letters and Social Aims.—Poems. By Ralph Waldo Emerson. 2 vols. Boston: Houghton, Mifflin & Co. 1904.

These are volumes viii. and ix. of the centenary edition of Emerson's Works. The notes in no way fall short of the standard of excellence set by the first volume of the set. There are about ninety pages of these in the prose volume, and about 115 in the 'Poems,' the difference being less than we expected. The filial editor avails himself of a preface to 'Letters and Social Aims' to pay a handsome tribute to Mr. J. E. Cabot, Emerson's biographer *par excellence*, and in a very special manner Emerson's assistant in the preparation of this volume for the press at the time of its first publication in 1874. So liberal was his help in the choice and arrangement of the matter that Emerson disclaimed all credit for the good fortune of the book—in speaking of it to Mr. Cabot always calling it "your book." An interesting feature of this volume, as of those preceding it, is the identification of persons left by Emerson within the veil of anonymity. The identifications are not always flattering—that of Thoreau, in one place, for example: "I have seen a man of genius who made me think that if other men were like him, coöperation would be impossible. Must we always talk for victory and never once for truth, for comfort or for joy?" Very different is "an American to be proud of," who is identified with John M. Forbes. To the splendid pages accorded him in the essay "Social Aims," we have an addition of two pages in the notes taken from Emerson's journal. Sometimes the identification mars the original effect, as where Lewis Cass proves to have been one of the interlocutors in a very impressive story which finds its place in the essay on "Immortality." The folly of arguing from this essay to Emerson's latest opinion on the subject is evident when we are told that parts of the essay are divided by a width of fifty years. Many of the essays in this and other volumes are subject to the stress of this bewildering circumstance. Mr. M. D. Conway would fain persuade himself and us that Emerson was Darwinian (not merely evolutionist) five years before the appearance of the 'Origin of Species.' But the editor informs us that Mr. Conway's conclusive paragraph is missing in the lecture of 1854, and believes that Emerson inserted it much later. Darwin is mentioned in the paragraph, but Mr. Conway thought Erasmus Darwin, the grandfather (the editor writes "the father") of Charles Darwin, was intended.

The changes in this edition of the 'Poems' from the Riverside edition, the fullest heretofore, are considerable in number and importance. "The Sphinx" no longer confronts us on the threshold; in its place we have the earlier "Good-bye, proud world!" With Emerson's poems addressed to Ellen Tucker, his first wife, are placed two of her poems, not undeserving the juxtaposition. Nearly all the poems printed in the Riverside appendix are retained, and a few are added. A few others have been transposed from the appendix to a series of some twenty early poems which have much interest of an autobiographical character, and a good deal beside. If the lyrical is the subjective, these poems are intensely lyrical. Their form is better than that of the poems written in Emerson's next and most fruitful period, but much more conventional. The son remarks the more musical form of the poems gathered in 'May Day and Other Pieces' (1867), but there was no return to the earliest form; the new music was his own. A good many variants from the published lines are given in the notes; also many "rhapsodies," as the editor calls the germinal forms in which the poems were first entertained. Some of these have a keener verve than the completer forms. The original prose forms of many pieces are also given. Those of "Seashore" and "Two Rivers" are extremely interesting. The prose form of "Seashore" is too dithyrambic to be good prose, while still it falls far short of the poem it foretold. It is a strange thing that the prose anticipation of "Days" is not given, for it was hardly less magical than the final achievement, which Emerson conceived to be his best in poetry. A year after writing it (1852) he could not remember how or when he wrote it and had a feeling about it similar to Dr. Holmes's about "The Chambered Nautilus"; "When I wrote that, I did better than I could." Of "The Problem" we are told that it came to him, like the Divinity School Address, without the usual experiments and delays. "No fragments, no trials remain; much fewer verbal changes than is usual appear in the manuscript book of poetry, and not one since the poem saw light in the first number of the *Dial* in July, 1840."

The note on "Uriel" confirms the faith of many persons that the poem is a daring allegory of Emerson's personal experience; the "young deities" figuring the Cambridge divinity students, the "stern old war-gods" Prof. Andrews Norton; Uriel, Emerson himself. "The poem, when read with the Divinity School Address, and its consequences, in mind, is seen to be an account of that event generalized and sublimed—the announcement of an advance in truth, won not without pain and struggle, to hearers not yet ready, resulting in banishment to the prophet, yet the spoken word sticks like a barbed arrow, or works like a leaven." An interesting particular is the changing of the date of the "Concord Hymn," the one poem of Emerson's to which Matthew Arnold conceded "wholeness of tissue" (sure proof he had not read them all) from 1836 to 1837. Of the "Threnody" we are told the first part, lamenting the lost child, was written soon after his death, and the consolatory part some time later. Beautiful passages are given from letters and journals prefiguring the Ode, but the terrible coldness of the passage in the "Experience" essay on the transiency of the father's sorrow has barred it out. There is evidence that Emerson did himself great injustice in that passage.

The photogravure accompanying the 'Poems' is the most pleasing, though not the most significant presentment we have ever had of Emerson's face. It is now published for the first time, except that it was used upon the programme of the Concord celebration of Emerson's birthday May 25, 1903, It was better printed there than here.

The Golden Trade; or, A Discovery of the River Gambra and the Golden Trade of the Æthiopians. By Richard Jobson, 1623. Now reprinted for the first time. Teignmouth (Eng.): E. E. Speight and R. H. Walpole.

The new series of the "Saracen's Head Library," entitled "The Mary Kingsley Travel Books," opens auspiciously with a reprint of the above rare tract. The author was the commander of an expedition sent out by the "Governour of the Countries of Ginney and Binney," and other adventurers, to explore the River Gambia and to discover, if possible, the source of the gold brought to the west coast of Africa by the "Moores of Barbary." Jobson succeeded in ascending the river several hundred miles, and established friendly relations with the natives, but he learned nothing new about the gold country, except that farther in the interior was a "great Towne, the houses whereof are covered onely with gold." Evidently an intelligent man and a keen observer, he kept a journal which Samuel Purchas read with such interest that he laid "as it were a commande upon" Jobson to write a full account of his travels, "which by publishing may first tend, unto the advancement of God's glory, and next undoubtedly the honor, wealth, and preferment of our owne nation." Purchas himself printed in his "Pilgrims" the main facts of the voyage.

Jobson wrote in such an involved style that he is at times difficult reading, but his purely narrative passages are graphic and apparently truthful. There are few examples of the credulity which characterized many of the early explorers. An exception may possibly be found in his account of the "Babownes" and the

"kind of common wealth that is amongst them. . . . Wee have seene in the desert places they use, trees and plants, wound and made up together in that artificiall manner, and wrought together with that thicknes over head, to keepe away the sun, and shade the ground, which hath bin beaten, & smoothed under neath, and all things in the manner and shape of an excellent arbour, which place they have only used, and kept for their dancing and recreation."

He evidently inclines to "the opinion the Spaniard holds of them, and doth not sticke to write it, that they are absolutely a race and kind of people, who in regard they will not bee brought to worke, and live under subjection, refuse to speake." This explanation of the dumbness of apes appears to be the origin of the following passage in one of Rousseau's letters (to Hume, March 29, 1766). The recluse of Wootton tells of his refraining from speaking English in his new surroundings: "C'est à peu près la ruse," he says; "des singes, qui, disent les Nègres, ne veulent pas parler quoiqu' ils le puissent, de peur qu' on ne les fasse travailler." The Abbé Raynal's voluminous redactions might, if one had the patience, prove to be the medium through which Rousseau came in touch with Jobson. A variant, ascribed to the Philippines, is, that the apes are silent in order to escape taxation.

Jobson describes by hearsay a tribe who will not suffer themselves to be seen by the traders because their lower lip is "of that greatnesse, it turnes againe, and covers the greater part of their bosome." Hence the salt and beads they desire are left by the merchant, who on his return finds gold laid by them which, if it is a satisfactory amount, he takes and leaves the goods. Comparatively little space is given to the author's personal experiences, but the larger part of his narrative is concerned with the country, its strange fauna and flora, the various races of people, their manner of living, and religious rites. The most interesting people were the Marybucks or priests of the country, who "acknowledge Mahomet" and are noted for their temperance and truthfulness.

The reprint is edited, without notes, by Charles G. Kingsley, and has woodcut ornamentation (based on West African designs) by R. M. Nance.

Religions of Authority and the Religion of the Spirit. By Auguste Sabatier, Late Dean of the Protestant Faculty of Theology in the University of Paris. Translated by Louise Seymour Houghton. McClure, Phillips & Co. 1904.

M. Sabatier was already a sick man when he finished this book in December, 1900. He would first rest himself with a journey to Palestine, then spend three months revising what he had written. The journey did not come off, nor the revision. In February, 1901, he was taken fatally ill and died the following April. But his orders were peremptory: whatever happened, his book must appear, his colleagues, Ménégoz and Roberty, doing the revision. They have done their work with perhaps too much of pious respect for the mere form in which M. Sabatier left his matter. This is exceedingly diffuse and redundant, especially in Book III. It is certain that, if M. Sabatier had done the revision, it would have been much more thorough. At the best he had a loose and flowing style, but as a piece of writing the present work is far below the level of his 'Outlines of Religion Based on Psychology and History,' the book which secured for its author a sudden reputation in the religious world, and especially among those who, so long as they can retain something of "the form of sound doctrine," do not care much if the substance is a minus quantity.

It is not easy to conceive why M. Sabatier should have been so anxious for the publication of the later book. Presented as a sequel to the former, it adds nothing to the line of thought which ran through that. What was most significant in that has here a weaker presentation. On the other hand, this gains by concreteness and explicitness in the parts assigned to the Religions of Authority. "We do not confute the old theologies," said Renan; "we explain them." So M. Sabatier: "The history of a dogma is its inevitable criticism." "Every system has its immanent logic which impels it toward its point of perfection, and, thus revealing its internal inconsistencies or insufficiencies, impels it no less to dissolution and ruin." An application of this principle to the Roman Catholic and Protestant dogmas of authority covers 250 pages of M. Sabatier's book, and just half as many are devoted to Book III., "The Religion of the Spirit." Hardly could anything be better than the temper in which the Roman Catholic and the Protestant dogmas are treated in the two earlier parts. The doctrine of evolution, in its diffusion through contemporary thought, has done no better service than inheres in the complacency with which historical forms of religion are regarded as inevitable steps in a progress of limitless perdurance. The treatment, here, is not formal or exact, except relatively to M. Sabatier's most characteristic style, but we have everywhere the impression of a man saturated with knowledge of the history which he details.

We have in Book I. first a definition of the dogma of authority and then successive chapters on the Church, Tradition, the Episcopate, the Papacy—never, anywhere, anything given outright, but everywhere that "development" which, confessed by Cardinal Newman, anxious to find some buffer that would soften the jolt of his transition from the Anglican to the Roman Church, has brought upon him the curses of his co-religionists over a wide area, with here and there the blessing of an Abbé Loisy or some kindred spirit. M. Sabatier's tribute to the grandeur of the Papacy at the height of its development does not stint admiration, nor does his appreciation of its salutary functions in the earlier stages of its course. A chapter of searching analysis is devoted to the Infallible Pope, arriving at the conclusion that in resting the dogma of infallibility on the Pope's *ipse dixit* the Papacy discredits him, itself, and the Church together. In a chapter, "The Future of the Papacy," a brilliant forecast of the inevitable conflict between infallibility and science, no sufficient account is taken of the differences of interpretation to which the dogma has already been subjected. Powerful organizations have an instinct of self-preservation that makes short work of formulas at any critical moment, and the

dogma of infallibility will as surely be a nose of wax in the hands of the papal politicians as our written Constitution is when a new chapter of "destiny" is to be written.

The argument of Book II. is that the infallible authority of the Bible has had as logical a progress to completion and dissolution as the Roman dogma. Necessity was the mother of its invention in the seventeenth and eighteenth centuries, when the Roman claim to infallibility inspired the Protestants to produce "something equally good." M. Sabatier is not superior to that manner of authority which leans assuringly on great names and high examples, and it is possible that he exaggerates the amount of free intellect involved in the beginnings of the Protestant Reformation.

As the positive part of M. Sabatier's exposition, his Book III., "The Religion of the Spirit," should be the most important, but it is actually the least important, because it reproduces his 'Outlines of a Philosophy of Religion' in a less admirable form. For lovers of clear thinking it will be disappointing, since it is extremely vague. Readers of scientific inclination, who have found their account readily enough in the preceding books, will imagine that in this, like foolish Ixion, they have embraced a cloud. The principal weakness is the apparently arbitrary identification of the Religion of the Spirit with Christianity. There is no satisfactory answer to Strauss's objection, "The Absolute does not descend into history; it is against all analogy that the fulness of perfection should be met with at the outset of any evolution whatsoever." It must be confessed that M. Sabatier hastens to denude the founder of Christianity of everything adventitious. His theological, equally with his scientific, opinons were, we are told, the children of his time. Indeed, the attenuation is too absolute. Even the contemporaries of Jesus must have apprehended his spirit through the form of his teachings and his life. We have only the teachings; and the earthen vessels (gospels and epistles) in which the treasure is contained have suffered grievously from the shocks of critical investigation, and much of their contents is dissipated. There does not seem to be enough left (M. Sabatier *judice*) to assure for Jesus that isolated dominance which M Sabatier ascribes to him. But what most disfigures his concluding rhapsody is the contemptuousness of his rejection of orthodox and rationalist alike as having no vital relationship with Christianity whatsoever. It is not easy to distinguish the temper here from that of the traditional dogmatist.

Marks on Old Pewter and Sheffield Plate. By William Redman F.R.G.S. Bradford, Eng. New York: Charles Scribner's Sons.

This little handbook of seventy-six pages, with its somewhat disjointed collection of information, some fair illustrations of groups of vessels and indifferent ones of marks, may be of use to the collectors of pewter who have not access to Massé's valuable work on 'Pewter Plate,' lately reviewed in these columns; and to collectors of Sheffield plate for the information as to its mode of manufacture, taken from a paper read before a Sheffield society, in 1889, by its President, A. T. Watson, who was also Assay Master to the Sheffield Hall.

As the author truly says, in his preface, "While much has been written concerning Gold and Silver Plate, China, etc., Pewter has been almost altogether neglected. There is good reason why, we have no doubt. There are no hall marks and date letters on Pewter, such as we find on Silver Plate." Beginning with a chapter of "General Remarks" on the trade in England and Scotland, the cause of the almost total extinction of the manufacture of pewter is traced to the fact that

"since 1844, among the ordinary better-class people, pewter has been replaced by earthenware, china, glass, enamelled and japanned iron, block (blocked) tin, and other cheap and handy utensils. Then came the discovery of more suitable silver and other alloys, such as white metal, Britannia metal, nickel silver, German silver, and electro-plated wares which are in appearance equal to silver. These causes together sufficed to banish pewter from our households, except in a few instances, and, until lately, few ventured to let them see the light of day, while the majority had long since sent them to the melting-pot as useless lumber."

Extracts from the History of the Pewterers' Company, by Charles Welch, are followed by a "Description of the Illustrations," "Odd Bits about Pewter," "Hints to Collectors," "Prices," "How to Clean," "Dating Pewter Ware," and a reference, with some of the illustrations, to J. Starkie Gardiner's interesting paper read before the Society of Arts, London, and published in full in the *Journal*, June 1, 1894. The particulars relating to the five remaining touch-plates of the Pewterers' Company are unreliable. Few would recognize the makers, John Baskerville, Thomas Scattergood, and Richard Dyer, in "John Baskerusle," 'Thomas Attergood," and "Richard Due." An abridged Summary of Pewter Pieces, taken from Trollope's 'Church Plate in Leicestershire,' is very misleading. In the original, where the vessels are dated they are noted as "inscribed"; the majority, however, are referred to as "*circa*" such a date. Mr. Redman has omitted these important points: the dates are given as fixed. The remainder of the book is devoted to Old Sheffield Plate, an account of the trade in which is extracted from Hunter's 'History of Hallamshire.' A directory of the manufacturers of the latter half of the eighteenth century, with a list of their wares, is followed by paragraphs on counterfeiting, testing, etc., with illustrations of a few plate-marks.

One hint to collectors is of value. For the first sixty years after the discovery of the process (1742-1802), the copper was plated on one side only. In later years (1803-1850, when, on the introduction of electro-plating, the trade became almost extinct), it was found possible to coat the copper on both sides. From this it will be seen that most of the Sheffield Plate was made during fifty years. There is an inadequate general index.

Mediæval England. By Mary Bateson. G. P. Putnam's Sons. 1904.

This work differs from most of its companions in the "Story of the Nations" series by excluding the element of political narrative. A chronological table of more than twenty pages in length is published at the close of the volume, but the text itself is wholly unmarked by anything which can be called annals. "My object," says the author, "has been to keep social rather than political facts in view, and throughout to supply by illustration from contemporary accounts some of the characteristic detail which is apt to be crowded out in political histories." The fulfilment of this idea gives us a most instructive and entertaining book on the life of England during the feudal period—a book wherein the results of erudition are brought together with great skill for the benefit of those who cannot pretend to study the subject at first hand.

Miss Bateson begins with the Norman conquest and ends with the Black Death. Her first subdivision of this period closes at the death of Stephen, and her third opens at the middle of the thirteenth century. The first part she styles "Norman Feudalism"; the second, "The Lawyers' Feudalism"; and the third, "Decadent Feudalism." But if throughout she makes the social activities of mediæval England centre in feudal institutions, she does not narrow feudalism to the relations of lord and vassal. Those who have read her excellent articles and notes in the *English Historical Review* need not have their attention called to her interest in municipal history. The development of town life is firmly outlined here, and the fortunes of the villein class are also described at length. Miss Bateson, like all who are not blinded by ignorance or prejudice, insists upon the fact of mediæval civilization, and, better than mere generalization, she illustrates it by examples of the most tangible kind. The chapters on the Church are particularly good, and there are separate studies of the part which was taken by the clergy in education.

During recent years our knowledge of mediæval life in England has been increased much more by the examination of legal and official documents, pay rolls, account books, etc., than by the study of more purely literary materials. Miss Bateson is conversant with the best technical literature of our day in so far as it touches upon her main subject, or indeed upon the minor subjects which she is led to consider. In a larger work we might have desired a more exhaustive treatment of difficult questions, like that of population, but we have observed no essential topic which fails to receive its proper share of attention. The best feature of the work is its control of striking and appropriate detail. Each chapter is a finished essay, which will be read with genuine pleasure by those who have mastered the elementary facts of English history. For beginners this book may possibly be too advanced; but for all who are not beginners or specialists, it possesses uncommon uses and attractions. The illustrations have been chosen with much judgment and are well reproduced.

BOOKS OF THE WEEK.

POSTPONEMENT of the DATE of PUBLICATION of

"HANNAH LOGAN'S COURTSHIP"

IT was originally intended to issue HANNAH LOGAN'S COURTSHIP *in the early fall of 1903. But the repeated discovery of new and interesting matter, and especially of portraits of the persons who figure in John Smith's Diary, has necessitated several postponements to escape the misfortune of going to press with an incomplete book. The matter seems now to be all in hand, and the book will be issued about October 1st, 1904.*

HANNAH LOGAN'S COURTSHIP. A True Narrative. The Wooing of the Daughter of James Logan, Colonial Governor of Pennsylvania, and Divers Other Matters as related in the Diary of her Lover, John Smith, Esq., 1736-1752. Edited from the original manuscript by Albert Cook Myers, who has collected a great mass of material elucidating the text, and also many portraits, relics, documents, signatures and pictures relating to characters appearing in the diary. Beautifully printed on deckel-edge paper and profusely illustrated. Cloth, $2.00; three-quarters levant, $4.00.

CHARLES STURTEVANT MOORE,
Assistant Recorder of Harvard College.

The Nation.

NEW YORK, THURSDAY, JULY 21, 1904.

The Week.

For the second time in two years, the public has been threatened with an arbitrary deprivation, through a great strike, of a necessary of life. There was plenty of coal in 1902, and there is enough meat now, but the comfort of the 80,000,000 people is a thing of minor importance when labor and capital are settling "a little matter." Frequent and arbitrary and wholesale cut-offs of the food and fuel supply of mankind are a new factor in modern industrial life. The world has to be continually on its guard against floods and crop failures, and in many places against earthquakes and volcanic eruptions. To these contingencies must there now be added the danger of an abrupt denial of food and fire? The butchers' strike brings out clearly the difference in tactics between organized labor and organized capital. Capital may be, and no doubt is, as greedy and as unscrupulous as labor, but it has a better knowledge how far it is safe to proceed. It knows that there is a point beyond which it cannot go. A Trust is always on the lookout not to tax the community more than it will bear. Sometimes it errs, but is generally quick to retrace its steps. Unlike labor, capital hesitates to throw itself out of employment. Money must earn money. As a rule, and in the end, economic law will undo the evil wrought by greedy and scheming capitalists. They inflated speculation tremendously in the last six years, but now are submitting gracefully to the consequences. Unprecedented losses are being written off without a murmur. But labor has also been playing an audacious game. It has said, and is saying with redoubled emphasis to-day, "If you won't buy goods with the union label and made at union prices, you shall starve." Starve we shall not, but we may be put to a vast amount of inconvenience, and shall perhaps ask ourselves if unionism is not quite as much in need of restraint as capital.

"The wicked partner" who used to serve as the scapegoat for embarrassed gentlemen with reputations to lose, is now superseded by the "erring secretary." It appears that the failure of Burke and Herskovitz, the delegates of the United Mine Workers, to see the President on their first visit to Oyster Bay was due to a stupid blunder of the arrogant Mr. Loeb. "Clothed with a little brief authority," he sent the delegates packing while Mr. Roosevelt was closeted with some of the regular politicians. But the delegates of the United Mine Workers command votes, and, returning to Wilkes-Barre, telegraphed back to the effect that they must see "the Secretary dead or the President alive." The reply came from the President himself. "Might they see him? Why, dee-lighted! Credentials not required: come any time: Friday or Saturday, just as they chose." Where was the valorous Rough Rider, the strenuous upholder of the dignity of the first citizen of the republic? Manifestly, it is one thing to become interested in a coal strike when the Presidential election is far in the future, but quite another to listen to the woes of Colorado miners when the Treasurer of the Republican National Committee is about to visit Wall Street.

Delaware Republicans who have fought Addicks and all his works for so many years at such fearful odds, are justly indignant at the President's reward of the man who turned his coat in order to become Addicks's henchman, W. M. Byrne. "Is the President mad?" asks the Wilmington *Every Evening*. It goes on to recite the scandalous facts connected with the original appointment of Byrne, and the refusal of the Senate to confirm him, and asks whether Mr. Roosevelt is "bent upon carrying out the terms of his alliance with the corrupt influences of Addicks Republicanism," or "merely providing a living for William Michael Byrne at the expense of the Government." This indignant Delaware editor is evidently in need of a private lecture on "the larger good." Addicks is a threatening monster, of course, and Byrne is one of his most discredited tools; but if they can aid in bringing about the larger good of Mr. Roosevelt's election, it would have been a failure in his highest duty if he had hesitated a moment in striking hands with the man who is doing his best to disgrace and debauch Delaware.

Mr. Paul Morton intends to be every inch a Secretary of the Navy. What his predecessors have done he will do, and more—vastly more. All they could cry was, "We need a larger navy"; but how much larger, and for what specific purpose, they were unable to say. But our new Secretary knows exactly what he wants and why he wants it. In a few terse words he has stated his conception of the American fleet. The navy, he asserts, is "the watchdog of American commerce everywhere on the high seas." And he adds that it should be "the most formidable in existence." But does American commerce need a watchdog just yet? Most of it is carried on in foreign bottoms, and neutral ships make neutral goods. Certainly, we do not need the most formidable fleet in existence to protect the comparatively few ocean steamers that now fly the American flag. We are spending over $100,000,000 a year at present on our navy, but if Secretary Morton starts right in on the policy that is credited to him, we shall mount up to $200,000,000 in no time. England has appropriated about $184,500,000 for the present year, but when we have caught up with that figure we shall have to begin all over again, since she will at once go us several better.

The outcome of the fight for the control of the great railroads of the Northwest is as uncertain to-day as before the fatal May 9, 1901. The United States Circuit Court at Trenton has granted a preliminary injunction against the proposed pro-rata distribution of the assets of the Northern Securities Company. This is a victory for the Harriman or Union Pacific faction. The decision does not go into the merits of the question whether the Union Pacific people are entitled to receive back the identical Northern Pacific stock deposited by them when the Northern Securities Company was formed. It merely prohibits the last-mentioned from disposing of its Northern Pacific or Great Northern holdings, or from drawing dividends on them, until a decision of the case on a full and final hearing can be reached. It keeps the Northern Pacific stock from getting beyond the recovery of the Harriman interest in case the court decides in their favor in the end. The real outcome must, of course, remain in doubt. The Union Pacific people have an obvious stake at issue. Northern Pacific stock has gone up since the merger of 1901, and Great Northern down, which naturally makes them opposed to a pro-rata distribution of the Northern Securities Company's assets. Besides, a victory on the final issue would keep them from losing their hold on the Burlington road. The fight, however, is hardly likely to reach the acute stage of the early days of 1901. Neither Wall Street nor the railroad world has the inclination or the means for such a conflict. The real importance of the present injunction is that it makes a compromise seem more likely than before.

Are the Massachusetts Republicans after Lodge's scalp? His term expires next March, and his return to the Senate will depend upon the favor of the Legislature to be elected in November. But the spirit of Lexington and Bunker Hill is abroad in the Bay State. The movement for Canadian reciprocity, we

read, has developed into "one of the most widespread and spontaneous outbursts ever seen in New England." A committee of one hundred business men of the highest standing has been appointed to take charge of the campaign. It is openly declared that "Massachusetts has been misrepresented." The sentiment of the State is asserted to be "overwhelmingly" in favor of reciprocity, and of a kind "not confined to non-competitive products." The committee has issued an appeal to voters, irrespective of party, and is also circulating a petition for Republican voters to sign. The latter has an ominous ring. "We promise," it runs, "to attend the caucuses, and also to urge Republican voters not to nominate any person as a candidate for the State or *national* Legislature who is unwilling to commit himself clearly in favor of such reciprocal trade relations." As a result of only a slight effort, 15,000 Republican names have already been obtained, and signatures continue to come in at the rate of nearly a thousand a day. The fight is not against Roosevelt; but Massachusetts seems determined to have it cut with Lodge. Of course, it well knows that it has only to show a majority for reciprocity to convert him into its most ardent advocate.

Another Southern judge has come out against the "false standard of honor" which has led to so much needless blood-letting in the South. In charging the July Grand Jury at Montgomery, Ala., Judge W. H. Thomas of the City Court declared that he would continue to speak his mind upon this question of wholesale manslaughter until he convinced his juries of his earnestness in the matter. He had previously prepared tables showing that the rate of homicide is not due to questions of density of population, or race, or climate, or illiteracy, but to misguided public opinion. The judge then expressed the following admirable sentiments:

> "We all must condemn and punish the silly sentiment that avenges wounded honor or fancied insult with the life of its victim; to condone it is to place a premium on brute courage and to cheapen human life. . . . I, therefore, urge that you honestly investigate such offences presented, and base your findings alone upon the evidence, regardless of what any former grand jury has failed or refused to do, regardless of the findings of any coroner's inquest or of the opinion of committing magistrates; and without regard to the color or standing of the unfortunate victim. Let it ring in your ears and burn in your hearts that the blood of the slain cries out to you that the crime be avenged."

Had there been a few similar utterances from the bench of South Carolina in the last few years, such a shocking betrayal of justice as the acquittal of James H. Tillman for the murder of the editor of the Columbia *State* could never have come to pass. Judge Thomas deserves a place in the front rank of the distinguished Southerners who, like Bishop Galloway, Judge Emory Speer, Judge Jones, and others, are striving for the enforcement of the laws, the suppression of crimes of violence and of prejudice.

In the swift trial, conviction, and imprisonment of the three colored assailants of Mrs. Biddle, Jersey justice has been true to its traditions. The management of the whole affair by the authorities cannot be too highly commended. There was every circumstance to inflame public opinion against the miscreants, and the precautions taken by the civil and military officers to avoid mob violence were apparently fully justified. The cumulative sentences imposed upon each of the prisoners amount to forty-nine years each. Even the allowance granted for good behavior will not reduce this time to less than forty years and ten months each, so that the sentence in all human probability is imprisonment for life. Viewed from the legal aspect, it will be seen that the maximum punishment in New Jersey for criminal assault, to wit, fifteen years, is incommensurate with the gravity of the crime. In this case, it was possible to supplement the penalty for criminal assault with the maximum penalties for robbery and for an attack upon an officer of the law. But the Legislature of New Jersey will do well to increase the penalty for criminal assault. This case was determined by confession, without the testimony in open court of the victim, who was, indeed, too ill to appear. Such might often be the case in the South if the defenders of mob violence could rid their minds of the belief that terror is a necessary deterrent, or could forego the excitement of a man-hunt.

From Mr. Arnold-Forster's long-promised statement of his proposed reforms for the English army, it appears that England is to escape some of the lasting consequences of the Boer war, which threatened a year or so ago to add to her burdens. Immediately after that struggle her Imperialists would have it that she must place a much larger number of men in arms or else resort to universal compulsory military service. Only the other day a commission reported in favor of conscription for the militia. Fortunately, sufficient time has elapsed for the sting of England's humiliation to pass away. The militia report was promptly pigeonholed for all time, and now Mr. Arnold-Forster comes forward with a proposition to reduce the army by fourteen battalions of infantry. The Volunteer forces are to be reduced to 180,000 men, but these Mr. Arnold-Forster means to change from play soldiers into effective men of arms. The militia the War Secretary will not touch at present, "because public opinion is not ripe" for any changes. Yet the militia is the great feeder of the regular army. The shortening of the term of service to two years in the case of four out of five men in order to increase the reserve is in line with military progress in this and other countries, and is Mr. Arnold-Forster's really important reform. With England reducing her army, France her navy, and the Democrats proposing to cut down the United States army, it appears as if the recent alarming craze for militarism and war were beginning to subside.

Having settled the question of Asiatic coolies, the Transvaal is now deeply pondering the question of Asiatic traders. The coolies are a blessing to the country because they can be herded together in a compound and made to cheapen the cost of production of gold. Cheap gold is a good thing, but the South Africans believe with Secretary Shaw that cheap goods are a curse. Asia produces, however, able merchants as well as hard-working day laborers, and some of them have fixed their eyes on the Transvaal. They have rashly concluded that where there is plenty of gold there ought to be a chance to do some business. But the Government has been requested to take measures to prevent a further influx of Asiatics, "except Chinese laborers." The situation, indeed, is one that should call for the attention of Mr. Chamberlain himself. As a matter of fact, the Asiatics against whom legislative action is desired are not Chinese merchants, but his Majesty's own subjects from British India, whose frugality enables them to undersell the white traders. True, India is not a self-governing colony, but only a dependency. Still, as the King does not hesitate to employ her sons to fight his battles in Tibet, China, and Africa, it is hard to see how he can graciously refuse to let them sell small wares in the country towns of the Transvaal.

President Kruger's death in exile after the gradual failure of his mental powers, marks the end of an era. He was the ideal chieftain of the Protestant Burghers of South Africa—their Moses and their Joshua. He represented personally their unyielding, well-calculated courage, as well as their fanatical piety and their excessive love of a hard bargain. The strange mixture of sordidness and valor in his nature was typical of his generation of Boers. They feared God, brutalized the Kaffirs, and bled the British settlers—not a very amiable character, yet it gave the world a classic example of military heroism. A statesman Kruger never was. Indeed, it would have been idle to expect so much in one whom training had made a shrewd politician, after Nature had cut him out

for an unbending leader of a chosen people.

The French Parliament has adjourned with a considerable record of achievement. At the last moment Premier Combes was cleared of all suspicion in connection with the Chartreuse bribery scandal, but stood a little discredited for bringing formal accusations which he could not prove. Previously a commission had thoroughly whitewashed M. Pelletan, Minister of the Navy, whose incompetence seems morally demonstrated. Personally, then, the Ministry goes into vacation with some loss of prestige. Politically, however, M. Combes's expectation of life seems good. The prohibition of teaching by the religious orders—the chief measure effected by the present Parliament—is very popular, although it involves the subversion of religious liberty and enormous expense. Popular also is the quarrel with the Vatican, now prolonged by the failure to provide a salary for the French Ambassador. Apart from these contentious matters, the Combes Ministry has deserved well of the Republic and of civilization by reducing the naval programme and by relieving in many ways the hardship of compulsory military service. France alone of all the nations which give lip service to peace, has handled her armaments as if she took her own professions seriously. Here M. Combes's neo-Voltairism has produced good fruits.

If Pius X. has decided to discipline the Bishop of Laval, the Concordat will hardly survive the resulting quarrel. Bishop Geay himself is in the awkward dilemma that if he goes to Rome the Government will certainly dismiss him, while if he refuses to go, he may even suffer excommunication; whereas Pius X. can hardly ignore Bishop Geay's apparent insubordination without sacrificing the discipline of the Church, or punish the recalcitrant without depriving the Church of its historic privileges in France. That the Pope will proceed regardless of consequences may fairly be assumed. Yet any composition of the quarrel seems preferable. Unwittingly the head of the Church is making the Church seem the enemy of the State, and on a clear issue of Church against State, the Anti-clericals can undoubtedly sweep the country at the approaching elections. Of the religious warrant for the Pope's inflexibility we do not presume to judge; politically it is an act of high folly for the Church to let the issue be sharply raised in the present state of public opinion.

The recent elections in Holland strengthened the position of Premier Kuyper. The majority is composed of elements which have absolutely nothing in common except hatred of liberalism. It makes no distinction between the most moderate doctrinaire and the rabid Socialist. Dr. Kuyper certainly is a unique personality. He is a man of infinite tact, a great organizer and skilful debater, and also an uncompromising Calvinist, for whom the world has not moved since the sixteenth century. A Prime Minister and head of the Department of the Interior, who writes, at the same time that he is busily engaged in preparing legislation, a voluminous book "on the nature and appearance of angels," is certainly a remarkable anomaly in this century. Yet it is this union of practical sense with intense religious feeling which gives him his strongest hold on the lower strata of the people, who by recent legislation have received the electoral franchise.

The defeat of the Russians at Motien Pass is of interest chiefly as showing their growing tendency to assume the offensive, in which they are doubtless encouraged by the steady arrival of reinforcements. It implies, too, how little there was in those brave stories from St. Petersburg that the passes were abandoned with little or no resistance because this retrograde movement was in keeping with Kuropatkin's carefully made plan of campaign. It is now apparent that the passes were given up because the Russians could not hold them, and their importance is evidenced by this attempt to regain them as soon as the necessary forces for an attack were at hand. But, like most of the other Russian aggressive movements, it failed egregiously.

Germany has protested vigorously against the seizure of Japanese mails carried in a German merchantman. The case raises two interesting points in international law: First, what is the status of the Russian volunteer cruisers plying in the Red Sea? Second, what right of search or interception of mails may a belligerent exercise upon the high seas? It would seem that the Russian auxiliary cruisers are war vessels with all the rights of such. The fact that they passed the Dardanelles in the guise of merchantmen should not affect their belligerent status. It merely raises the question whether Turkey exercised a proper vigilance and faithfully observed her treaty obligations to the European Concert. The Russian cruisers, if they slipped through with their armament on board, were already war vessels, and may be thought of as having run successfully a diplomatic blockade. If, on the contrary, they fitted out at a foreign port, their condition is that of the famous Confederate cruiser *Alabama*. In any case, they are officered from the Russian navy, and rank as second-class cruisers. They can fairly be challenged only if they exceed the admitted rights of belligerents. The question whether they got out of the Black Sea legally is apart from the main issue.

Mails to a country at war are not contraband as such, and it seems certain that by sequestering all the Japanese mailbags for a day or two the Russian captain committed an offence for which his Government must apologize. Letters and dispatches relative to military operations are, however, contraband; on this point there is no difference of opinion. But here arises the very delicate question, Who is the judge? The French Foreign Office has attempted to place the whole responsibility upon the captain of the mail-carrying vessel. Germany apparently takes the view that Russia might properly have exercised a discretionary right of search on board the neutral vessel. Should the case come before an international tribunal, a very important item might be added to the law of nations.

A report of the American consul at Bremen, just submitted to the State Department, shows that there has been a relative decrease in the number of American students registered at the German universities. During the first semester of the current university year in Germany, there were in attendance but 317 students from the United States, as against 310 in 1900. The slight absolute increase contrasts with the marked growth of numbers in our colleges at home, and with the continued influx of students of other nationalities, especially the Russian, to the German seats of learning. The explanation is probably twofold. Our Mecca of learning has become cosmopolitan, and our home provision for advanced study has grown more inviting. Prof. J. M. Hart's little book upon 'German Universities,' published more than thirty years ago, had a surprising influence in turning many of our ambitious students to German institutions. But of late years France, Austria, and even England have awakened to the presence of the American student, and now vie with each other in proffering him privileges of study and investigation. Doubtless there has conspired with the causes already cited a growing distrust of the Ph.D. "made in Germany." It may mean much and it may mean little. Even when deservedly conferred, it is no complete evidence of the bearer's fitness to teach in an American college. The story is told of some English Premier who explained that in appointing judges he always chose a gentleman, and added, "if he knows a little law, so much the better." This may be a poor rule by which to choose judges, but something may be said for it as a recipe for selecting college instructors.

POINTS IN THE STRIKE.

In striving to think straight about the great strike in the packing industry, a preliminary warning should be given against falling into the fallacy of magnitude. The extent of a labor trouble of this kind does not alter the principle in issue. Whether it be a butcher's assistant who throws up his job in a retail shop in a country village, or 50,000 employees of millionaire packers who quit work, the economic and social and moral laws involved are essentially the same. This is not to say that the consequences in the latter case may not be enormously more disastrous than in the former. When organized capital on a large scale engages in a conflict with workingmen's unions whose membership runs into the thousands, the effect cannot but be far-reaching, and somebody is bound to get hurt. But the essence of the problem remains the same. The real questions, in one instance as in the other, are these: Was the demand for higher wages justified by the state of the industry and of the labor market? Were the further stipulations of employees such as their employers could not admit without surrendering control of their own business?

Those are the strictly relevant considerations. The threat of serious inconvenience to the public, large immediate money losses, and the certainty that the strike will, if persisted in, plunge many into misery, are all painful things to reflect upon, but do not touch the vital points at issue. Justice is justice, and social morals are the same, whether two persons or two millions are affected. Yet merely because the meat strike is of colossal size and bids fair to interfere with the comfort of half a nation, some people speak as though we were to abandon all our settled notions of the rights and wrongs of labor conflicts. But this is to let bigness count more than clearness.

On the first point—the demand for higher wages—the labor leaders have already confessed that they blundered badly. They misread the labor market. It became at once evident that plenty of men stood ready to take the places of the strikers. It was an ill-timed strike. Possibly the men had been misled by Republican panegryics on our unparalleled state of prosperity, in which employment was everywhere seeking the man; but anyhow they speedily found out their mistake. This is a period of falling wages, in spite of Dingleyism, and to strike for a higher rate of pay is folly. So the union immediately discovered; and, accordingly, on Saturday it abruptly withdrew its demand for an increase in wages.

In fact, it withdrew all its original demands, thereby confessing that the strike was not justified in the beginning. Still, though thus speedily driven to admit their gross error of judgment, the labor chiefs say they will not let the men return to work unless all are taken back in a body and the establishments of the packers are completely unionized. This the employers refuse to concede—in our opinion, properly. To discharge incontinently, at the option of organized labor, men who have come forward to prove in their own persons that no such thing as a labor monopoly exists, would be not only a grave injustice to them, but a knuckling under to a beaten union. What the strikers practically said was: "Increase our wages, for if you do not we will strike, and you cannot get men to do the work." Thereupon the employers set about getting new hands, and were successful. Then the strikers returned to say, in effect, "Well, we see now that we were wrong, so just discharge those non-union men and put us again in charge of your business."

Right there, it seems to us, the packers have a public duty to perform, and we hope they will not falter in it. It is high time that labor leaders were taught an emphatic lesson in as impressive a way as is now possible in the packing trade. They should have it borne in upon them that positions are not to be played fast and loose with. A man's job is no longer "his" if he throws it up without warning. When he "walks out" of the shop, he walks out of any fancied lien he may have had upon the right to work in that shop. This is the correct attitude now maintained by the packers. They agree to take back men as the latter may apply and may be needed; but they decline to displace the new workmen they have taken on, or to put their works again at the mercy of union dictation. If they are firm in their stand, as we sincerely trust they will be, they will do the labor unions and the whole country a good turn. Nothing is more important than to beat it into the minds of all concerned that the rules of the game must be observed; that if you take the risk of striking, you must abide by the penalties of failure; and that a labor monopoly, or an attempt to erect one, is as hateful as any other kind.

Apparently, all that is now left of the strike is the insistence of a blundering union that it be "recognized" and taken back to the work which it so foolishly abandoned. There can be but one end to this. The kind of "recognition" of which organized labor is in greatest need is recognition that its leadership is too often stupid and selfish; that its extreme pretensions are such as cannot be admitted for an hour; and that, in its policy of restricted output, in its willingness to make the consumer pay the enhanced cost due to its demands—as John Mitchell complacently proposed that the public should pay the increase in wages in the shape of higher-priced coal—and in its proneness to resort to violence, already in evidence in the meat strike, it makes itself an intolerable nuisance and a public danger.

THE LAW OF THE "CLOSED SHOP."

As the law now stands in Illinois, and a Wisconsin judge also so held last week, every agreement for the exclusive employment of members of a trade union is void. A strike for the purpose of having such an agreement made or carried out is not only illegal, but criminal. These principles were laid down by the Appellate Court of the First District of Illinois, the decision being subject to review by the Supreme Court. The text of the decision has now been published, and the importance of the issue should cause it to be subjected to the scrutiny of the whole country.

However mean and selfish the policy of the trade unions may be, we doubt very much if their agreements for the "closed shop" either are illegal or ought to be made so. The sole principle which the law ought to maintain is the right of free contract. Every man should be protected in his bargaining for work, and in carrying out his bargain. To prevent him by violence, or by the threat of violence, is everywhere illegal; and if the law were enforced, it is probable that very few strikes would succeed, except those which ought to succeed. To prevent a man from making a bargain by any means not involving force is a different matter. It is not wrong to dissuade a man from doing what we think will injure us, or injure others, or injure himself. It may be morally, although not legally, wrong to tell a man that if he makes a certain bargain we will have nothing to do with him, and will persuade others to have nothing to do with him. But when we agree with others to apply the boycott, the character of the act is materially changed and the law of conspiracy may apply. This law is far from settled; but it is not commonly understood to be what it has been declared to be in Illinois.

The statute relied on by the court declares that "if two or more persons shall combine for the purpose of depriving the owner or possessor of property of its lawful use and management, or of preventing, by threats, suggestions of danger, or by any unlawful means, any person from being employed by, or obtaining employment"—such persons shall be fined or imprisoned. It is further provided that if "any person shall, by threat, intimidation, or unlawful interference, seek to prevent any other person from working or from obtaining work," the offender may be fined. In the case just decided, there was a strike for the purpose of making an employer agree to employ only union men. The court declares that this was an unlawful purpose. The men conspired to injure the business of the employer, and a business is property.

This, however, is the crucial point. It cannot be maintained that every strike is unlawful; yet every strike must injure the property of the employer. This indicates that the statute was too broadly construed by the court. Freedom of contract means freedom not to contract, and freedom to agree with others not to contract. In a large sense, the men in this case did combine for the purpose of preventing the owners of property from making a lawful use of it. But a penal statute is to be construed strictly; and when the quality of an act depends on its purpose, we must judge of purpose, or intent, by the consequences which naturally follow an act. Now, a strike like this, although temporarily injurious, does not necessarily deprive the owner of the lawful use of his property. To hold otherwise is to forbid workmen to leave their employer when it causes him damage. For all that appears, the employer in this case might have at once filled his shop with non-union laborers. The question is whether a combination of workmen for the purpose of getting work from an employer to the exclusion of other workmen has for its purpose to deprive the employer of the lawful use and management of his property. To hold that it is, would be to lay down a principle that would have dangerous consequences.

The Illinois court declares that the attempt to make the employer sign an agreement to employ only union men constituted such duress as would have made the agreement void. Duress exists when one "is constrained, under circumstances which deprive him of the exercise of free-will, to agree," etc. It seems impossible to maintain that an employer can be deprived of the exercise of free-will by anything short of violence or the fear of violence. It may be very alarming to have to face a strike or a boycott; but determined men do not yield their independence whenever they are threatened with pecuniary loss. Nor does the assertion of the court that the agreement in question tends to create a monopoly in favor of the members of trade unions seem to be very conclusive. Many things "tend" to create other things, without actually creating them. There are not many monopolies, in the strict sense of the word. The strike was to secure employment for union men at a particular shop; there may have been employment for non-union men elsewhere. If every contract which "tends" in any degree to create monopoly is void, half the business of the world is unlawful.

We have little doubt that if the Supreme Court of Illinois sustains the decision just made, it will be solely on the ground that a criminal conspiracy existed. If that is held, the right of workmen to agree to cease working for an employer, that is, to "strike work," is denied. Individuals may withdraw, but they must do so without combination. This would put an end to "collective bargaining," which is the cornerstone of trade unionism. It is abundantly asserted that the cause of "labor" has been mightily advanced by such bargaining; but, be that as it may, no doubt exists that a large number of citizens outside the laboring class would be exasperated if striking were made a crime. It is folly to call any act a crime that is not condemned by all, or nearly all, the members of a community. It means another statute that cannot be enforced, and a further obstruction to the administration of justice. The all-important thing, we repeat, is to enforce the law against violence so vigorously that any man may apply for work wherever he pleases, without fear of bodily harm. Until this clear right is protected, it is no gain to have the law recognize other dubious rights; and, when it shall be protected, strikes and boycotts will become insignificant.

THE NEW INDIAN.

When Senator Dawes, nearly twenty years ago, carried through Congress a law securing for the Indian a home which he could possess and improve exclusively in his own right, he foresaw all too clearly the perils to which a red man would be exposed as soon as the whites around him realized that he had something more of which he could be stripped. Hence was inserted in the act a provision that the land allotted to an Indian should be inalienable for twenty-five years, and free of taxes during the same period. But the white frontiersman was not frightened by that. There was no law to prevent an Indian's leasing his allotment to a white man; and the exemption of his acres from taxation did not involve the exemption of the personal property which the Indian might acquire in making his acres habitable. So in due course the bulk of the Indian allotments, and no small share of what they produced, found their way by one device or another into the control of the white man. In order to prevent the complete denudation of the Indian, the Government insisted upon the approval of every lease by the authorities at Washington, and of late has even designated sundry district attorneys to appear for Indians who are unrighteously taxed.

Again the frontiersman proves equal to the emergency. He taunts the Indian with letting the Government treat him like a child, and tells him that he ought to assert his manhood, shake himself free of such leading-strings, and strike out for himself. A red man who has acquired the dangerous little of learning, who can speak broken English and write his own name, falls a ready victim to that sort of flattery. The result has been the rise of the "new Indian," who insists that he has a right to lease his lands to whom and at what rental he pleases, independent of any outside interference, and who retains private counsel at fat fees to do for him in the courts what the Government's lawyer is willing to do without compensation. With the invasion of his landholdings by railroads, the Indian finds a further reason for insisting upon his independence. The Government, anxious to protect him, employs agents to assess the value of so much of his land as a road takes for its right of way, and to fight for a proper compensation; but the frontiersman whispers in his ear: "These Government fellows are all in collusion with the railroads. They accept a small price for you, when, if you did business for yourself like a white man, you could get a big price just as well."

So, step by step, the new Indian has been egged on to strike for his emancipation. The Government still holds fast to the principal of the trust funds on deposit in the Treasury for the account of the several tribes, paying the tribesmen only the interest. The new Indian now wishes the Government to do with the money on deposit what it has done with the land in many of the reservations—divide it up, and give to each individual his share. His dream is of the time when every red man can wave a last farewell to his Federal guardian and live his own life as the white man does.

Let it be noted that all Indians are not new Indians. There is still a large remnant of the race who believe generally in the beneficence of the Great Father and his Council at Washington, and refuse to be drawn into any scheme looking toward separation. They frankly say that they cannot cope wth the white man in doing business in the white man's way. Hitherto, all Indians have been grouped together in the laws. The Dawes act, for example, authorizes the President, in his discretion, to allot the land of any tribe in severalty, not to those members of the tribe who wish allotments, but to all alike. No recognition of the individual traits, wishes, interests, or advancement of any Indian appears in the act except in prescribing the privileges of one who has cut loose from his tribal entanglements and taken up land like an ordinary homesteader.

The opening of the Indian Territory, where all the most powerful elements of the population belong to the "educated" class, has been seized upon by the advocates of individualism as the opportune time for making a change in the practice of generations. The latest Indian budget bill authorized the removal of all restrictions upon the alienation of their lands by any of the members of the Five Civilized Tribes who desired it, and who could satisfy the Secretary of the Interior of their ability to care for their own affairs. This is but the entering wedge.

From now on we may expect, at frequent intervals, the release of one tribe after another from its unqualified tutelage. The Secretary of the Interior has laid down a code of rules for judging of the fitness of an Indian applying for emancipation. The present Secretary is paternal and conservative in spirit; his successor may be an easy-going man or a radical. The regulations prescribed by one Secretary are amendable at will by another, and the trend of events is toward the extinction of differences of status between the two races. What else is to be looked for, then, than the gradual merger of the guarded Indian system of landholding into the free tenure of the white man?

The generation of Indians now passing away remains distrustful of its powers, while the one coming on is, as a rule, either indifferent or independent. At the instigation of their white neighbors, and able to make a brave show of their smattering from the schools, they will soon be rid of all obstacles to the disposal of their land as they choose. Does any one suppose that the money in the Treasury will be long in following the land? It will not do to say that the great change which is impending will be wholly bad for the Indian. A percentage of the race will survive the upheaval the rest bring on; and they will be a contingent worth saving. Perhaps, as to those who fall by the wayside, it may be consoling to reflect that to have retained them longer under the pauperizing influences of the system on which they have been reared, would have been merely to postpone the evil day, not to avert it.

THE BRITISH SITUATION.

Lord Tennyson exercised a hereditary poetic license on Thursday, at the Liberal Unionist Council, when he moved a vote of confidence in the Government's fiscal policy. The Government, it need hardly be insisted, has no fiscal policy. Mr. Balfour, in the famous Sheffield speech, made, to be sure, a profession of partial conversion to Mr. Chamberlain's Imperial Reciprocity creed; but Mr. Balfour has scuttled every time an attempt has been made to put the gist of the Sheffield speech into a Parliamentary motion of confidence. His free-trade Unionists he knew well would vote against him because he went too far; his Chamberlainite members, because he did not go far enough. So, deducting from the Government total of 383 votes about 80 free traders and 200 fiscal reformers, Mr. Balfour's personal following would appear as 103 in a house of 674. Naturally, then, he has been unwilling to divide on the fiscal issue, and very clearly Lord Tennyson's vote of confidence was not directed to Mr. Balfour at all, but to the President of the Liberal Unionists, Mr. Chamberlain.

To graft upon so obsolescent an organization as the Liberal Unionist League Mr. Chamberlain's Imperial Reciprocity plan required no extraordinary legerdemain. The presence of two members of the Cabinet, Lord Lansdowne and Lord Selborne, did, however, emphasize the fact that Mr. Balfour's Ministers avowedly owe their real allegiance to Mr. Chamberlain, with whom the immediate future of Unionism lies. The true question is this: Is Mr. Chamberlain increasing politically in the same measure that Mr. Balfour is decreasing? Even Mr. Chamberlain does not claim as much. He assumes that Mr. Balfour will be beaten soon, and has, as La Rochefoucauld says we all have, "sufficient fortitude to bear another's misfortune." Mr. Balfour, with an unparalleled magnanimity, accepts the situation cheerfully, and leaves nothing undone to magnify his office as a vessel of dishonor. He courts humiliation and beckons unpopularity from afar. Such at least is the kindest view to take of his closuring the Licensing Bill.

This measure is highly contentious and political. Its object, despite high asseverations of desire to do justice and restrain liquor selling, is to bind "the trade" firmly to the Government. Paradoxically, the Government, which last year handsomely overrode fee simple in Ireland, now proposes to extend a perpetual franchise to the retail liquor trade. The licensing act transfers the right to grant licenses from the local magistrates to Quarter Sessions, and provides that every publican to whom license is refused shall receive a cash indemnity for the loss of his livelihood. The argument for this radical proposal is that a license to sell liquor is precisely like any other valuable property. Death duties are charged upon it; so the State indemnity is made equal to the assessment for the death duties. The practical result of the act will be that renewals of license will be carried from the local justices, who are familiar with the needs of the community, to a remote jurisdiction, while licenses, unless forfeited by bad conduct, will become perpetual grants.

Waiving the discussion of the merits of the bill, it evidently is revolutionary in character, has no popular mandate, and requires the fullest debate in Parliament. Even the majority chafe under the principle of unrestricted compensation, and already there are scores of friendly amendments on the docket, most of them imposing a time limit upon the act. In the face of all this, Mr. Balfour has forced through a vote of "closure by compartments" which allows just fifty minutes for each clause. Answering Mr. Bryce's question, Mr. Balfour admitted that there had been no obstruction in the early stages of the debate; hence the usual reason for closure did not exist. To Mr. Lloyd George's direct challenge, "Do you think the clauses can be properly debated in fifty minutes?" Mr. Balfour refused to reply categorically. Why, in Heaven's name, it may be asked, should a veteran parliamentarian with a majority of 95 and the assurance of fair play from the Opposition, feel compelled practically to suppress debate on a crucial measure?

Mr. Balfour gives the answer to our question with considerable frankness. Parliament has shilly-shallied away too much time. He wants to adjourn early in August (the opening of the shooting), but does not want to adjourn with such important matter as the Licensing Bill hung up. Now, these are in themselves good reasons. Parliament has wasted its time; a measure like the Licensing Bill, if introduced at all, should be carried to a vote; it is a bore to hold Parliament in August. But all these considerations are so many indictments of the Government. It is not the Liberals who have played ducks and drakes with the calendar. The session has been one story of points of order on unfair "blocking" motions, of dilatory speeches by the Government to tide over the dinner hour, of adjournments over Ascot week. Mr. Balfour, then, is disciplining not the Liberals, but the Unionists, and we have the extraordinary spectacle of a Government which has virtually to closure itself to get any work done.

How long Mr. Balfour can retain the Premiership under these preposterous conditions depends simply on how badly he is willing to be beaten in the next general election. In Parliament the Liberals are not anxious to press their advantage. Indeed, they seem quite content to let those of the "Fourth Party," Mr. Bowles, Sir John Gorst, and Mr. Winston Churchill, bear the brunt of the Parliamentary battle. As yet no commanding leader has appeared to unseat Mr. Balfour. Should the Liberals through any chance be returned this summer, it is only too likely that they would, justifying Mr. Chamberlain's taunt, play a very short and disorderly comedy, and leave an empty stage.

That Mr. Chamberlain could then make his bow as the accepted *jeune premier* of Imperial federation seems most unlikely. The bye-elections show that the country is against him to-day. His two hundred members of Parliament will many of them never see St. Stephen's again. Finally, the colonies give him only empty applause. For what does it profit at Birmingham to peruse press clippings on Imperial unity when Canada is raising the duty on British woollens, and both the Dominion and the Australian Commonwealth are planning completely to dissociate their military establishments from the Empire?

THE RELIGION OF THE SCHOOLBOY.

Two controversial articles have recently made their appearance in the *Contemporary Review* upon the religion of the schoolboy. It must be remembered that the schoolboy in England is a student at old foundations like Eton, Harrow, and Rugby, called "public schools" despite the fact that they are neither supported by the public purse nor attended by the masses. The American congener to the English public school, therefore, is found in our secondary schools and colleges. While it is proverbially difficult "to canvass with official breath" such "viewless things" as the religious life of either adults or the young, it may be of profit to compare the religious situation in English and American schools of this type.

The gravamen of the charge which Mr. Weisse brings against the religious life of the English public schools is that among the boys there are widespread inattention at religious exercises, general indifference to religious truths, and a total absence of any impress of religious teaching upon their community life. It is alleged that "schoolboy honor" takes the place of the Decalogue as a moral guide, and sanctions many a custom "morally uncivilized."

The anonymous rejoinder to Mr. Weisse's attack is most unsatisfactory. It purports to come from a schoolboy, but this is a flimsy pretence, for he is evidently a very *old* boy, since his caution betrays him at every step. He acknowledges first of all that very scanty provision is made for rendering the religious services at the English public schools attractive or interesting. The sermons are generally homœopathic homilies prepared and read by the Masters in orders. He cites also the habitual reserve of the English schoolboy as evidence that it is difficult to generalize from surface indications as to the undercurrent of religious feeling. He comforts himself that he has heard among schoolboys heated debates upon such topics as Apostolic Succession, and, after devoting "schoolboy honor" to the infernal gods, concludes that there is very little in the situation "to justify . . . extreme pessimism."

The situation disclosed by the controversy brings into sharp relief the general aspects of the religious life of our school and college boys. Of no fairly respectable American college is "Schoolboy's" confession true, that "they seem rarely to solicit the aid of such artificial stimulants of religion" as effective sermonizing or good music. On the contrary, college students in this country are exceptionally favored in hearing the *élite* of the pulpiteers of all denominations. Moreover, the voluntary religious associations in our schools and colleges play a rôle almost unknown in the English public schools. It may be surmised that the very common plan of organizing separate societies for the younger members of our churches is not without distinct drawbacks. It may easily habituate many of the young people to an edifying interchange of conventional symbols of religious experience which dulls their sense of the deeper aspects of the life of the spirit. Many of the most thoughtful of our young boys doubtless feel that a verbal disclosure of their inmost hearts is a duty laid upon them, and are taught that this laceration of soul is obedience to God. Those of coarser fibre harden under this process, and the result is the "religious hustler" who, with a light heart and a heavy touch, lays his hands on sacred things. He is merely the counterpart of the blatant young skeptic who officiously assailed with his doubts the late Master of Balliol, until Jowett, sizing up the young braggart's intellectual calibre, told him "to find God within twenty-four hours" or pack his things and leave college.

Another point of contrast between the religious life of the American and the English schoolboy is the nature of the issues that interest them. The most powerful shaping influence exerted upon the character of a boy's religious beliefs must be traced, of course, to his home training. The new environments, social and mental, which school and college afford, modify but do not, as a general thing, mould his religious beliefs. A *Sturm und Drang* period generally, it is not dissimilar as regards religion. The uniformity of natural law and the process of natural selection of which he learns in the lecture-room, he cannot keep in a water-tight compartment of his brain. He must somehow adjust his mental horizon and his religious perspective. It is in these secret wrestlings of heart, and not in the more dramatic functions of "corybantic Christianity," that the *vie intime* of the American school and college boy is really to be found.

A last point of contact between English and American school usages connects itself with the honor of the schoolboy. Both Mr. Weisse and his antagonist agree that this honor is an "almost iniquitous virtue." But this can by no means be said of our own academic code. Schoolboy honor the world over may probably be summed up in the two commandments, "Thou shalt not blab," and "Thou shalt not cheat for grade." But the first finds justification in experience. The *delator* has always been mistrusted with good reason, and, so far as cheating goes, it must be remembered that espionage tempts to it by assuming it to be probable. Putting college boys on their honor has in more than one instance proved the most effective remedy for cheating at lessons or examination. With external restraints removed,

"When duty whispers low, 'Thou must';
The youth replies, 'I can.' "

THE ANNIVERSARY OF THE HELLENIC SOCIETY.

LONDON, July 5, 1904.

Few recent events in the world of scholarship have excited more interest than the twenty-fifth anniversary of the Society for the Promotion of Hellenic Studies, celebrated this afternoon by a much frequented meeting at Burlington House. Greek archæology receives now, and has received during the last twenty years, so large a share of public attention that not only the man in the street, but even younger scholars, are apt to forget how small was its place in the world of thirty years ago, and how recent an institution is the Hellenic Society, which, despite its broad range of interests, has achieved its present importance largely through association with discoveries made in Hellenic lands during the closing quarter of the nineteenth century. These and other facts were made clear at the anniversary meeting (1) in the outline of the Society's history (1879-1904) printed by order of the Council and prepared by its Hon. Secretary, G. A. Macmillan, Litt.D., who was also its projector and practically its founder; (2) in the addresses of its President, Prof. Sir Richard Jebb, M.P., of three of its honorary members, Mr. Gennadius, and Professors Gildersleeve and J. W. White, and of two of its vice-presidents, Prof. Percy Gardner, under whose editorship the *Journal of Hellenic Studies* achieved the reputation so well maintained by his successors, and Mr. Cecil Smith, formerly director of the British School at Athens, and now Keeper of Greek and Roman Antiquities at the British Museum in succession to the late lamented Mr. A. S. Murray. Among the many American members of the Society, some few, being in London, were in attendance, notably Prof. Allan Marquand and Mr. Rowland Hazard of Peacedale.

Some hint of the contents of the Honorary Secretary's historical sketch may well be given here, since it was distributed before the anniversary meeting was called to order. First be it noted that the Hellenic Society took shape in the years 1877-79, when Mr. George Macmillan, not long after his Eton days, returned from a trip to Greece, and evolved from discussions with Mr. Gennadius, Sir Charles Newton, Professor Sayce and others the idea of an association which should (1) publish Greek inscriptions and monuments, as well as memoirs on Greek topics, ancient and modern; (2) promote Greek studies in language and literature and cultivate intimacy with similar societies outside of England; and (3) establish at Athens an agency to supply its members with information and guidance when they visited Greece, as well as with photographs of sites and monuments of interest. The inaugural meeting took place at the Freemasons' Tavern on June 16, 1879, when 112 members were enrolled. At first confined to those who had visited Greece, membership was soon put on a broader base, and in 1880 the first volume of the *Journal of Hellenic Studies* was issued. The rule has been ever since to publish two parts every year, and with two exceptions it has been adhered to. Sir Charles Newton, in his opening address, printed in the first volume, urged that the *Journal* be not allowed to "dwindle away into atrophy, as has been the fate of so many learned periodicals in this country." The means for making this organ what it

has just been pronounced to be, "the model of what an archæological journal should be," have been supplied by the large number of subscribing members, now 850, besides the 150 libraries which take the *Journal*.

The publication of the *Journal* has always been and still is the central and peculiar concern of the Society, which has wisely refrained from initiating excavations on its own account. This self-denying ordinance has not only enabled the Hellenic Society to avoid exclusive devotion to archæology, and to keep its *Journal* open to literary and historical topics, but has also facilitated the establishment under its auspices of various institutions more or less confined to the work of the spade. Moreover, the certainty afforded by the well-attended meetings of the Society and by its well-supported *Journal* that any and every important discovery could be immediately proclaimed before a competent and interested audience, has done and still is doing even more to promote archæological discoveries in Greece than the substantial money contributions which the Hellenic Society has always been ready to make. Without its aid, given in all these ways, the British School at Athens could hardly have come into existence, and the like is true of the Cyprus Exploration Fund, the Asia Minor Exploration Fund, and, last but not least, the Cretan Exploration Fund, by which various Cretan explorations, but more particularly those of Mr. Arthur Evans, have been made possible. To all these enterprises the Hellenic Society has contributed not money only, but men, since its Honorary Secretary and leading members of its Council have organized and promoted them all. Indeed, the pages of the *Journal of Hellenic Studies* contain interesting records of all the explorations to which grants have been given, and these include more than are enumerated above. A contribution was made to the excavations of the Egypt Exploration Fund at Naucratis (1885), another was made to help the late Theodore Bent's Thasian investigations (1886); in 1892, the late Mr. Penrose's study of Greek temples was assisted by a grant; the same thing was done in 1894 for Mr. Paton's Corian explorations, and in 1896 a grant was voted for the illustration of Mr. Woodhouse's 'Aetolia.' Finally, an annual grant to the newly founded School at Rome has been made by the Society.

The interest attaching to the general meeting of the Hellenic Society, at which explorers have announced their discoveries, has often been noted in your columns. The papers read upon these occasions have, as a rule, been published in the *Journal*, so that they have reached the eyes of the many country and foreign members unable to attend. Sometimes, however, discussions on burning questions of the day have taken the place of original contributions. Among these last was the debate at a special meeting to which Dr. Schliemann and Dr. Dörpfeld were invited. Mr. Penrose undertook on that occasion the delicate task of presenting Mr. W. J. Stillman's thesis that the Tirynthian fortress and palace walls were not prehistoric, but either Byzantine or mediæval, and at the close declared that he had found the debate a most instructive one, which moved him to gratitude and admiration for the interesting discoveries of his opponents in the discussion. Dr. Dörpfeld, on his side, was confident that he could convince Mr. Penrose or any doubter who would visit Tiryns in his company. Prof. Percy Gardner's tribute to Dr. Schliemann in 1891; Mr. Arthur Evans's paper on "A Mycenæan Treasure from Ægina" in 1893, and his account of Cretan pictographs in 1894; a discussion on the Homeric house, and Mr. Evans's account of Knossos in 1900, may serve as further examples of what topics have occupied the general meetings of the Society, which have also been constantly illustrated by addresses from Sir Richard Jebb, the president.

Of these, by no means the least interesting has been the lucid and comprehensive account of the Society given at the anniversary meeting just held. After a tribute to Mr. George Macmillan and those who had labored with him to plan and launch the Society, Sir Richard dwelt feelingly upon the merits of Sir Charles Newton, Bishop Lightfoot, who was his only predecessor in the presidential office, and the late Mr. A. S. Murray, Newton's successor at the British Museum. He pointed out the benefits to scholarship incident upon the close intimacy between scholars at Oxford and Cambridge and those in charge of the British Museum. This intimacy, he said, had been made possible by the Hellenic Society. Then followed a masterly account of the educational function performed by the Museum and its staff —men who had been among the most efficient and active promoters of the Society and had thus "raised the conception of advanced study in England." A lucid account of the merits and defects of specialization was succeeded by mention of various publications, notably that of Sophoclean and Aristophanic codices. To give point to the habitual announcement of new discoveries at the Society's general meetings, Sir Richard then expounded the ritual hymn of the Dictæan Zeus just discovered at Palaiocastro in Crete, and sent him by Mr. Macmillan only three or four days before the meeting. He closed with graceful words of welcome to Mr. Gennadius and Professors Gildersleeve and White.

Professor Gildersleeve was then called upon, and in a brief but telling speech, abounding in characteristic sallies, first of all paid a tribute to his great German teachers, notably to Boeckh, and then, after a hopeful account of the present condition of Greek scholarship in America, deprecated a certain aloofness from English operations traceable among American scholars, some of whom were estranged from what was really valuable in English methods by foreign training. He spoke further of archæology as a common meeting ground, and of the Hellenic Society as one continuously active in the promotion of more intimate relations between the scholars of the United States and those of Great Britain. "Yesterday," he exclaimed in conclusion, "was Independence Day, but to-day let us think of Interdependence."

M. Gennadius's speech began with an allusion to the first idea of the Society, which arose in the course of conversations between him and Mr. George Macmillan at the Greek Legation in Pall Mall, twenty-five years ago. Touching discreetly upon the encouragement of the Society by the Greek Government, and recognizing the generous support given by the English public, M. Gennadius praised the "truly Hellenic enthusiasm of the Hon. Secretary," and closed with an exceedingly suggestive criticism of the late Herbert Spencer's "strange observations upon Homer," and a warm appreciation of the "noble traditions of British scholarship" so effectively kept alive by the Hellenic Society. Prof. J. W. White congratulated the Society on the fact that no region of literature or archæology had been neglected by its catholic activities, which had faithfully followed the broad lines laid down in Sir Charles Newton's first address. He alluded to the Society's collection of photographs and slides, larger than any existing elsewhere, and dwelt upon the utility of photographic facsimiles of MSS. Having conveyed the heartiest greetings of the American Archæological Institute and a Latin address of congratulation indited by that Society, Professor White also expressed his thanks for his own enrolment among the "forty immortals" of the Hellenic Society. Mr. Cecil Smith, successor at the British Museum of the late Mr. A. S. Murray, declared that the cordial relations between the British Museum authorities and the Hellenic Society were mainly due to Mr. George Macmillan, and then enlarged upon the obligations under which, by discoveries made and publications promoted, as well as by many other services, the Hellenic Society had put the British Museum. In Britain, where the Government was penurious as compared with those of foreign nations, the Hellenic Society had constantly rendered assistance not to be obtained from Parliamentary grants. The last to address the meeting was Prof. Percy Gardner, who spoke from a full heart in eulogizing the providential influence of Sir Charles Newton, without whose wise influence in promoting and guiding the early essays of the Hellenic Society the lamp of archæology might have burned low or even have been extinguished. Happily, the Society's labors had never let that light grow dim.

So ended, after a renewed expression from the chair of thanks to the distinguished scholars from oversea who had honored the anniversary meeting with their presence, and a vote of thanks to the President, one of the most interesting general meetings ever held by the Society for the Promotion of Hellenic Studies. LOUIS DYER.

DINO MANTOVANI.

ITALY, June 16, 1904.

"Il n'est pas le premier venu," wrote Ferdinand Brunetière of Émile Faguet, then just beginning his career as critic. The praise seems modest enough in the light of what M. Faguet has since achieved, and I feel it equally insufficient when I apply it to Prof. Dino Mantovani of the University of Turin, who is by no means at his first essays. It is merely in despair of finding a phrase which will characterize a talent so just, so delicate, so generous, and nourished by such solid studies, that I have adopted the words of M. Brunetière; if they do not tell the whole story, they are at least true as far as they go.

Of what Professor Mantovani has written in the past I will concern myself only with one volume, published in

1891, but of which a new edition, perhaps revised, has recently appeared. 'Lettere Provinciali' is a series of ten discursive essays in the form of letters, and dated one for each month from October to July. These months compose a scholastic year, which the writer spent as master of a school in a little city of the Adriatic coast. The weather, its gloom or its glory, often suggests the topic with which the letter opens. Apropos of a cold snap we are assured beyond doubt that Italians suffer cruelly in support of the fiction that their houses are not cold in the winter; in the spring we get some delightful passages on the love of nature in Latin folk—passages instructive for the many who believe that a feeling for landscape exists only among northern races. With the changes of the months we get an infinity of sentiments and opinions that are very pleasant in the reading: on the value of the old Italian *commedia dell' arte*, for instance; on the writers of monographs who have not sufficiently wide culture to understand the place of their subject in universal history, and who distort the perspective of an entire epoch in magnifying beyond measure some insignificant object; on the attitude toward religion of Voltaire and the Encyclopædists, scarce of science and deficient in all that modern learning brings to bear upon Biblical exegesis, with plenty of biting sarcasm for those who think that pose good enough for to-day; and an uncomfortable quarter of an hour for the large class of Italians who have no better reason for their hatred of the Church than the rhymester had for not liking Dr. Fell. In short, we find everywhere in the volume the mark of a man of generous culture, open-minded, refined, sensitive, and quick in sympathy, and hating only ignorance, shallowness, stupidity, and pretence. I may exaggerate in saying that he *hates* these infirmities; they certainly try his patience beyond endurance, but I am inclined to believe that the liveliness of his invective is of the nature of a *boutade*, and that, after his wrath has exploded, his sentiment towards the offenders is rather of pity than of hatred—a pity that soon dissolves any leaven of contempt that may have been in it at the beginning.

The style of course also reflects the man. The Italian language abounds in words current in two or even more forms. Of these, at any rate in the 'Lettere Provinciali,' Professor Mantovani is apt to employ that which is less, or least, common. There is also a good sprinkling of words that are recognizably poetical, as well as those which the dictionaries mark as belonging to the *nobile parlare*. With all this there is no obscurity, though the author's passion for thoroughness occasionally leads him to exhaust all the varied aspects of premises and conclusion in a sentence that fills the greater part of a page. In this respect, as well as in all that makes for simplicity and compactness, a decided improvement is visible in 'Letteratura Contemporanea' (Turin and Rome: Roux & Viarengo). This is probably partly due to the difference between a volume of letters, in which the writer's personality must more or less intervene, and one of objective criticism, but it comes in greater measure from the fact that the author is twelve years older, that his knowledge is wider, and that in all these years a process of solidification, of crystallization, of ripening—call it what you will—has been going on in his mind. In the preface to the republished 'Lettere Provinciali' he speaks of the work as done

"Quand' era in parte altr' uom da quel ch'i' sono."

I cannot resist the temptation to give an example of the way the old man has survived in the new. As a critic he has to treat a subject treated twelve years before in the letter for June, and, looking back at his early work, he finds a quotation from Machiavelli with commentary of his own that, it seems, will serve admirably for the essay in hand. The passage is therefore transferred bodily; but when he comes to the early application of it to the subject, he seems to have found *that*, with his present light, youthful and diffuse. At any rate, though the opinions expressed are essentially the same, the form of presentation is more mature and closely knit. Indeed, this riper work is everywhere of an admirable firmness and lucidity.

The 'Letteratura Contemporanea,' composed of articles that have appeared during the last five years in the *Nuova Antologia*, or, by far the greater part, in the *Stampa* of Turin, is sufficient, to my mind, to place the writer in the foremost rank of Italian critics. Others may equal, or even excel, him in depth, variety or exactness of culture, but in the union of these with two other qualities he can scarcely have a rival, and these qualities are a light, graceful, and persuasive form, and the faculty of expressing the opinion that seems the *fine fleur* of cultivated, refined common sense. In other words, he has a pleasant way of taking the right view or of saying the right thing. He has not, indeed, the gift of Faguet of occasionally coining expressions that sum up a whole line of argument. Faguet once, in an essay on Voltaire, expressed opinions as to his influence on certain shallow thinkers of to-day similar to those we have remarked in Professor Mantovani, and he threw a flood of light on the question by calling the great scoffer, "Dieu des imbéciles." Professor Mantovani says much the same thing with less economy of language, though he says it characteristically enough in his own way; he does not throw light in flashes, but his reader's path is evenly and clearly illuminated for all that. He is Italian, not French; a difference that it is easier to perceive than to define. For one thing (and this has no reference whatever to M. Faguet), Gascony is not in Italy; everybody knows that it is in France. The Italian rejoices in his "Latin sangue gentile," but he is uneasily conscious of little deficiencies at home, and—at least so long as you don't agree with him—is a merciless critic of them. Professor Mantovani is thoroughly Italian in this respect. So he is in the *facondia* which we northerners wonder at in the race, and which in Italy is perfectly respectable and even admirable, while in France *faconde* is rather disreputable, and is the head of a family that ends in *bagou*.

Still, even *facondia* cannot always escape from its besetting peril, and Professor Mantovani, in whom the quality is at its best, is once or twice—*only* once or twice—betrayed by it. For instance, in writing about a novel of Sienkiewicz, an epic of fire and blood, he says that in the Pole it may awake an echo of the heroic voices of the now dismembered and subjugated country, but that to the Italian it "appears a series of colossal decorative compositions, pictures of Siemiradzki, of Makart, of"—you would never guess—"Corot"! I will not give the other instance, as in a notice brief as this is it would falsify all perspective to bring into prominence so small a point. I have attained my end in showing that a quality, which we Anglo-Saxons as a rule lack, is not without its dangers for those who are fortunate enough to possess it.

The volume 'Letteratura Contemporanea' contains notices of some thirty-five or forty works published within the last five years in Italy, in France, Poland, Russia, and England. It must, however, be noted that the literature of the last three countries is represented by Italian translations. There is also a compact review of Italian literature in the nineteenth century, and an essay, the longest in the book, on "The Sadness in Modern Art." At first one is tempted to wish that our critic had reviewed the entire production of each author considered, but one finds in reading, not only that one must have missed in that case many of the present judgments (which would have been matter for regret), but that, notwithstanding the brevity of these papers, and that each is consecrated to a single work, they are always contrived so as to give the relation of that work to the others of its author, and that the volume is not unworthy of its title. Perhaps had it been called 'Alcuni Autori d'oggi' or 'Saggi di Critica' it would have answered more exactly to its name, but a still looser one would have passed unchallenged so long as it introduced us to such a feast of good things.

Seven of the essays in the volume are prompted by as many works of Gabriele D'Annunzio, of all Italian writers of to-day the one who gives most frequent occupation to the reviewer. It would be hard to say where one may look for another judgment so just, so full, so complete, of an author whom certainly it is not easy to treat adequately. On the whole, it is a severe judgment. It recognizes the exquisite form into which D'Annunzio moulds every matter that he touches; his love of nature, his wonderful powers of evocation and of description—in fact, all the charms that conspire to blind many to his equally obvious defects, and that have blunted the edge of many a condemnation. Professor Mantovani ends by reproaching him with his vocabulary, "laboriously drawn from classic springs"; with his inspiration too exclusively literary, in which the real and human interest is easily lost sight of; and finally with the hedonism, overweeningly sensual or erotic, that is the chief part of his philosophy of life. This bald statement does not, I trust, positively misrepresent the substance of Professor Mantovani's criticism. My few lines have vainly tried to give something of the essence of more than forty pages rich with varied matter; but it is to be hoped they may tempt some reader to go to the proper place for supplementing them.

There are treated in this book other poets, whose names will probably be new to most American readers, to say nothing of the rest. The curious may be thankful for having their attention called to Giovanni Marradi and Giovanni Pascoli, the two who, with D'Annunzio, "to-day awaken in

Italy the greatest admiration and expectation."

The triple essay on Anatole France is especially charming, and how could it be otherwise and be, as it is, in thorough sympathy with its subject? So, the succeeding articles, prompted by two books of Octave Mirbeau, are interesting as showing the fascination that the sharp, subtle observation of that writer may exercise—indeed, is most likely to exercise—upon a sane mind, and the revulsion of feeling that is equally likely to accompany the attempt to admire the same qualities in a second novel of the author. Indeed, there is no article of the forty-one that fill this volume that cannot be read with pleasure as well as profit, though for most American readers the chapters devoted to current Italian literature will probably prove most valuable. I am confident that for such readers the strongest impression on closing the book will be that they have found not only a competent guide to the study of Italian letters, but also that they have come in contact with an unusually attractive personality, whom they will wish to meet again. Thus far, Professor Mantovani has talked to us only about poets and novelists; the last essay in the volume, however, on "The Sadness in Modern Art," shows what absorbing interest he can communicate to the general considerations he draws from all these special studies, and gives a notion of what one may rightfully expect from him in the future. S. K.

Correspondence.

LECKY MEMORIAL.

To the Editor of The Nation:

Sir: Will you allow me to call the attention of the readers of the *Nation* to a memorial which the friends and admirers of the late W. E. H. Lecky propose to erect in his honor? It is designed that this shall be a statue, for which a site has been selected within the precincts of Trinity College, Dublin, the institution which he so long represented in Parliament.

Among the numerous readers in the United States who have benefited by his luminous and impartial expositions of history, there must be many who will desire to contribute to such a memorial. Their subscriptions can be sent to "the Honorary Treasurer, Lecky Memorial Fund," No. 36 Molesworth Street, Dublin; or, if addressed to the undersigned, they will be duly transmitted. Henry C. Lea.

2000 Walnut St., Philadelphia,
July 16, 1904.

THE IRISHMAN'S "BROGUE."

To the Editor of The Nation:

Sir: The tedious task of examining newspapers of the colonial period is relieved, one might almost say enlivened, by the descriptions of those servants, slaves, soldiers, criminals, debtors, or others, who had either run away or broken out of jail. Minute and often amusing details are given of feature, manner, dress, speech, mental and moral characteristics, and peculiar idiosyncrasies. In 1754 a servant who ran away with a fiddle, on which he played very well, was thus described: "He is very antick, he crows like a Cock, and barks like a Dog, and he is very apt to act so." These accomplishments proved his undoing, for six months later he was "discover'd by his barking like a dog and crowing like a cock."

From the frequency with which peculiarities of speech are dwelt on, it may be inferred that these were an important means of identification. We learn that "a West-Country Man, speaks by Clusters, hard to understand"; that an Irishman "does not speak plain"; that an Englishman "speaks West-Country"; that a Dutchman is "prodigal in his Walk, and much so in his Speech"; that a negro "laughs much"; that an Irishman "speaks tolerable good English, but a little on the Scotch"; that a North Briton "speaks broad Scotch"; that an Irishman is "apt to laugh at his own expressions"; that an "Englishman "speaks broad English"; that an Irishman "talks broken"; that a man from the west of England "talks upon that dialect." It is even possible that these descriptions will enable us to solve a problem which has thus far puzzled lexicographers.

Under the word *brogue*, two nouns are recorded in the Oxford Dictionary. One means (1) a rude kind of leather shoe (wrongly defined in eighteenth-century dictionaries as wooden); (2) hose, trousers; and examples are given as early as 1586. In 1624 Gov. E. Winslow, speaking of the Indians, said: "As for their apparel, they wear breeches and stockings in one, like some Irish; which is made of deer skins"; and in 1734 a runaway Welshman had on "a Pair of New Brogues ty'd with Leather Strings"; consequently brogues of both sorts were well known in this country. The other word is thus defined: "A strongly-marked dialectal pronunciation or accent; now particularly used of the peculiarities that generally mark the English speech of Ireland, which is treated *spec.* as *the brogue.*" Two examples only before 1775 are given: one from the London *Gazette* (1705), where we read that C. Morgan has "much of the Irish Brogue in his Speech"; the other from Defoe (1727), who writes: "When I see young shopkeepers keep horses, ride a hunting, learn dog-language, and keep the sportmen's brogue upon their tongues, I am always afraid for them." On this word, Dr. Murray makes the following comment:

> "Deriv. unknown: from the frequent mention of 'Irish brogue,' it has been conjectured that this may be the same word as the prec., as if 'the speech of those who wear brogues,' or 'who call their shoes *brogues*'; but of this there is no evidence."

This notion was apparently first broached in 1755 in Scott's edition of Bailey.

Irishmen figure in the plays of Shakspere and his contemporaries, and these contain many allusions to the Irish (especially to Irish footmen) and to things Irish. In a play by Dekker (1630), *Lodovico*, in reference to *Bryan*, the footman, says: "Is't not strange that a fellow of his starre should bee seene here so long in Italy, yet speake so from a Christian?" In Shirley's 'Hyde Park' (1632), the word "Teague" occurs, and in a song called "A Medley of the Nations," one stanza is as follows (*Rump*, 1662, i. 257):

> "O hone, O hone, poor Teg and shone,
> O hone may howl and cry,
> St. *Patrick* help dy Country men,
> Or fait and trot we dye;
> De *English* steal our hoart of *Vsquebagh*,
> Dey put us to de sword all in *Dewguedagh*:
> Help us, St. *Patrick*, we ha no Saint at all but dee,
> O let us cry no more, *O hone, a cram, a cree!*"

In 1665 the Irishman in Sir R. Howard's 'Committee' was called "Teague," and this was the common nickname for an Irishman until displaced by "Paddy" late in the eighteenth century. The Irish characters of the seventeenth century speak a dialect which differs much from the modern Irish dialect; but throughout that century there was apparently no mention of the Irish *brogue.* Soon, however, as the following extracts show, the word became common:

"Tho' this Fellow [*Teague*, an Irish footman] travell'd the World over, he would never lose his Brogue nor his Stomach." 1702, G. Farquhar, *Twin-Rivals*, Act iii. Sc. ii. (1772), p. 40.

"*Foigard.* Upon my Shoul, noble Friend, dis is strange News you tell me, Fader *Foigard* a Subject of England! de Son of a *Burgo-master* of *Brussels* a Subject of *England!* Ubooboo—

"*Aimwell.* The Son of a Bog-trotter in *Ireland;* Sir, your Tongue will condemn you before any Bench in the Kingdom.

"*Foig.* And is my Tongue all your Evidensh, Joy?

"*Aim.* That's enough.

"*Foig.* No, no, Joy, for I will never spake *English* no more.

"*Aim.* Sir, I have other Evidence—Here, *Martin*, you know this Fellow.

"*Enter* Archer.

"*Arch.* [*In a Brogue*] Saave you my dear Cussen, how does your Health?

"*Foig.* Ah! Upon my Shoul dere is my Countryman, and his Brogue will hang mine. [*Aside.*] *Mynhere, Ick wet neat watt hey zacht, Ick Universton ewe neat, sacrament.*

"*Aim.* Altering your Language won't do, Sir, this Fellow knows your Person, and will swear to your Face.

"*Foig.* Faash! Fey, is dere Brogue upon my Faash too?" 1707, Farquhar, *Beaux' Stratagem*, Act iv., Sc. ii. (1772), pp. 60, 61.

"There is an odd provincial cant in most counties in England, sometimes not very pleasing to the ear; and the Scotch cadence, as well as expression, are offensive enough But none of these defects derive contempt to the speaker: whereas, what we call the *Irish brogue* is no sooner discovered, than it makes the deliverer in the last degree ridiculous and despised." J. Swift, *On Barbarous Denominations in Ireland*, *Works* (1824), vii. 148, (Partly quoted in Richardson.)

"Broke out of the Goal of *Burlington*, . . . an *Irishman*, has the Broage on his Tongue." 1729, Dec. 23, *New Jersey Archives*, xi. 200.

"Absented on Thursday . . . Richard White, an Irishman, with somewhat of the Brogue on his Tongue. . . . He took away with him a Servant Man . . . an Irishman, and has the Brogue on his Tongue." 1742, July 8, ibid., xii. 134.

"RUN away . . . one Michael Collins, a native Irishman, and has the Brogue much on his Tongue. . . . From David Wheeler, . . . Patrick Kelly, a native Irishman, and has the Brogue on his Tongue." 1743, March 24, *ibid.*, xii. 174, 175.

"Run away . . . an Irish Servant Man, with a little of the Brogue on his Tongue." 1743, May 26, *ibid.*, xii. 180.

"Run away . . . James Downy, . . . can neither read nor write, has the Brogue." 1744, May 17, *Ibid.*, xii. 220.

"Run away . . . Michael Clarke, . . . He has much of the brogue on his tongue." 1746, Nov. 27, *ibid.*, xii. 329.

"Run away . . . a native Irish servant man, . . . talks very thick, has much of the brogue." 1752, July 30, *ibid.*, xix. 173.

"Run away . . . an Irish servant man, . . . talks much upon the brogue." 1752, Aug. 13, *ibid.*, xix. 177.

Run away . . . an Irish Servant Man . . . pretends he was born in England, but has the Brogue on his Tongue." 1752, Dec. 18 *ibid*, xix. 227

"Run away . . . an Irish servant man, . . . talks very thick, with the brogue on his tongue." 1753, Aug. 23, *ibid.*, xix. 290.

"Last night broke out and made his escape from the goal . . . an Irishman, . . . has the brogue on his tongue." 1753, Nov 28, *ibid.*, xix. 321.

"Run away . . . an Irish Servant Man, . . . has much of the Brogue upon his Tongue." 1754, May 6, *ibid.*, xix. 358.

"Run away . . . An Irish servant man, . . . speaks thick, and has much of the brogue." 1755, Dec. 18, *ibid.*, xix. 566.

"Run away . . . A . . . native of Ireland, and has something of the brogue on his tongue." 1756, March 4, *ibid.*, xx. 8.

"Run away . . . an Irish servant man, . . . very talkative, speaks very much with the brogue." 1756, April 22, *ibid.*, xx. 26.

"Run away . . . James M'Daniel, . . . speaks much on the brogue." 1760, Nov. 27, *ibid.*, xx. 507.

Though the phrase "to speak with the brogue on the tongue" does not occur until 1729, yet this phrase is implied in the 1707 extract from Farquhar. It will be observed, too, that an Irishman seems to an Englishman to speak "thick." Is it unreasonable to conclude that "speaking with the brogue on the tongue" is equivalent to "speaking with an Irish shoe on the tongue," that is, "speaking thick, as Irishmen do"? Then *brogue* comes to mean the accent in question. Professor Kittredge informs me that nowadays one sometimes hears "flannel-mouthed" and "flannel-tongued" applied to Irishmen.

Even if this conclusion is not accepted, the above evidence at least shows that from the very beginning the word *brogue* was peculiarly associated with Irishmen. Throughout the eighteenth century the Irish, and the Irish only, were said to speak with a brogue. Hence Dr. Murray's statement would seem to need qualification.

ALBERT MATTHEWS.

Boston, June 26, 1904.

Notes.

Dr. Ellis P. Oberholtzer has arranged with George W. Jacobs & Co., Philadelphia, to publish an edition of the Diary and Writings of Robert Morris, the financier of the Revolution. The collection will include the important papers in the John Meredith Read "letter-books" lately acquired by the Library of Congress, together with letters preserved in other libraries, both public and private. Few of Morris's writings have ever been published. Several volumes will be necessary to this scheme, which will form a memorial of the hundredth anniversary of Morris's death (1806-1906). The editor desires the loan for copying of letters and papers of Morris in private hands. They may be sent to the publishers at No. 1216 Walnut Street, and will be promptly returned.

J. B. Lippincott Co. will shortly issue 'True Republicanism,' by Frank P. Stearns.

St. Clair Baddeley's 'Recent Discoveries in the Roman Forum' will be published by Macmillan in September.

Harper & Bros. have nearly ready 'The Pan-Germanic Doctrine,' by an Englishman.

Lemcke & Buechner send us the prospectus of a sumptuous folio edition of the 'Nibelungenlied,' following Karl Lachmann's text, by the house of Stargardt in Berlin. The form will be folio, and there will be three degrees of quality in the paper and as many in the binding, making a range of cost from 450 to 645 marks. Only two hundred copies will be printed. The decoration has been entrusted to Joseph Sattler, an artist versed in the culture of the Middle Ages.

Nearly half a century ago, in 1855, Mr. Henry Flanders issued the first volume of his 'Lives and Times of the Chief Justices'; in 1875, the second, including John Marshall. The work being out of print, it has seemed advisable to extract the sketch of Marshall, and it is now put forth in a volume of 278 pages, with a good photogravure after Inman's portrait belonging to the Law Association of Philadelphia, by the house of T. & J. W. Johnson & Co. of that city. This is an old-fashioned biography, and needed to have its chronology made manifest on every page by a running date-line. The index, of names only, is both meagre and unanalytic.

Mr. G. K. Chesterton's little book 'G. F. Watts' (Duckworth-Dutton) should go far to reassure those who fear that the author loves antithesis better than truth. The essay—it is scarcely more—is important inversely to its bulk. Mr. Chesterton maintains that Watts is the consummate type of the Victorian era (giving his reasons, which are excellent), and the most significant figure in modern painting, which is not so certain. In his characterization of the passionate skepticism which is the Victorian hall mark, and which makes "In Memoriam," for all its lame philosophy, the central monument of the period, Mr. Chesterton is at his best. More attractive, however, to the lover of art is the account of Mr. Watts's lifelong quest of a universal symbolism, the object of which is "that the pictures may be intelligible if they survived the whole modern order. Its object is, that is to say, that if some savage in a dim futurity dug up one of these dark designs on a lonely mountain, though he worshipped strange gods and served laws yet unwritten, it might strike the same message to his soul that it strikes upon clerks and navvies from the walls of the Tate Gallery." Even Mr. Watts's aldermen, protests the critic, are thus painted in their eternal aspect, and all the portraits are allegories of the forcefulness, sensitiveness, doubt, and devotion that lay in the great doers and thinkers of Victoria's reign. All this is so well said that it seems ungracious to press the truism, ignored by Mr. Chesterton, that the painter of ideas never came to the full birthright of the master. With a productiveness that put to shame an anæmic age of art, Mr. Watts never achieved unconscious control of the grammar of his art.

The International Copyright Bureau at Berne has rendered a timely and valuable service by publishing, in a stout octavo of excellent typography, a collection of copyright treaties under the title 'Recueil des Conventions et Traités concernant la Propriété Littéraire et Artistique.' The volume contains the copyright agreements entered into between individual countries, and the texts of such paragraphs of commercial and other treaties as relate to the protection of literary and artistic property; together with the texts of the general conventions established between various countries to secure reciprocal copyright protection. In the last class belong the Convention of Berne of September 9, 1886, with the "Additional Act" and "Declaration of Interpretation" signed at Paris on May 4, 1896—these various texts being in French, Danish, English, German, Italian, Norwegian, and Spanish, followed by the texts of the various laws and administrative ordinances, orders in council, etc., which put in force the provisions of the general convention; the Convention of Montevideo, in French, Italian, and Spanish texts; the Pan-American Convention, signed at Mexico, January 27, 1902, in French, English, and Spanish texts; and the Central American Convention of June 17, 1897, with the supplementary agreement of February 12, 1901, in French and Spanish texts. The special copyright conventions between individual States, occupying the greater part of the volume, are also printed not only in French, but in the languages of the countries concerned as well. The work has been edited by Prof. Ernst Röthlisberger, the enthusiastic and indefatigable secretary of the International Copyright Bureau, whose intelligent industry is evidenced in the general introduction, the elaborate prefatory explanations in the case of each country, detailed footnotes, a selected bibliography, and an index—valuable matter extending to more than two hundred pages of fine print. This excellent book usefully supplements the compilation of copyright legislation by MM. Lyon-Caen and Delalain; or Professor Röthlisberger's own more recently edited German texts of copyright laws now in force.

The "Programme des travaux" for the twenty-sixth Congress of the International Copyright Association (Association Littéraire et Artistique Internationale) announces that it will be held at Marseilles from September 24 to 29 inclusive, this being the first time a provincial city has been chosen. Heretofore the reunions in France have taken place at Paris, with the exception of a meeting at Monaco in 1897. As usual, the discussion of several topics will be carried over from last year's Congress, such as the further revision of the Berne Convention, the protection of engineering works, and the copyright of historical publications and criticism. The protection of architectural works will be further dealt with by M. Georges Harmand and the architect Charles Lucas, while the latter will also, in a separate paper, discuss the nice questions arising in the case of public monuments as to the moral control of their works by the artists, and the rights of the public. M. André Taillefer and Alphonse Davanne, president of the Society of French photographers, will discuss the proposed new legislation in France relative to photographs; MM. Jean Lobel and Paul Wauwermans of Brussels the protection of musical works; Albert Vaunois, copyright and the sale of artistic productions; and the Secretary of the Association, M. Jules Lermina, the right of translation in countries where several languages are spoken, while reports are expected from different authors on movements for new copyright legislation in various countries. For rest and recreation, in addition to "promenades en mer et fêtes diverses," excursions are planned to Arles, Aix, and the very curious rock-hewn ruins of Les Baux.

Although the second centennial of the birth of Linné does not occur until May 13, 1907, the learned world of Sweden is al-

ready at work preparing to celebrate the event, especially by the establishment of a Linné Museum in Stockholm. The rector of the University of Upsala, Dr. Olof Hammerstedt, has published an appeal asking for documents of importance bearing on the life and work of the father of botany. It is thought that a great deal of the correspondence of Linné with his hundreds of pupils throughout the educated world must still be extant, especially from his Leyden and Amsterdam times, and perhaps also some of his own writings in those years when he was unable to print on account of his poverty. It is known, too, that a number of portraits were made of the naturalist which have never been published. It is proposed to collect all these and similar material for the museum, although, of course, the instruments he used in his daily work, his library, and his herbarium are known to have been sold by greedy heirs to the British Museum. In addition, the present incumbent of Linné's chair at Upsala, Professor Fries, is preparing a comprehensive biography which, together with a new edition of all the unpublished writings of Linné, is to be issued by the authority of the University Senate.

The city of Arezzo has prepared a five-days' programme of festivities to celebrate the six-hundredth anniversary of Petrarch, its most distinguished son. Yesterday the municipality held a reception of delegates and visitors, dedicated a tablet in Via dell' Orto, where Petrarch was born July 20, 1304, listened to an oration by Sig. Orlando, the Minister of Public Instruction, gave a banquet, and, for the evening, provided an illumination, a concert and an opera. To-day, the National Petrarch Congress opens its two-days' session. To-morrow evening there is an historical fête in the amphitheatre del Prato, representing in the fourteenth-century costume the coming of Petrarch to Arezzo in 1350. For Saturday an excursion to the Casentino is planned, and it will include a visit to the Convent della Verna, famous for its association with St. Francis. On Sunday there are final festivities at Arezzo—the dedication of a memorial to King Humbert, a reception by the patronesses, a fantastic illumination in Piazza Vasari, and an opera in the theatre. How Petrarch himself would have enjoyed the celebration! One permanent result of the Congress will be the publication of the long-desired edition of his complete works.

An unusually delightful feature in this year's Commemoration festivities at Oxford was the performance of Milton's "Comus," with John Law's original music, on the lawn at the edge of the picturesque lakelet in Worcester College Gardens, well known for their fine trees and for the spacious effects of genuinely sylvan scenery given partly by clever landscape gardening, partly by the picturesque remains of Benedictine buildings belonging to the most ancient period of what, in its present form of incorporation, is a comparatively modern institution. Supported by encouragement from the provost of Worcester College, the Mermaid Society began each of its two performances in the twilight at about half-past eight. The audience was so placed on a slightly raised platform that the actors in the "Masque" stood out against the background afforded by the waters of the lake. The moon shone out as the actors progressed, and was aided by unobtrusively simple contrivances which flashed electric rays upon the half-dozen leading actors where they stood under the trees. Large audiences maintained on both occasions their interest in the play in spite of the length of the speeches, more than made up for by the magical charm of Milton's diction and the melody of his verse. Variety was ensured by the songs, the incidental music, the gambols and antics of the revelling attendants upon Comus, and above all by the fairy-like effect of Sabrina's approach in a boat across the lake from Wonderland. "The Masque of Comus," together with the wayward and stately *pavane* which was danced at its close, occupied about an hour. "Comus" was first performed when Milton was twenty-five years old (in 1634), at Ludlow Castle, the leading performers being Lord Brackly, Mr. Thomas Edgerton, and Lady Alice Edgerton.

This year's performances (during the latter part of June) at Bradfield College, England, of the "Alcestis" of Euripides seem to have been quite up to the level reached there on previous occasions. Indeed, the texture of the play, with its sudden alternations from mourning to revelry and its cheerful dénouement, makes it one particularly well adapted to performance by youths of the age of English public-school boys. On this occasion all the parts were taken by boys of the school, who also prepared the very creditable verse-translation placed at their guests' disposal as a book of the play.

Medicine in ancient Egypt was the subject of Dr. R. Caton's Harveian oration before the Royal College of Physicians, which contained many facts of general interest. The most remarkable of the early physicians was a priest named I-em-hotep, who lived during the third dynasty, nearly 6,000 years ago. Judging from the references to him in the temple inscriptions and the papyri, he was a man of extraordinary genius and versatility. In addition to his professional work, which apparently included lectures on medicine, he was an architect, the first (according to Manetho) who built with hewn stone, a writer of divine books, an astronomer, alchemist, magician and king's counsellor. Later he became in popular esteem a demigod, and temples for his worship, which were also hospitals for the sick, were built, first at Memphis and then in other parts of the land. Here the priest-physicians not only treated the sick, but also embalmed the bodies of men and the sacred animals. In this process the heart and viscera were removed, and they had thus an opportunity of learning something of anatomy and of the changes produced by disease, being probably the first to acquire a rudimentary knowledge of the circulation of the blood. The medical papyri contain references to the heart, the blood-vessels, the pulse, and the changes which took place in disease. In one, distention of the heart and shortness of breath are attributed to the fact that the blood had stagnated and did not circulate properly. Among the prescriptions for various maladies was one advising rest in certain forms of heart disease, and Dr. Caton concluded his lecture by strongly recommending the method prescribed by Egyptian priest-physicians 4,000 years ago.

The largest collection of Japanese books in Europe is declared to be in Sweden. It was originally made by the great polar explorer, Nordenskjöld. When returning on the *Vega*, he spent several months in Japan, during which, with the assistance of a young Japanese savant, he collected some six or seven thousand volumes of native books, many of them rare. While the published works date mostly from the sixteenth to the eighteenth centuries, the manuscripts go back to the oldest periods of the Shogunate. The Swedish Government, several years ago, appointed a committee of foreign specialists to catalogue the collection, but the task has not yet been entirely finished.

—The first number of the *Revue Économique Internationale* appeared in March of this year. The task it proposes to itself is the presentation of the most important industrial problems of to-day, unbiassed by the tenets of any particular school of economic thought. The international character of this new monthly is evidenced by its corps of contributors; English, French and German economists being represented in the first issue. To avoid compromising the cosmopolitan character of the new journal, the main office has been established in Brussels, although Félix Alcan has taken the Paris agency, and P. S. King & Co. that at London. The articles appear printed in French, but—presumably as a concession to the Teutonic participants in the project—a summary in indifferent English precedes each leading article. With whatever acclaim a new economic journal may possibly be greeted by the general public, the serious students of economic science will welcome such a new serial as this with more than chastened joy. This surfeit of economic magazines is one form of "dumping" to which the great majority of them are emphatically opposed. The number of periodicals devoted to scientific economics and allied disciplines such as charities, corrections, finance, sociology and various branches of technology, is now so great that nobody can pretend to read them all, if perchance he is to read anything else, even in his own subject. In the United States, for example, where there are, at an outside estimate, a thousand advanced students of scientific economics, there are six journals purveying the requisite pabulum quarterly or oftener. More irritating than the mere number of such journals is their "expectation of life." If they were subject to the law of survival, one might for a time tolerate their numbers, but the truth is that they are wholly exempt from the process of selective slaughter, being backed by personal or by university patronage.

—Despite the excellence of two of the four leading articles in the first number of this particular review, a careful inspection of the number as a whole fails to establish its *raison d'être*. The introductory article is by Émile Levasseur, who opens the World's Parliament of Political Economics by describing the various schools of economics, which he classifies mainly on the basis of their public policy. He is at pains to emphasize the somewhat trite fact that economic ideas and industrial conditions have mutually influenced each other. He concludes with the reassuring thought that there is some merit in all schools of economics, and that

their divergences are not altogether insurmountable. Sir Vincent Caillard next rushes into the lists, and in the second article breaks a lance for Chamberlain's proposed fiscal policy. A spirited rejoinder is made jointly by Winston S. Churchill, M. P., and Armitage Smith of the University of Oxford, and these two articles on Chamberlain's policy are the best things in the introductory number of the *Revue*, and afford a very good résumé of the counter contentions of the combatants. The last of the four leading articles is by Prof. Gustav Schmoller of the University of Berlin on "the typical phases of economic crises and their history"; but everything that he says with reference to the cyclic character of crises has been said before and better said. The *Revue* concludes with a number of departments containing shorter articles.

—The 'Review of Historical Publications relating to Canada' (Toronto: Morang), which is edited by Prof. G. M. Wrong and Mr. H. H. Langton, reaches its eighth volume with the issue of 1903. No year of the past decade has been more prolific in literature about Canada than that which is covered by the present survey. The relations of the Dominion to the Empire have always been represented by a separate heading, but, thanks to Mr. Chamberlain's proposals, there is much more material than usual to digest under this rubric. The number of good monographs is also unusually large. 'Lord Elgin,' by the late Sir John Bourinot, 'Sir Wilfrid Laurier and the Liberal Party,' by Mr. J. S. Willison, and 'Canada in the Twentieth Century,' by Mr. A. G. Bradley, are but a few of the books which rise above the average level of writing on Canadian subjects. The section devoted to provincial and local history seems particularly strong this year, while notable contributions have been made to geographical exploration in the Rocky Mountains. Owing to the collapse of the gold boom, one picturesque feature of earlier volumes is wanting, but, economically speaking, the development of ranching and agriculture in Alberta furnishes an ample equivalent. As we have pointed out on previous occasions, the number of signed reviews is small, a fact which may be accounted for by the large and generous contribution of the editors themselves. At the same time, a large proportion of the most competent reviewers in Canada are known to write for this publication, and, whether they sign their names or not, the authority of the work stands high.

—Where such a diversity of subject is presented, it may seem futile to fasten upon any one topic for particular notice. However, some of our readers may be interested to see the reasons which are advanced to account for Canada's allegiance to the British connection. They occur at the close of the long article on "Mr. Chamberlain's Proposals." The writer, whose name is withheld, indicates that business instincts might well draw Canada towards the United States. The deterrent is not merely the sentiment of union with Great Britain, but belief in British methods of government and British administration of law. "The average man is at least as deeply concerned in these matters as in a more or less rapid increase of national wealth which may not affect his personal prosperity at all, and he sees that Great Britain and her colonies present many points of contrast in these important respects with the United States. There are no desperadoes in the Canadian West who successfully defy the law, there are no lynchings in Canada, there is no apathy on the part of the constituted authorities in suppressing outbreaks of mob violence. The same characteristics of respect for law and a speedy suppression of disorder are found in the annals of Australian development. The British traditions which have set the standard in these matters are not lightly to be parted with."

—One not unnatural and not unpromising result of a widespread alarm in England lest the discussion of "compulsory Greek" at Oxford and Cambridge should loosen the hold of Greek studies, has been the formation of the Classical Association of England and Wales. At the meeting, held early last spring at University College, Gower Street, to organize this association, those interested in Greek studies took part, irrespective of their opinions as to the desirability of maintaining Greek by compulsion. The first session of the new organization began at Oxford on May 26, and was characterized inevitably by some little discussion of the burning topic of the hour, in spite of the witty avoidance of it by Mr. Mackail (the secretary) in his finished address on the place of Greek in university study. Professor Ramsay of Glasgow University spoke at this meeting as the representative of a similar association which has for some time been organized in Scotland. The general advantages which it is hoped may be gained by the new society are to be found in the free interchange between its members of ideas as to the improvements necessary and possible in the teaching of Greek, more especially in the teaching of the rudiments of Greek. Accordingly, it is interesting to note that at the evening session of the Association at Oxford, a conversazione in the Oxford Examination Schools, members were chiefly occupied in examining drawings and photographs exhibited by the Hellenic Society and by Professor Gardner. The higher reaches of Hellenic scholarship were also represented by an interesting exhibition of Oxyrhynchus and other papyri. These were offered for inspection and explained by Drs. Grenfell and Hunt, their fortunate discoverers and most competent editors.

—In order to make room for this first session of the Classical Association a most important exhibition of portraits was closed. It consisted of a loan collection of portraits of English historical personages who died prior to the year 1625. This loan collection was made under the auspices of a committee of the Oxford Historical Society, and occupied the Schola Borealis of the University during the months of April and May. Towards its close Mr. Lionel Cust, M.V.O., director of the National Portrait Gallery, who contributed the very interesting introduction to the catalogue put forth by the committee, delivered a lecture on the collection before the Oxford Architectural Society. He astonished his hearers by declaring that an extremely brilliant and well-preserved portrait of Queen Elizabeth, belonging, with others of the same royal lady, to Jesus College, Oxford (the only Oxonian foundation of her reign), was the portrait not of Elizabeth at all, but of Anne of Denmark. Not all, perhaps, of Mr. Cust's hearers were convinced by his account of this matter, but it is likely that every one was convinced by his protest against the attribution to Zucchero (Zuccaro?) of another portrait admittedly of Elizabeth belonging also to Jesus College. Apart from portraits of Elizabeth; from one of Archbishop Warham, in which Holbein had a hand, if it be not wholly his; from one of Anne of Cleves, not by Holbein, like the one in the Louvre, but certainly by a skilful hand either Flemish or English; from one of Sir William Cordell by a master revealed in his newly discovered signature on this panel as Cornelius de Zeew; from one of a nurse and child; and, above all, from one of Sir Henry Lee, by "Sir Anthonis Mor," which is a masterpiece, these 137 portraits are not especially interesting as works of art. Very many of them, however, assert themselves as faithful likenesses.

—One has heard a great deal, in the last few years, of the work of Arnold Böcklin, but in this country we have had little opportunity to see it; therefore the monograph, in the Knackfuss series, devoted to him (Bielefeld and Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner) is especially welcome. The more than one hundred illustrations, most of them dated and arranged in chronological order, give a good notion of the development of his extraordinary genius, and of the manner of his work in everything but color and technical handling. From them it becomes evident that Böcklin was primarily a landscape painter, of a classic-romantic sort, his earliest pictures containing no figures. First the small incidental figure is introduced; then the figures become larger and larger and occupy more space on the canvas, until we have figure-pictures with little or no landscape. To the end, however, he returns from time to time to the landscape with small figures, and it is doubtful if some of the pictures of this class are not the most unquestionably successful things he ever produced. It is evident that he never really learned to draw, or, in the modern sense, to paint. The impression he leaves is of technical weakness combined with a remarkable sharpness and validity of imagination, as if he had seen with his bodily eyes the strange places and creatures he paints. He has actually voyaged to the "Island of the Dead," and the inhabitants of the sea and the forest have shown themselves to him. He has drawn them feebly and painted them badly, but this is what a mermaid or a sea centaur is like, and it is so that a faun totters on his goat-legs. Even the most grotesque of his visions, like "the sirens"—hideous plucked fowls with the tail feathers left clinging to the fat croup—have a horrible veracity, and one says: "I did not think they were like that!" Nothing could be further from classic dignity or beauty than the "Susanna"—but this was intentional, for the face is a portrait, and the picture a coarse retaliation. On the other hand, there is a real beauty, though seldom without some touch of stiffness or awkwardness, in certain of Böcklin's works. Some of his nymphs are noble animals, though they

have not learned how to pose, and his landscapes often have charm as well as majesty. One would judge that a life-time of self-centred dreaming and of scant encouragement from the world tended to weaken his grasp of the technical part of painting and to exasperate the eccentricity of his mind. His latest work is the feeblest in execution, while it pushes strangeness to, or beyond, the verge of caricature; but his best work will surely live, for nothing more vital was created by the art of the nineteenth century.

—Otto Kahn calls attention in the *Frankfurter Zeitung* to the striking coincidence that the Simplon tunnel is to be completed in April, 1905, precisely a hundred years after the completion by Napoleon of his road over the Simplon pass, which involved the building of 613 bridges and 8 short tunnels. That road served military purposes, whereas the new railway tunnel is being built in the interest of peaceful pursuits; not exclusively, however, since Italy will have three forts near the south end, while Switzerland will have mines within the tunnel, which will enable the Government to close it in case of war. The use of this tunnel, in connection with some short cuts projected north of it, will reduce the time for express trains between Paris and Milan from eighteen hours to fifteen. The total cost of the Simplon tunnel will be 78,000,000 francs; its length is 19,803 metres, as against St. Gothard's 14,984 and the 12,849 metres of the Mont Cenis. It might have been shortened considerably but for the determination to have it as low as possible all the way, so as to avoid inconvenient and expensive grades. Its highest point consequently is but 704 metres above sea level, whereas the highest point of the Mont Cenis tunnel is 1,295 and of the St. Gothard 1,155 metres. The first plan was to build a rack-and-pinion railway crossing the mountain at an altitude of 2,010 metres without a tunnel. This would have been much cheaper, but such a road would have served merely for local tourist traffic in summer. The principal structural novelty in the Simplon tunnel is that it is double, although only one of the tunnels is being entirely completed at present; the other will be used as soon as the first yields $10,000 a year per kilometre. Many advantages have already accrued from the use of the double system. The two tunnels being separated by 17 metres, accidents are less likely to happen through pressure from above; the ventilation problem has been greatly facilitated, as has the task of getting rid of troublesome water. It may not be practicable to open the Simplon tunnel on the projected date, April 30, 1905, but extraordinary efforts are being made. Nearly 3,000 laborers, all Italians, are at work, and are being stimulated to do their best by offers of prizes. The time required to build the tunnel will have been six and one-half years, which, despite its greater length, is less by about three years than that required for the St. Gothard, and nearly eight years less than that required for the Mont Cenis.

— The King of Italy is considering his award in the question between Brazil and England submitted to him for arbitration. This question interlocks with that decided between Venezuela and England touching Guiana's proper boundaries, and our old friend Schomburgk looms up once more as a disturber in the cartographic controversy. The territory in question embraces the head waters of the Tacutú, an affluent of the Rio Branco, as it in turn of the Rio Negro, and it again of the Amazon; but Brazil claims further a narrow strip, one-sixth of the whole, beyond the divide, along the left bank of the Rupununi, which flows into the Essequibo. The greatest extent north and south is about 150 miles; the greatest width a third as much. Massachusetts would offer a more considerable area for an international dispute in the old or in the modern fashion. When England, under our impulse, finally agreed with Venezuela, she held to her Brazilian line, but with express recognition of Brazil's right to set up a counter claim. The strife is somewhat mixed, as Brazil for five-sixths invokes the watershed principle—not solely, however—while relying for the one-sixth on the "sphere of influence" (namely, from an outlying fort), which is England's strongest hereditary argument (via Holland). What sort of a country, in the bad old Cleveland-Olney days, one might expect civilized nations to fly at each other's throats for, is shown in the Brazilian Memoir submitted to the King of Italy by a map sweeping a radius from Fort S. Joaquim. In a zone of 450 kilometres eastward to the very head of the estuary of the Essequibo there is no European centre.

— The Brazilian Memoir forms eighteen quarto volumes, including an atlas, and is a monument to the industry of the Brazilian minister to St. James, Sr. Joaquim Nabuco, whose anti-slavery labors are not forgotten in the republic. Thanks to him and his former coadjutors, there is in the present dispute no element of free vs. slave soil. But this also is England's honor as the first European Power to abolish slavery in our hemisphere. A supplementary note to volume three of the Second Memoir pertains to the Swiss cartographer Von Henemann (Van Heneman), and is taken from Prof. George Lincoln Burr's "Report on Maps from Official Sources" accompanying the report of President Cleveland's extraordinary commission for establishing the true Anglo-Venezuelan boundary line. It is not for us to express an opinion in a case of which we have only one side. We are content to reflect on the enormous economic saving which the costly Memoirs pro and contra effect over a barbarous settlement by force of arms, even were an El Dorado at stake. Our apostles of strenuosity would surely shrink from a task like that performed by Sr. Nabuco, in which something other than verbosity and bluster was required. His patriotic service lacks the soldier's name, but may well have the happy warrior's reward.

A STRENUOUS LIFE.

William Pepper, M.D., LL.D. By Francis Newton Thorpe. Philadelphia: J. B. Lippincott Co. 1904. Pp. 555.

William Pepper was born in Philadelphia in 1843. By descent he was German. His first known ancestor came to this country from the neighborhood of Strasbourg, in 1769. His grandfather, George Pepper, was one of the wealthiest merchants of Philadelphia in the first half of the nineteenth century. His father, of the same name as himself, was a distinguished physician and a professor in the University of Pennsylvania. Blessed with ample means and the inheritance of his father's reputation, he entered upon the same career, in which he early achieved success.

The first part of Professor Thorpe's book is devoted to Dr. Pepper's career as physician and medical writer; but, distinguished as that was, it is not that which really made his reputation. Characteristic of Dr. Pepper from the outset was an aggressive and ambitious spirit of unrest, which impelled him to seek for large results, to make himself felt in the world, to overthrow old and cumbering traditions, to organize new and ever greater institutions. He was early appointed lecturer in the medical faculty of his alma mater, the University of Pennsylvania. At that time the University of Pennsylvania was just about to remove from its old downtown site to West Philadelphia. It was evident that if this were done and the Medical School went with it, a question of the gravest importance would at once arise, inasmuch as there were no hospital facilities in West Philadelphia, and, indeed, the city of Philadelphia was, in comparison with New York, singularly lacking in hospitals at that time. Dr. Pepper, then but twenty-seven years of age, set himself the task of establishing a University Hospital. For this purpose he not only levied upon private individuals, but also organized a campaign to secure from the City Council and the State Legislature grants of land and money. It was the beginning of his lifelong work of organization, and the methods he then developed he pursued to the end. He entered politics at that time, and ever after remained in politics, not as a reformer, but as one who sought to achieve through political agencies, city, State, and national, certain important results—the endowment of benevolent and educational institutions, the promotion of archæological research, the improvement and development of educational methods and materials, the betterment of water supply and almshouse management, and much more of the same sort.

His energy and success in raising funds and equipping the University Hospital led to his appointment to the position of Medical Director of the Centennial Exposition of 1876, when he was only thirty-three years of age, a position which brought him into the eye of a world larger than that of Philadelphia. The next step in his administrative career was his selection as Provost of the University of Pennsylvania in January, 1881, at the age of thirty-seven. At that date, outside of its Medical School, which was famous and important, the University of Pennsylvania was little more than a high school. Other institutions no more ancient and originally occupying an educational grade no higher than itself had passed it and left it far behind in the march of development. The sons of the best citizens of Philadelphia went to it to get their education. It was the same education which their fathers had received, and they conceived of nothing better to pass on to their children. One who has not encountered it can scarcely appreciate the conservative opposition which Dr. Pepper met in his effort to make of the University an institu-

tion worthy of the name of the great State which it bore, and abreast of the leading universities of the country. Writing of those struggles in 1893, after victory had been achieved, he says: "No one then believed in the future of the University. Men smiled maliciously to my face and insulted me behind my back. I lost most of the friends of my youth—true, loyal, sincere men, united to me by youthful vows to devote our lives to lift science and education and the level of municipal life here. One after another they left me by the way, overwhelmed by weariness, contempt, or weakness" (p. 460). Here is Professor Thorpe's summary of the results of his provostship (1881-1894): "He found the University a respectable school; he transformed it into a real university—created thirteen departments, erected above twenty costly and appropriate buildings for its use, increased the faculty from a corps of ninety to one of nearly three hundred, and the attendance from eight hundred to above twenty-eight hundred. For the endowment and use of the institution he raised over four million dollars, and added more than forty acres in the heart of the city to its campus" (p. 458).

In doing this work he found himself obliged to bring the University into the life of the people. He coördinated the public-school system of the city with the courses of the University. He perceived the possibilities of University Extension, as a means both of extending educational facilities, and also of bringing the University in touch with new classes in the community and advertising it to the public. Accordingly he put himself and the University at the head of this movement in America to bring the University before the world. He made a similar, but much more daring use of archæological expeditions and collections. As his work went on, his vision expanded. He planned a great system of museums, illustrative of commerce, art, science, history, anthropology, centring about the University, and free to the people. He meant to coördinate the educational opportunities of the city and State with the University as a centre. His work often seemed visionary, his methods dangerous and speculative. After he ceased to be Provost, severe judgments were passed upon his administration of that office—the manner in which he involved the University in financial responsibilities, his spectacular and sometimes sensational methods of bringing the University before the public, and his selection of work and men because of telling rather than solid qualities. These and other charges, which Professor Thorpe has not mentioned, were brought against his administration. It must be said that probably at the time when he laid down the office of Provost, he had achieved all that he could achieve in that position; that there was need of another and a very different management; that a prolongation of his administration would have been injurious, if not disastrous, to the interests of the University. But, on the other hand, it will be recognized by those who knew and followed his career, that it was precisely the methods which he used that were needed to lift the University from its condition of insignificance, and to stir the people of Philadelphia to contribute to its work as they never contributed to anything before.

To Dr. Pepper's career as Provost of the University of Pennsylvania, Professor Thorpe devotes the second part of his volume, entitled "The Educator." His resignation from that office seemed to him at the time the end of his career. He supposed that his retirement, under the conditions of that retirement, would seriously affect his standing in the world. He seems also, and naturally, in view of what he had done, to have supposed that the University could not be carried on without him. But he was of a temperament that could not rest, and soon he had plunged into a new scheme, the creation of a great system of free museums and libraries, to which he devoted the last five years of his life—a work which will constitute, if possible, an even greater and more enduring monument than the University itself. It is fitting that Carl Bitter's bronze statue, erected after his death, should stand by the side of the Free Museum of Science and Art, which houses the treasures of the archæological expeditions that Dr. Pepper fostered and fathered, and by means of which he had interested the citizens of Philadelphia both in the University and in the Museum.

This statue stands not far, on the other side, from the University Hospital, the first creation of his organizing genius. It was in a room in this latter building that the proposition to start a very modest exploring expedition under the auspices of the University, on condition that the latter furnished a museum, was presented to Dr. Pepper with many misgivings by its originators. He lay on a sofa, his eyes closed, seemingly too exhausted by the lecture he had just delivered to pay heed to anything. But no sooner had the plan been stated than he was on his feet, beholding and expounding the vision of a scheme to make Philadelphia the centre of a great art and archæological movement, by the originality and the success of which he meant to raise the University of Pennsylvania to a high place in the world. This seeing of visions and leaping to conclusions was characteristic of the man in every part of his career. It was well brought out in a comparison of Dr. Pepper and his father made in a memorial address by Dr. Tyson, in 1898:

"The elder Pepper's method of diagnosis was to make a patient and exhaustive examination of the case, weighing each symptom and physical sign, and, after careful reflection, cautiously to draw conclusions. These were always well founded, and rarely changed. The younger Pepper's diagnosis was more rapid, more brilliant, and was usually sustained by the autopsy, though sometimes corrected by it. His quickness in recognizing a morbid condition and its causes was surprising, and he rarely erred in his diagnosis of the consequences which were likely to follow" (p. 147).

He displayed the same power of diagnosing individuals in other relations, and the same quickness to perceive and to utilize morbid as well as natural conditions to achieve results. Society and its foibles were made subservient to his ends. He instituted the Charity Ball, and probably no other man would have conceived or could have achieved such a social union of Philadelphia north and Philadelphia south of Market Street. He was continually seeking methods of reaching new groups of wealthy or influential men for the furtherance of his great educational and civic schemes, and the utilization of social ambitions was one of his methods. His constant preoccupation with great schemes and the methods of promoting them led him to regard all men, apparently, with a view to their usefulness, present or potential, in the furtherance of those schemes. One is impressed with the lack of the element of personal affection in his relations to the men about him, even those who seemed to stand the closest. Attractive in his manners, a witty, pleasant companion, abounding in gracious and kindly words and deeds, he yet seemed to have no deep and intimate friendships. If a man or woman were not useful for his purpose, they were cast aside. He exercised a remarkable influence, transforming into valuable agents much material which others would have regarded as hopeless; like a certain young man of great wealth, who spent his time "in sleep, tennis and dancing, but no work," until Dr. Pepper persuaded him "to abandon coffee, tobacco, and wine, and literally made a new man of him" (p. 465). On the other hand, this attitude of personal detachment aroused in others opposition and distrust. They regarded him as heartless and designing, and although it was clear that the object of his designs was always the promotion of good works, they yet failed to give him the confidence and support which the objects aimed at merited. Professor Thorpe says of him somewhere that he believed every man had his price, not in the sense that every man could be bought with a bribe, but that there was some motive in each man which, if he could but find it, would enable him to use that man for the furtherance of his plans. Generally he was successful. Sometimes he blundered, and the methods which he used even seemed to those whom he sought to influence unscrupulous, rousing in them a bitter opposition. Professor Thorpe does not make clear in his book the reason, outside of sheer conservatism, of the opposition which Dr. Pepper encountered to some of his great plans, an opposition which came often from men of character in the community. The reader is told that there was opposition, and that is all. The book is a chronological eulogy rather than a record merely of virtues and activities. We see and hear nothing of the mistakes and faults. It would be a better picture if it were not all done in so high a light, for the real portrait of a man cannot be painted without shadows.

Perhaps that which will most impress the reader of this book is the tremendous activity and energy that characterized Dr. Pepper, an activity and energy so extreme that one finds oneself doubting whether there were any depths of reflection and feeling beneath, whether the whole being of the man did not express itself in his activities. It must be remembered that while engaged in great educational and civic enterprises, he was all the time an active physician, with an enormous and constantly increasing practice; and not only this, he was a voluminous writer. He published medical text-books, systems, encyclopædias, and articles innumerable, showing in his literary activities the same remarkable powers of organization and coördination which he developed in all his other work. He was constantly called upon, also, to prepare and deliver addresses on a great variety of themes. In the preparation of these occasional papers he showed extraordinary versatility combined with an astonishing power of literary expression. His address before the Pan-American Medical Congress in 1893

produced a great impression on the delegates from Canada and Spanish America, and this, in connection with his statesmanlike handling of the Congress in general and the delegates in particular, procured him a fame in the sister republic probably exceeding that which he enjoyed in his own country. When, in 1896, he visited Mexico, as president of the Pan-American Medical Congress, he was received with an ovation which could scarcely have been greater had he been President of the United States; and after his death a memorial service was held in the legislative hall of the capitol, equal to that which might have been held in memory of a friendly potentate.

The secret of the immense amount of work which Dr. Pepper was able to accomplish lay largely in his great diligence and his careful utilization of every moment of time. The schedule of a normal day's work was somewhat as follows: Rose at 6:45. In office at 7:15, dictating letters and opinions until 8:15. From 8:15 to 11:30 office hours (he ate his breakfast in his office while seeing patients), interspersed with the transaction of all sorts of business pertaining to his many schemes. Twice a week at twelve or one he lectured at the University, to which he drove from his house, frequently carrying some one with him, with whom he transacted business, or to whom he gave medical advice on the way. (His visits to his patients were made in the same way, and he has been known to carry a professor of the University with whom he wished to transact special business to three consultations, going over the business with him in his carriage in the intervals.) Otherwise, the hours from 11:30 until 2:30 were devoted to consultations. He lunched incidentally, usually in his office, often transacting business or dictating at the same time. From 2:30 until 4:00 were office hours. From 4:00 until 7:15, with the exception of the time given to lectures, usually from 5:30 to 6:30 four times a week, he was again in consultation. Dinner he seemed to regard as a social function peculiarly adapted to the promotion of schemes and plans of work. From 8:30 to 10:00 he was usually once more in consultation, interspersing with singular dexterity fragments of social functions, committee meetings, and the like. From that time until after midnight, frequently until half-past two in the morning, he was dictating to one of his stenographers or working in his study. (At 12:30 the postman tapped on the window of his study, which was on the ground floor, to receive his mail.) Under great pressure he occasionally worked thirty-six or even forty-eight hours without interruption, except for a bite of food. On the other hand, he had the capacity of taking a nap at any time and at any place. When visiting a patient's house he would sometimes ask for a room and a bed, to lie down and take a brief nap. Sometimes in the midst of business he would say: "Let me sleep five minutes, then waken me, and we will talk it over," and fall asleep at once, freshly to resume the business or conversation at the end of that time.

Some notes for a never delivered "Address on Great Men from a Physician's Standpoint" throw light on his treatment of himself. Discussing the question of sleep, he says (p. 456):

"Many can do with less than eight or even seven [hours] while working hard, provided they recognize the increased risk; that while running their engine they take more scrupulous care with every part of the machinery. Machine must be perfect, fuel ditto; everything must be sacrificed to the one point of keeping the machinery running thus: Subjection of carnal, emotional excesses; certainty that no weak spots exist; diet, especially too much eating, too fast eating; stimulants, tobacco, open-air exercise; cool-headed, almost callous, critical analysis of one's self, one's sensations and effect of work on the system; clear knowledge of danger lines; result, avoidance of transgressing and immediate summons at right time. This involves a clear conscience or a callous one.

"Ability to sleep at will, which no one ever could do with certainty, except on the recognition of a certain stage of mental and bodily fatigue, which gets to be well known, and the result an unvarying obedience to the call of these sensations, almost with no regard to time, place, or circumstances."

He seemed to believe that he was so regulating his life and so thoroughly understood his system as to accomplish this immense amount of work without ultimate injurious results. As a consequence of incessant and intense overwork, he wore himself out early. At fifty he began to break down, and the last few years of his life were years of sleeplessness and pain. He had by this time become so addicted to work that he could not give it up even for a few days at a time. Such a place of recreation as Northeast Harbor palled upon him. He writes (p. 467): "It is a tiresome place and too far away, and the telegraph people can neither read nor write." With the failing of his health came a feverish, unhealthy sense of the need of working harder. "The days are few, and the crush of work makes them short. So little accomplished: 'The petty done, the undone vast.' I must work harder. The very rich people are nearly all a little trying" (p. 464).

He was aware, during these last years, that organic troubles had developed which rendered death an event possible at any moment; and that the only hope of prolonging his life was to drop work and rest. This he either could not or would not do. His whole interest in life was in the prosecution of his great schemes. He died at the age of fifty-five at the home of Mrs. Hearst in California, whither he had gone nominally to seek the rest which his restless energy rendered impossible, with his hand, as it were, on the telegraph wire, worrying about the "Loan Bill" which would provide the funds to carry out his museum projects.

RAMSAY'S TACITUS.

The Annals of Tacitus, Books I.-VI.: An English Translation by Geo. Gilbert Ramsay, Professor of Humanity in the University of Glasgow. E. P. Dutton & Co. 1904.

The present season appears to be unusually prolific in translations of classic authors, made as much for those who read the originals also as for those who do not. The latter class is usually inclined to take a strictly utilitarian view of such labors. Said Emerson, "I should as soon think of swimming across Charles River when I wish to go to Boston, as of reading all my books in originals when I have them rendered for me in my mother-tongue." That was a safe thing for Emerson to say, for he was competent to take the barest, and even the distorted, skeleton of another man's thought, and clothe it from the rich wisdom of his own treasure-house. The result might not be recognizable by the original proprietor, but it was sure to be a beautiful thing in itself. Lælius Decumus could not do that. His Charles River bridge would be a mere *pons asinorum*.

To the thorough classicist a translation is a very different thing. It is a work of art. As the Chinese say that nature first possesses the artist and then works itself into an outward expression through his fingers and his soul, so the classicist brings to birth a translation. It is a possession that seizes upon him at least once in his life. He can no more resist it than the youngling can the tendency to Spring poetry, or the mountaineer the glittering charm of the virgin peak, or the woodsman the call of the wild. However impossible it is to render perfectly, or even adequately, into one language the literary forms and imaginative conceptions of another, it is a task that will always be attempted, and, if at all well done, will demand attention as a literary creation, and not simply as a piece of hack work.

There is no historical writing in the world's literature so full of permanent and manifold interest as the account of the reign of Tiberius by Tacitus. Tacitus was indubitably quite as much a rhetorician as he was an historian. Hence modern historians who would not write well if they could, shake their heads at him, as they do at Macaulay and Froude. But the world still prefers wine to sawdust, even if the sawdust be made out of vine-stocks, and the English-speaking world ought to welcome such a rendering of Tacitus as Mr. Ramsay gives us. It is not only the most recent of the translations from classical authors that have come to our table; it is also by all odds the best. The author's purpose was

"to give a version of the first six books of the Annals which shall be close and faithful to the original, and yet shall not read as a translation; which shall satisfy the strict demands of modern scholarship, and yet give to the English reader some idea of the power, the dignity, the greatness, of the great historian of Rome."

This purpose he certainly appears to have achieved, and he is the first English translator who has done so. His footnotes are also such as the reader will need for his full understanding of the text, and the handsome and stately volume in which his work is issued renders due honor to the dignity of the subject. We trust the single star on the back indicates that we may hope for the rest of the Annals in a second volume.

Prefixed to the translation is an extremely interesting and well-written essay of sixty-six pages, in which the translator discusses the merits and the failings of earlier translations, including those into French and Italian, and passing very lightly over the later English versions. In the course of his discussion he points out, with illuminating examples, the difficulties that confront the translator, especially the translator into English, and the way in which these difficulties should be dealt with. The translator, according to Mr. Ramsay, must strive, though with the inferior resources of the English tongue, to emulate the liveliness, richness, variety, and conciseness that mark the style of Tacitus. He must perforce avoid the periodic structure, which is clumsy in English, and make up for it in some measure by the careful

structure of the paragraph. He should not imitate the poetic and archaic diction of Tacitus, but he must, for example, describe military matters in terms that would not bring a smile to a modern soldier's lips; social and economic facts as our own economists would describe them; and in the record of debates in the Senate use only such expressions "as might fall from the lips of a British statesman in our own houses of Parliament." He must perforce expand some phrases, but no addition of idea should be tolerated. Some omission, on the other hand, may be pardoned, for

"to give a little less than the meaning of an author so charged with meaning, so subtle in suggestion, as Tacitus, is less misleading than to give more; and a translator may be forgiven if he fail to squeeze out to the last drop all the meaning of a Tacitean sentence."

He must labor after a "harmonious whole," asking himself constantly, as did M. de la Bléterie, "If Tacitus had lived in my day, how would he have expressed himself?"

With this conception in general we certainly can take no issue, but we might find possibilities for disagreement in certain practical details. These are a part of the fascination of the study of a first-rate translation. For example, must a translation, to be satisfactory and effective, always sound as if it were not a translation? Is such a thing, indeed, actually possible? Could any one make Isaiah sound like John Ruskin? Again, one might describe a certain military movement across the Rhine as a reconnaissance in force, but should we use that phrase, which appears to have no brief parallel in Latin, as the translation of the much longer Latin description of the movement? Furthermore, if the Latin of Tacitus shows in any place a ruggedness or awkwardness, why should the translator feel bound to apply the file? If Tacitus uses words or expressions from poetry that set his style apart from the prevailing style of his day, and give it a certain distinction, why should the translator hesitate to do the same, in so far as our English speech is not distorted by it? Would Tacitus, were he living now, surely talk like Macaulay rather than like Carlyle?

Even within the limits that Mr. Ramsay sets for himself he is not always impeccable. In three places (iii. 14. 6; v. 9. 3; vi. 25. 4) Tacitus speaks of the wonted exposure of the bodies of executed criminals (in one case only the portrait statue) upon the Gemonian Stairs, using in each case the customary phrase *in Gemonias*. In the first instance the translator renders the preposition by "to," in the second by "down," and in the third by "on to." Of these three renderings the third (though doubtless not elegant) is the only one that adequately represents the fact, while the second is actually misleading. Did the translator misunderstand *abiecta?* The Stairs were no Tarpeian Rock. He certainly misunderstood both Juvenal and Roman customs in his note on iii. 14. 6. The passage in Juvenal, 10. 58, means simply that the statues were pulled down by ropes from their pedestals, not that they were dragged *in Gemonias;* nor is it true that this fate was commonly visited upon the statues of the fallen. The case of Piso's statues is the only one we now recall of this sort. In vii. 27. 5 *inlustri fortuna egere* does not mean, as Mr. Ramsay expresses it, "were persons of distinction," but "achieved worldly success." Tacitus should therefore be acquitted of the charge made against him in the translator's note on the passage, that he "regards high birth as to some extent a set-off against bad character." In iv. 34.8 is one of the *sententiæ* of which Mr. Ramsay gives the translation by various of his predecessors (*Spreta exolescunt; si irascare, agnita uidentur*). But his own rendering ("The insult which goes unnoticed dies; to resent it is to accord to it recognition"), though otherwise excellent, does not accurately represent the original; for accusations rather than insults are in question, as *agnita* points to more than "recognition." The rendering might run, "Contempt withers calumny; anger implies confession." In vi. 14. 2 the translator again misunderstood Tacitus, and represents an unintelligible or impossible occurrence. Celsus did not "loosen the chain which bound him, and put his head through the loop." He looped around his neck the chain that attached him to the wall. Nor did he "break his neck"; he merely strangled himself, *ceruicem perfregit*, meaning that and nothing more, as elsewhere in Latin. Again, in iv. 70.2, the muffled noble, dragged to execution, cried indeed, "See how the New Year comes in," but not, as Mr. Ramsay goes on, "behold the victims of Sejanus." The reference is rather a bitter sarcasm on the customary sacrifices on New Year's Day for prosperity during the year to come, especially on behalf of the Emperor—"These are the sacrifices paid Sejanus."

Mr. Ramsay holds that the translator may omit some part of the writer's thought. But he certainly should not do this unless such omission is unavoidable through the exigencies of our English speech. When the mob dragged the statues of Piso to the Gemonian Stairs (iii. 14. 6), it is perhaps necessary to render the imperfect indicative (*diuellebant*) as if it were a pluperfect subjunctive ("they would have broken them in pieces"); but is it necessary so to cut down the vigor of the historian's expression when he uses of marble the word that would properly fit Piso's own flesh ("rend into fragments"), for which the savage crowd found a poor substitute in the senseless stone? Again, in vi. 27. 1, Tacitus says that Julia (Drusus's daughter, Nero's widow) married beneath her station in wedding Rubellius Blandus (*denupsit in domum Rubellii Blandi*). The translator is content to say, "married into the family of Rubellius Blandus," and furthermore passes over entirely the words *Drusi filia.* But both elements of the description are in point, reminding one of "Sidney's sister, Pembroke's mother." In another vigorous passage (iv. 35. 4), the various renderings of which by other translators are discussed by Mr. Ramsay, Tacitus says of the two combatants, *clamore telis equis concurrunt.* Mr. Ramsay thinks it enough to say, "with a shout they pushed their horses to the charge." That is finely said, but is it necessary to omit *telis?* Could not "lance in rest" find a proper place in the English narrative as in the Latin?

We turned with interest to a number of the brief, pregnant phrases of Tacitus, to see whether the translator had been able to make his rendering as lightning-like as the original. In every instance the translation is into smooth and courteous English, quite different in tone from Tacitus, or, we venture to believe, from what Tacitus would write it if he were writing in English. The shuddering vividness, for example, of *laqueum iuxta* is, perhaps unavoidably, quite lost in "before being strangled," and "men fled and left a solitude" lacks much of the picturesque energy in the two lone words *fuga, uastitas.*

We repeat heartily our earnest commendation of the translation as a whole, though we find it more satisfactory in the dignity of its general harmony than in the accuracy of its details or its effective transference of local color. Only collaboration by means of successive revisions by competent scholars and writers of the work of others can result in giving us the best possible translation of any great work of literature. Mr. Ramsay's version, because it lacks so little of superlative excellence, would be the ideal starting point for Tacitus. Why should not a translator, as well as any other interpreter, build professedly on the foundation that others have laid?

New Sayings of Jesus, and Fragment of a Lost Gospel from Oxyrhynchus. By Bernard P. Grenfell, D.Litt., M.A., Lucy Wharton Drexel and Arthur S. Hunt, D.Litt., M.A. Oxford University Press; New York: H. Frowde. Pp. 47.

This booklet contains five new Sayings of Jesus, and the fragment of a lost Gospel discovered in 1903, reprinted with slight alterations from 'Oxyrhynchus Papyri,' Part IV., together with the Sayings discovered in 1897 and published in 'Oxyrhyncus Papyri,' Part 1. The new Sayings contain forty-two incomplete lines, and are written on the back of a survey list of various pieces of land. They are supposed by the editors to belong to the same work as the eight Sayings discovered in 1897. As these latter, however, constituted the eleventh page of a "handsomely written book," it is clear that both are not parts of the same copy. On epigraphical grounds, the editors assign both texts to the middle of the third century A. D. The original work of which they are copies goes back, they suppose, to the end of the first or the beginning of the second century A. D. The newly discovered fragment commences at the very beginning of the work, with the introduction—"The . . . words which Jesus, the living Lord, spake to . . . and Thomas." The first Saying in this fragment was already known from Clement of Alexandria, who quotes it from the Gospel according to the Hebrews. In our text it reads: "Jesus saith: let not him who seeks . . . cease until he finds, and when he finds he shall wonder, and, wondering, he shall reach the kingdom, and, having reached the kingdom, he shall rest."

As in the case of the Logia found in 1897, there is a striking resemblance between these Sayings and passages in the various canonical gospels, the resemblance being sometimes with one gospel, sometimes with another; but there is also an element quite distinct from anything with which we are familiar in those gospels. This foreign element is well illustrated in the second Saying. According to the restoration of the editors, Jesus is asked: "Who are those that draw us into the kingdom if the kingdom is in heaven?" To which He answers: "The fowls of the

heaven, and, of the beasts, whatsoever is under the earth or on the earth, and the fishes of the sea—these are they which draw you, and the kingdom of heaven is within you, and whosoever knoweth himself shall find it."

The editors state that their reconstruction of this Saying is altogether conjectural, because, with the exception of the few words about the kingdom of God within the man, they have been unable to find any parallel passage. In a letter recently printed in the *Athenæum*, Dr. William Hayes Ward points out that there is a parallel which the editors have overlooked in Job xii. 7-9 (which bears, also, a certain resemblance to Ezekiel xxxviii. 20). The preceding Saying, quoted above, deals with the manner of entering into the kingdom. The succeeding Saying, properly understood, deals with the place of the kingdom. Our Saying, between these two, deals partly with the finding, partly with the place of the kingdom. It uses the phraseology and, to some extent, the thought of Job xii. 7-9 and Job xi. 7-9, and from those passages we may perhaps restore it somewhat as follows: "Jesus says: Ask now the cattle (quadrupeds), and they that draw you shall say to you, The Kingdom is in heaven. Ask the fowls of the heaven, and they will say that it is under the earth. Go down into the deep, and the fishes of the sea will tell you it is not there. Verily the kingdom of heaven is within you, and whosoever knoweth himself shall find it." In this, as in other Sayings, the mystic thought of the inner life is expressed with an emphasis which seems only from its continued repetition in excess of the emphasis in our canonical gospels. Unfortunately, all of the Sayings are fragmentary, approximately the first half of each line being preserved, and in the last Saying even less.

The editors conclude that, while akin to the Gospel according to the Hebrews, these Sayings are not extracted from that source, neither are they extracts from either of the apocryphal gospels of St. Thomas, although "a connexion between the earlier gospel of St. Thomas and the Sayings is extremely likely," but that they are part of a collection of sayings "obviously intended to stand as an independent literary work."

The portion of a lost gospel contained in this little book consists of eight fragments of a papyrus in roll form, "comprising parts of the middles of two narrow columns." The handwriting is a small uncial of third-century type. The gospel itself was similar in point of form to the synoptical gospels. In the fragments preserved we have a part of the material grouped by St. Matthew and St. Luke under the Sermon on the Mount, handled with a freedom which is extremely interesting. The editors opine that this gospel was probably composed in Egypt before 150 A. D., and that it "stood in intimate relation to the Gospel according to the Egyptians."

Their conclusions with regard to the origin and the date of these various fragments will not be accepted by all scholars, any more than were their conclusions with regard to the first Sayings. To the present reviewer there seems to be a slight difference in both form and thought between the two fragments of Sayings, suggesting a derivation from kindred rather than identical collections. But such a difference might exist between different parts of the same work, provided the work itself were of a composite character, as such collections are apt to be, different parts being drawn from different sources. It is to be hoped that the further excavation of the ruin mounds of Oxyrhynchus, which are more than a mile in length, and of which only a portion has yet been explored, will result in the discovery of further fragments which may throw light on the disputed points. Biblical scholars will welcome this little book, which brings together in a small compass the material that must otherwise be sought in two large volumes of the publications of the Græco-Roman Branch of the Egypt Exploration Fund.

English and Scottish Popular Ballads. Edited, from the collection of Francis James Child, by Helen Child Sargent and George Lyman Kittredge. Cambridge Edition. Boston: Houghton, Mifflin & Co. 8vo. 1904.

There could be no more acceptable addition to the "Cambridge Poets" than this scholarly condensation of the late Professor Child's monumental work. With the exception of five ballads (Nos. 33, 279, 281, 290, 299, suppressed *pudoris causa?*) every one of Child's 305 is represented, generally by the two best versions. Variant readings, when of importance, are given in notes, and there is a bibliography and glossary. Child's introductions are severely condensed or epitomized, and the book is a veritable vade-mecum for the ballad lover who, through shortness of purse or leisure, may not take his Child straight. The frontispiece portrait of Professor Child is from the original which Kruell's graver has interpreted so feelingly and poetically in the print known to a chosen few.

While this admirable compendium (to which the only rival is Child's early and less accurate compilation originally made for [illegible], "British Poets," and subsequently reprinted) is addressed to the general reader, scholars must reckon with the special introduction in which Professor Kittredge discusses the communal theory. Ballad readers know, or ought to know, that there are two divergent theories of ballad authorship. Herder believed that ballads were a kind of emanation from the people, a theory which Jacob Grimm dogmatized in the aphorism, "Das Volk dichtet." Mr. Courthope, among others, has maintained that a ballad is neither more nor less communal than, say, a metrical romance; we merely have to do with a very humble sort of authorship plus the accidents due to oral transmission. Mr. Kittredge seeks an eirenicon which lacks a little in definiteness. Admitting the difficulty of proving that a consistent narrative poem can be produced by several persons collaborating under a communal instinct (here the verse-capping of the Faroe Islanders and the mocking rhymes of children are made to bear a staggering burden of proof), Professor Kittredge shows conclusively that, however ballads originate, they inevitably become popular. The people may or may not invent them; it invariably gives them their shape and tone, so that the entire *genre* falls out of the literary tradition, is so truly popular and impersonal as fairly to be called communal.

In a sense, the question is academic. Nobody disputes the popular nature of these poems, which transcendentalists love to think come out of some sub-conscious stratum of communal emotion, while rationalists apply rather pragmatically the argument from design, and infer an author from an ordered product. But then it makes a real difference which horn you choose. To Mr. Courthope the author of a ballad is simply an humble Meistersinger. There are bad and good ballad makers—the unknown author of "Sir Patrick Spens" and the average rhymester for the broadsides; some ballads have suffered in transmission, others have gained; all are a sort of cheap literature. To Professor Child and his disciples, on the contrary, a sharp distinction exists between ballads and sham ballads. "Traditional ballads," as Child loved to call them, grow only in rather primitive communities, where ideas are uniform and authorship in the literary sense is unknown. Thus, Professor Kittredge would conclude, the author is merely the mouthpiece of the throng, and, taken genially, Grimm's *Das Volk dichtet* is essential truth.

Hereupon it may be said that rule of thumb bears out the transcendentalists surprisingly well. Practically, in spite of perplexing cases like "The Queen's Maries," it is not difficult to surmise the pedigree of any given ballad. The present writer heard "Lord Lovell" (Child, No. 75) at his mother's knee, and learned "The Mermaid" (Child, No. 289) from his New Jersey schoolmates. These ballads, though of respectable antiquity and seemingly popular provenance, are surely as literary as Thackeray's "Little Billee," also a high favorite with the schoolboys of the late seventies. These same playmates commonly sang a literary parody of "The Twa Corbies," a genuine traditional ballad; and "Captain Kidd," a surprisingly excellent effort of some broadside poetaster. Only recently your reviewer has heard "Greenfield Mountain" crooned by an octogenarian—a broadside ballad which has gained pseudo-traditional standing in central Massachusetts. To pass from this circle to the illiterate mountaineers of Kentucky, who still recite "Chevy Chace," is to make the great step from mere balladry to the real ballad. Autolycus's bag, *pace* Mr. Courthope, has about as little to do with the genuine ballad as Dibdin and Rossetti with the community that produced "Johnie Armstrong."

The Writings of Samuel Adams. Edited by Harry Alonzo Cushing. Vol. I. Putnams. 1904.

This initial volume contains the Adams papers of 1764-1769. They relate to the troubled period of Massachusetts history in which the differences between Assembly and Governor and between colony and ministry were rapidly widening and were already productive of protest and violence. In the fervid representations of Adams and his colleagues, the actions of the Governor become grievous oppression, malignant crimes against freedom; and we almost forget the moderating circumstances that give support to Bernard and Hutchinson in their efforts to maintain authority and fulfil instructions in opposition to a turbulent House of Representatives. Again and again the addresses, memorials, and private let-

ters state the grievances, repel accusations, protest loyalty, and demand redress. Much of the reasoning is based upon the local contest with the King's representative; but it constantly tends to a broader application, and includes the liberty of the subject in all the English colonies in America. The right to dispose of his property, and (not being represented in Parliament) to oppose the taking of his property by taxation without his consent, was a fundamental principle of liberty. The Stamp Act, the duties on imports, the independence of Governor and judges, the commissioners of customs, were only some of the object-lessons for the colonies that the cause of Massachusetts was the cause of all.

Adams gives expression to the common danger and the common remedy, and he is best in the few private letters printed in this volume, for in his town and assembly papers the restraining influence of a committee is seen. His letter to Gadsden in 1766 (p. 108) is a masterpiece of agitation, asserting rights, suggesting dangers, urging watchfulness, glossing hostile acts of Parliament, and describing the awful possibilities should his imagined dangers become real. His pen was always active, and, before the last page is reached, the reader is wearied by a certain sameness of expression and attitude, which later became fixed and inseparable from all Adams did or wrote.

The editor has performed his task with great self-repression. Notes on the measures to which the addresses were a reply would not have been out of place, and some proof that the "Puritan" and "Candidus" articles were really by Adams would be welcome. The two letters on pages 26 and 34 were written to George Whitefield. Convenience would have followed the printing of the draft and the final form of a letter in parallel columns. Was not one of the commissioners named Hutton (not Hulton, as given in the note on p. 316)? The reprint of the "Appeal to the World" is made the more interesting by comparison with the manuscript draft, which seems to establish Adams's authorship; but in a number of other papers the same proof is needed to support the very general and often loose claims of William V. Wells.

The volume is a much-needed reminder of a chapter of colonial history that is in danger of being forgotten, even while some of the features of governing a dependency by agents at a great distance from the source of authority are almost daily present to us. "In all free States," wrote Adams, "the constitution is fixed; it is from thence the legislative derives its authority; therefore, it cannot change the constitution without destroying its own foundation"; and he insists that the constitution holds as well in English America as in England. But Parliament never asserted that the Constitution did not follow the flag.

Economic Inquiries and Studies. By Sir Robert Giffen. 2 vols. London. George Bell & Sons; New York: Macmillan. 1904.

These volumes contain a selection of essays that have appeared at intervals during the last thirty years. Some of the subjects discussed belong now to history; some are of very present interest. Those who appreciate the treatment of questions of fiscal policy according to scientific methods will read, or reread, nearly everything here presented with pleasure. Those who care to understand the controversies now shaking the very foundations of the English system of government will find here the light they need. All will agree that these essays constitute a splendid memorial of the industry and ability displayed by their eminent author in the statistical researches to which he has devoted his life. No such brilliant work, we must reluctantly say, has been done in this country since Mr. Wells's time; and we fear that what is now done in this direction receives scant recognition from the public.

We need not infer, however, that the extensive use of statistical arguments by the English public is a sign of great political intelligence. As Sir Robert Giffen ruefully observed more than twenty years ago—and we believe he has lately repeated the observation—the actual handling of statistics proves how little the study has really advanced, not merely among the multitude, but among the classes who are most carefully and highly cultivated.

"There has been a great hash of figures," he says, "indicating that those who use them have hardly the rudiments of statistical ideas, whether true or false. In journals of the highest standing there are the wildest blunders of the schoolboy order. . . . Our satisfaction therefore at seeing so frequent an appeal to statistics must be considerably qualified by the nature of the appeal. . . . The popular standard for statistics is evidently not yet so strict as it is for other scientific studies. Any man, it seems to be thought, can handle figures, and writers who are otherwise competent are not afraid to touch them, as they would be afraid to touch chemistry, or geometry, or botany, or geology, or almost any science one could name."

It is impossible to read these observations without a feeling akin to despair. They occur in what may be justly called the celebrated paper on "The Use of Import and Export Statistics," read before the Statistical Society in March, 1882. This paper was occasioned by the agitation which then prevailed concerning the balance of trade and the "fair-trade" theory. We believe it may be said that Mr. Giffen exposed every fallacy which has been brought forward on these subjects, and made plain the conditions of English trade in a manner that should have rendered the repetition of these fallacies impossible. Notwithstanding this conspicuous and conclusive refutation we now, after the lapse of twenty years, see all these antiquated fallacies revived and refurbished, and so vigorously championed by Mr. Chamberlain and his followers as to make it not improbable that they will be adopted as the basis of the commercial policy of England. That such a result should be even possible is enough to dishearten all laborers in Sir Robert's field; but, we must add, his ardor seems unabated.

Perhaps this ardor may, after all, be justified by the event. While it is true that every generation must learn wisdom for itself, it is something to have a store of facts so well established as to be easily accessible. In the essay to which we have referred, very careful investigation was made of the extent of what Mr. Giffen called England's "invisible exports." He pointed out that the gross revenue derived from vessels engaged in foreign commerce was certainly as much as £60,000,000, and probably more nearly £80,000,000; an item which is omitted in the ordinary estimates of the balance of trade. It has, of course, been disregarded by those prominent in the present recrudescence of protectionism; but the opponents of reaction have found Mr. Giffen's investigations extremely serviceable, and the absurdity of the alarm expressed at the excess of imports has never before been so thoroughly exposed. Of course, the income derived by Englishmen from their investments in foreign countries appears in the imports of goods. So far as these investments have been sound, they necessarily swell what is called the "adverse" balance of trade. So far as they are worthless, they appear only in the addition which they make originally to the list of exports. To use one of Bastiat's illustrations, a "favorable" balance of trade, according to the protectionists, would result if the vessels bearing imports were all wrecked before reaching port. No quicker way of reducing the excess of imports could be devised.

As Mr. Giffen explained, if we compare the trade returns of all countries, we find that on the whole the value of imports exceeds that of exports by some 10 or 12 per cent., the principal cause of the discrepancy being the cost of transportation. There are, however, as he showed, so many pitfalls in the shape of differences and changes in the systems of valuation, in fluctuations of price, in the effect of wars, and in many other influences, as to make it the height of presumption for any one not an expert to venture to make use of trade figures. He is almost certain to proceed in ignorance of absolutely vital elements. Speaking in a broad way, we may say that a country which imports more than it exports is either absorbing foreign capital or drawing an income from foreign investments. An exporting country may be paying its debts, or investing in other lands. The mere figures tell us little about causes; they must be explained by evidence *aliunde*. England, for instance, exports vast quantities of goods that have been simply consigned there, or that have undergone some process of manufacture. She imports a great deal of cotton, and exports most of it as cotton yarn and cloth. Imports thus make exports, and we cannot have the latter unless we have the former.

In this connection we shall quote a few words from the beginning of a paper written in 1877, as illustrating the timeliness of these essays. Mr. Giffen then observed:

"A phenomenon is being repeated at the present time which is often witnessed in times of depression of trade. The cry is raised that trade is being destroyed by foreign competition. Every bale of goods or ton of ironwork which comes from a foreign country into England 'at a lower price than the same articles could be produced at home,' is made the text of a discourse on the decline of English manufacturing. The multiplication abroad of manufactories of those articles which we produce for export is made the text of similar discourses. 'See,' it is said, 'how some nations which were formerly our customers are manufacturing for themselves, and how other nations are going to the shops of rivals like the United States, France, and Germany, who are gaining on us every day in the race.'"

The folly of these apprehensions was thoroughly exposed by Mr. Giffen; but we need not restate his facts. They are in the main as available now as they were a generation ago, for the outcry against foreign competition proceeds on the same misunderstanding of the situation. Several of

these papers are of interest as showing how statistical science can forecast the future; but in one instance Mr. Giffen was mistaken. He was disposed to predict a continued fall in prices, because he did not anticipate any great increase in the production of gold. His argument, otherwise valid, was vitiated by the unexpected increase of this production. With this exception we observe no instance where Mr. Giffen has ventured on a prediction without being justified by the event. The enormous advantage which lawmakers might obtain from studying these volumes is too obvious to require statement; but our lawmaking has not reached the point where scientific methods are applied or appreciated.

History of the United States Capitol. By Glenn Brown. 2 vols. Washington: Government Printing Office, 1900-1903. Pp. 255. 322 plates.

In view of the recent attempt to set going extensive and ill-considered additions to the Capitol—an attempt which, fortunately enough, resulted in having committed to the hands of architects of great ability the duty of studying the whole problem of an extension of the building—the appearance of the second volume of Mr. Glenn Brown's 'History of the Capitol' is most timely. The first volume concerns itself with the old Capitol and with the work of Thornton, Latrobe, and Bulfinch, the three architects who made it what it was. Chief among these men was Dr. William Thornton, whose scholarly design, submitted after the first competition had proved a flat failure, commended itself to Washington for its "grandeur, simplicity, and convenience," and to Jefferson because he found it "simple, noble, beautiful." It was indeed the quality of simple beauty not devoid of grandeur that gave the Capitol that character which it has retained through all its changes, and from which no future additions should depart. Credit has also been claimed from time to time for both Hallet and Hadfield, early superintendents of construction, for the design of the original buildings, or at least for such great changes in Thornton's design as would force us to accord the success of it to them. Mr. Brown's marshalling of evidence in the form of letters and drawings once and for all disposes of such claims, and proves beyond doubt that the design of the Capitol, up to the time of Latrobe's appointment, was in all essentials Thornton's, and that the many attempts of Hallet and of Hadfield to modify that design were, for the most part, signally defeated.

Congress first occupied the building, or rather one wing of it, in the year 1800, and Mr. Brown has been at great pains to discover the way in which the Senate and House were accommodated in the small area between the rotunda and the present north wing. The Senate, it appears, sat where is now the room of the Supreme Court, but upon the level of the basement floor, the gallery of the Senate Chamber being upon the first-floor level. On the other or western side of the building, and upon the first floor, sat the House in a room which reached through two stories. Diagrams showing the shapes and uses of the several rooms of the then north wing accompany the description, and make clear the otherwise obscure contemporary evidence.

Of Latrobe's important modifications of Thornton's plans, and of his restoration of the interior of the building after its burning by the British in 1814, as well as of Bulfinch's subsequent part in the work, a very complete account is given. Of the old Capitol, Mr. Brown says:

"Thornton, Latrobe, and Bulfinch deserve the distinction of being the architects of the building. Each designed and planned. Of the three, Thornton deserves the greatest praise, as the originator; Latrobe next, doing much original work in detail as well as planning, and general arrangement of the interior. Bulfinch executed Latrobe's drawing and gave a better plan for the central western part of the building. Thornton showed an appreciation of the needs of the American people, and a confidence in the growth of the country which his contemporaries did not appreciate."

The second volume of the work deals chiefly with the extensive additions to the Capitol made after the year 1850, the wings and dome designed by Thomas U. Walter, and the western terraces and improvements to the grounds carried out under Frederick Law Olmsted. By the middle of the nineteenth century, the increase in the membership of Congress incident to the growth of the country, and the increase in the volume of business transacted at the Capitol, had rendered a great enlargement of the building necessary. A futile competition was followed by the appointment of Thomas U. Walter as architect charged with the work. He retained his position for fourteen years, at first making the long series of studies which led up to the design of the north and south wings as eventually constructed—a highly interesting series of plans, which Mr. Brown reproduces in his book. In 1855, Congress determined to erect upon the walls of the low dome of the old Capitol a far higher one—a dome of necessarily greater diameter than the original. To comply with such conditions, it was necessary to resort to a veritable *tour de force.* How brilliantly Walter met and overcame the difficulties of the situation, need not now be related. The apparent inadequacy of the eastern portico of the building to support so vast a mass as the dome which had partly to surmount it, is the justification, from a purely artistic point of view, for the eastern extension of the Capitol now under consideration.

During eight of his fourteen active years Walter was nominally subordinate to a captain of engineers, but whatever may have been the merits of the long controversy between himself and Capt. Meigs as to the control of the work (a controversy with which Mr. Brown deals at length and in a most judicial fashion) the verdict of time is that to Walter and not to Meigs is due the credit of giving to our greatest monument an aspect of the utmost dignity and impressiveness. Of Walter, Mr. Brown says: "He was the man best fitted to make these important additions. His love of refined and classical proportions and details, his good taste and his rare restraint in reproducing the features of the old work and harmonizing the new with it, showed a man of rare capacity." The many beautiful drawings made by Walter's own hand, which are reproduced in the book, prove his personal capacity as a designer and draughtsman to have been of a kind that would put to shame many of the greatest practising architects of the present day.

To the great improvement of the western aspect of the building and of the grounds, which later came about under the direction of Olmsted, a chapter is devoted, while the remainder of the book is given up to a most faithful and exhaustive account of the works of painting and sculpture that are to be found within and about the building; to a detailed list of all appropriations, numerous beyond belief, made for the building; to biographies of the architects, engineers, and superintendents of the fabric, and to a bibliography of the building. This work is by all odds the most comprehensive and authoritative yet published upon the United States Capitol.

The Penobscot Man. By Fannie Hardy Eckstorm. Boston: Houghton, Mifflin & Co. 1904.

Idlers on the coast of Maine—or, for that matter, pilgrims to Alaska—will find a *bonne bouche* better than a mountain trout in this little volume, 'The Penobscot Man.' It is a series of true stories of the feats of lumbermen on the old "West Branch Drive." The mere gormandizer of fiction will read it for the verve and dash and enthusiasm which sweep him through each fytte with the speed of a log-drive down a cataract. But the judicious epicure will taste it slowly and ruminate on it, and then lay it away on a shelf quite apart from the general run of facile outdoor narratives with which the publishers class and compare it. Mrs. Eckstorm says that her "stories are told with little art"; but from this the critic must respectfully dissent. Another person might know the bare facts; she tells them with imagination, with a beautiful poetic insight, with that arrangement and selection which make art.

She gives us a scene and the heart of it; she knows the hearts of her heroes with an intimacy which may be partly drawn from love and old acquaintance, but which has a bit of genius in it, too. Without that, her dialect and her technical terms might be a weariness and vexation. Each of her sketches is a little dithyramb rather than an idyl; and it is curious to observe how she rolls the long Indian names on her tongue with the same instinctive art and enjoyment that belong to the Iliad, or to Clough's 'Bothie of Tober-na-Vuolich.'

She thinks that her tales may be good because they are facts. That is partly true; but no one knows what exact portion of fact there is in the Iliad or the Odyssey, and still the misguided schoolboy pores over them with delight. Mrs. Eckstorm has the epic rush and the charming poetic touch. She was a little girl when a band of Indians came to her father to inquire for the body of their drowned chieftain. "They were tall, and I looked through their legs as between tree-trunks, and the shadow of grief on their dark faces made them like the heavy tops of the pine trees, trees of mournfulness and sighing." That is epic—one might say Ossianic—but it is without affectation and beautifully true. We were lately informed by a young parson who labored among congregations Down East, that the people of Maine are degenerates, and that they have no morals. Mrs. Eckstorm shows us that the Maine man "dies cheerfully; he does not boast of his morals, but

he does not fear death, and he knows how to live for an ideal." That type of man is more needed than the worshipper of the full dinner-pail. It is likely that Mrs. Eckstorm knows the nature of the Penobscot man better than our pessimistic parson.

Spinoza's Political and Ethical Philosophy. By Robert A. Duff. Glasgow: James MacLehose & Sons; New York: The Macmillan Co. 8vo. pp. 516.

Baruch de Spinoza died on the twenty-third of February, 1677; and when he shall have been dead for two centuries and a half, it is safe to say that a higher rank in philosophy will be commonly accorded to him than ever before. The vicissitudes of his fame, and not of his fame only, but of the understanding of his doctrine's prevalent color, have been unparalleled by those of any other modern philosopher, and are more surprising—yes, and more discreditable to readers of metaphysics—than those which the estimation and interpretation of Duns Scotus, Aristotle, Plato, and Epicurus have undergone, since different civilizations must be expected to apprehend such all-permeating conceptions very differently. When Spinoza's principal works appeared, as they first did shortly after his demise, in one collection, the judgment of Leibniz was that they merely traced out a little further some consequences of Cartesianism; but they soon got that brand *"atheistical"* scorched upon them that has not entirely worn off to this day. The original meaning of it was that they displayed that incipient tendency toward regarding the books of the Bible with the eye of historical criticism which had no little popular vogue about 1700; but before long, as in so many instances, the word was retained while the meaning of it was entirely changed, as one can see by turning to Bayle's 'Dictionnaire,' where Spinoza is set down, without misgiving, as a materialistic pantheist. When Malebranche called the doctrine an "épouvantable et ridicule chimère," the phrase reflected a curiously jumbled misapprehension.

About the middle of the century Wolfius honored Spinoza with a refutation, and a definitive judgment seemed to have been reached on all hands that his philosophy merited notice only for its oddity. Then, as the century drew toward its close, the sort of people who gape in admiration of Jakob Boehme, first in Holland and afterward in Germany, took up, as a help or substitute for that, a mystical and sentimental Spinoza fad. Herder caught the infection; and later, Moses Mendelssohn; and still later, Goethe and Schiller. Of course, all these literary folk looked upon the geometrical form of the 'Ethica' with simple awe. So, indeed, or almost so, did all readers of Spinoza until recently, although it is the only thing in his books that is ridiculous, the only thing about the man that is not venerable. The celebrated philosopher Friedrich Heinrich Jacobi made a more serious study of the 'Ethica'; and he and, more particularly, Hegel brought in that conception of its metaphysics which exaggerates the rôle that idealism plays in it; albeit its idealism is, in truth, very remarkable, considering that Berkeley was not born until several years after Spinoza died.

The importance that the Hegelians attributed to the strange thinker led to his works being studied more generally, more carefully, and more impartially than ever before. They were many times republished in the original Dutch and Latin—upon which latter Spinoza so set his own stamp—not to speak of translations following one another like waves on a beach. We would that the 1895 edition of *the* edition of Van Vloten and Land could give place to a third issue which, retaining the commodious form, should correct misprints and should confront each page of the Dutch with an English, or even German, translation. Meantime, commentaries have appeared in such numbers that the mere perusal of the principal of them has become a great task, and their study a specialty. But the principal question is the very reverse of a minute one. In regard to another philosopher, say Kant, we compare the three versions of the deduction of the categories to see how they gibe, we ask whether the refutation of Berkeley accords with the first edition of the 'Critik,' how far the Critic of the Judgment is in harmony with that of Pure Reason, and the like. But in reference to Spinoza, it is the general attitude of his mind that is in question; and the general lesson we derive from the leading discussions is that the commentators have been apt to restrict their studies too much to the one book that is so formal, that they consider Spinoza too exclusively as a metaphysician, and that they have not paid sufficient attention to his extraordinary approaches toward pragmatism. Such had been the conviction of the present reviewer before he took up this volume of Mr. Duff's, who presses the same opinions much further than the reviewer had conceived them to be warranted.

Mr. Duff surveys the works of Spinoza as a whole; and his remarkable acquaintance with them enables him at each point to cite chapter and verse in support of his interpretations. Confining himself strictly to interpretation without criticism, and putting aside Spinoza's metaphysics, so far as it is possible to do so, he forces us to acknowledge what we venture to think will be a novel idea to most of our readers, that Spinoza regarded philosophy from an intensely practical point of view. Mr. Duff makes no reference to pragmatism. For aught there is in his volume, he may never have read a page of James, or Schiller, or any other pragmatist. Of course, he could not say that Spinoza ever enunciated the principle of pragmatism, which is that even the abstractest of our conceptions has absolutely no meaning otherwise than in so far as it has a conceivable bearing upon human conduct. But he brings before us a Spinoza so far on the road to that opinion that we cannot help guessing that if, instead of dying at the age of forty-four years and three months (all but one day), he had lived to the age at which men commonly come to philosophical maturity, he might very likely have conferred upon philosophy the inestimable advantage of a formulation that vindicates so many judgments of common sense and of anthropomorphism. Already, as Mr. Duff points out, Spinoza had thoroughly recognized, as a fundamental truth, that the substance of what one believes does not consist in any mere sensuous representation, but in how one would be disposed to behave. How long, then, could it be before he would come to ask himself, "If that is what belief is, how can a belief relate to anything but behavior?"

Spinoza, according to Mr. Duff's presentation of him, was the last man in the world to care for abstract speculation. He was animated with the desire to do his practical part in making men better. How men were practically to be made better was his problem. In order to solve this problem, it was necessary to begin by analyzing it, and this drove him perforce to metaphysics. His real study, however, was ethics; and he understood by ethics an infinitely more practical science than many writers upon the subject do in the twentieth century.

Of certain faults in Mr. Duff's work we shall say nothing, for, as long as metaphysics is avoided, they are of no consequence. The book is by no means a mere study of the history of philosophy. The author expects his reader to be interested, not solely in the fact that Spinoza thought so and so, but in the substance of his cogitations as well. The reviewer, individually, will frankly confess that, in going through the volume, he has had a difficulty in repressing an occasional movement of impatience at this. On the other hand, this is about the only Spinoza book that is not handicapped by the weight of technicalities. Its style is as comfortable as one's favorite easy-chair can be, and receives every aid that beautiful printing and delicious paper can render. It is the only book we know of that considers Spinoza from the most comprehensive single point of view.

Physical Training For Children by Japanese Methods. By H. Irving Hancock. G. P. Putnam's Sons.

It seems a pity that the author in his third volume should uselessly overwork his main contention concerning the excellence of jū-jutsu, by advertising it as having been "practised for twenty-five hundred years," which antedates just about a thousand years any real Japanese history. The very word jū-jutsu was unknown until introduced, like pretty nearly everything else in Japan that is worth anything, from China, while the samurai class, of whom Mr. Hancock talks so airily as existing in the prehistoric ages, had its origin as late as the ninth or tenth century. Nor is it fair to say, without considering all the circumstances, that the Japanese in the Pekin campaign of 1900 were able "day after day to outmarch our troops by 50 per cent." As a matter of simple fact, the Japanese, already practically acclimatized, most numerous and best equipped with cavalry, horses, and artillery, were given the van. Being ahead of the Russians, who were exceedingly slow marchers, they were able to select always the umbrageous villages and to rest in the shade, utilizing the best and coolest hours of the day to march in. Not being allowed to outstrip the Russians, they had even more rest than they wanted. The Americans, on the contrary, were kept behind the slow-footed Russians, and were compelled to do the heaviest marching in the hottest hours of the day. Had the Japanese been obliged to take the American place, the story would have been very different. As for the early days of the campaign of 1904, the Japanese, despite the difficulties of nature and the weather, were provided with porters and laborers beyond

anything known in our military life. They were moving over ground every foot of which was perfectly familiar, with special facilities for transportation, while every contingency had been foreseen for years.

When the author states that during his stay in Japan he saw hundreds of white men intoxicated, but he did not see one drunken native, we can only say that his experience must have been confined to the seaports, for our long knowledge of life in the cities and interior is of a state of things very different. It is true that the drunken Japanese, except when full of fusel oil, is not usually violent. The author's remarks about saké, which is a generic term, are not scientific. Saké is not a wine at all, but in its most common form a beer, a brewed or fermented drink, though by distillation it can be made into others of its fifty or more forms as strong as brandy. As far back as 1853, the prevalence and cheapness of saké called forth Commodore Perry's surprise and fear: "Japan's curse for centuries has been cheap liquor."

Apart from the author's rambles into history and chemistry, we are very glad to say that he has produced a book of high value, both on account of its sterling matter, the orderliness of its arrangement, and the thoroughly practical nature of his directions. These show that he is a true teacher, and understands well both the object to be attained and the limitations of his pupils. The book is admirably fitted for use in schools and in the home. The abundant illustrations taken from life powerfully reinforce the text, showing that such exercise faithfully followed must make healthy and superbly developed young men and maidens. Obviously, this little work, which reads so easily, has been one of long and arduous preparation. Apparently, no essential of bodily training has been omitted. Incidentally the author preaches a powerful temperance sermon in showing the uselessness of alcohol and the manifold benefits of pure water. The charm and beauty of the gentle art is that it avoids overtraining and intemperance in all things, and that it keeps its subject supple and elastic even into old age. Its *bête noire* is over-exertion. None of its pupils ever get muscle-bound. Like the best things which are truly Japanese, it has a horror of the too much.

Administrative Organization and Matters in France and Abroad.
Algerian and Colonial Legislation—Mussulmanic Law.
Legislation of Railways.
Political Economy—Social Economy—Labor Legislation.
Public Health and Important Public Works.
French and Foreign Finances.
Money, Credit, and Exchange—Banking.
Commercial Policy of the Great Powers.

GENERAL INFORMATION

The instruction given at the School of Political Sciences is the natural crowning accomplishment of every liberal education. In each of its several branches the pupil acquires the requisite competency for holding high State Offices (Diplomacy, Council of State, Court of Accounts, Inspection of Finances Inspection of Colonies), in getting thoroughly prepared for the examinations and competitions which, they call for, and is also trained for leading posts in all great private enterprises.

The pupils are admitted without examination, with the approbation of the Director and School Board; no university degrees are necessary.

Tuition comprises 2 years' course, which may be extended to 3 years. On completing his studies, every pupil who has successfully passed his examination receives his diploma.

SCHOLAR YEAR, 1904-1905.—The Scholar Year commences on 7th November, 1904, and closes on 5th June, 1905. Applications are received at the Secretary's Office from 2d November, 1904. Application for the whole Course gives right to all the regular and complementary Courses and Conferences, and also access to the Library (about 25,000 Volumes and 160 French and Foreign Reviews and Newspapers). Per annum, $60.

A Special Pamphlet giving detailed information on the organization of the School and respecting the Professions for which the Pupil receives special training can be had by addressing to

Assistant Recorder of Harvard College.

The Nation.

NEW YORK, THURSDAY, JULY 28, 1904.

The Week.

Nothing in Mr. Cleveland's summons to his party to rally about Parker will give more offence to certain Republicans than his intimation that an overruling Providence is preparing the way for Democratic success. Yet Mr. Cleveland is the son of a Calvinist clergyman accustomed to deciphering the divine decrees, and he expresses "reverent belief" that a "leading wiser and more certain than the wit of man could have devised" brought about the nomination of Judge Parker. This, in Republican eyes, is pretty near sacrilege as well as high treason. It is not that there is objection to a political party annexing Providence, but that party must be Republican. For the Democrats to claim any share in the favor of Heaven is an impudent poaching upon Republican preserves. The little girl in *Punch* who overheard her governess actually saying her prayers in French—as if God could understand that language—was no more astonished and horrified than Republicans will be at seeing the weakest Democratic saint upon his knees.

Carl Schurz's letter to Judge Parker will give little comfort to the Republicans. He not only refuses to believe that the Democratic nominee was guilty of a scurvy trick in sending that telegram to the St. Louis Convention, but finds him quite as worthy of praise as does Mr. Cleveland. That Mr. Schurz's opinion carries great weight with the independent and German-American voters it is unnecessary to state, and we shall doubtless soon have proof of the importance of his utterance in the form of attacks upon him by the Republican press. The leading German newspapers, by the way, which left the party because of Bryanism, are now as eager on behalf of Parker as Mr. Schurz himself. Equally interesting is the fact that many Republicans are declaring their readiness to vote for the Judge. This is not merely proved by the letters he is receiving, but in other ways, and this Republican defection will more than offset the decision of some Gold Democrats, like Mr. Oscar Straus, to follow Mr. Roosevelt. It is the steadily growing belief that the President is temperamentally an unsafe man which is winning these recruits for the Democrats. All the oratory of a Hay and a Root, all their arguments that the Republican party is the only one with capacity to govern, cannot make head against this as long as their candidate is what he is.

That Senator Gorman will not be Chairman of the Democratic National Committee is an auspicious omen. The deep-seated distrust which this boss has inspired among honest Democrats and independent voters is well known. He is to be credited with all of the wisdom which belongs to "that crafty and insidious animal called a politician," but he lacks the fundamental requisites of a general who can inspire his cohorts with confidence. The cunning of the serpent often fails where clear-eyed, transparent directness and honesty of purpose will succeed. Moreover, the fact that Senator Gorman, out of pure personal pique, was ready to close the Democratic Headquarters in one of the Cleveland campaigns on the very eve of election, raises the gravest doubts of his capacity as a leader. It needs to be reiterated that, without the aid of the independent vote, the Democratic candidate for President cannot be elected. That vote is just as necessary to Democratic success now as ever. Mr. Gorman's selection as Chairman would have fallen like a wet blanket upon that element. It was far more important that Senator Gorman or a man of his type should not be put in command, than that any other particular aspirant for the position, like Mr. Taggart, should be chosen.

The post-convention utterances of Mr. Bryan have not raised a ripple. The public attitude towards him has been the extreme of indifference. Even last Thursday's deliverance has interest only as an individual instance of pathological psychology. While leader of his party, Mr. Bryan did not, so he tells us, feel at liberty to "engraft new doctrines upon the party creed"; but now that he is only a member in the ranks, he may undertake the organization of the radical and progressive element in the Democratic party! We have all along harbored the delusion that it was this radical element which had foisted Bryanism on the party in the last two campaigns. A momentary gleam of sanity is to be detected in the averment that "the people cannot be brought at this time to consider the various phases of the money question," but the new issues which Mr. Bryan intends to bring forward leave little hope of his recovering his political health. After two weeks' study of the railroad question, the *Commoner* declares for public ownership, not by the Federal Government, but by the States. This plan will avoid the dangers of centralization. But all who appreciate the magnitude of interstate railway traffic will pronounce such a scheme the wildest lunacy. The Post-Office, on the other hand, according to Mr. Bryan, is to absorb the telegraph system. How this can be done without giving an impetus to centralization we are not told. Municipal ownership of municipal franchises, for which Mr. Bryan also contends, he fails to define. In fact, his utterances, except for their indication of malevolent spite against the present Democratic standard-bearer, have nothing to do with present politics.

The *Herald's* outspoken repudiation of Mr. Roosevelt is another and a striking proof of the dissatisfaction of the metropolitan press with the President. After three years' experience with him, the *Herald*, *Sun*, *Times*, *Staats-Zeitung*, *World*, *Brooklyn Eagle*, and *Evening Post* have been compelled to oppose his reëlection, though they all supported McKinley. It is unusual for the *Herald* to take up its position so early in the campaign, but there is nothing uncertain about its note. Despite the mud-throwing of the Republican organs, it finds that Judge Parker's telegram "has won the confidence of the people, and that sort of confidence Mr. Roosevelt has not inspired." Acknowledging the latter to be irreproachable personally, the *Herald* declares that conservative people "doubt his capacity for self-control, distrust his judgment, and question his conception of Presidential duties," which leads him to think himself "a sort of dictator." This change of feeling among the newspapers of this city shows very clearly that it is the Republican party upon which now rests the burden of proof that it is sufficiently sane and safe to be entrusted with the conduct of the government.

In pleasant contrast to the solemn and perfunctory assurance which Mr. Roosevelt gave the Pennsylvania miners' delegation that their petition would be referred to the Department of Labor and Commerce, is the action of Capt. Sewell in the strike upon the Army Engineer School at the Washington Barracks. Over the recent labor difficulties in Colorado the Federal Executive has no direct jurisdiction. It would have been more frank if the President had flatly said so to the delegates. But in the Washington strike, as in the preceding difficulty in the Government Printing Bureau, the President has everything to do. We commended at the time the position which Mr. Roosevelt then took, that the regulations of labor unions are subordinate to the Constitution of the United States. Consistency will require that in the present strike the President stand by Capt. Sewell. It appears that when it was found advisable to increase the force of bricklayers upon the bar-

racks, the first name furnished by the Civil Service Commission was that of a non-union negro. The twenty-eight union bricklayers quitted work, and informed Capt. Sewell that the rules of their union would not permit them to work with non-union men. To this the doughty Captain made a very proper, if a bit ironical, reply, that in that case they had better change their rules, as "it would be far easier to amend their regulations than to change the Constitution of the United States." The Federal anti-Trust statute, no less than the Constitutional equality of all men before the law, is just as much opposed to a job-trust as to a coal combine. It matters little that the "glad hand" be given by a Presidential candidate to union labor delegates if the door of Federal employment be kept open to all, irrespective of race, color, or union membership.

Secretary Metcalf's Department should be unionized at once. Its chief function of late has been to placate disgruntled agitators. This it can never do to perfection until its official head and the entire staff are made union members in good and regular standing. How long does the country suppose that the opponents of the open shop are going to remain satisfied with an executive department which serves simply as a pigeonhole for complaints made by those who want a monopoly of jobs? When the President's "old comrade," Mr. Hertzkovits, presented the miners' petition in behalf of their Colorado brethren, the petition was promptly turned over to this new Federal Circumlocution Office. The Central Federation of Labor telegraphed Secretary Metcalf to prevent the departure of the *St. Louis*, and the lethargic response was accountable for the liner's escape to a port where her repairs can be made more cheaply. The various unions of musicians are protesting against the importation of competitors who will make sweet melody at a lower wage than seven dollars per diem. Secretary Metcalf has responded by ordering the immigration officials to question all musicians arriving at our ports whether they come under "contract for the purpose of taking the places of American musicians." If so, they are to be deported, unless the courts step in and declare that musicians are "artists," and therefore not subject to the contract-labor clause. It is humiliating to see a Cabinet officer charged with mapping out the policy of a new executive bureau forced into the rôle of an humble adjunct to a political machine. He is standing up manfully to the job, however, and shows all the attributes of a well-trained butler who can be kicked from behind without moving a facial muscle.

The Fall River cotton mill operatives have discarded the notion that half a loaf is better than no bread. Within the last twelve months their lot has changed from bad to worse wtih remarkable rapidity. First, their wages were cut 10 per cent.; next, the running time of the mills was heavily curtailed; and recently they were told that on July 25 their pay would be reduced 12½ per cent. more. The fear that the operatives would be driven to extreme measures was justified when the five unions in Fall River, by a vote of about four to one, decided to strike on Monday, July 25. At least 30,000 hands will be affected. The idea of the manufacturers was to reduce wages from a basis of 19.8 cents per cut of cloth to 17.32 cents. In 1898, when the industry was at a very low point, the price for weaving was 16 cents. It seems, therefore, that the operatives are rapidly getting back to the conditions which prevailed when, according to the Chicago platform, the Republican party "found the country, after four years of Democratic rule, in evil plight, oppressed with misfortune, and doubtful of the future."

As for the mill-owners, their attitude has changed of late. Some time ago they freely announced that it was better for them to keep on running their plants, despite the extraordinary handicap of Sully prices and the refusal of the public to buy goods at their figures, than to close down and allow their help to be scattered. What has changed their minds? Possibly, for one thing, the fact that they have gone as far in accumulating goods as they dare. The stocks on hand in Fall River are estimated at 1,500,000 pieces, which, at the rate at which orders have been received in recent weeks, will enable the mills to ship goods for some time to come if they do not make a yard of cloth. But probably the real motive is this: Earlier in the year they were in doubt about the future price of cotton. Quotations were then high, and the public would not buy the goods; but if, on account of a continued shortage, the raw material should remain at exceptional figures, it might be safe to manufacture to stock—the masses might have to pay the bill in the end. But with spot cotton quoted to-day at about 11 cents, as against the materially lower figures now predicted for the new crop, a prudent mill-owner would hardly feel like piling up goods made from raw material at current prices, unless he could economize sharply in other directions. But how is the strike going to affect the political situation in Massachusetts? Canada is buying American cotton goods at the rate of $2,300,000 a year. Under reciprocity she would probably take very much more. Perhaps the strikers will call Lodge's attention to this.

A fluttered protectionist contemporary, after kindly explaining that the present shortage in beef could not have been mitigated by allowing the free ingress of meats from Canada and Australia, asks pertinently, "Why should people be discouraged by the prospect of a meat famine? There are good things to eat besides beef and pork. Moreover, it should be borne in mind that plain living promotes high thinking, and we can never have too much of self-restraint . . . in this country." This is positively delicious. But why was not the same tone adopted during the anthracite coal strike, when the Dingley tariff prevented the import of foreign coal? Why should people have been discouraged by the coal famine? There were good things to burn besides coal. Moreover, it should have been borne in mind that sitting on a red-hot stove is not conducive to the self-restraint of which we can never have too much in this country. The protectionists have been boasting for years that the American workman, thanks to the tariff, is the only laborer on earth who can eat meat three times a day. Are they now going to change the slogan from "the full dinner-pail" to "the stuffed vegetable basket"? In their sudden conversion to vegetarianism, the "stand-patters" should not forget to recommend "cereal sausages," which "look just like other sausages until you eat them." Then there is sawdust, which, we know,

> ". . . is cheap by the ton
> And it nourishes one,
> And that's the main object of food."

As the talk of Mr. Root for Governor is revived, the knives of the Odell machine flash out again. The Chairman-Governor is filled with painful forebodings about the effect of "Federal interference" in the affairs of this State. Everything would be lovely if only the President would keep his hands off, but the noble Republicans of New York simply will not endure dictation—that is, from anybody except Odell. Some of his followers are more outspokenly ugly. "If Roosevelt insists upon nominating a Governor, let him do the electing," they say. All which simply shows that the Republican machine dreads a nominee who would not only stand well with the people and have a chance of carrying the State, but would be his own master in the Governor's chair. Hence the implacable hostility of Odell to Mr. Root, and his demand for a candidate who may or may not run well—that is a secondary consideration—but whose heart in either victory or defeat will be true to the machine.

It is some time since Secretary Taft last told Americans that they must not talk about Philippine independence, since that kind of thing could only provoke revolutionary outbreaks in the isl-

ands. He assured us, too, that his view was shared by the most intelligent and patriotic Filipinos, notably those of the Federal party, of which *La Democracia* is the organ. But in the issue of that journal for May 31 we find a statement of wholly opposite tenor. Discussing the capture of the *insurrecto* Ricarte, it said that his failure was a complete proof that the country did not sympathize with agitators like him. Then it added significantly: "Therefore, there is no good reason for objecting that a statement of what our final political destiny is to be would lead to revolution. It is a live question [*de verdadera actualidad*], this demand upon the parties that they take a more decided stand, made by the Independence League, composed of a great many distinguished citizens of the United States." Thus Secretary Taft will perceive that the incendiary news about Americans desiring independence for other people as well as for themselves has reached the Philippines without at once setting everything ablaze.

There are, according to the "Official Roster" of January 1, 1904, more than 2,200 Americans holding office under the Philippine Government, exclusive of teachers. That is a very respectable number. And the offices held are the fattest there are in the archipelago. With very few exceptions, mostly in the judiciary, all the high salaries are drawn by Americans. Open the Roster at random, and we find that all the $7,000 or $5,000 or $2,250, or $1,800 or $1,400 jobs are in the hands of "gentlemen from Indiana" or other favored States, while it is not till you get down to the $800 or $580 or $216 class that you begin to encounter native names. No candid American, going through this official register, could deny that it presented strong *prima-facie* evidence that the offices in the Philippines had been exploited for the benefit of Americans. If such a tell-tale roster had been produced before 1898, we should all have pointed to it as proof of the shamelessness of the Spaniards in squeezing the juice out of the Filipino orange. We have had the curiosity to analyze a few sections of the Official Roster. Take the Executive Department. Here we find 175 American office-holders and 111 natives. The average salary drawn by the Americans is a little more than $1,800. Their stipends range from $20,500 down to $900. For the Filipino incumbents the average pay is $584. In other branches of the Government the comparison would bear still harder upon the natives, since three of them draw $5,000 each as members of the Philippine Commission, thus raising the average considerably. The American Commissioners, we note, are paid from $15,000 to $20,500, and their private secretaries $2,400, as against $1,400 for the native secretaries. This discrimination against natives doing practically the same work as Americans runs through the whole system. You cannot pick up a current report of appointments without encountering it.

Two widely divergent views upon racial questions were promulgated on Thursday, one by Mr. Justice Brewer of the Supreme Court, in an address at Milwaukee, and the other by the Hon. Joseph Chamberlain, in the British House of Commons. Justice Brewer declared that the time would come when this country would be as heartily ashamed of the Chinese Exclusion acts as Massachusetts now is of the witchcraft persecution. It is America's duty, he contended, to merge into one great composite photograph all the nations and races of the earth. In contrast to this catholic attitude of our republican jurist was the chauvinistic utterance of the apostle of Empire. While advocating the policy of importing gangs of coolies into the Transvaal, he based his defence upon the allegation that "white laborers would not work with black laborers on equal terms." As a matter of fact, this is notoriously untrue. In New Orleans, for instance, there are hundreds of instances of just this very thing—of whites and blacks working together at the same job and at the same wage. Mr. Chamberlain, after commending the supposed attitude of the white laborer to the negro, added: "As the dominant race, if we admitted equality with inferior races, we should lose the power which gave us our dominance."

That the Vladivostok squadron is commanded by an officer of dash and daring has been evident since its first successful raid. Now that his ships have actually appeared off the bay which leads to Tokio and Yokohama, his movements begin to recall John Paul Jones's famous raid upon the English coast. In the nature of things, the Russian admiral, be he Skrydloff or some one else, is likely to achieve similar results. Jones fairly threw London into a panic, and sent marine-insurance rates up to almost unheard-of figures. The mere presence of the Vladivostok squadron must, by alarming neutral carriers, do an immense amount of harm, of which the sinking of the *Knight Commander* and the capture of other vessels will be small items. Since the Russians have doubled on their tracks, and are standing towards the Tsugaru Straits, through which they came, it is evident that it is purely a raid upon merchant vessels with which we have to deal, and that for the present, at least, there is no thought of any attempt to join the Port Arthur fleet. Like Jones, the Russians realize that their safety lies in mobility. The total failure of their adversaries to "contain" them at Vladivostok must make them feel something of the contempt for the Japanese as tacticians which our naval captains had for their English rivals in 1812. This naval failure of the Japanese certainly calls for an explanation.

After a very stubborn resistance the Russians have been beaten back from Ta-Che-Kiao, having previously evacuated Niu-Chwang, which has for a long time awaited this contingency. The taking of Ta-Che-Kiao is of the highest strategic importance. It cuts the railroad to Niu-Chwang, and at one blow deprives the Russian army of all supplies by rail from western Mantchuria and China. By this time the Japanese, whose transports have for several days lain off Yin-kow, are probably in possession of that port, without any serious call upon the forces which are driving the Russian right back upon Kuropatkin at Liao-yang. Only the existence of the much-battered Port Arthur squadron clouds this brilliant conclusion of the Mantchurian campaign. From now on, it seems merely a question how far the Japanese can safely press their advantage. The rainy season, which may have embarrassed the Russians on the river plain, has obviously done little to impede the movements of the Japanese in the mountains. Now the situation changes; to clinch their advantage they must apparently fight Kuropatkin on level ground of his own choosing.

If Merry del Val has put his resignation at the Pope's disposal, as is credibly reported, the crisis between the Vatican and the French Government must be regarded as acute. The withdrawal of the Papal Secretary would mean that the way was to be cleared for a policy of conciliation such as Rampolla consistently followed. In fact, the present issue might easily be evaded by postponing to the Greek Kalends the cases of the French bishops who are technically insubordinate. If, on the contrary, Pius X. refuses to accept Merry del Val's resignation, it will show that the Pope, declining a convenient scapegoat, accepts the full responsibility for the recent policy towards France. A certain nobility in this uncompromising attitude does not alter the fact that other successors of Peter have known that it was anachronistic. In striking contrast with the increasing tension between the Pope and the President are the constantly better relations between the Vatican and the Quirinal. This suggests that only a punctilio, the nominal suzerainty of Rome, separates the Church and the new régime in Italy, while in France the quarrel is about vital matters—the rights of instruction, State support, and the internal discipline of the hierarchy.

THE MORAL OF FOLK.

Mr. Folk's nomination for Governor of Missouri is an event of national significance. Effected as it was upon the ruins of two political machines in alliance to defeat him; conferred by an aroused people in defiance of the politicians; bestowed upon a young man unknown except for the fearless vigor with which he had uncovered gigantic corruption and prosecuted the guilty, no matter what their social standing or political influence, it is a political occurrence far overleaping the boundaries of Missouri. What it means for the country at large was perceived by President Roosevelt when, with a fine impulse which did him honor, he urged his own party to endorse Mr. Folk and so make his election unanimous. The colder-blooded Republican managers overruled the President, as in so many other particulars; but he could see, if they could not, what was implied in the delight of the people in honoring a man like Joseph Folk.

It shows how surely true public service is appreciated, and how eager are Americans to reward it. As an example of the way in which political advancement may be won in this country, Mr. Folk's career is inspiring. Compare his extraordinary fame and rapid promotion with the fate of the time-servers and the trucklers. They spin plots and humiliate themselves and do dirty work in order to secure the slow and uncertain favor of the machine, while Mr. Folk passes over their heads simply by becoming the embodiment of stern justice in pursuit of political scoundrels. It is a wonderful appeal to young men entering upon public life. Let them look on Folk and on, for example, Timothy Woodruff, and decide which one knows the true way to the heart of the American people, as also to political honors.

Mr. Folk's success makes the professional politicians look silly. He violates every one of their maxims of political wisdom, yet triumphs in a way their wildest dreams never pictured as possible. It is Emerson's man of "native force" rising superior to old and mouldy conventionalities. Courage, directness, frankness, simple devotion to public duty—these are again shown by Mr. Folk to be the qualities which sway the world. Even in the moment of his acclaim by the State convention, he spurned the ordinary political humbug of such occasions. He had no wishy-washy words about letting by-gones be by-gones, and no enemies to punish, and all turning in to win a great victory for the party. No, the disreputable element he had fought he announced that he meant to pursue "with unrelenting warfare to the end." Between him and them it must be no favors asked and no quarter given. He was proud of their hatred, and proposed to deserve it more richly in the future. Evidently, the honest farmers of Missouri who controlled the Convention for Mr. Folk had not mistaken their man. Hack politicians and the machine newspapers thought them a "funny lot," so innocent of political wiles were they; but they at least knew enough to admire a brave man and efficient public servant, and to stick to him through thick and thin.

The uncompromising and successful war which Mr. Folk has waged upon the most insidious and dangerous form of American political corruption, and the national prominence which has come to him in consequence, are omens full of good cheer. They show that the people are not ready to submit in servile fashion to the reign of the briber and the blackmailer; that the methods of rich corruptionists do awaken shame and indignation; that citizens are everywhere looking anxiously for the man who will see that justice is done though the bosses fall. What Mr. Folk has accomplished in St. Louis, others will be stirred to attempt in other cities. Reform is as infectious as corruption. Everywhere the people are ready to applaud and follow men who will lead in the work of purifying the public service. Americans are invincible optimists: for every evil they are confident that the remedy will be found. And the rise from time to time of men like Mr. Folk—men who would break the old patterns and pluck by the beard criminals long dwelling in fancied security—goes far, it must be admitted, to justify this springing of eternal hope.

Such a career as that of Mr. Folk illustrates the possibilities, and also the perils, of a new type of public man which we seem now to be producing. He has, first of all, to make the impression of being personally honest. That is the prime essential. Another one, as alleged by a cynical friend of ours, is to possess the art of being a "good advertiser." *That* Mr. Folk is not. Thereby he avoids a danger. To do a good piece of work without feeling compelled to go about bragging of it is safer as well as more dignified and reassuring than forever to be rushing where the fierce limelight beats. But the final test is persistence and consistency: never submitting or yielding; hating a compromise with sin as much as sin itself; following up promise with performance—in a word, "making good." In this Mr. Folk has an undeniable advantage over, let us say, both Mr. Jerome and Mr. Roosevelt. As to them, we still have to say, as Garibaldi did of Napoleon III., when the latter seemed at the height of his power, "We must wait and see."

THE STRIKERS' OBJECTIVE.

Amid the exasperation and even alarm caused by the renewal of the strike in the packing industry, it is necessary to keep one's head clear in order to perceive exactly what it is the strikers are doing and aiming at. We see at once that they are imitating the most offensive methods of the Trusts which they denounce. President Donnelly's haughty demand upon the allied trades, "I insist upon a general strike at once, with the negotiations to come afterwards," could not better hit off the arrogant tone of the presiding officer at a corporation meeting, "Vote first and discuss afterwards." To copy the worst features of industrial or financial monopolies seems, in fact, to be the present cue of the labor unions. But their animus and secret purposes may best be gathered from their most pronounced enmities. Show me what you most hate, and I will tell you what you are.

Now, it is not the consuming public that the strikers desire to hurt. Doubtless they count upon the general inconvenience, caused by the strike, to force a settlement. But their anger is not directed that way, nor even mainly against their employers. Their chief enemy they consider the free workingman. Him they pursue with savage ferocity. The existence of a body of non-union men ready to work is to them the intolerable thing. By denunciation, by outlawry, by clubbing and burning and shooting, they seek to terrorize men who refuse to be their fellow-slaves in the union, and to perfect their own monopoly. In other words, the anti-monopoly laboring man is marked out for the especial vengeance of the labor unions.

Nor can it be said that the difficulty would be solved if all hands would join the unions. The unions do not want all hands. They wish to remain a small favored class. The theory of unionism, like the theory of protection, breaks down the moment it is universally applied. Both systems propose to give a greedy few an advantage over the many. As protectionists rage against importers, so labor unions do against free workingmen. In both cases a monopoly is furious with those who threaten it. Labor unions represent certainly less than 20 per cent. of American workingmen. Yet they assume to speak for all, and are ready to hunt to death the 80 per cent. on the outside, whenever in any way it competes with them.

Next to the independent workmen, the strikers hate the State authorities who protect him in his rights. The "right to work" (the old *droit du travail* converted into the new-style *droit au travail*) is vested only in a labor union; and so the "strike-breaker," with the policeman or militiaman who prevents him from being murdered, becomes at once a deadly enemy. There can be no mistaking the significance of this animosity. In it the labor union stands revealed not only as the foe of public order, but of the sovereignty of

the State itself. We see in the raging of unionism whenever the police or the military power is invoked against its violent methods, the confession that it means eventually to usurp the functions of government. To crush out free labor; to frighten or fetter the State—those are the two objectives of labor leaders of the militant type.

Just at present they are no doubt counting upon political aid. This is Presidential year, and Republican politicians are nervous. They recall the unsettled strike at Homestead in 1892, and what followed in the election. On the other hand, the strikers remember the coal strike of 1900, in which the men won, owing to Senator Hanna, and, above all, the anthracite strike of 1902, with President Roosevelt's intervention. Can he not now, as a candidate, be worried into doing something to end the meat strike?

We think he will let it severely alone. Whatever may be thought of his action in the coal strike two years ago, the situation to-day is very different. Then we were confronted with an impending failure of a necessary of life. That is not the case at present. There are plenty of temporary substitutes for meat. The more important difference, however, lies in the fact that now the employers are ready to carry on their business and supply the country if only protected from violence. The mine-owners did not take that position in the early months of the strike in 1902. No attempt was made to work the mines. The strikers asserted, with some show of plausibility, that the employers could not secure men to dig the coal. But the employing packers would evidently have no difficulty in replacing the strikers. The trade is easy to learn. Men in plenty are out of a job, and come forward. It is plainly a case, therefore, if the strikers persist, where the State should demonstrate that it, and not the union, is the sovereign power. If Mr. Roosevelt feels called upon to say anything at all to the appealing or threatening strikers, it should be only a reaffirmation of the language which he used in praise of President Cleveland's resolute dealing with another Chicago strike—that of 1894—"The reckless labor agitator who arouses the mob to riot and bloodshed is, in the last analysis, the most dangerous of the workingman's enemies. This man is a real peril; so is his sympathizer, the legislator, who, to catch votes, denounces the judiciary and the military because they put down mobs."

PROPHETS OF PROGRESSIVE DEMOCRACY.

Within the last decade there has arisen among us what may fairly be termed a new school of social philosophy. The impulses which gave it birth are, negatively, skepticism regarding the colorless scientific study of social science, and, positively, an unreasoned feeling that if sympathy with the masses is only present, active work in their behalf will remove the doubts which settle on the old-fashioned student of politics and society. This new attitude may not unfairly be said to characterize those interested in such excellent organizations as the People's Institute of this city and similar bodies. It finds utterance in Mr. John Graham Brooks's 'Social Unrest,' and in many of the writings of the Rev. Lyman Abbott. It has numerous traits that are wholly admirable, but we believe it has the defects also of its quality.

What seems to some to be one of the most striking errors of this new school is the assurance with which, despite occasional protestations of fallibility, they diagnose the thoughts, the feelings, and the aspirations of "the masses." Their brows are warmed in the atmosphere of the People's Lyceum, and they sometimes mistake the artificial heat of the forum for the normal temperature of the popular pulse. They never hear nature mockingly whisper, "So hot, little man," when they reach the sidewalk, but carry the fervor of the crowd from the turmoil of the street to the quiet of the study.

A recent outline of the ideals of Progressive Democracy is given by the Managing Director of the People's Institute in this city. The programme deserves the careful consideration of all students of public opinion, for it is based upon a painstaking study of the audiences which for years at Cooper Union have heard almost every public issue discussed upon a platform of unquestioned ability and independence. We are told, first, that the masses of the people to-day are socialistic in tendency, though not as a body Socialists; that they favor State and municipal socialism; that even as regards such necessaries as milk, grain, and meat their mind is made up that the production of these commodities should no longer be submitted to the caprice of private individuals and the risks and evils of private monopoly. The masses also, so we are told, demand the repeal of unfair tax laws, and an elision of the enormities of the tariff, though apparently this mandate is less imperative than the establishment of State socialism. In the matter of political method the initiative, the referendum, and the direct primary are the approved methods of bringing in the social millennium; while such features as old-age pensions, compulsory arbitration, and ultimate international peace and disarmament are thrown in to make a good baker's dozen of social ideals.

The appeal which this earnest body of social workers makes to the independent well-wisher of American Democracy, untrammelled by the partisan harness, is unquestionably earnest, and not lightly to be set aside. But it is not unjust to these social reformers to insist at least upon a fair hearing for the old-fashioned programme of social betterment, which, if it cannot claim the suffrages of the Lyceum, is yet, in the opinion of some of its upholders, based upon even solider foundations.

In the first place, the adherents of the older view insist that the generalizations of the new school are, to say the least, premature. The audience at the People's Institute, even though it reach the thousands, is, we are expressly told, "rather constant than variable." Both its constancy and its intelligent interest in the public weal go to show that its opinions are likely to be very different from those of the masses. The study of family budgets, for example, has always notoriously suffered from the fact that the family which keeps a rigid and itemized account of its expenditures is shown by that very fact to be a wholly exceptional family. And a similar generalization may be ventured about the verdicts of the People's Institute. The masses are very hard to discover *en masse*. They consist of thousands of plain people at home, thousands on the street or in places of amusement—sometimes of dissipation. There is no vote so illusive as the "straw vote." And no amount of social sympathy can buttress a proposition built on so flimsy a foundation as this programme of "what the people want."

Moreover, the old-fashioned well-wisher of his kind must insist that as yet social solidarity, however construed, is by comparison with self-interest what a weakling is to an athlete; and that, until social tissue is regenerated, this fact must be reckoned with—even though it involve the rejection of the glittering promises of various kinds of socialism. If experience has not demonstrated that, when possible, it is best to limit the powers of Government rather than enlarge them, the lesson of history must be relearned. Our friends, the social workers and reformers, in their zeal for social salvation and their indifference to individual human nature, seem to forget that there is an alternative ideal to theirs, and one which is still the lodestar of many a patriot. It is the full amplification of individual liberty, where the humblest citizen may sit "under his own vine and fig-tree," with no tax to pay to the tariff baron, with no graft to render to the politician, with no obeisance to make to the labor union, and with no enforced deference to his fellows who find their pleasure in mapping out the way to Utopia.

THE BEET IN TROUBLE AGAIN.

After long vexing this country, the sugar beet has begun to stir up strife in the Philippines. In those gems and glories of the tropic seas, a circular is-

sued by the American Beet Sugar Association of the United States is making a great sensation. It expresses the usual solicitude for the American laborer. The argument is the same as that employed by the speakers at a recent meeting of the Association, a full account of which is found in the American papers printed at Manila. The keynote of the discussion was struck by a leading "professional" protectionist, who said that this country consumes about 2,400,000 tons of sugar, and that "American citizens should produce 100 per cent. of that output." He did not believe in the policy that has flooded the docks and warehouses of New York with the product of Cuba. Furthermore, he considered Secretary Taft a very dangerous man. "I sincerely hope," he said, "that this Association will not agree to any concession" on Philippine sugar; for in the extension of that industry he saw "the destruction, the absolute destruction," of American beet-sugar growers.

Then followed a speech by the Secretary of the Association, which not only contained some astonishing facts about the cost of labor in the Philippines, but also showed that there is no love lost among "stand-patters." The extension of our coastwise laws to the Philippines means a general advance in freight rates. This, of course, will be a cause of rejoicing to the ship-owners. But the people of the islands will not be able to export their sugar at higher cost of transportation, unless they are granted lower duties at the custom houses of the United States. This is what Secretary Taft is contending for. But, don't you see, we are building up a beet-sugar industry. We have been at it some years, but it is still a sickly infant—already a combine is proposed in order to keep the plants in Michigan from losing money. But the baby beet, though ailing, has strong lungs, and has no intention of allowing the Philippines to make up for the rapacity of the shipping people by offering new competition to the California or Michigan sugar grower. The American ship-owners, says the Secretary of the Beet Sugar Association, had two years to prepare for the enforcement of our coastwise laws in the Philippines, but "they have not laid a keel, and have not provided vessels for the United States and Philippine traffic, as they promised they would when securing the passage of the bill in July, 1902."

Yet Secretary Taft actually glories in the fact that he had an understanding with Lodge that the shipping provision should go over until a bill could be forced through Congress reducing the tariff! The beet growers should have no mistaken ideas regarding the latter question. It is bound to come up at the next session of Congress, says their spokesman. It would have come up at the last session "but for the fact that it seemed wise to the Administration not to take up a matter of the tariff just preceding the national election." "Sugar is sugar the world over. There is a very great menace to the American industry" in the North, in Louisiana, and Texas "and in Hawaii and Porto Rico." The distinction between the Philippines and our other insular dependencies seems, at first glance, rather invidious. But there is plenty of reason for it: labor costs practically nothing in our Asiatic colony, and "experts" state that the islands can easily satisfy the sugar demand of the whole world.

It is a curious fact that, however much one may be wedded to the "American idea," when he lands at Manila he speedily becomes enamored of the "Philippine idea." Our adventurers are not in the Philippines for the pure enjoyment of the thing, but to make money. Others were willing to serve their country by growing sugar in Hawaii, and their country rewarded them with a free market. Manila is several thousand miles farther away than Honolulu, and the climate is more trying, yet no favors follow. Hawaii is counted worthy, but the Philippines are no better than Timbuctoo. The party of protection gloats over the acquisition of the islands, and harps incessantly on the wealth they are going to bring this country. But one great possibility of wealth lies in the sugar lands, yet the Republicans, at the beck of their Oxnards, proclaim, "Cultivate these lands at your peril!"

American investors in the Philippines are told that their sugar must not be imported into the United States because it is produced by laborers who are paid only six cents per day, while the American beet growers pay all the way from $1.25 to $2. The American papers in Manila are up in arms against these statements. They call this talk "political trickery." Accepting the figures given for this country (though they might make some reservations on this point if they knew the extent to which cheap Russian labor is now employed in our beet fields), they deny the assertions regarding the Filipino laborer. First of all, they show that the six-cents-a-day field hand does not exist. Labor, they assert, brings thirty and forty cents in the islands. But the Filipino is dear at forty cents, and the American cheap at several times that figure. Given equal rights in a common market, says a Manila paper, the manufacturer of the United States would drive the employer of Filipino labor out of the market. Furthermore, the native "does not regard the price of his labor as being eternally fixed or incapable of advancement." That shows how ungrateful he is for all we have done for him. Asking higher wages and freer markets is a poor way of showing his fitness for self-government.

SIX MONTHS OF MAYOR M'CLELLAN.

For six months there has presided over the city of New York a Mayor whose personal bearing has left nothing to be desired. A gentleman by instinct and breeding, he has been the very reverse of his last Tammany predecessor, the ruffianly Van Wyck. Citizens who have had business with the Executive, officials of an opposite political faith, and delegates of civic bodies, all unite in testifying to his courtesy and consideration. In the dullest hearings he has expedited matters by searching questions, and he has frequently asked for briefs that he might consider the points at issue more carefully. As a result of his attitude there is a widespread belief in this municipality that Mayor McClellan is doing his best to give us an honest and upright Administration so far as this is possible with the corrupt political machine behind him. That he has repeatedly caused dissatisfaction in Tammany Hall is still further proof that his aims are high.

Indeed, if Mayor McClellan were surrounded by heads of departments of the same high character as those gathered about him by Mr. Low, there is every reason to believe that he would be a more successful executive of the city. Mr. Low's Administration, it must be remembered, had an enormous amount of construction or rebuilding to do before it could settle down to work. Take the Tenement House Department, for instance. It fell to Mr. De Forest and his assistant commissioner, Mr. Veiller, to plan the whole department, to select the permanent personnel, create the very machinery, and obtain the all but endless information necessary for the tasks in hand. Mr. Crain stepped in just in time to profit by this pioneer work. He found the machinery "shaken down" and running smoothly. That it is already showing marked signs of deterioration is the more discreditable to him and to his chief.

In the long run, Mayor McClellan will be judged not by his personal qualities or by his ability to say such admirable and fitting words as those he addressed to the heroes of the *Slocum* disaster who wore the city's uniform. It will, of course, always be written down to his credit that in his first half-year his attitude towards new legislation was only once severely criticised—in the matter of the gas bill, for his stand on which it must be admitted that he had very strong legal support. But the final verdict upon Mayor McClellan's Administration will depend very largely upon the achievements or the failures of his department heads. He will naturally be criticised for his own mistakes of judgment, as, for instance, his approval of every effort made by his third-rate Civil Service Commission to break down the merit system by wholesale exemptions; but the

burden which he must bear because of the errors or wrongdoings of his subordinates he will find, and already has found, we believe, much more trying. For there can be no doubt that among his numerous Tammany appointees there are many weak and worthless. They, like Mr. Crain, are responsible for what has already become noticeable—a steady falling-off in the city government from the Low standard.

The Police Department is an interesting example. Mr. McAdoo, able and upright, is afflicted by three deputy commissioners who are largely concerned with the discipline of the force. That this is far less stringent than under Gen. Greene is a commonplace. The success of the patrolmen in obtaining the three-platoon system has made them feel that they own the Department, and put a most dangerous spirit into them. Loafing off posts, frequenting saloons, and other methods of "shirking," are made possible by the failure of roundsmen and sergeants to do their duty, and by the astonishing leniency of the deputy commissioners in the trial rooms. So few have been the dismissals—only ten since January 1, about one-fifth the number cashiered by Gen. Greene during the same period last year—and so light the fines, that Mr. McAdoo has been compelled to take two of his deputies severely in hand.

Like the police force, the Department of Health has become less effective under Dr. Darlington than under Commissioner Lederle. Its methods are still far superior to those which prevailed under the Murphy-Sexton régime, for they are honest, even if not free from political taint. Dr. Darlington has resisted a good many demands of politicians, far more than any previous Tammany Commissioner, but his major appointments have been bad, for the reason that they are due to political dictation. The assistant sanitary superintendents, for example, in Brooklyn, Queens, and the Bronx, are the direct choice of McCarren, Cassidy, and Haffen, and even "Tim" Sullivan has secured one of these nice "jobs" for a henchman who is neither a sanitarian nor a capable superintendent. These borough superintendents have supreme charge of the work in their departments, and their selection for political reasons is a direct insult to the medical profession. On the other hand, Dr. Darlington has seen the necessity of retaining many of Dr. Lederle's appointees, and has done so despite severe pressure. To these "holdovers" is largely due the fact that the standard of achievement in this borough is still high, while sinking steadily in the other subdivisions of the city.

In the Park Department the situation is precisely what was to be expected under a Pallas. The civil-service laws are being ignored. Many experienced foremen and gardeners have been dismissed or have left, partly because of the open friction between the Superintendent of Parks and the Commissioner. So poor is the policing of the large outlying pleasure grounds that they not only are being injured, but have become the resort of the immoral and vicious to a startling degree. It is but fair to say, however, that the police are under the control of Mr. McAdoo, and not of Mr. Pallas. But even this circumstance does not mitigate in any way Mr. Pallas's gross unfitness for his office.

To the Civil Service Commission we have already referred. Aside from its plain desire to "take the starch out" of the service—best illustrated by its futile attempt to exempt the deputy tax commissioners, which the mayor abetted—its work has been creditable in only one respect: it has kept its current business well in hand, and has established a service record of office-holders, as required by the White law, which should have been done by Mr. Low's Commission. In the Fire Department Croker's influence is worse than ever before. Many of his own followers are willing to admit that his year out of the Department has "spoiled the Chief," and it is believed to be due only to the firmness of the Commissioner that Croker has not gratified personal dislikes and spite by abuse of his authority. The shortcomings of the Building Department are notorious. The censured inspector responsible for the Darlington disaster is not only still in active service, but is to have his salary increased if the superintendent has his way. And an ominous word—"graft"—is freely heard in connection with Mr. Hopper's inspectors as with those of the Tenement Department.

An examination of the other departments would bring out similar retrogression.

DUMPING.

The dress rehearsal of the first act of the comic economic opera, "Dumping," was held on July 20, and evinced the masterly leadership of the conductor, Mr. Chamberlain. What the cablegrams designate as "Joseph Chamberlain's Tariff Commission" on the iron and steel trades have filed their preliminary report. As was anticipated, it but re-echoes the views of its creator. In marked contrast to the sage opinions of the non-official ironmasters quoted in the papers a day or so ago, who ascribed the English iron trade's failure to improve to the uncertainty involved in the new fiscal proposals, the commissioners are convinced that the cause of their trouble is the surplus product dumped on the English market by American and German manufacturers. For this untoward evil they see but one remedy—a tariff gate whose bars are to be high or low according to circumstances. For the colonies the bars are to be low; for countries admitting British "wares" on "fair terms" to be fairly low; for others the bars are to be put up to the top notch, unless the offending country will concede a lowering of its own tariff wall.

Of dumping it may be said in the first place that it is but an old foe with a new face. In earlier days it went by the fairer name of "inundation," or the "threatened flooding" of the markets of a new country by the unscrupulous producers of the old world. Defined with precision, it means simply the sale of goods in a foreign market either at an absolute loss, or at a markedly lower figure than is obtained in the home market of the dumping manufacturer. Now this so-called dumping process may take two forms. It may be done at an initial loss, in order to advertise wares, or possibly to drive out small competitors; or it may be practised in order to clear the home market of a surplus and thus maintain monopoly prices in the home market. It is not necessary to go abroad to find the first kind of dumping. Every grocer who sells sugar below cost in order to make custom for his other wares, is a dumper. Where this practice in England is resorted to once by a foreign producer, it is practised by Englishman against Englishman a hundred times. Moreover, it involves a certain initial loss and a doubtful future gain. No tariff can protect against it, nor has the success of this kind of underbidding proved so frequent as to warrant any attempt to prohibit it by law, even if such an attempt were likely to succeed.

The second species of dumping—where a surplus is sent abroad and sold for what it will bring—is commonly the result of a high tariff wall around the dumping country. Such an exclusion of foreign goods often makes possible the Trust or cartell. To remedy the falling profits of English manufacturers, the sagacious advice of the Chamberlain commission is to domesticate the Trust bacillus. In order to escape the fleabite of foreign competition, the British consumer is invited to submit himself to the laws of the domestic monopolist.

Even if it be granted that in special cases the dumping process destroys certain industries, it no less surely creates others. For decades the bounty-fed sugar of Europe was dumped on the English market. As a result the refining of sugar in England suffered, but the low price of sugar created an immense domestic and foreign trade in preserves, confectionery, biscuits, chocolate, and jam. As Mr. Winston S. Churchill and Armitage Smith put it: "The foreigner dumps ship-plates at a price which cannot remunerate him; we retort in ships at a price with which he cannot compete. He dumps his steel and we answer him with machinery. At every

step our business is a paying transaction. At every step his business is a losing transaction." Another difficulty inevitably attends all attempts to exclude by tariffs such commodities as will be dumped upon the market. A duty high enough to exclude them will *à fortiori* be high enough to exclude all similar articles which the foreigner desires to put on the English market at what is called "a fair price." There is not yet invented a dumpometer which will differentiate the import that is pure, peaceful, and seeking not its own, from its insidious fellow that is only waiting release to dump itself on the market. Even if we grant that all the surplus of competing goods is excluded from British markets, these goods will seek other neutral markets, and there come into competition with the Brummagem wares which perfidious Albion sometimes tries to dispose of throughout the world. The truth of the matter seems to be this, that the knell of certain British industries is tolling. Natural deposits of coal, lime, and iron, and advanced processes of iron and steel production make it inevitable that ultimately England must yield the palm of superiority in these lines of production. The only remaining question is whether the English statesman will be found to recognize the unpleasant situation, and make the transition at the smallest cost to the English people.

In all the discussion of the matter so far, little or nothing has been said about the unfortunate dumpee, the pitiable consumer who has cheapness thrust upon him. But this is only another illustration of the old adage of the forgotten man, or rather of the forgotten millions, betrayed in every legislative assembly where every interest but the public is clamant. The report of the Commission may be used by worshippers of our Dingley monstrosity as an argument in its favor. Such an argument, however, will prove a two-edged sword. Secretary Shaw has just told the country that only an insignificant fraction of our exports sells abroad at a lower price than at home. If this is true, then we are not guilty of dumping. On the other hand, if what Chamberlain's creatures say is true, and we do dump, then our American Trusts, many of them tariff-fed, are robbing the American consumer. Which horn of the dilemma will our Republican friends take?

THE EXHIBITS OF THE GERMAN EMPIRE AT ST. LOUIS.

ST. LOUIS, July 22, 1904.

Whoever passes through the grounds and buildings of the St. Louis Exposition in an objective and critical spirit must be struck by the vastness of its scope and the completeness of its organization. It is in a true sense an Exhibit of the World's Culture. Your correspondent of the issue of June 30 has well portrayed its exterior aspect so far as the lay-out, the architecture, and the whole artistic and landscape picture are concerned. Any attempt to describe in a short article what is contained in these buildings would be futile. Six months of close daily observation would not suffice for the gathering of this vast material. I will therefore attempt to set before your readers only a short sketch of what is considered by all to be the fullest, the most generously equipped, and the most intelligently designed and constructed exhibit in the World's Fair, that of the German Empire. One may judge exhibits from the point of higher culture or from the point of commercial significance. I propose to consider only the former.

Three foreign Governments have designed their representative buildings on historical grounds. The English Government has reproduced the Kensington Garden Orangerie, and the French Government the famous Trianon, each having its peculiar charm and historic flavor; the German Government has chosen for its representative abode a noble replica of the royal palace at Charlottenburg. Nothing could be more typical of national character than these three designs. The Trianon, light, cheerful, and interesting, perfect architectural bric-à-brac; the Orangerie, stiff, square-cut, and unattractive, but in its interior comfortable and inviting; the Charlottenburg "Schloss," proud, dignified, almost imperious in its exterior, and pervaded by governmental atmosphere in its interior. The French and English structures are situated amidst a cluster of other foreign buildings on the flat grounds bordering the west end of the general group of Exposition buildings; the "Schloss" is located a mile away from them, on the high plateau on which the Festival Hall and its Court of States—the architectural crown of the whole Exposition picture—and the Fine Arts Buildings are situated. There it stands in its austere beauty; in shape, contour, and dimensions an exact reproduction of Schlüter's famous design, with its brownish-gray outer coat, its green lantern and cupola on which stands the gilded statue of Fortuna, and its bold front columns, on the pediment of which appears the defiant Hohenzollern motto, "Nec soli cedit."

Its surroundings are beautifully laid out in the garden style of the eighteenth century, and the view from its terraces, which commands the whole tier of Exposition buildings in front, the Festival Hall, cascades and lagoons at the side, and all the State buildings in the rear, is superb. To soften the somewhat severe aspect of the building, its title, "Das Deutsche Haus," which appears in flowery design and largely lettered on all its approaches, invites the visitor to feel at home there. The interior is lavishly furnished, and contains reproductions, in the different apartments, of the original decorative designs of the state chambers of the Berlin royal palace. The genius of Schlüter is nowhere better visible than in the ceiling of the red-velvet chamber, where are now exposed in a glass case the principal pieces of plate presented to the German Emperor by one hundred towns on the occasion of his marriage in 1881. A full description of these chambers, including the Oak Gallery, the galloon room (*Tressen-Zimmer*), the Brandenburg Gallery, and of the Emperor's collection of Gobelins, is given in an *édition de luxe* catalogue, just issued, of which mention will be made later. The whole arrangement reflects great credit on Architect Mohring, a member of Dr. Lewald's (the German Commissioner's) staff. It is due to the latter's sagacity and grasp of the situation that the site on which this imposing structure stands was secured. He was sent to St. Louis by the Emperor nearly two years ago, and, while the other Governments were deliberating whether to participate in the Exposition or not, he was on the ground and gained for his Government not only the finest position, but also spaces and locations in the Exhibit buildings which in area and prominence have aided in gaining for all departments such well-deserved credit.

In viewing these German exhibits as a whole, a general impression forces itself upon the observer that it is the Empire—the State—that is exhibiting, and not the individual exhibitors. If you traverse, for instance, the Varied Industries Building and see the exhibits of others, not German, grouped collectively under the heads of their respective countries, you seem to notice only the individuals or firms displaying their wares and products; but in the enormous space allotted to "Germany" in that building, you are made to feel, as soon as you pass the sign with the black eagle, that it is the Empire which is exhibiting, and that the exhibitors are only the forces which have been marshalled under its ægis and under its powerful direction. Everything is ordered with elaborate care and uniformity, and a hundred exhibitors appear as though they were in one grand hall instead of in so many booths. While, in any other part of the building, the eye, looking upward, meets the naked timbers and trusses which sustain the roof, in the "Germany" part of the building all these are covered with Gobelins and tapestry, entwining every column and beam, all arranged in exquisite color schemes, giving to these lofty places a cathedral-like appearance. The tasteful and original arrangement of this department, as well as of those in other buildings, was designed and executed by the architect, Dr. Schmitz, a member of the German Commissioner's staff.

The vast space occupied by Germany's "industrial products" in this building is divided into fifty-nine groups, one of which, No. 2, the Hall of Honor, is a perfect gem. Space forbids any even approximate description of the contents. Suffice it to say that there are on exhibition thirty-six fully furnished and decorated rooms, each with hangings, carpets, rugs, wall pictures, originally designed for every sort of room used in families of ease and culture. One may, of course, find occasion to question the taste and general make-up of some of these rooms—much of the furniture seems heavy and clumsy, though aristocratic; but there is much of enchanting beauty. Among the prominent industry groups are those of amber, of which there are solid columns; of ceramics, cast and wrought iron, silver and goldsmith's products, etc. There is a gracefully designed open court, with a fountain in the centre, around which, in a semicircle, some of the choicest rooms just described are arranged.

Fully as rich as the exhibits in this building, though not occupying as much space, are those in the Liberal Arts, Manufac-

tures, Electricity, Machinery, Mines and Metallurgy, Transportation, Agriculture, and Forestry Buildings. Many of these, as well as the German paintings in the Fine Art Galleries, will very likely be reported to you by specialists in those various branches. I will confine myself to a cursory description of the German educational exhibit. There is, perhaps, no specific department so well and so fully represented at this exposition as the educational. All countries, foreign and American, all cities, universities, and colleges, seem to have vied with each other to present to the world the best they have accomplished in the line of education. A walk through the palace of education is a delight to the educator and the educated. Whichever way the eye turns, every step of instruction in the ascending scale from the kindergarten to the post-graduate course, from the schools for the feeble-minded, the deaf and dumb, and the blind, to the highest college room, can be followed in all its numberless phases; and no pessimist as to the ultimate fate of the race who has the least amount of imagination and intuition, can enter these halls without passing out of them an optimist. It is the unanimous judgment of all educators who have visited and examined these exhibits, that the German educational department towers far above them all in quantity and quality, in systematic arrangement, in the wealth and variety of material collected and presented, in the intelligent classification of every branch of human knowledge, and in the exposition of the methods and results of every phase of scientific research.

The department is presided over by Professor Bahlsen of Berlin, under whose intelligent and gentlemanly guidance the visitor finds it easy to comprehend the general arrangement. A closer examination of the various groups shows the scheme of the whole arrangement. To use the terms of the catalogue, there are three grand divisions: *Lehrgegenstände*, *Lehrmittel*, and *Lehrmethoden*, which, roughly translated, stand for subjects, means, and methods of teaching. The demonstration of each of these is carried out to the minutest details. Entering from the northeast, we come upon an aisle on the sides of which are placed tables giving in large print the educational statistics of the Empire. It is significant that, among the thirty tables, there are only five dealing with the Empire as a whole, and twenty-five relating to Prussia; but, upon reading the specific article devoted to education in the catalogue, this anomaly is easily understood. The tables are arranged with the well-known German thoroughness, and give statistics on every conceivable point covering high schools, common schools, male and female seminaries and gymnasiums, their attendance, cost of maintenance and teaching, salaries of teachers, and other innumerable items, some of them without significance and merely technical. I have no data at hand for comparison of these with our American standards. Picking out a few figures at random, I find that the cost of a pupil in the common school of the Empire in 1891-2 was about 40 marks, or ten dollars, whereas in Prussia it was 47.60 marks; that there were 66 scholars to each teacher; that the average salaries of male teachers were 2,401 marks in the city and 1,693 in the country schools, and of female teachers 1,599 and 1,321 respectively! Compared with our American standards, these are pitiful remunerations for this high corps of educators.

On each side of this and other parallel aisles in partitioned rooms and cabinets are aligned the educational exhibits of forty of the largest cities of the Empire. These comprise models and pictures of school buildings, gymnasiums, workshops, and museums, some entire models of school rooms with their interior equipment, with tables for each school containing specifications of the teaching system, specimens of the work done, pictures, charts, objects for nature study, and whatever is needful to illustrate historical, geographical, or physical subjects. The wealth of these exhibits is beyond anything in that line under the roof of the building. The area occupied is about 4,000 square feet, more than double that of any other foreign educational exhibit. To the left of the east entrance are shown in profusion the scientific instruments and instruments of precision used in research and in the conducting of lectures; further on, the medical and surgical, biological, zoölogical, and botanical sections. Among these a Röntgen X-ray cabinet, fully equipped, is open to interested visitors, and demonstrations are conducted by an intelligent attendant. One section is filled with large models of universities and technical high schools, with plans and elevations showing their interior arrangements. To the left of the main south entrance is the Hall of Honor, tastefully decorated with yellow satin, devoted to the several academies of science, whose reports, in beautiful binding, are arranged in elegant bookcases along the walls. A fine marble bust of the Emperor is placed on a pedestal in the middle of the room.

The chemical exhibit is in the Electricity Building. It is replete with the products of German chemical research, and a delight to the specialist. Hundreds of specimens of the most recent results of analytical and synthetical investigation are here exposed. together with the literature pertaining to each specific subject. To those of us gray heads who used to do laboratory work abroad in the early forties, one of the most interesting exhibits is the reproduction of Justus Liebig's laboratory in 1835, with the tools and apparatus which this great protagonist of modern chemistry introduced, and which were eagerly copied by all contemporary chemical students. An alchemist's laboratory of the 15th to 17th century has also a deep historical interest.

Taken all in all, these exhibits show that they are the result of nearly two years of careful and thorough study, of masterful grasp of the situation, of learned as well as brilliant execution, and of unstinted money. The Reichstag appropriated three and one-half million marks for the purposes of the Exposition, most of which has been expended. And, finally, when we come to compare the exhibits of other foreign countries, which are also deserving of the highest praise, with those of Germany, we cannot help recalling the old Latin adage: "Si duo faciunt idem, non est idem."

Special mention should be made of the 'Official Catalogue of the International Exposition, St. Louis, 1904,' English edition, of which, in an *édition de luxe*, only 300 copies have been printed. It is a quarto volume of 538 pages, bound in elegant gray sheepskin, printed with antique Roman type, "specially cast in the Imperial Printing-Office," beautifully illuminated in varied colors, with heraldic designs and initials, fully illustrated, and replete with information. It is a perfect encyclopædia of the history, development, and present condition of every governmental interest of the Empire, composed by twenty-nine of the most learned and noted specialists on as many different subjects, each article a lucidly written essay, full of interesting statistics, and handled with the well-known thoroughness of German professors. These essays occupy 358 pages of the book; the remaining 180 pages contain the real catalogue, wherein every article on exhibition is enumerated under its appropriate head, in a skilfully arranged scheme. W. T.

MIRABEAU TONNEAU.

PARIS, July 13, 1904.

The great Mirabeau had a brother, Viscount Mirabeau, who was known in his time as Mirabeau Tonneau. M. Eugène Berger, who died not long ago, devoted the last years of his life to the composition of a book on this younger brother of the famous orator. He had not given his conscientious work its final touches, but his family and friends have paid a tribute to his memory by publishing it as he left it. The choice of Mirabeau Tonneau as a hero seems singular at first; but he lived in such troubled times, he was such an ardent champion of the old régime in opposition to his brother, his military life took him to so many places, that the biographer found the means of writing a very interesting work. "In any other family but mine," once said the Viscount Mirabeau, "I should be considered a man of sense and a rogue [*mauvais sujet*]. In my family I am rated a fool, but a worthy fellow."

He was born in Paris, November 30, 1754, the last of five children, and, according to the fashion of the time, was destined to enter the order of Malta; he was for a long time called only Chevalier. (The eldest living child became a nun at Montargis; another married Count du Saillant; the future orator Gabriel came third; Louise became the Marchioness of Cabris; Boniface, the second son, was our Chevalier.) M. de Loménie has described, in his book on Mirabeau, the stormy life of the Mirabeau family. The Chevalier served for some time as an officer in a regiment of Lorraine; from Lorraine he went to Malta to accomplish his novitiate. The life led at Malta was far from edifying, and after some scandal the Chevalier was obliged to return to France. Boniface de Riquetti seemed to belong to another epoch. The eighteenth century tolerated all possible vices, but proscribed whatever offended *le bon goût;* intemperance was not the fashion, and the Chevalier, who drank like a Templar, and who for this reason was nicknamed Tonneau, ought to have lived in the time of the Grand Prieur de Vendôme, or of the Marquis de la Fare.

His family did not set the young Chevalier examples in virtue. Most people know the episode of Mirabeau and Madame de Monnier's love affairs, when Mirabeau was shut up in the Fort de Jouy, the imprudence of the two lovers, their flight to Holland, their life in Amsterdam, their extradition and arrest, and Mirabeau's impris-

onment in the castle of Vincennes. The 'Letters to Sophie' are no longer read. "They seem," says M. Berger, "like a confused mixture of familiar confidences, of social theories, of rhetorical phrases borrowed partly from Rousseau's 'Nouvelle Héloïse,' partly from the crude outpourings of Diderot." They are, so to speak, the memorial of the captivity at Vincennes. The Chevalier remained philosophically a stranger to the quarrels and troubles of his family. His elder brother judged him with great severity, and in the 'Letters to Sophie' spoke of him as a sort of burlesque personage, incapable of anything, and quite lost to society.

The American war was a piece of good fortune for the Chevalier; it took him out of his low pleasures and his monetary difficulties. France had espoused with enthusiasm the cause of the revolted colonies. The salons of the time, those of Madame Necker, of Madame d'Houdetot, of the Beauveaux and Noailles, became familiar with the names of Rhode Island, of Massachusetts, of Vermont, of New Hampshire. The Chevalier followed the example set by the Duke de Lauzun, the Dillons, the Lemeths, Charles de Damas, Custine, Chastellux, the Prince de Broglie, Count de Ségur, and many others. He was allowed to quit his regiment, and left Brest on the second of February, 1780, in the squadron which took over to America the Saint-Simon brigade, composed of the Touraine regiment together with a battalion of Royal-Comtois and a detachment of artillery. He landed on the twenty-second of March at Fort de France, in Martinique, where M. de Bouillé was Governor, and afterwards went to San Domingo, where he had the yellow fever and nearly died. His regiment finally went to Florida, and joined first Lafayette and afterwards Washington and Rochambeau. In October, 1781, the Americans and French besieged Yorktown, defended by Lord Cornwallis. The Chevalier was on the staff of his division, and could therefore follow all the details of the operations, and approach the principal Frenchmen who fought with the Americans — Lafayette, Rochambeau, the two Visménils, M. de Saint-Simon, Charles de Damas, the Viscount de Noailles, M. de Choisy, Charles and Alexandre de Lameth, Robert Dillon, D'Aboville, Philippe de Custine, Lauzun.

"These officers," writes M. Berger, "all noblemen, and some of them of high birth, whom the Revolution was soon to divide profoundly and to throw into opposite ways, were then united by the same feeling of national honor, by a common desire to efface the humiliations of the Seven Years' War. The attack on Yorktown, in which Rochambeau's divisions had the leading part, was conducted briskly, *à la française*."

The capitulation took place on the 19th of October, and the Chevalier de Mirabeau was among the commissioners who presided over the formalities of the surrender. Mirabeau, his brother, became somewhat reconciled to him on hearing this news, and wrote to one of his correspondents: "I have received intelligence of my brother, who was an actor in the most decisive event of the war; and as he is adjutant of his division, he was one of the masters of ceremonies on the day when the troops of Cornwallis were reviewed."

The Chevalier distinguished himself later at Brimstone Hill in St. Kitt's, and obtained leave of absence; he, with two other officers, was charged to take to Versailles a report of the events in the West Indies which succeeded the capitulation of Yorktown. He was presented to the King and received by him with great distinction. He was appointed lieutenant-colonel of the regiment of Touraine, and had to return to San Domingo. The ship on which he sailed was wrecked on the coast of France; he lost everything he had on board, but was indemnified afterwards by the Minister of the Navy. On his return to France he stayed with his regiment in Brittany, at Laval; the regiment mutinied, and was sent in disgrace to Perpignan. There Mirabeau was appointed colonel in 1788, and left the order of Malta in order to get married to Mlle. de Robieu. Troublous times were approaching. On March 21 he was named Deputy to the States-General by order of the nobility of Haut-Limousin. He was very little prepared for his new work, but he had a great deal of assurance; he had a hand in preparing the "cahiers" of the *noblesse*—what we might call its platform. The country gentlemen asked for better management of the finances, the simplification of justice, the remodelling of taxation; they were willing to sacrifice their pecuniary privileges, but insisted on the maintenance of their honorary privileges, intending to remain a distinct body, next to the *Tiers Etat*, but not confounded with it.

The Viscount remained faithful to this programme on the whole; he continued to the end an adversary of democratic pretensions, and from the first day placed himself in opposition to his famous brother Mirabeau. He sat in the States-General at the extreme right. Many people were surprised at this attitude, and explained it only by a desire to act in contradiction to his brother. The marquis, his father, died not long after the opening events of the Revolution, the taking of the Bastille, the capitulation of the Court, and the return of Necker; he had written prophetic lines and seen them verified: "Equity can contrive revolutions, but they are executed by the passions."

The two brothers Mirabeau played no part in the famous night in August when the Assembly, seized by a sort of patriotic enthusiasm, abolished all privileges, feudal rights, tithes, corporations, franchises of cities or provinces, and demolished, so to speak, in six hours the entire edifice of the old régime.

The younger Mirabeau spoke in the Assembly on a number of questions, not always very wisely—on the clergy and its possessions, on administrative subjects, on the military laws; he protested against the abolition of titles of nobility. He soon became as unpopular in Paris as his brother was popular. Finally, as his person was threatened in the streets, as his house was no longer safe, he decided to emigrate, and he was the first to organize a royalist legion, called after him the Légion Mirabeau. He made incessant journeys to Switzerland, to Chambéry, to Turin, to see the Count d'Artois. His legion was obliged to leave Bâle and stayed for a time at Freiburg-im-Breisgau. Difficulties of all sorts paralyzed it. The Viscount, however, began a campaign when war was declared on August 1st, 1792. He entered France without orders, but was soon obliged to retire to Freiburg, where he fell ill and died on the 15th of September. He was not yet thirty-eight years old. Great military honors were paid him by the Prince de Condé and by Prince Esterhazy, who represented the Emperor.

Correspondence.

A SOURCE OF BEN JONSON'S "ALCHEMIST."

To the Editor of The Nation:

Sir: Ben Jonson's "Alchemist" is currently regarded as substantially an original work. Professor Köppel, in his *Quellen-Studien, Münchner Beiträge*, 1895, concerned himself primarily with Gifford's notes on the use of Plautus in the play. Professor Hathaway, in his edition of the folio text of 1616 (Inaugural dissertation, *Yale Studies in English*, XVII, 1903), remarks: "No direct source of any moment can be found. The plot of the play is entirely original." He notes the well-known fact of Jonson's indebtedness to Plautus in lesser details of the plot, and endeavors to show that *Subtle* was suggested by a swindler of the time, *Forman*, "reinforced" by the famous Dr. Dee, and that *Face* represents Kelley, who made a tool of Dee. *Dol* is left unexplained. He concludes that, "in the ordinary use of the term sources, there are none for this play. After we have assigned to his predecessors every half-line reference, and enumerated every man whose life might have furnished an idea, Jonson's absolute originality stands out in clearer relief." Professor Schelling, who has recently published the first accurate and complete critical edition of the play (*Belles-Lettres Series*, 1903), enriching it by the fruits of many years' study of Jonson and by most helpful contributions in explication of the allusions with which it teems, does not venture a claim for its author so generously enthusiastic but so rash, and contents himself with recording the minor sources so far ascertained.

Chance has indicated an original to which Jonson was, without doubt, materially indebted. It has provided at least one student with a mild sensation to discover that Jonson's famous play was in great measure suggested by the single comedy written by the martyred Renaissance philosopher, Giordano Bruno (of all people!), namely, "Il Candelaio" (The Candlemaker).

Jonson was, I believe, said by Drummond to be ignorant of Italian, and I find no trace of an English translation of the play, but Bruno's intimate relations with Sidney and others, and, possibly, the fact that the play was published in Paris (1583), would, granting Jonson's ignorance of Italian, suffice to explain his acquaintance with it. Considering Bruno's celebrity in England, we may feel sure that it was well known, both in the Italian and in MS. translations.

In this play, ignorance and credulity are satirized through three characters. *Bonifacio*, sordid and niggardly, desiring the favors of *Vittoria*, seeks the aid of a pretended magician, *Scaramuré*, whose fee he thinks will be less than the costly presents otherwise necessary. *Bartholomeo*, on the other hand, rendered credulous by avarice, has recourse to a charlatan alchemist. *Cencio*. *Mamphurio*, the absurd pedant, need not be considered. All three suffer loss and shame through imposture and knavish foolery.

Ben Jonson has unified the two dupes and

the two sharpers. *Sir Epicure Mammon* represents *Bonifacio* and *Bartholomeo* together, combining greed for gold and for "epicurean" pleasure. *Subtle* combines the parts of *Scaramuré*, the magician, and *Cencio*, the alchemist. *Face*, the master-knave, parallels the arch-rascal *Sanguino*, "padre et pastor di marioli." *Dol Common* has for prototype the procuress *Lucia*, in league with *Sanguino*.

To enter into the detail of the plots of the two plays is impossible here. I may, however, be permitted space for one piece of specific evidence that Jonson used the play as being more immediately convincing to those who have not actually compared the two works. *Gioan Bernardo*, the painter, who represents intelligence and common sense, indicts *Cencio*, the pretended alchemist, as fraudulent, just as *Surly* does *Subtle* in Jonson. When challenged to explain the possibility of the transformation of other metals to gold, both make use of the same explanation in the same manner. This can hardly be mere coincidence.

Molière, if I mistake not, has used "Il Candelaio." Its sprightliness and general suggestiveness render it probable that Bruno's comedy was used by other English playwrights than Jonson. This question, with that of Jonson's indebtedness in detail, will form the subject of a special study.

CLARENCE G. CHILD.

BOSTON PUBLIC LIBRARY, July 16, 1904.

Notes.

Leslie Stephen's 'Hobbes,' in the English Men of Letters series, is among the autumn publications of Macmillan Co., who announce also a small volume for children, 'Is There a Santa Claus?' by Jacob Riis.

The Brownings, like Carlyle, always received with mingled surprise and gratitude the applause and the dollars that came to them across the Atlantic. In the early forties, Elizabeth Barrett was publishing her shorter poems in American periodicals, such as Lowell's *Pioneer* and *Graham's Magazine*, for payment that even nowadays sounds liberal. She was always rather hard on American poets, and saw more bathos than poetry in Poe—an estimate that ranks with her misguided phrases about Euripides; poets are very poor critics of one another. Miss Elizabeth Porter Gould, in her small volume entitled 'The Brownings and America' (Boston: The Poet-Lore Co.), has collected a number of allusions from the Browning Letters and other sources, which illustrate the connection of Browning and his wife with the American painters, poets, and sculptors who haunted Italy in the fifties and sixties, the most conspicuous intimacy being, of course, that with W. W. Story, which, as Browning said, for him at least lasted "forty years without a break." Miss Gould adds to her collection a good deal of evidence as to the business relations of both the Brownings with their various American publishers. What pleased Browning most in all the appreciation that was lavished on him by the New World at a time when it was withheld or given grudgingly by the Old, was the fact that it was the "Official Guide" of the Chicago & Alton Railroad that first published a complete edition of his poems, in monthly issues, from 1872 to 1874, a copy of which is preserved in the British Museum.

For many years tourists enjoying an opportunity to visit California's greatest scenic wonder have met there Galen Clark, the venerable author and publisher of a little book, 'Indians of the Yosemite Valley,' now on our table. Though Mr. Clark is in his ninety-first year, he is still alert and active in mind and body. Nearly fifty years ago he had a serious attack of lung trouble, but the glorious mountain air not only cured him, but hardened him so thoroughly that no exposure to winter storms and snows affects him. It was he who, in 1857, discovered the Mariposa Grove of Big Trees, in which he built a log cabin for sight-seers that became known as "Galen's Hospice." Subsequently he was appointed Guardian of the Yosemite Valley, a position which he held for twenty-four years. He wishes, naturally, to be buried in the valley which has so long been his home. With his own hands he has dug his grave, has quarried his granite tombstone, and placed a young sequoia at each corner of the lot. His book, which embodies some of his experiences, will serve as a useful supplement to the regular guides. The appendix contains hints to visitors, while the main body of the work is devoted to descriptions of the Indians of the region (with whom the author was always on terms of intimacy), their history, customs, and traditions. The concluding pages contain a short Indian vocabulary, some of the names in which—Kusoko, Tokoya, Ahweiyah, Weiyow—have a strangely Japanese and Chinese sound.

Under the title 'Working with the People' (New York: A. Wessels Co.) an interesting account is given by Mr. Charles Sprague Smith of the work of the People's Institute. Mr. Smith appears to have been the originator of the enterprise, of which he is now managing director, but the late Abram S. Hewitt gave material aid, furnishing the free use of the large hall of the Cooper Union. "The Institute is to-day a free evening school for adults in Social Science, providing also instruction through lectures in other departments of knowledge; a forum for the discussion and voting upon questions of the day, with direct influence upon legislation; a People's Church, a fosterer of people's clubs, and, through alliance with another organization, a People's Hall of Music." Although the members of this club appear to be Jacobins to a man in their political principles, it is the policy of the management to have views distasteful to the audience of the lectures presented as well as those which are popular. Not many years ago "Lyceum lectures" were an established institution in New England, and the People's Institute seems to accomplish a similar purpose in a section of the city of New York.

Lewis F. Day's 'Stained Glass' (London: Chapman & Hall; New York: Charles Scribner's Sons) is an excellent brief handbook published at the instance of the Board of Education and illustrated entirely from specimens in the Victoria and Albert Museum. The treatment of the subject is historical, based in the main on the divisions established by Winston in his 'Hints on Glass-Painting.' Thus, each of the accepted Gothic periods and the Renaissance receives in turn the author's undivided attention. All this sounds very much as if the treatment were of the dry-as-dust sort, but Mr. Day is too much of an artist to turn pedant. Technique never fails to interest him. The kind and quality of the pot-metal in use in the various countries, the way of using the leads, the kind and amount of painting, the use or abuse of enamel, the absolute and relative scale of the figures—all these and many more of the things that go to give character to the glass of any epoch, receive consideration such as only one thoroughly familiar with the operations of stained-glass making could give them. The book is smaller, less elaborate, and more strictly historical than the same author's 'Windows: A Book about Stained Glass.'

A Greek Grammar, by John Thompson, M.A. (E. P. Dutton & Co.), aims at introducing into the subject some knowledge of modern ideas in philology and modern views in syntax. It accomplishes this object in a volume of 494 closely packed pages, which will certainly make a useful handbook for reference in connection with the undergraduate work of colleges. For this purpose it offers a number of useful features: the systematic introduction to sound changes and to the conclusions of Delbrück and Brugmann, the hints as to regimen supplied with the list of verbs, the ample and minute examples in syntax treated from the later and more philosophic standpoint. These are very convenient and "up to date." One misses in a volume of this compass some introduction to rhythm and metre; and the important subject of word-formation is not dealt with at all. The book is entitled "a grammar for schools and colleges"; but in our preparatory schools it might be found rather unmanageable. Amid the necessary clamor of science and modern languages, it would hardly be possible for the pupils of secondary schools to absorb much philology in addition to the outlines of accidence and syntax. For these, as a matter of pedagogy, some ingenious minimum of the type of Goodell's 'School Grammar of Attic Greek' (Appleton) marks a limit of attainment which college instructors would be glad to secure as a foundation. This admirable specimen of scientific method, of judicious simplification and condensation, secures the utmost economy of time for the distracted teacher and pupil, yet it manages to devote a liberal chapter of twenty-six pages to word-formation, and to include a luminous little treatise on word-order. Although designed exclusively for beginners in Attic Greek, it might have spared a few pages for an introduction to iambic and anapæstic rhythms in the tragedians.

In the June number of the *Columbia Law Review*, Prof. James B. Scott contends that international law should be recognized as law, and not treated as merely the body of rules observed by governments as a moral code. Using as a test the enforcement of these rules by courts of justice, Professor Scott finds abundant authority for maintaining his proposition. He cites the declarations of many of the great English judges that the law of nations is part of the Common Law, and refers to the power given Congress by the Constitution to punish "offences against the law of nations."

This law has been often recognized by our judges as having the same validity as our municipal law, and in Professor Scott's opinion it ought to be studied in the same way at our law schools. It is of as much importance as Constitutional law, and cases under it are likely to arise in practice with increasing frequency. We may add that to include this branch of law in the ordinary legal education would tend to accustom the public to the idea that governments should submit their disputes to courts, as their subjects do, instead of going to war about them. The next great advance in civilization should be in this direction.

The Western Reserve University has sent out the announcement of the courses in its new Library School, the purpose of which is stated to be "to give a thorough course in training for library work." The introductory statement says that "while, as is eminently proper in a school so established and endowed [*i. e.*, by Mr. Andrew Carnegie], special attention will be given to training for work in our rapidly growing system of public libraries, the interests of college, endowed, and other libraries will not be neglected." Further, "all candidates for admission are expected to bring a maturity and a preparation which will fit them for work equal to that in graduate schools." The graduate work will presumably come in the second year (the entire course covers two years). There is little indication that the first year's course will differ materially from the first year's course in any of the older schools. The new school has, however, one great advantage over the older ones, and that is in its faculty. While in the latter the faculties are almost exclusively taken from the staff of the particular library with which the instructors are connected, the Cleveland school has selected its instructors from half-a-dozen different libraries of varying character and grade. Furthermore, three of the instructors will devote all their time to the teaching. If any criticism might be offered at this stage, it would be to point out an apparent tendency to make a showing of a large number of subjects. Library "science" cannot very well be regarded as an organic entity by a faculty which enumerates its 28 subjects of instruction without any subordination, and puts in one line with Cataloguing, Classification, and Library Administration such topics as Book Numbers and Alphabeting, not to speak of Library Handwriting, of which the announcement even says that "no time will be set aside for definite practice." On the other hand, it is gratifying to see that so much space has been given to Library Administration, which important central subject has been sadly neglected in the older schools. The lectures on the History of the Printed Book will be particularly valuable in breaking the monotony of purely technical study, and in giving the students an outlook into a world with which no librarian should fail to make himself familiar.

Since the year 1899, the German Government has been publishing annually official reports of the strikes and lockouts in the Empire. The report for the year 1903 has just appeared. The number of strikes in that period was 1,374. In every respect labor troubles increased as compared with the previous two years. In 1902 there were 1,060 strikes; in 1901, 1,056; but in 1900 there were 1,433, and in 1899, 1,288. The number of concerns affected in 1903 was 7,000, as compared with 3,437 in 1902 and 4,561 in 1901. The number of strikers in the past year was 85,603; in 1902, it was 58,912; in 1901, 55,257. While the number of strikes increased by nearly one-third as compared with the preceding year, the number of strikers was more than fifty per cent. greater, and the number of concerns affected was more than doubled. The greatest number of strikes took place in the building trades, viz., 320 with 35,491 strikers, followed by the wood industries with 195 strikes and 6,168 participants, and metal workers with 150 strikes and 11,099 participants. As compared with the figures for 1901 and 1902, the number of successful as well as of unsuccessful strikes was greater, but the failures were comparatively more than the successes. There were only 70 lockouts reported for 1903, but the number has grown steadily from 23 in 1899. The number of workingmen affected was 35,293. In thirty-six cases the lockouts were entirely successful, in nineteen cases total failures; in other cases there was a compromise. The *Vorwärts*, the chief organ of the Social Democrats, is of the opinion that the lockouts will soon equal in number the strikes in Germany, and urges the unions to renewed agitation and consolidation.

The marked success of the Germans in manufactures and commerce, which they attribute in large measure to their industrial and commercial schools, has led our Government to publish on July 13 the first of a series of nineteen reports on industrial education in Germany. In this E. C. Meyer, deputy consul at Chemnitz, gives a bird's-eye view of the entire educational system of the Empire. Its foundation is the *Volksschule*, or common school, at which attendance is compulsory from the age of six or seven. The most important turning-point in the child's education is reached at his tenth year. The children of the poorest class continue in the common school till they are fourteen; but, though they are then permitted to work for their living, their instruction does not cease. For two or three years they are obliged to attend evening industrial, commercial, or one of the "countless lower trade schools, such as the schools for locksmiths, blacksmiths," etc. The children of the middle and higher classes at ten leave the common school for the *höhere Schule* if they are going into business, or the *Hochschule* if a university education is the aim. In these the course is six to nine years, and the instruction is classical, or industrial, with general cultural studies. A powerful incentive to take this secondary education is that every youth who successfully completes a six-years' course is "honored with the privilege of one year's military service as a volunteer, instead of a service of two or, in certain cases, three years of regular service; and in addition shall have opened up to him an opportunity to become an officer in the German army." The non-classical or *Realschulen* are comparatively new, but in spite of bitter opposition from the adherents of the old methods they have, purely on their merit, "won their way to the front, aided also in no mean degree by the far-sighted and broad-minded commercial policy of the present Emperor, who has bestowed on them his unconcealed favor."

Rhodesia was brought into touch with the tourist world in the middle of June by the opening for general traffic of the Cape-to-Cairo Railway to the Victoria Falls on the Zambezi. Earl Grey, in making this statement at a meeting of the Chartered Company, gave other facts showing the progress of the country—"the Cinderella of South Africa"—notwithstanding the depression of the mining industry from the lack of a continuous supply of efficient labor. The most encouraging of these was the development of the agricultural resources of the land. The rural white population had increased more than 40 per cent. during the past two years, and the company had adopted Lord Cromer's system, which had proved so beneficial in Egypt, of making advances to the farmers. Four hundred and eighty-two miles of railway had been built within the year, making a total of 1,743.

—The Ecclesiastical Records of the State of New York, translated from the Dutch under the direction of Dr. E. T. Corwin, and published by the State, cover, in the third and fourth volumes last issued, the period between 1701 and 1750. Besides the Dutch documents herein put into good English, there are others arranged according to the rule of the respective governors, in chronological order, under the supervision of the State historian, Mr. Hugh Hastings. In this way pretty much everything relating to every denomination of Christianity in the colony of New York finds a place. Much light is thrown on the relations of the white men to the Indians and negro slaves. One gets a lively idea of the multifarious struggles and diverse energies under which the colonies were shaped. The Old World quarrels and contentions of Church and State could not be eliminated or quieted at once, and the pluck and determination of the New Yorkers, and especially the Dutchmen, to have no State Church seem wonderful. Evidently they thought the best way to resist the encroachments of the English Establishment was to hold tenaciously to their own ecclesiastical order, and this in not a few cases seemed to make them and their parsons unduly quarrelsome. Yet he must be a dull reader who cannot discern in the heavings of this heterogeneous mass of colonists the instinct for liberty safeguarded under law. We are not at all certain of the wisdom of the State historian in inserting so many reprints of matter already in English and accessible, or of making the general scheme conform so closely to the rule of the English governors, who were often little better than figureheads, and whose direct or indirect land speculations were the cause of trouble with the colonies and especially with the churches and ministers, who did not relish the fussiness and interference of the governors with their rights. The evident intent of both the colonists and of the British Government to do at least ordinary justice to the Indians is manifest, despite their frequent mistakes.

—The material in this publication for those who with patience would open its treasures for the illustration of social life in the colonies, though abundant, is much more available when used with such a work, for example, as Dr. Corwin's Manual of the Reformed Church in America. The generous aid given by the great Classis of Amsterdam to Dutch, French, British, German, and other immigrants making up our cosmopolitan commonwealth of New York

is visible, but not glaring. There is not a little that concerns the settlement of the Mohawk Valley. The documents illustrating the disputes between the adherents of the Coetus or annual cis-Atlantic assembly and those opposed, or between the Progressives and Conservatives—those who held to more local independence of the mother church in Holland and those desiring closer conformity with the strict Calvinism and State-church rule beyond sea—are here given pretty fully. Without much meaning to the general and uncritical reader, these contests are luminous and fascinating to those who realize how much civilization and freedom in the Empire State owe to the men of the time in the Reformed Church, which, within a stout shell of conservative orthodoxy, has ever held the living germ of an intense love of freedom. No one pretending to write of the history of the Mohawk or Hudson River valleys, to say nothing of Long and Manhattan Islands, can ignore this series of volumes, which another brace will probably complete.

—It is doubtful if Holland has ever produced a more quaint and original writer than Multatuli. It remained, however, for the Germans to discover him. At home he made many enemies by his unsparing and vivid exposure of the tyrannical treatment by his countrymen of their subjects in India; and when, a few years ago, Wilhelm Spohr brought out a complete edition of his works in a German version, there were Hollanders who sneered at the Germans for their overrating of the author of 'Havelaar.' The tide has now turned, and books and articles on him are steadily increasing in number. The recently issued 'Multatuliana,' by Dr. A. S. Kok and Louis D. Petit, contains a complete list of all the works by and on this author, as well as some previously unpublished letters and articles. Particularly characteristic is an autobiographic sketch which he wrote in 1881 for Taco de Beer, who was writing the article on the literature of Holland for Spamer's Cyclopædia. A few sentences from it will serve as an excellent introduction for those not yet acquainted with this writer: "You ask for characteristic information regarding my life. 'Among the peculiarities of this author one of the most striking is that he has a cursed aversion to writing.' You see, my dear collector of Autoriana, there is one and a marked characteristic. For the rest, I was born on March 2, 1820. My parents were well-to-do and Godfearing, but very honest. Of these three parental qualities only the last passed over to me. Already in my eighth year I wrote verses which threw polite visitors into ecstasies. Not until the feeling of shame was born in me did I give up rhyming. It is incredible how many beautiful verses I have not written. . . . I am, of course, convinced that all Germany is eager to hear something about my development. But, my dear sir, I did not develop at all. Nor am I alone in holding this opinion. When literature is under discussion in Dutch periodicals, I am seldom mentioned—a fact which I greatly value. . . . That literary work is disagreeable to me follows from this, that I was forty years old when I was *compelled* to write 'Havelaar.' . . . But if Spamer issues a cyclopædia about persons who sacrificed themselves to their duties, and who, in consequence, were tortured to death by the idiotic multitude, then you may put my name in—even if it should be but a thin little book."

—We have received from M. Henri Gaidoz—eminent for his researches both in Celtic literature and in general folk-lore, and successively editor of the *Revue Celtique* and of *Mélusine*—an essay dealing with the influence of the Académie Celtique upon the study of folk-lore. The Celtic Academy, founded in 1804, was the parent organization from which sprang, in 1813, the Société des Antiquaires de France, and M. Gaidoz prepared his paper for the centenary of this society. He reviews briefly the circumstances of the foundation of the Academy at a time of great enthusiasm for the study of national antiquities, and speaks of its varied activities in history, archæology and linguistics. He takes due account of the prevalent Celtomania which impaired the value of much of its work, particularly in philology, and which (we may observe in passing) long survived the Academy. We recall an article published as lately as 1876, in the journal of a learned society in Brittany, in which the name of Mount Ararat was solemnly explained by the Breton phrase *ar-er-rha*, "on the summit"; and, outside the ranks of the learned, similar etymologies are still common enough among the other peoples of Celtic speech. In spite of false methods and erroneous theories, however, M. Gaidoz points out that the science of folk-lore owes a considerable debt to the Académie Celtique. It gave an important impulse to the work of collecting popular material, both in France and abroad, and the best of its published mémoires dealt with such subjects. To the influence of the Academy, or at least to the same national enthusiasm which animated its founders, M. Gaidoz attributes the great compilations of departmental statistics begun by the Government during the Consulate and continued under the Empire, which contained in some instances valuable reports on the manners and customs, beliefs, and traditions of the population. Looking beyond the boundaries of France, he makes an interesting suggestion with regard to Jacob Grimm, who became a corresponding member of the Academy in 1811. In that same year—suddenly and unaccountably, according to the editor of his correspondence—Grimm formed a plan for collecting popular literature, usages, and superstitions throughout the German lands; and four years later he issued a circular proposing the foundation of a society to foster such investigations. M. Gaidoz suggests that the idea first came to Grimm from his association with the Academy in Paris, and that his circular was based in large part on the "questionnaire" of Dulaure. The paper closes with some comparisons between the different aspects and motives of romanticism in France and in Germany, and from one point of view the whole of it may be regarded as a contribution to the history of the movement which goes by that name.

—Prof. Adolf Jülicher's 'Introduction to the New Testament,' translated by Janet Penrose Ward, with a prefatory note by Mrs. Humphry Ward, is published by Smith, Elder & Co., London, and in this country by G. P. Putnam's Sons. The translation is so good that the book reads as if written in a good English form, and the original must have been written with more literary skill than has been characteristic of German critics since Strauss's epoch-making book. The book is indeed remarkable for its fresh and simple presentation of its learned matter. Mrs. Ward's note indicates Jülicher's relative standing among the German critics. Much more liberal than Weiss, he is opposed *à outrance* to Zahn, the orthodox coryphæus, whom he calls the great *Irrgärtner*, a maker of bewildering labyrinths. As compared with Holtzmann (H. J.), he swings much freer from the Tübingen school, especially from the violence of F. C. Baur's *Tendenz* construction and his chronology of the New Testament writings. But the estimate of Baur in the "Prolegomena" is in admirable contrast with much vulgar contemporary depreciation. Great differences between Jülicher and Harnack do not, Mrs. Ward assures us, put them far apart. We do not find the differences great, measuring Harnack by his particular results and not by the rash expressions in which he indulged a few years since in a moment of rhetorical effusion. Professor Schmiedel of Zurich is conspicuously absent from Professor Jülicher's summary of the course and present state of New Testament criticism; but Professor van Manen of Leyden, who shares with Professor Schmiedel the blame visited on the destructive New Testament criticism of the 'Encyclopædia Biblica,' is dismissed as representing "a form of pseudo-criticism which considers itself called upon simply to upset all previous views of the development of the earliest Christian literature." More than a hundred pages are devoted to an excellent history of the New Testament canon, and sixty to a history of the New Testament text. It would be difficult to exaggerate the gulf that yawns between this 'Introduction' as a whole and the conservative view of the New Testament fifty years since, of which in popular preaching and teaching there are still many survivals.

—Enrique Piñeyro's 'El Romanticismo en España' (Paris: Garnier Frères) is distinguished by two excellences somewhat rare in Spanish criticism—a fine liberalism and a cosmopolitan view of literature. Both may be traced in part to the author's Cuban birth and American and Parisian residence; but his delicacy of critical touch, which has matured through a series of publications since the 'Estudios y Conferencias' of 1880, is quite his own. The present volume is modestly offered as a help to the study of Spanish romanticism for Spanish-Americans only; yet the author has much to say that must prove instructive to the Castilian as well as to the general reader. He considers the movement in a series of essays upon its principal exponents, Larra, Saavedra, Gutiérrez, Hartzenbusch, Espronceda, and Zorrilla, grouping lesser figures in supplementary chapters. But the stress of the work is critical rather than biographical, and it is pleasant to find preserved here in more permanent form several articles which we recognize as having appeared in the *Bulletin Hispanique*. The Spanish romantic school at best was a derivative growth, dependent upon France and (in less degree) England and Germany. It

differed from its French counterpart in entailing no break with national achievements of the *siglo de oro*. For the Spain of Lope de Vega and Calderón was essentially romantic, and the classical literature of the eighteenth century in the Peninsula, a purely Bourbon imposition, was readily sloughed off under foreign romantic influence. In describing these influences Sr. Piñeyro is especially happy, and the names of Hugo, Mérimée, and Dumas, of Schiller and the Schlegels, are constantly recurring in his pages. In tracing the indebtedness of Spanish authors to English, he fills out many details that are lacking in the rough indications of Prof. J. D. M. Ford's article upon the subject in the Publications of the Modern Language Association of 1901 (vol. xvi., 3, pp. 453-459). To the English reader these points of contact constitute the most interesting feature of the book, for Macpherson, Scott, and Byron profoundly impressed most members of the group, and even a writer so pugnaciously national as José Zorrilla felt, though he would not confess, the influence of Southey. It is the despotism of Ferdinand VII. that may be thanked for having practically inaugurated the Spanish romantic movement by driving from Spain for a time those political liberals naturally prepared to appreciate and themselves fulfil Hugo's definition of romanticism as "liberalism in literature." In certain matters it is difficult to follow Sr. Piñeyro's lead, as, for example, in his extravagant commendation of the agreeable poetess of Cuban birth and education, Gertrúdis Gómez de Avellaneda, who is made to surpass Sappho and most other remarkable women of literature. Apropos of Zorrilla's 'Don Juan Tenorio,' we miss any notice of Arturo Farinelli's exhaustive study of the theme, 'Don Giovanni'; but in general the scholarship is adequate, and the absence of dogmatism is refreshing by contrast with that which mars the chief previous authority for the period, the 'Literatura española en el Siglo XIX.' of Padre García.

—When the soil was removed from the Athenian Acropolis just north of the Parthenon, in the autumn of 1885, foundations were uncovered which were recognized by Dr. Dörpfeld as those of the old temple of Athena, which had been embellished by Pisistratus in the sixth century B. C. A little later were brought to light several broken statues which evidently had been overthrown by the Persians on their invasion of Attica at the time of the battle of Salamis, and had received decent burial from the Greeks on their return. Fragments of still more ancient sculpture and architecture also were unearthed. Naturally the sculpture received first attention, and very early groups which once had stood in the pediments of a larger and a smaller and still earlier temple, were in a measure restored several years ago. For at least ten years the remains of early "poros" (calcareous tufa) architecture, and of the sculpture which was connected with this, have been studied by Dr. Th. Wiegand, and he has just published the results of this study —'Die archäische Poros-Architektur der Akropolis zu Athen' (Leipzig). He determines an original temple *in antis*, built about the time of Solon, early in the sixth century B. C., which was almost exactly 100 feet in length and thence received the name of Hecatompedon. In the front pediment of this temple stood a group of Heracles contending with the Triton, watched by the three-headed "Typhon huge, ending in snaky twine"; in the rear pediment was a group of three divinities, with serpents in the angles. Pisistratus or his sons took, as a nucleus, this temple with two columns on the front, and surrounded it with columns, making it, with some changes, the cella for their more magnificent peripteral temple which was burnt by the Persians 480 B. C. Architectural fragments of five other and smaller Doric buildings are identified in this book. Wiegand's studies have been continued so long that not a few of his results have become known to scholars in Greece, but this publication contains much that is new. The plates reproduce the polychrome decoration of both architecture and sculpture. The importance of the work is the greater because of the previous wide gaps in our knowledge of the early development of Doric architecture in Greece proper, as distinguished from that of Sicily and Lower Italy.

THE REFORMATION.

The Reformation. (The Cambridge Modern History. Vol. II.) The Macmillan Co. 1904.

This further instalment of the great modern history which is to be the monument of Lord Acton's amplitude of view and constructive power, sustains the high level attained by the first volumes, and is, perhaps, somewhat superior in plan and execution to Volume VII., which appeared out of its turn a few months ago. It covers what is *par excellence* the period of the beginning and of the first phase of the religious Reformation, from the death of Pope Alexander the Sixth (1503) and arrival of Luther at Wittenberg (1508) to the end of the Council of Trent (1563) and death of Calvin (1564). Events of determinative significance for the three centuries that followed were crowded into these sixty years —events not only of political complexity, but of the profoundest interest for the history of the Church and of religion. In the preceding period, which the first volume has dealt with under the title of the Renaissance, the centre of movement and change lies in Italy, with Germany filling the second place. In the present volume, Germany comes to the front and Italy begins to fall back into that position of dependence on the fortunes of Germany, France, and Spain in which she remained down till our own time. Pope Julius the Second may be said to be the leading figure of the earlier period, the Emperor Charles the Fifth of the later; and just as Pope Julius comes up in four or five of the chapters dedicated to the Renaissance, so Charles appears in five or six of the present volume.

The scheme is still the same. Prominent persons and great movements are taken as the subjects of the several chapters, and thus it happens that the chronological order cannot be followed, and that some repetition is involved, because where ecclesiastical affairs are complicated with politics, the same event has to be noticed twice, or perhaps more frequently; and the same thing occurs when the line of development in two different countries, coming into relations with one another, is separately followed in different chapters. The loss involved in such repetition is, however, much smaller than the gain which we find in the treatment of a special topic as a special topic. It is this which gives novelty and freshness to the book. The editors deserve the utmost credit for having so thoroughly grasped the spirit and meaning of Lord Acton's design. They have in this volume reduced the difficulty of following in the order of time the march of events by adding a chronological table, an addition which we asked for in noticing the first and the seventh volumes. This table is a valuable feature in the present one; it might perhaps have with advantage been made even fuller than it is. Another suggestion which was thrown out in these columns—viz., the placing in the top corner of the page the name of the writer of each particular chapter—has not been adopted. We still find ourselves embarrassed in passing from one chapter to another, and still more in turning back from one to compare the treatment of the same person or event in another, by not knowing in whose hands we are at each moment, for it need not be said that the attitude of the various writers is different, and it becomes important to know from what point of view the event or person is being considered.

In manner and style the writers of this volume worthily sustain the standard reached in Volume I. They are careful and accurate, and give us excellent bibliographies. They are business-like, and abstain from rhetorical flights; yet they write well, clearly and vigorously, some of them with notable power. Though we can discover their sympathies, and in treating of ecclesiastical questions it is impossible not to reveal sympathies, they are almost invariably fair and dispassionate in their handling of the great issues and the great personalities. Thus the late Professor Kraus's chapter on Medicean Rome is excellent in its sharply drawn yet guarded and discriminating portraits of Leo the Tenth, Adrian the Sixth, and Clement the Seventh. Though it does not dwell with equal fulness on the general intellectual tendencies at work within the Church, it is free from any ecclesiastical bias. Still more remarkable is Professor Lindsay's chapter on Luther, a really striking and impressive presentation of the personal character and earlier career of the man who is, more even than Charles V., the central figure of this period. It is truly scientific in its attitude, a remarkable contrast to what almost any Scottish Protestant would or could have written sixty years ago. Equally large and luminous is Dr. Fairbairn's chapter on Calvin, written with the force we expect from that distinguished scholar, but so much occupied with Calvin's attitude and work as to give us a less distinct impression than we desire of the man's personality. The chapter on Zwingli and the Swiss Reformation does not reach the level of the two last mentioned either in breadth and grasp or in style, but it is free from partisanship.

The mention of these three reformers suggests a reflection that bears upon the period covered by this volume. There is a sense in which the sixteenth century may

be called the most complicated period of European history, and the period for which it is most difficult to compose a clear narrative of events. If the historian tries to follow the main stream of events and recount them in chronological order, he finds it hard to make them intelligible without constant digressions into the annals of each of the leading countries designed to explain what brought about the attitude of its rulers. If, on the other hand, he abandons the main stream, and deals with each of the great countries separately, he is driven to a tedious repetition, because many of the great conflicts and negotiations belong equally to German, to French, to Italian, to Spanish, and to English history. This unexampled complexity is due partly to the struggle over the Burgundian inheritance, the beginnings of which lie as far back as the death of Duke Charles the Bold, and to the rival claims in Italy of the house of Hapsburg and the house of Valois. But its chief source is to be found in the great religious movement which, appearing in different parts of Europe at almost the same time, though first and in its fullest strength in Germany, brought all the nations and kingdoms of Europe into a closer relation with one another than had been seen since the days of the Carolingians, when the nations and the kingdoms were but just beginning to exist. The Pope had been a spiritual monarch in all the countries; so a revolt which threatened his power drew all the countries into new bonds of alliance or of repulsion. Yet the ecclesiastical and theological struggle was constantly crossed and distorted, so to speak, by the dynastic hostilities of the great monarchs, so that there were constant changes of political attitude on the part of each; and even firm Catholics like Charles V., Philip II., and Francis I. found themselves sometimes driven into a more or less avowed support of heretics. Thus the problem which the present volume has placed before the editors is perhaps the hardest of all those they have had or will have to deal with in the whole of their enormous task.

That the problem has been completely solved one can hardly venture to affirm. Several of the chapters traverse the same subject, regarding it from different points of view, and are obliged to describe the same events over and over again. This is especially the case with regard to Germany, which occupies seven or eight of the nineteen chapters that compose this volume, though a considerable part of two of those chapters is devoted to the Italian policy of Charles V. England stands rather more apart, and is treated with a fulness which would be disproportionate were not the book intended primarily for the English-speaking world. Four chapters are allotted to it. Dr. James Gairdner writes of Henry VIII. He writes with a fairness and good sense which is particularly welcome to those who recall the outrageous vagaries and perversions of Froude, and the partisanship into which other writers, far superior to Froude, have been by their religious sympathies sometimes betrayed. The brief summing up which he gives of Henry's character and policy will commend itself to most unprejudiced minds, though it perhaps hardly sufficiently brings out the remarkable moral change which showed itself as the King grew older. He made for himself in his early years a reputation and a popularity on which he continued to live for some time after he had ceased to deserve it and had become one of the most repulsive ruffians of his age.

"The reign of Henry VIII. has left deeper marks on succeeding ages than any other reign in English history. Nothing is more extraordinary than that within less than a century after Fortescue had written in praise of the Constitution and laws of England, a despotism so complete should have been set up in that very country. But it was a despotism really built on the forms of the Constitution and due mainly to the remarkable ability of the unscrupulous King himself, who was careful to disturb nothing that did not really stand in his way. . . . Henry VIII. was really a man of consummate ability, who, if his course had not been misdirected by passion and selfishness, would have left a name behind him as the very founder of England's greatness. Not only was his judgment strong and clear, but he well knew how to select advisers. To talk of parliamentary control is out of the question. The King called Parliament only when he wanted money, or when he wished despotic measures passed with a semblance of popular sanction. But the forms of parliamentary legislation and control were kept up; and thus, with weaker kings and a more effective popular sentiment, the ancient assembly afterwards proved able to recover all and more than all its former authority. . . . No king was at first more devoted to the Church or more anxious to stand well in the opinion of his subjects. Nor could it be said that the Church's yoke was a painful one to mighty potentates like him. But wilfulness and obstinacy were very strong features in Henry's character. Whatever he did, he must never appear to retract; and he had so frequently threatened the Pope with the withdrawal of his allegiance in case he would not grant him his divorce, that at last he felt bound to make good what he had threatened. . . . He was anxious to show that the faith of Christendom was maintained as firmly within his kingdom as ever. He made Cranmer a sort of insular Pope, and insisted on respect being paid to his decrees—especially in reference to his own numerous marriages and divorces. But beyond the suspension of the canon law and the complete subjugation of the clergy to the civil power, he was not anxious to make vital changes in religion, and both doctrine and ritual remained in his day nearly unaltered" (pp. 462-4).

The Reformation under Edward VI. is treated of by Professor Pollard, who has also contributed four out of the chapters devoted to Germany; while the reign of Philip and Mary is allotted to Mr. Bass Mullinger, and the Anglican settlement under Elizabeth (together with the Scottish Reformation) to Professor Maitland. Scotch readers will complain of the lumping together of these two topics in one chapter; for the result is that the striking incidents that marked the religious revolution in North Britain, and which have obtained a dramatic interest for the world from their association with the romantic career of "vielgeplagte, vielbescholtene Helena," Mary Stuart, lose their connection and their dramatic interest by being crushed into the interstices, so to speak, of an outline of the history of England during the earlier half of Elizabeth's reign in England. If the Scotch story was worth telling, it ought to have been told as a story by itself, and the whole of it. The present volume leaves us in the middle. Mr. Maitland writes with his accustomed brilliancy. He has a gift for going to the point and for telling and vivid phrases. But his turn for epigram sometimes leads him perilously near obscurity, and clearness is, after all, next to accuracy, the first of historical merits. It has now become the fashion—a fashion palpable and even wearisome in Mr. Andrew Lang's History of Scotland—to sneer at John Knox, by way, perhaps, of restoring a balance after the undue glorification given him by his countrymen seventy or eighty years ago. Still, one is a little surprised to find it said that "Knox had no mind for martyrdom," merely because he quitted Scotland at a time when he would certainly have been put to death had he remained. The most courageous man—and few men were more courageous—may withdraw himself from imminent danger when he can do so with honor.

The Scandinavian kingdoms as well as Scotland come for the first time into the story of these volumes. They are, however, treated too briefly to permit the narrative to have the sort of interest that belongs to the German or Italian or French parts of the book. The inexorable limits of space exclude the necessary explanations of the economic and social conditions of these outlying lands. One great merit, however, the volume has which must be noted before we part from it. Like the first volume, it leaves, with all its complexity, a broad and tolerably definite impression. As in Volume I, one felt through all the chapters the movement of that new spirit which we call the spirit of the Renaissance, so in this volume we everywhere are met by the new forces that are at work in the sphere of religion, and feel how they interpenetrated politics, creating new affinities and new antagonisms. Moreover, we are led to realize in a way which perhaps no preceding history has brought out, the relation of the literary movement of the latter half of the fifteenth century to the religious movement of the earlier half of the sixteenth. This relation appears not only in the leaders of religious thought, but also in the body of educated or semi-educated men upon whom their influence first fell. The ground had been cleared, thought had been stimulated, minds had been prepared to discard old ideas and welcome new ones. And it is interesting to observe that this is the last period in European history in which the thinker and the scholar find themselves almost equally at home in other countries and in the country of their birth. The love of learning and religious sympathy form bonds which overleap differences of speech and of political allegiance, and make the lands that lie between the Vistula and the Atlantic one intellectual commonwealth almost as fully as were the lands between the Euphrates and the Atlantic in the first ages of Christianity. After 1600 not only has the unity of the Church vanished, but the various reformed churches have been divided by mutual jealousies. There is no more a *respublica Christiana*.

LEE'S HISTORY OF NORTH AMERICA.

The History of North America. Guy Carleton Lee, editor.—Vol. I. Discovery and Exploration. By Alfred Brittain, in conference with George Edward Reed. Pp. xxiv., 511.—Vol. II. The Indians of North America in Historic Times. By Cyrus Thomas, in conference with W. J. McGee. Pp. xx., 464.—Vol. III. The Colonization of the South. By Peter Joseph Hamilton. Pp. xxiii., 494.—Vol. IV. The Colonization of the Middle States and

Maryland. By Frederick Robertson Jones. Pp. xxiv., 532. Philadelphia: George Barrie & Sons. 1904.

When a coöperative history of America in twenty volumes, laying special claim to completeness and "definitiveness," is heralded in advance of publication by advertising of the most elaborate sort; when its claim to favor, based in large part on alleged conformity to plans virtually endorsed by a great learned society, is publicly challenged, also in advance, by a scholar of repute; when the prospectus shows a formidable array of consulting and advisory committees of librarians, college presidents, editors, and military and naval celebrities; when the several volumes are introduced by the general editor with fulsome praise for the author and with wordy comment on the significance of the period; and when, to crown all, the publishers kindly furnish for editorial use four carefully prepared reviews, one of fifteen columns, a modest reviewer may well feel that the task of appraisal is not only difficult, but downright precarious. If, by any chance, impartial examination shows that the work, notwithstanding the preliminary puffing of it, is nevertheless in the main a meritorious performance, the judgment is likely to be taken as in some measure a justification of the advertising methods of publishers and editor; while if the reviewer, having in mind the peace of his own soul or the intellectual welfare of the community, finds in the volumes matter for condemnation, it will of course be proof positive that he has not read the book, but only the prospectus, and is probably himself on the staff of some forthcoming rival series.

The four volumes noted above are the first instalment of the "definitive" History of North America which Dr. Lee has undertaken to edit. A volume on "Prehistoric North America," which one would expect to find near the beginning of the series, is postponed in order that the author may avail himself of "certain research work now in progress"—a phrase whose real meaning only the initiated will comprehend. The History is to be illustrated by one hundred and twenty photogravure plates and more than a thousand other pictures, most of them, we are told, from photographs made expressly for the occasion. So far as the volumes before us go, the illustrations are well chosen and commendably executed, though their distribution seems to be without particular regard to the immediate text. The volumes are of substantial octavo size, attractively printed on good paper. The work is dedicated to the American Historical Association. Inasmuch as the Council of the Association, after having endorsed the plan of a coöperative history and submitted it to the Association, later found reasons for adjudging the preparation of such a work under the auspices of the Association inexpedient, Dr. Lee's dedication is not devoid of grim humor.

Recent years have so familiarized us with the coöperative history that nothing special need be said here regarding the merits or limitations of the plan. In the field of American history the only notable example of the method thus far carried out on a large scale is the great 'Narrative and Critical History' of Justin Winsor. Winsor's work, however, is valuable chiefly for its wealth of bibliographical learning, while its disproportionate attention to cartography and the colonial period makes it in no sense a well-balanced book. In American history, however, where the quantity of material is very large in proportion to its chronological limits, and where the dependence of the history of one section upon that of another is not always close, the coöperative method has obvious advantages; and there has certainly long been need of a comprehensive work which should sum up, with a scholar's accuracy and discrimination, the results of recent investigation. Dr. Lee has aimed to supply this lack in a series which shall avoid the particular pitfalls that endanger cooperative narration, namely, arbitrary arrangement, repetition, overlapping, and obtrusive inequalities of treatment and style. At the same time, he has worked for the general public rather than for scholars, for the uncritical rather than the critical reader. The criterion, accordingly, is inevitable: admitting that the work was worth doing, has it been so done as to give, in popular shape and tone, an accurate, duly proportioned, and impressive view of American history?

The publishers, with a wealth of iteration, assure us that it has, and the editor in his preface continues the refrain. We would gladly believe, without further inquiry, that such is the fact; for if there is anything which the historical student desires and the public ought to have, it is a "definitive" history. Unfortunately, Dr. Lee has made a critical estimate of the work of his contributors extremely laborious by the practically complete exclusion of references to authorities. A "definitive" history of North America would, we imagine, contain not only much that is new, but also much that has not hitherto been coördinated with the mass of previously accepted data; but to offer the public such a history without telling where the new material comes from, or why it is used as it is, is to run the risk of producing a work which scholars will not think it worth while to spend time over. We do not say that the matter in the four volumes before us is not all true. All we affirm is that, the customary means of testing it being lacking, the work cannot be quoted as authoritative. We cannot but think it unfair, too, to the writers of the volumes to deny them the privilege of vouching in the usual way for the truth of their statements and the thoroughness of their research.

Turning now to the individual volumes: Mr. Brittain's volume on "Discovery and Exploration" deals with the exploration of the coast and the interior by the Spanish, French, Dutch, and English, down to the beginning of the seventeenth century, the survey ending with the first permanent settlement of Virginia. The author, in the language of Dr. Lee's preface, has "woven his narrative from the very words of the discoverers and explorers and their contemporaries." In fact, the book consists for the most part of extracts, often lengthy, from contemporary sources, strung together so as to make a continuous narrative. The apportionment of space seems to have been determined somewhat by the availability of the material. Thus, the first chapter is a sketchy review of classical and mediæval geographical ideas, with principal reference to Vinland and the Northmen; the Sagas being quoted from at length. Then follow a chapter on the life of Columbus before 1492, three chapters on Columbus's first voyage—chiefly the journal—and one chapter on the remaining voyages. The same method obtains throughout. The text contains only occasional and incidental references to authorities, and the translations of the documents are uncredited. The many questions of critical scholarship which recent study of this early period has raised are little referred to, nor is the connection between the exploration of the New World and the general growth of geographical knowledge well brought out. As a whole, Mr. Brittain's volume—so much of it, that is, as is not simply source material—is creditably written; the unusual method is skilfully applied; but the book makes, obviously, no new contribution of importance to the period of which it treats, nor gives, on the whole, an especially good view of it.

Dr. Thomas's volume on the Indians, on the other hand, shows evidence throughout of sound learning and good judgment, and undeniably fills a distinct void in our historical literature. For the first time, in a scholarly way, the Indian history of North America is brought together in narrative form, and dealt with, not as a mere addendum to the history of the European conquest, but as an historical factor of independent importance and vital significance. The general method is that of taking the Indians by tribes, groups, and race stocks, tracing the internal history as far as known, and following the course of contact with the whites. The narrative, as a whole, is brought down to the present time. We recall no author who appears to have used so thoroughly the mass of recent scientific data concerning the Indian, or who has appraised with such discretion and wisdom the Indian character. Examples of the latter quality are numerous, as good a one as any occurring on pages 127, 128, where Penn's Indian policy is discussed. The last two chapters treat of the Indian policy of the United States, and of the Indians as a race and as a factor in American history. Dr. Thomas is careful to distinguish between the policy of the Government and its enforcement, finding in the former much to commend. Despite the prohibition of footnotes, the author contrives to introduce into the body of his narrative numerous references to or criticisms of authorities, with happy results for the scholarly impression of his work, though here, as elsewhere, the principal sources of the material are not indicated. The pictures of Indians are exceptionally good, but it is a pity that the very useful ethnographic maps were not drawn on a larger scale.

Dr. Thomas revives much of the history of the Indian; Mr. Hamilton restores to us the history of the French and Spanish colonies in the South. His account of the English settlements is good, though in no respect novel or distinguished save, perhaps, for the skill with which a considerable mass of detail is handled and the careful summaries of legal and governmental institutions and of social life in the colonies. The account of Virginia shows constant indebtedness to Alexander Brown, to whose devoted labors Mr. Hamilton pays deserved tribute in his preface; and the sketch of Carolina has profited by the work of McCrady. With the history of the Gulf col-

onies, however, Mr. Hamilton is on his own ground, and he has succeeded, better, we think, than any one else, in restoring to its proper place in the story of American origins the history of the settlements at New Orleans, Mobile, Pensacola, and in Florida. The account of British Florida, based on the Haldimand papers and other manuscript sources, is offered as "almost original." Further, the connection between European events and the movements in America, especially in the eighteenth century, is adequately emphasized. Mr. Hamilton's style, though lacking in dignity, is lively and readable, and he has succeeded in bringing out something of the romantic charm of the early South which Dr. Lee, in a remarkable preface, dwells upon as the antithesis of New England "realism."

A somewhat similar service has been performed by Dr. Jones for the history of the Middle colonies. Dr. Lee's introduction dwells on the lack of interest on the part of the people of the Middle States in their own history, and on the fact that the Middle States have never advertised themselves as have New England and the South. Whether or not the dictum has anything more than a piquant suggestiveness to commend it, it is certain that the annals of the Middle group of English colonies have commonly been looked upon as relatively uninteresting. Dr. Jones has sought to show that the Middle colonies "possessed important characteristics and interests in common," and therefore "present a territorial and political unity that admits of a special and independent study." If he has not wholly succeeded in his aim, he has at least written a valuable and readable book. His five chapters on the first half of the eighteenth century will do much to rehabilitate, for the average reader, this neglected period. The seventeenth century offers less field for originality, but there is a good account of New Sweden and of the important relations between the Dutch and the English. Chapter viii., on the "Migration of the Oppressed," is an instructive account of the immigrating sects and communities that found asylum in America. On the other hand, there is not much in the book about social matters, and only moderate notice of economic conditions. We hope, too, that the two chapters on the eventful years 1754-65, with which the volume closes, are not all that Dr. Lee's History plans to devote to Revolutionary beginnings.

Bearing in mind its popular purpose, and with the reservations already noted, we are glad to commend the first instalment of this ambitious history. Of the four volumes thus far put forth, Mr. Brittain's is the least satisfactory and Dr. Thomas's the most important scientific contribution; while the two others, though not as a whole notable for originality or breadth, are straightforward, useful narratives. If the style nowhere attains distinction, it is at least nowhere dull. We do not think that the popularity of a work which places special emphasis on "definitiveness" would have been lessened by judicious footnotes or bibliographies. The only really objectionable parts of the volumes are the editor's prefaces. If these could be shorn of their glib generalizations and complimentary ascriptions, the interests of literature as well as of history would be conserved.

MALLOCK'S VEIL OF THE TEMPLE.

The Veil of the Temple; or, From Dark to Twilight. By W. H. Mallock. London: John Murray: New York: G. P. Putnam's Sons.

In order to discuss the antagonism between Science and Religion and to effect a reconciliation, or at least a compromise, Mr. Mallock assembles a small but select company at a country house, situated indefinitely on the Irish coast; a house remote from the stress of modern civilization, yet an example of all which that can do for making life perfect, materially speaking. The device has probably been adopted to lighten the solemn spectacle of physical science annihilating God, Freedom, and Immortality; and certainly it has deprived the operation of a certain not undesirable dignity and impressiveness. It also adds to the cares of the trained librarian, who will hesitate to place the volume among Mr. Mallock's works of fiction for fear of disappointing the frivolous, or among his direct contributions to religious and social controversy for fear of enraging the earnest thinker.

The people who sit metaphorically before "The Veil of the Temple" in Mr. Rupert Glanville's ancestral abbey or drawing-room or moonlit garden are not exactly asking what it profits a man to gain the whole world and lose his own soul. The world and its pomp, power, and corruption are already theirs, and they show no inclination to part with a penny or a vice in exchange for a soul, only a polite willingness to accept an arrangement whereby the comfortable assurance of a soul may be added to their other possessions. Mr. Glanville has long been preoccupied with his own sensations, much wrought upon by failure to harmonize his rational beliefs and religious sentiment, and at last driven to call his friends about him and thrash it all out with them. He summons Mr. Seaton, a speculative, philosophical Scot; and Mr. Hancock, a sensible, self-made, tuft-hunting Englishman; and several aristocratic friends whose condescension in having minds and wishing to have souls is nicely appreciated by Mr. Mallock. He permits them intermittently to assert their proper position by talking scandal and by displaying that cold sensuality which he so frequently assumes to be the high prerogative and happy practice of the great. Their attitude towards the entertainment provided for them is prettily indicated in a remark made by Mrs. Vernon: "I was once told by a friend of mine to read Dr. Sanday's writings, as he put the case for belief in an absolutely convincing way. I couldn't do so at the time, because I had to go to Ascot." But, for so flippant a lady, she holds up her end in admirable language.

After some preliminary expression of views by the amateur theologians, professional aid is sought from Ballyfergus, described by Glanville as a "grand resort of the clergy, where a clerical hotel has been started with a low tariff, a chapel, and a room for religious conferences." No invitations are declined, and the coterie gets its fill of sermons while the professionals get their fill of victuals and drink, of a quality not dreamed of in the low-tariff hotel. The State Church takes precedence. There are three representatives—an old-fashioned parson, an advanced canon, and a high-church priest. Then follow Mr. Brompton, a light of the ethical church, and Mr. Brock, presumably a suitably plebeian substitute for the name Herbert Spencer. Mr. Seaton speaks for rationalistic and idealistic philosophy. The mind of the Church and its attitude towards modern criticism are expounded pretty fairly, with only slightly malicious exaggeration, but Father Skipton is a rather gross caricature. To the credit of the inquiring listeners be it said that, during his performance, they silently crept out of the chapel, leaving him and a female devotee sprawling and shrieking amidst his embroideries and candles.

Mr. Brompton accepts the definition of religion already reached—"a desire, accompanied by a belief in the possibility of its actual satisfaction, for some larger kindred life into which by moral conduct the individual life may expand itself," but his offer of Humanity as that larger life, Comte's "Great Being," exposes him to derision.

Brock stands manfully for the evolution of the universe and its contents from cosmic stuff of unknown parentage, and Seaton, with marvellous lucidity for a philosopher, proclaims that reason, freedom, and moral sense are matters of direct apprehension, and disposes of physical science and the material universe by declaring that the only realities are God, or the Supreme Mind, and the human mind, and that religion is ecstasy produced in the lesser by contemplation and adoration of the greater.

The verdict on all this is that the dogma of Christianity has been irretrievably destroyed by the higher criticism and scientific demonstration; that Natural Theism collapses before the profound truths of Evolution; that Humanity is a ridiculous God; and that regular development from a single principle, an unknowable, is unthinkable. Nevertheless, the existence of religious impulse is admitted, and Mr. Glanville is called on to review and criticise the desolating conclusions, and to indicate, if possible, some means whereby this impulse may connect itself as it once could intellectually with "any scheme of existence which the intellect will permit it to accept." He performs the duty thoroughly and brilliantly, arguing, for the validity of the mystical faculty, that science has not proved the reality of things outside the individual mind, and, by its conception of the cause or substance out of which we have all risen, compels us to accept what are for the intellect contradictions. Therefore, he continues:

"If we find any good reason for assenting to the doctrines of religion, though these are absolutely contradicted by the detailed demonstrations of science, we do no more violence to our intellect by simultaneously accepting both than we do by accepting the demonstrations of science itself, which have their root in contradiction equally or even more unmanageable."

He suggests a meeting-ground for religious feeling and intellect in theories similar to those advanced by the Pragmatists—arguments most persuasively set forth in a series of essays by Mr. William James. These theories, though very attractive, are to some minds far from convincing; and if Mr. Glanville's audience had not by this time been in a state of exhaustion, it would not have been so easily satisfied that the validity of a belief is intellectually proved by its general presence in some form and its usefulness for living worthily and

happily. He hastened to clinch his argument by allowing great license as to the character of religious aspiration and its object, offering a wide choice of "a Something which is beyond ourselves and which yet responds to us with a promise of future union." From the Somethings offered, Lord Restormel promptly chooses the Eternal Feminine, and Mr. Mallock seems thus to laugh profanely not only at his subject, but at the fools who take an interest in it.

Through the whole discussion runs the error of ascribing to the knowledge accumulated by scientific labor too much power to destroy the legitimacy of religious belief. Each separate science, attending to its own business, has given accounts of facts ascertained within its own boundaries, and the attempts by piecing these facts together to account for the whole of life establish nothing, and rest at Mr. Hancock's refuge, a working hypothesis. Only a few enthusiasts ever believed that science had put God and immortality out of court, or that it "has stripped us of everything that gives worth to us in our own eyes."

"Science," says a very modern philosopher, "consists in the full and coherent description of facts of experience; experience being the most general term to describe the character of all that goes on in the universe." So far, no such account has been given. When it is given, the work of science will be done. Philosophers as well as scientists and speculative novelists will be forced to retire from business. We shall really be as gods, knowing everything; and though the state of certainty cannot be so interesting as our present one, let us hope that it may be blissful.

Francis Parkman. By Henry Dwight Sedgwick. (American Men of Letters.) Boston: Houghton, Mifflin & Co. 1904.

The series to which this volume is now added would manifestly be incomplete without a biography of Parkman; but if Mr. Sedgwick's book did not do something more than satisfy this formal exigency, it would be below the level of the writer's reputation and the public need. If it does not fail in both of these particulars, it is in neither of them quite satisfactory. Mr. Sedgwick seems to have been hampered by his consciousness of the excellence of Mr. Farnham's biography as an analysis of Parkman's work in relation to his personality, and to have said, like Michelangelo of Brunelleschi's dome, "Better than thee I cannot, but like thee I will not." By this refusal he has debarred himself from the most characteristic action of his critical faculty, while at the same time he has failed to utilize Mr. Farnham's neglected opportunity and give us a criticism at once large and particular of Parkman's histories. Mr. Sedgwick's book is equally with, if not more than, Mr. Farnham's a representation of Parkman's personality. The nearest approach we have yet had to any generalized view of Parkman's work is Mr. John Fiske's introduction to the later edition of Parkman's Works.

One fruit of Mr. Sedgwick's determination to make a different book from Mr. Farnham's is a much fuller use of Parkman's letters and journals than his predecessor's, and a much more expansive treatment of his early life. In a whole of 326 pages, 216 are devoted to the years preceding the publication of the 'Conspiracy of Pontiac,' the first of his historical books, though dealing with an afterclap of the events narrated in the subsequent volumes. Of these 216 pages much the larger part is in Parkman's own words, the pages of his 'Oregon Trail' being freely drawn upon for the story of his foolhardy Western adventures. Whatever potentiality of mishap was hidden in Parkman's physical inheritance, it is evident that to his overdoing in the new Harvard gymnasium and to his ambitious overstrain upon the Western plains was due most of his suffering and disability. Our best account of these is Parkman's letter to George E. Ellis, published in Farnham's Life. Mr. Sedgwick publishes in an appendix a very similar letter to Martin Brimmer. Parkman had imitated so faithfully the Spartan boy hiding the savage fox under his cloak, that the story of his hindrances and suffering, when published, was a startling revelation, even to his friends, except those of the most intimate circle. The continuity of his purpose and performance would be remarkable had these been associated with vigorous health. One of the greatest disappointments of his life was that he could not be a soldier in our civil war. It is certain that he would have been one of the most striking figures on that memorable scene; one of the most efficient, as well as courageous, of our generals; also, one of the least compassionate. It has been significantly remarked that he never has a word of reprobation for the cruelty of war. For this, as for the tortures he describes so placidly in 'Pontiac,' he had an almost Chinese indifference. His early eagerness for action was intensified as he grew older by the prohibitions of his lameness, blindness, and other disabilities. But, had he fought through the war from Sumter to Appomattox, he could not have exhibited a more inflexible courage than that with which he met the shock of physical anguish, steadily renewed from day to day.

An interesting feature is the amount of knowledge that he brought to his first travels in the region which was to be the principal scene of his histories. An instinct for knowing what he wanted was highly characteristic of his unwearying hunt on the long trail which, on setting out, he thought would hold him twenty years. In the event it held him more than twice that length. But corresponding to this extension there was a marked extension of his plan. This was at first to write a history of the 'Old French War.'

"It was not till some years later that I enlarged the plan to include the whole course of the American conflict between France and England, or, in other words, the history of the American forest; for this was the light in which I regarded it."

Mr. Sedgwick hesitates at the praise which ranks Parkman with Gibbon, but in this enlargement of his plan there was an agreeable resemblance to Gibbon's enlargement of his from the decline of Rome, the city, as he first apprehended it, to the decline and fall of the Empire. When we consider that Parkman reckoned his loss of time through sickness as three-quarters of it all, it would seem that he considerably overestimated the time necessary for the accomplishment of his task—that ten good years would have been enough for this. But hardly would the work, done so swiftly, have been what it now is. The brooding habit of the intolerably inactive years brought many living things to birth.

Mr. Sedgwick's inclination is to regard Parkman's early journals as rhetorical exercises, whereas Mr. Farnham thinks they were the practice of his 'prentice hand in exact description of things, persons, and events. Neither opinion gets much support from the first instalment of the history, which, rhetorically, was far more florid than the journals and far less realistic. Theodore Parker found its descriptions of the forest, which Parkman loved so exceedingly, too much generalized. "You do not tell us what kind of trees, etc., these were; only trees." In one respect the man's gain on the boy was immense. The temper of the early journals is habitually of the *nil admirari* sort. He "would not give a damn for all the churches and ruins in Rome," and he has a way of persecuting animate persons and inanimate things, and worrying them with epithets, which is entirely foreign to the temper of his books.

Nowhere else does Mr. Sedgwick warm to his work so eagerly as in his chapter descriptive of Parkman in his flower garden, cultivating his roses and lilies with assiduous care. A quite breathless tale is that of his marriage of the Lily Beautiful and the Lily Golden, from which came the *Lilium Parkmanni*, the most signal of Parkman's floral victories. There is not a line too much of this; but a more important matter—Parkman's social and political opinions—is neglected to a degree, in painful contrast with the brilliancy of the flower-garden episode. Here again Mr. Sedgwick seems to have been deterred by the good things that Mr. Farnham had said before him. But Parkman's relation to the anti-slavery conflict is indicated forcibly, if not powerfully, in a letter of November 10, 1850:

"Just now we are on the eve of an election—a great row about the Fugitive Slave Law, and an infinity of nonsense talked and acted on the subject. A great Union party is forming in opposition to the abolitionists and Southern fanatics. For my part, I would see every slave knocked on the head before I would see the Union go to pieces, and would include in the sacrifice as many abolitionists as could be conveniently brought together."

For this Mr. Sedgwick pleads "a certain extravagance, half in jest, half in relief of his humors," but it is significant of Parkman's attitude towards the entire body of humanitarian reform. A little grain of it in any person or movement was enough to make him sour. He was aristocratic in his politics, as in his tastes; with as little faith in the people as his admired Hamilton. Universal suffrage was intolerable to him; women's suffrage more so, if possible, and all efforts for international peace or social amelioration. Yet there was the spirit of a reformer in him also. The condition of the civil service evoked it, the abuses of municipal politics, the corruption of the legislature and executive. In its total manifestation his character was less simple than dual, and no pages of Mr. Sedgwick's book are more instructive and appropriate than those of his "More Intimate Chapter," in which the man's obverse of hard and gritty stoicism is qualified by a reverse of playfulness and kindness, with appreciation of such genuine sympathy as required few words for its expression. Perhaps both Mr. Farnham and Mr. Sedgwick

are well advised in attaching themselves preëminently to the man's character and experience rather than to his work. Of this sufficient has not yet been said, but it speaks well for itself.

North America. By Israel C. Russell. (Appletons' World Series: The Regions of the World. Edited by H. J. Mackinder of Oxford.) 1904. Pp. 435, 8 colored maps, and 39 other illustrations.

Professor Russell states that his aim has been to "give a condensed and readable account of the leading facts concerning the North American continent which, from the point of view of the geographer, seem most interesting and instructive." Unfortunately, limitation of space has required the exclusion of several chapters that had been prepared on political and economic geography—only a short discussion of boundaries being preserved—so that the book as published is for the most part concerned with physical geography (land forms, coastal features, and climate) and with the distribution of native plants and animals; but to this are added chapters on the geology and the aborigines of the continent. Nevertheless, the volume certainly realizes the author's aim. There is an abundance of entertaining matter in which the results of modern studies are well set forth.

Thus, in the chapters on coast and land forms we learn of the unusual steepness of the submarine mountain flanks whose summits rise in the islands of the Antilles, and of the absence of features due to erosion such as characterize continental ranges, as if the submerged ranges had been originally folded up under the sea; of the drowned river valleys by which our mid-Atlantic coast is so plentifully embayed, and of the off-shore wave-built reefs, by which the embayments are so largely enclosed from the outer ocean; of the Appalachian ridges that stand as monuments of the difference of altitude between the surfaces of the two peneplains to which the range has been so generally reduced. The chapter on climate tells of the West Indian hurricane with its calm central "eye," of the drying chinook wind on the Western plains, as well as of the special features of various climatic provinces. The chapter on plants and animals gives a careful account of the flora and fauna of the continent, where one may learn of the palm, the mahogany, the cacao tree, and their many fellows; of the buffalo, the moose, the beaver, and their neighbors, not forgetting the unsavory skunk. Indeed, the information on all topics is so carefully selected and so well presented that the book must immediately take a valued place in all libraries of reference.

There are certain points, however, in which the descriptions are not all that could be wished. The Appalachian Mountains are described as "long, narrow ridges," although this simple statement has no proper application to the bulky domes of North Carolina; and the mountains of New England and the eastern Canadian provinces are unsatisfactorily set outside of the Appalachians. The ranges of the Great Basin are said to have a steeper slope, which represents the upraised side of a faulted block of earth-crust, and no sufficient indication is given of the extensive erosion that the block face has suffered. The explanation of the chinook wind is deficient in failing to bring clearly forth the physical processes that determine its peculiar warmth and dryness. The extraordinary diversity of language stocks among the Californian aborigines is accepted as involving "a very long period of time" for its evolution, although the principle on which this deduction is based is here strained towards, if not to, its breaking limit.

It is with regret that we feel impelled to add that the chapters on geology, plants, animals, and aborigines are not treated from a sufficiently geographical point of view. They contain much information, as has already been pointed out, but the information as presented might be transplanted to books on geology, botany, zoölogy, and ethnology, and be even more at home there than it is in this professedly geographical handbook. For, as Hettner has lately expressed it, things of these various kinds are not of geographical essence in themselves, and they become geographical only through a certain kind of consideration—namely, a consideration which presents them as environing or environed elements, and not as isolated, independent elements of the region to which they belong. The accounts of bear and deer, the descriptions of changes in continental outline during the Cretaceous period, and other examples of the same kind, are presented in a way that is appropriate enough to zoölogy and geology, but that lacks too often the essential quality of geographical discipline. The proffered opportunity of teaching the most characteristic quality of modern scientific geography has been to too large an extent neglected.

Certain pages are open to criticism in another respect: there is sometimes a descent to elementary statements that are out of place in a book of so generally a mature style as this. For example, the change of seasons and the variations of day and night are explained as the result of the inclination of the earth's axis to the plane of its orbit (wrongly stated as 23° 27′); and space is thus lost that might be given to better things. The origin of offshore sand reefs ought to be learned elsewhere by readers of such a book as this, if it be unknown to them; and the fifteen lines given to this elementary problem could then be devoted to the cusps of the Carolina coast, which are well figured, but not explained. It must, however, be admitted that there is some provocation to this irregular combination of elementary and advanced material in the curiously ragged state of public education on geographical matters; but it is an open question whether deference to this ragged state is a good means of correcting it.

The small number of illustrations and diagrams is an unsatisfactory feature of the series to which this volume belongs.

Success among Nations. By Emil Reich. Harper & Brothers. 1904.

We fear that a nation desiring to learn how to be successful would be disappointed in this book. It may furnish schoolboys with some of the sounding and meaningless sentences wherewith they love to besprinkle their graduating orations, but it is hard to conceive of what use it can be to any other class. It purports to "initiate the reader into the psychological view of history, by giving, in outline and by means of a few illustrations, a bird's-eye view of the human forces that have raised some nations to the glory of success, while their absence has prevented other nations from holding their own in the battle for historic existence." But the method of obtaining this psychological view is, unfortunately, not generally available. "There is little danger of exaggeration," Mr. Reich tells us, "in stating that most opinions held by one modern nation on the others are wrong." But "nothing short of lengthy struggles for existence in a modern country will give one the opportunities by the close analysis of which one may arrive at the real soul of a foreign nation."

The most obvious inference from this is that it is vain to hope to "arrive at the real soul" of an ancient nation. Struggle as one may, one cannot struggle for existence among the Hittites or the Carthaginians. Nor can it be admitted that struggling for existence in a modern country qualifies one to understand the forces that have affected its progress. Such struggles are too engrossing to allow leisure for historical investigation, and Mr. Reich is careful to tell us that it is "a very rare exception" for an Englishman to know much about England or an American about America. No doubt the intelligent foreigner notices peculiarities to which the natives of a country may be blind; but he is apt to generalize from insufficient observation, and to exaggerate the importance of what strikes him as novel.

Many of the propositions here advanced are undeniable. The ancient Peruvians and Mexicans and Egyptians and Babylonians are certainly not regarded as intellectually successful; but the fact that the soil of their countries was rich is hardly sufficient to explain this phenomenon. China, we have been told before, is unprogressive; but the alluvial plains of the Hoang-Ho do not exhaustively account for this intellectual stagnation. We are assured that poverty is not conducive to man's real progress, and that a certain degree of comfort is essential to the development of a higher civilization. We do not dispute these statements, but as generalities of this kind are tolerably familiar, it hardly seems worth while to make a book of them. Those who enjoy them can take down their Buckle and find all that they require.

Not all of Mr. Reich's propositions are of this safely conventional description. He asserts that the French colonial empire would prove an immense source of capital in the event of European war. "Europe, as a whole, has been completely successful." "The statistical returns of moneys devolving by inheritance show a total for France nearly thirty times as great as those for England, Austria, or Germany." The "success" of Europe seems to be attributed chiefly to the wars that have desolated that continent. "Each square foot of European soil has cost thousands, not to say hundreds of thousands, of European lives." As there are 27,878,400 square feet in the mile, and as the area of Europe is some 3,700,000 square miles, if we allow but 2,000 lives to the foot, we reach the appalling total of over 200,000,000,000,000,000 lives as the cost of the European territory. In the light of these figures we find it impossible to concur in the assertion that, "should

the agitators for international disarmament and the abolition of compulsory military service meet with success, it will be an evil day for the Continental countries."

Major André's Journal. 1777-78. Boston: The Bibliophile Society.

In two beautiful volumes, illustrated by many finely executed maps, the Boston Bibliophile Society issues what purports to be a journal kept by "Captain" John André from June, 1777, to November, 1777, with a break in the record from January to June, 1778. The maps and plans, forty-four in number, stated to have been drawn by André, are very beautiful drawings, some being colored and very elaborate in detail and finish. Senator Lodge supplies an introduction. The journal adds little to our information as to the movements of the British army, but any record from André's pen would possess a certain interest. It may be said at once that the maps are of the highest value, and are finer examples than any series of military maps of the Revolution known in any collection outside of the War Office. The reproductions are all that can be desired, and it is only to be regretted that the edition is so small, as they should be available for every student of the military history of the Revolution. They should have been issued in atlas form.

The history of this journal, so far as known, is briefly told in the letter of the agents who sold the manuscript to an American collector. "The journal was recently discovered by Earl Grey, on his opening at his house a box that had not seen daylight for at least 100 years. . . . Major-General Grey and André were exceptionally intimate friends, and hence the preservation of this MS. amongst Earl Grey's papers. It was probably brought home by Grey to show what he had done." André's name or signature nowhere appears in the journal, and the writing was identified by a photograph of a letter vaguely described as being "in America." This letter is the well-known request for a soldier's death, written to Washington after sentence to be hanged.

It is strange that more attention was not given to identifying so important a manuscript, and the journal and its contents raise some difficulties. The army lists show that Captain André became an aide to Major-General Charles Grey in 1777 or 1778. In September, 1779, he served as aide to Sir Henry Clinton, but did not receive his major's commission until August, 1780. Grey was made colonel of the Twenty-eighth Regiment in March, 1777, and André was a captain in the Twenty-sixth Regiment. So far as dates and rank are involved, the journal may have been written by André. But how can the statement of the agent regarding the exceptional intimacy existing between the two men be reconciled with the fact that not a scrap of André's writing could be found in Earl Grey's collections, not so much as would serve as an example for testing the writing of the journal? Further, if Gen. Grey was solicitous about his service, and almost every one connected with the campaigns of 1777 and 1778 had reason to expect investigation, would he not have saved some other records than a journal by his aide? And would not a complete record of the year be a better defence than one that said nothing of some six months of the period? The record was probably a personal journal of the writer, one who was at headquarters and therefore in a position to know what was being done. It was not an "official" document. This is not convincing as to the authorship, nor does it aid in explaining the presence of the manuscript in Earl Grey's box. It is neither a full nor a fair test to compare the writing of the journal, of which a few pages are reproduced, with the letter written just before the execution, when strength of feeling might easily modify the usual form of the script. Notable differences may be seen, however, and a comparison with the account of the Mischianza, known to be in André's writing, would have been a better test.

Nor do the difficulties in accepting this record as described end with the question of penmanship of the journal. Unless André was specially set apart to prepare maps, was it possible for an aide, busily employed while the army was on the march and in a campaign, to prepare so large a number of elaborate maps, perfectly drawn and bearing evidence of close study of actual conditions? The difficulty might be lessened by saying that André merely "copied" maps sent to headquarters; or the groundwork of the maps might have been drawn by a regular engineer while André filled in the names of places and the manœuvres of the troops. Neither of these explanations would be satisfactory in itself, and either would detract from the claim made, that the maps were drawn by André. It is known that he was clever at drawing, but the workmanship of the maps would have demanded too much of his time from other duties, and their presence in the journal would seem to show that he prepared them (if indeed he did) for his own amusement. The writing of draughtsmen, like that of business clerks, is often conventionalized, offering many nice points of difference in the absence of an actual name or signature. It was certainly very uncritical to accept in so unquestioning a spirit the attribution of authorship that accompanied the manuscript. In themselves the maps are a really great addition to the cartography of the Revolution; but it still rests with the Bibliophile Society to prove that either journal or maps were of André's making. There is so much looseness in identifying unsigned manuscripts that every precaution against error should be taken before the stamp of authority is given to a doubtful piece. The Society appears to have taken no precaution, and thus offers a fair opportunity for questioning the correctness of its assumptions regarding this journal and the maps.

Notes on the Composition of Scientific Papers. By T. Clifford Allbutt. Macmillan Co. 1904. 8vo, pp. 154.

Dr. Allbutt adds to the characteristics of an elderly physician those of a don of a small college in an English university. Thus, he is particular to let us know that he has "read no grammars, nor the handbooks of literary artists." In other countries an author usually desires his readers to know that he has not entirely neglected the literature of the subject upon which he writes. But, considering how nearly identical the greater part of the matter of these "Notes" is with the time-honored recommendations that are found in all the textbooks of rhetoric, we cannot suppose that Dr. Allbutt expects us to think he has worked them all out by original reflection. The volume contains not a few remarks that argue a higher kind of discrimination; but a good many of these have sounded in our ears like reminiscences of observations that were certainly made by one or another of the older French writers on style, from Pascal to Sainte-Beuve; and, notwithstanding his modest-arrogant disclaimer, we should not wonder if all that La Bruyère, Fénelon, Voltaire, Marmontel, Vauvenargues, and Buffon ever wrote about style were perfectly familiar to Dr. Allbutt. Yes, and the utterances of modern critics as well. For when he tells us that 'Le Capitaine Fracasse' (which, though he does not name it individually, is included among its author's writings of which he does speak without limitation) "will not endure," for reasons which would equally apply to the conversations in Alexandre Dumas's novels and 'Impressions de Voyage,' this sounds a little as if it might have been said by one of the later critics in the *Revue des Deux Mondes*. At any rate, it is sufficiently striking. Dr. Allbutt evidently approves of French rhetoric. It is something like that that he chiefly aims to enforce, though he sometimes fails to strike the nail squarely on the head. Thus, in order to illustrate Sainte-Beuve's manner of opening a "Causerie du Lundi," he quotes a sentence (in translation) which would have been an illustration of this author's sometimes failing to devise the kind of opening he preferred for his *causerie*, were it not that (though Dr. Allbutt does not remark it) it really comes from one of the 'Portraits Contemporains,' where a somewhat different style was chosen by Sainte-Beuve.

The "scientific papers" of the title-page appear in the body of the book as "scientific essays," by which are meant theses required from candidates for the degree of M.B. or of M.D. by the University of Cambridge—a motive entirely different from that of any genuine scientific writing. Now, rhetoric ought to be the doctrine of the adaptation of the forms of expression of a writing to the accomplishment of its purpose. Hence, the rhetoric which is specially appropriate to a thesis for a degree (whose soundest maxim is that the forms of expression must be such as the examiner, Dr. Allbutt or whoever it may be, will approve) is not specially appropriate to any writing having a really scientific purpose. The almost incredible comicalities of incorrect writing with which this volume is no less replete than are ordinary books of rhetoric, are examples of what writers of all kinds should shun. We doubt if they could have been culled out of American country newspapers—unless from the columns of jokes. Bad style rather than good style of writing has always been characteristic of the medical profession; it naturally would be so, for more than one reason. Sir Thomas Browne is often set up as one of the glories of English literature, and the mannerisms of the majority of doctors have been less agreeable than his; moreover, of the really great stylists among them a few only carry a distinctly professional stamp. But it is very surprising to find how atrocious must be the faults of the theses which call for such a book as this to correct them.

Dr. Allbutt's own style is one of those that may be perfectly delightful to some persons and at the same time nauseating to others. He is more captious than correct, and more meticulous than engaging. He is very fond of employing technical terms of logic, but almost always applies them wrongly. He insists, for instance, that the word "theory" can properly be used only in a sense which would make it nearly synonymous with "theorem." Yet in one place he seems to confess (what is at all events true) that such a limitation is not in accordance with usage. From his dicta it would follow that the "atomic theory" ought not to be so called. The word "scientific," on the other hand, is used by him with extraordinary latitude. Thus, we read that "scientific writers are apt to suppose that restatement in bigger words is explanation." Evidently, the "scientific writers" he has in mind are the writers of the "scientific essays" he talks of—undisciplined candidates for medical degrees.

It is singular that while he holds that very few, if any, pairs of English words are synonyms, yet he thinks that all such half-English expressions as *raison d'être, tout ensemble, cortège, par excellence,* have their precise English equivalents. The extreme improbability of the proposition passes unnoticed. But who cannot see that all this is nothing but his personal taste, good or bad, hunting in quite a wrong direction after justification? In many cases his judgments are good, while the reasons he gives for them are bad. But in this, as in most respects, the book is very much like any ordinary book of rhetoric. Had he dropped all pretension to being himself very scientific or to having anything to say specially germane to the communication of scientific discoveries, and had he acknowledged that his book differed from a common text-book on style chiefly in not covering the ground systematically, we might have thought it a nice little thing in its way.

The Organization of Agriculture. By Edwin A. Pratt. E. P. Dutton & Co. 1904.

The subject treated by Mr. Pratt would, as he suggests, afford abundant scope for the enterprise of some twentieth-century Arthur Young. Even the hasty survey here taken is fascinating, and it is evident that a closer view would reveal many things of interest which lack of space prevents the author from noticing. His original purpose was to investigate the complaints made by British farmers against their railways. He found that in order to carry out this purpose it was necessary to inquire into conditions on the Continent, and this inquiry revealed the existence of organization, or combination, among farmers to a wonderful extent. The grievances of the English farmers were found to be due to their own lack of enterprise. They have allowed their own market to be taken away from them because they would not work together to maintain it.

It is hardly necessary to say that the managers of the English railways have no desire to cripple English agriculture. They know well enough that the local traffic is better worth cultivating than the foreign. But they simply cannot transport small quantities of perishable goods at carload rates. It is true that the Continental railways make very low rates on exports: they are generally under the control of governments that undertake to give bounties to exporters. But these low rates are not the chief factor. By means of organization, the farmers of the Continent are able to bring goods to the railways in wagon loads and even train loads. The National Poultry Organization Society recently asked one of the English railways for a lower rate on eggs from a certain county. The railway was at the time carrying through the district foreign eggs in twenty-five and fifty-ton lots. The railway officers replied: "If you will send us eggs in four-ton lots, we will give you a rate 25 per cent. lower than what we get for carrying the foreign eggs." But the offer had to be declined. In fact, a consignment of English eggs weighing a hundredweight is exceptional.

Mr. Pratt declares that in every one of the countries now pouring their agricultural produce into Great Britain there has been an agricultural revival, due to the spread of agricultural education and to combinations for an endless variety of purposes. Fertilizers are obtained by these associations, of better quality and of lower cost. Expensive machines are bought. Societies are formed both for production and for distribution. Agricultural credit banks have played a great part. They exist by thousands on the Continent, but are practically unknown in England. They have not been established in this country, though all other forms of coöperation are known to us. On the whole, Mr. Pratt's account of the progress of agricultural enterprise is very encouraging. It is only in England that the farmers seem to be unable to combine successfully. Even Ireland has been aroused, and the labors of Sir Horace Plunkett in establishing cooperative dairies have brightened the future of the Irish peasantry.

Collectanea Anglo-Premonstratensia. Edited for the Royal Historical Society by Father Francis A. Gasquet. Vol. I. London: Offices of the Society, Chancery Lane.

This initial volume contains documents drawn from the registers of the Premonstrant Order. The original register is now in the Bodleian Library, and there is in the British Museum the transcript of another register. From these sources Father Gasquet produces materials which open up a new chapter in the monastic history of mediæval England. That the Premonstratensians never reached the importance of the Cluniacs or Cistercians is sufficiently well known, but they came to England as early as 1143, built up in all more than thirty houses, and remained a factor in the ecclesiastical life of the island until the Reformation. St. Norbert, their founder, was son of the Count of Gennep, in the Duchy of Cleves, and connected through his mother with the Emperor Henry IV. The original monastery of Prémontré was situated in the forest of St. Gobain, within the diocese of Laon; and here, on Christmas Day, 1121, Norbert, with forty companions, received the white habit of canons regular from Bartholomew Viry, Bishop of Laon.

The chief aim of the Premonstratensians was preaching among the poor. In point of organization, Nobert followed the Augustinians, save that with his order the head of a daughter-house was styled Abbot, while with the Augustinians the official of corresponding rank received the lesser title of Prior. The only real innovation of Norbert seems to have been the establishment of Tertiaries on lines which were afterwards adopted by the mendicant orders. There were also Premonstratensian canonesses, but only two houses of these existed in England, and neither attained more than local influence. Welbeck Abbey, founded in 1153, grew to be the leading establishment of the English Premonstratensians.

The documents which are here edited by Father Gasquet may be divided into two main groups, the first belonging to the early years of the fourteenth, and the second to the later years of the fifteenth century. As every student of Rymer's 'Fœdera' knows, a great deal of friction arose in the days of the Edwards between the Crown and those members of alien religious orders who were sending money across the Channel at the instance of the Abbot-General or the Chapter-General. These documents of the Premonstratensians reveal the presence of heartburnings within the orders themselves on the subject of contributing to the funds of the mother-house abroad.

"From the English canons," says Father Gasquet, "Prémontré claimed three things: regular attendance on the part of the abbots at the annual general chapter, held at the mother-house; the appointment of the visitor to examine and report to the abbot-general as to the state of the houses; and the right to tax the affiliated houses for the benefit of the order in general and Prémontré in particular. It was this last demand which, in practice, caused many difficulties and led to many misunderstandings."

A crisis was reached in the reign of Edward II., when Adam de Crécy, Abbot of Prémontré, tried to insist on the full exercise of his prerogative. This policy led the English abbeys to appeal from their superior to the papacy, and in 1316 they secured a settlement which, while nominally a compromise, left the solid advantage with them. The fifteenth-century documents here published relate chiefly to the career of that distinguished Premonstratensian, Bishop Redman of Ely. Father Gasquet's preface contains an admirable summary of the documents and a discussion of the main points which they suggest.

DOROTHEA A NEW NOVEL

By MAARTEN MAARTENS

Author of "God's Fool," "Joost Avelingh," etc. *Cloth, $1.50*

"Mr. Maartens deals with real people, moving in real places, swayed by their true characters. He is no pessimist and no optimist. He sees life whole, and he sees it clearly."—*St. James Gazette, London.*

"The book is not one to be read hastily or superficially, There are a great number of characters, and they are all living, breathing, thinking men and women, stimulating in their contrast to the sawdust puppets of so much of our contemporary fiction. Mr. Maartens writes from the viewpoint at once of humorist, philosopher and man of the world. He does not pelt us with laboriously prepared epigrams, but a quietly wholesome humor sparkles in all his dialogue. His, in short, is a story to enjoy in leisurely fashion and be grateful for."—*New York Sun.*

NANCY STAIR

By ELINOR MACARTNEY LANE

A New Novel by the Author of "Mills of God" **Frontispiece by Sara N. Bartle**

MARRIAGE & DIVORCE

There was a time when men stole wives, when they bought wives, when they got wives free, and when they expected dowries. There was a time when women did not marry at all, when one woman married a number of men, when with other women she married one man, and when alone she was married to a husband. At different periods either man or wife, could terminate the relation; only one or the other could do so; neither could; nor could both. This evolution of marriage and divorce, under primitive and subsequent social conditions, is interestingly and accurately told by Professor George E. Howard in a three-volume work entitled

A History of Matrimonial Institutions

Present and past conditions in England are related in ample detail, and the peculiar matrimonial practices in our own colonies receive fuller attention here than in any other book as does also the history of divorce. A most complete narrative on the development of the family, and an invaluable presentation of the status of marriage and divorce.

By W. H. WILKINS, M.A., F.S.A., Author of 'The Love of an Uncrowned Queen,' &c. With Portraits (2 Photogravures) and 47 other Illustrations. 2 Vols. 8vo. $12.00.

*** *Caroline Matilda* (1751-1775) *was the youngest sister of George III. She married Christian VII. of Denmark, was suspected of an intrigue with Struensee, the Prime Minister, and was divorced and imprisoned. She was released by the Interposition of George III. and died at Celle, near Hanover, at the age of* 24.

DUCHESS SARAH

Being the Social History of the Times of Sarah Jennings, Duchess of Marlborough,

With Glimpses of Her Life and Anecdotes of Her Contemporaries in the Seventeenth and Eighteenth Centuries. Compiled and arranged by one of her descendants, Mrs. ARTHUR COLVILLE. With 10 Photogravure Plates and 2 other Illustrations. 8vo. $6.00

AUTOBIOGRAPHY. By ALEXANDER BAIN, LL.D., late Professor of Logic and English, University of Aberdeen. With Supplementary Chapter by WILLIAM L. DAVIDSON, LL.D., Professor of Logic and Metaphysics, University of Aberdeen, and 4 Portraits. 8vo. $5.00 *net.*

PROBLEMS AND PERSONS. By WILFRID WARD, Author of 'The Life and Times of Cardinal Wiseman,' &c. 8vo. $4.60 *net.*

CONTENTS: The Time-Spirit of the Nineteenth Century—The Rigidity of Rome—Unchanging Dogma and Changeful Man—Balfour's 'The Foundations of Belief'—Candour in Biography—Tennyson—Thomas Henry Huxley—Two Mottoes of Cardinal Newman—Newman and Rénan—Some Aspects of the Lifework of Cardinal Wiseman—The Life of Mrs. Augustus Craven.

The United States and Porto Rico

With Special Reference to the Problems arising out of our Contact with the Spanish-American Civilization. By LEO S. ROWE, Ph.D., Professor of Political Science in the University of Pennsylvania, President of the American Academy of Political and Social Science, Member of the Commission to Revise and Compile the Laws of Porto Rico (1900-1901), Chairman of the Porto Rican Commission (1901-1902). Crown 8vo, pp. 280. $1.30 *net.* By mail, $1.40.

The Evolution of Modern Liberty

By GEORGE L. SCHERGER, PH.D., Professor of History, Armour Institute of Technology. Crown 8vo. $1.10 *net.* By mail, $1.20.

Political Theories of the Ancient World

By WESTEL W. WILLOUGHBY, Ph.D , Associate Professor of Political Science in Johns Hopkins University. Crown 8vo. $2.00.

"Professor Willoughby has the very unusual ability to write at once compactly, clearly and thoughtfully . . . presented in a persuasive non-controversial style. Whoever reads this book . . . will find his own political views clarified so that he can more justly estimate present-day political movements." —*The Outlook, N. Y.*

NEW AND THOROUGHLY REVISED EDITION

Actual Government as Applied under American Conditions

American Citizen Series. By ALBERT BUSHNELL HART, LL.D., Professor of History in Harvard University; author of 'Formation of the Union,' &c., &c. With 6 Colored Maps and 11 other Illustrations and Diagrams; Suggestions for Students; a Select Bibliography of American Government; General Chapter References and an Index (15 pages). Crown 8vo. $2.00.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

THE usual Summer Educational Numbers of the *Nation* will be issued this year on August 25 and September 1, and will reach the professors and teachers in all the leading Colleges and Academic Institutions in the country. Four thousand extra copies of each issue will be sent to persons interested in educational affairs in addition to those sent to regular subscribers, and as there will be different lists for each of the special issues, advertisements should be inserted in both of them in order to reach the entire list.

Copy for the first of these numbers should be received by Tuesday, August 23, and for the second by August 30.

THE NATION

Publication Office 206-210 Broadway, New York City

The Nation.

NEW YORK, THURSDAY, AUGUST 4, 1904.

The Week.

Judge Parker bids fair to go down in American political history as the "Complete Letter-Writer." His telegram to the St. Louis Convention cleared the political atmosphere like a flash of lightning. The fearless independence of his communication extorted even from the most hide-bound professional Republicans an involuntary round of applause, but ever since then they have been apologizing for their unintentional candor. They have even gone so far as to call the message a trick, and have persistently been asking why Judge Parker did not express his views on the money issue until after he had been nominated. Even this refuge has now failed them, and the publication in the August *Review of Reviews* of a private letter sent by Judge Parker on June 17 to Mr. Creelman in behalf of the editor of the *World*, has bowled them all over again like a lot of wooden nine-pins. The letter in question reads as follows:

"ALBANY, June 17, 1904.

"You may be right in thinking that an expression of my views is necessary to secure the nomination. If so, let the nomination go. I took the position that I have maintained—first, because I deemed it to be my duty to the court; second, because I do not think the nomination for such an office should be sought. I still believe that I am right, and therefore expect to remain steadfast.—Very truly yours,

"ALTON B. PARKER."

There speaks the man first of all, and the trained and conscientious jurist in the second place. The American people know a man when they see one, even if he do not parade with drum and trumpet.

Judge Parker may be open to rebuke for having voted for Bryan, but Speaker Cannon is the last man on earth to taunt anybody with having been wrong on the money question. "Uncle Joe" has about as bad a silver record as any Republican, and that is saying a good deal. In 1878 he voted to pass the Bland bill over President Hayes's veto. "Cannon of Illinois" appears in the list of those voting for the Sherman silver-purchase law in 1890; and when, three years later, the repeal of that mother of all our woes was being forced through Congress, Mr. Cannon was again on the wrong side, being one of the few Republicans who refused to listen to the united demand of the business men and bankers of the country. Once more, in 1895, when President Cleveland urged Congress to make the 3 per cent. bonds payable in gold, so as to save $500,000 a year, Mr. Cannon voted against the joint resolution. Is it not, then, a little impudent, even for a chartered "rambler" like "Uncle Joe," to come out at this late day with his comically solemn denunciation of any man who ever favored silver? His own language could certainly be retorted with double force upon himself: "I congratulate him. It is better to be right late than never."

Speaker Cannon's case is peculiarly flagrant, but the Republican party, as a whole, is as far as possible from being in a position to rake over the dead ashes of silver. In 1888 the national Republican platform denounced President Cleveland for his "efforts to demonetize silver." Mr. Roosevelt was for that declaration then, though, to hear him now, you would think him an advocate of the single gold standard since before the world was created. Indeed, there would be no end if it came to "twitting on facts" in the matter of Republican friendliness to silver in recent times. Lodge was almost as unblushing a bimetallist as Cannon, and introduced some of the pettiest measures ever heard of to "do something for silver." President Roosevelt himself was only last year taken in the snare of a new commission to arrange an "international par of exchange" so as to give the silver miners a lift. But all this recrimination and comparison of records is happily pointless to-day. The silver issue is dead. Bryan himself has sat upon the corpse and pronounced it to be without a flicker of life. It is for intelligent men to turn their backs on that dead past and address themselves to the living issues of the present.

Mr. Charles Francis Adams's assertion that "there is no issue before the American people so important or so difficult to meet as the issue of curbing the Senate," will find many supporters in both the great parties. With his doctrine that this country needs nothing so much as a vigorous Opposition, even Republican leaders will agree. But they will dissent with great unanimity from his idea that the Republican party is now admirably fitted to be that Opposition. The "outs," in their opinion, should always be the Democrats, who would thus fulfil a really useful purpose in life, particularly in view of the belief of Messrs. Root and Hay that they will never have the capacity for governing constructively. In another respect Mr. Adams has done a very valuable service. Some timid souls dislike the thought of Judge Parker's election because they fear a deadlock of the Government, since the Senate must remain Republican for at least two years. Mr. Adams truthfully states that such a condition at Washington would be "the very best result which could possibly be brought about." With an Executive, supported by the House, arrayed against the Senate, "light would then be thrown into dark places, while no legislation could be enacted except what was thoroughly well considered and safe." Mr. Adams need only point to the cowardly refusal of the Republican leaders to permit a legislative investigation of the postal scandals to demonstrate the force of his contention. It alone is proof positive of his dictum that "the Republican party has been too long in power."

An independent Republican ticket in Massachusetts this year would certainly cause the oldest inhabitant to rub his eyes. The Bay State has usually taken its Republicanism straight. Probably no one manufacturing section has derived so little benefit from prohibitive duties, but, by a strange irony of fate, Massachusetts has for many years kept at Washington the very high priest of "stand-patters." There cannot be any prosperity, in Lodge's opinion, unless the tariff is kept at top notch. The business men of New England think otherwise. They believe there is as much money in selling as in buying, but how are they going to sell if Lodge forbids them to ship their goods to Canada? He tells them it is an insult to the President even to desire such a thing. But the Massachusetts Republicans are pretty sure of one thing—Lodge does not love the President so much as he loves Lodge. He has been too busy in the past to count the people clamoring for Canadian reciprocity, but now they mean to give him a chance. It is even said they will run that arch-apostate, Eugene Foss, for Governor on an independent ticket next November, and ask every candidate for the Legislature how he stands on reciprocity. If they are serious, Lodge will, of course, see new light. But is it necessary for them to bother him in this way? They can have what they want if they assure him that they actually have the votes.

Generosity to the old soldier is apparently not incompatible with bidding for votes in support of the Republican nominee. The Commissioner of Pensions has announced that his report will issue earlier this year than usual. The reason is that the statement is expected to prove a good campaign document for the Administration. "Special Order No. 78," whereby Mr. Roosevelt augmented the pension deluge, is to come in for special treatment. Under this order, which went into effect only on the 13th of last April, there were 3,859 original pensions granted, and 14,768 pensions increased. At the end of the fiscal year, however, there

were pending about 40,000 applications—"and a majority of these," so the Washington dispatch remarks, "will be favorably acted upon." This will, of course, be excellent news to the taxpayers of the country, especially when the Treasury deficit last month footed up $17,000,000. Mr. Ware, the Commissioner of Pensions, will point out in his report that the total number of pensioners is just less than 1,000,000. In a nation of 80,000,000, where the adult male population may be represented by 16,000,000, there are 1,000,000 persons in large part supported by taxes mostly paid by the other 15,000,000; and this, forty years after the close of the conflict which principally created the need of a pensioned class. The pension report may yet prove a boomerang.

Mr. Gompers as Procurator of the Holy Synod of the Job-Trust, *alias* the Federation of Labor, announces that he will officially catechize every candidate for Congress. The replies to the Gomperian Inquisition must be a categorical "yes" or "no"; and failure so to reply within ten days will be construed as a negative answer, and will subject the recusant to the pains and penalties of being opposed by the labor vote. The three queries which our American Pobedonosteff puts to the trembling candidate are: (1) Will you vote against government by injunction, by voting for our bill on that subject? (2) will you vote for our eight-hour bill? (3) will you vote for the referendum? We do not want to interfere in what is none of our business, but we should like to suggest that the "little list" ought to be supplemented, if Mr. Gompers is to be sure of his man. It would, we submit, be proper to add the following interrogatories: (4) Are you in favor of beating, maiming, and killing all scabs and strike-breakers who are willing to take up jobs that Federationists have quit? (5) do you acknowledge that the Constitution of the United States is subordinate to the mandates of the Federation of Labor and the ukases issued in pursuance thereof? (6) how much are you ready to plank down as insurance against a further persecution by the Federation? It is probable that only the last question need be answered, provided a satisfactory and unequivocal reply is made thereto.

The critical feature of the Fall River strike has not yet been pointed out. If the manufacturers and operatives are in sore straits to-day merely because the mills have run too long on high-priced cotton, the situation will right itself in time. But is that the whole of the trouble? Behind all the talk of the mill owners is a constant iteration of the theme, "Southern competition." The cry is being taken up where it was dropped in 1898. At that time there was genuine alarm in the North over the rapid increase of cotton mills in the South, and in Massachusetts the Legislature was asked to grant longer hours of labor and to rebate taxes. Then came the boom years: the foreign demand for American cotton goods increased astonishingly; there was business enough for both Southern and Northern mills; the threatened decay of New England's leading industry was less talked about. But were the five years between 1898 and 1903 more than a breathing-spell? Must Northern wages, after all, come down closer to the Southern if the Fall River mills are to keep in operation? Northern mill treasurers say yes; and though careful students dispute this, none can follow the course of events without more or less anxiety.

The right to strike is fully established, but as much cannot yet be said of the right to regard yourself as still in the employ of the person against whom you have struck. On Thursday one of the big packing concerns posted a notice that "all help leaving our employ July 25-26 will be paid in full." This "was greeted with angry exclamations" by the strikers. Indeed, it was regarded as a "bomb." Not in their employ! Who ever heard of such a thing? The strikers have not waived any rights by striking. They have thrown down their tools and declined to work for the packers; they have refused to let other people take their place, they have put their employers to a heavy loss—in fact, have done everything possible to destroy their business. But what of that? The butchers have a divine right to quit the packers, but the packers have no right at all to declare the relationship severed. Of course, this view is the sublimation of nonsense, but organized labor has been driven to it logically. Picketing, boycotting, and the union label sufficiently attest labor's belief that the employer has no more rights than his employees are pleased to accord him; and among these is not the right to say that a workman who throws up his job has lost it.

The salaries of the St. Louis Fair officials have all been cut, and a good many employees have been discharged on scant notice. We are afraid the Secretary of the Treasury is to blame for this "sign of prosperity." When the Fair management secured a loan of $4,600,000 from the Government, it hardly expected its creditor to be so rigorous in the matter of payment. But Mr. Shaw began right off to demand his money back. On June 15 he made the Fair live up to contract and turn over to him half the receipts to date, and he has called for his $500,000 every half month since then. The Treasury was piling up a deficit that reminded one of the days before the "McKinley prosperity" set in, and he had to make every cent tell. It was not his fault that business was not good enough to let every one go to the Fair. Still, his action would have been commendable even if the Treasury situation had not required such prompt measures. If the outcome of the St. Louis Fair shall tend in the least to discourage the use of Government funds for such projects in the future, the present situation will not be a matter of regret.

The Charleston *News and Courier* is telling the truth about the recent lynching at Eutawville, S. C., of a negro, Kitt Bookard, for no other reason than for being "impertinently familiar" to a white man. It prints many of the details of the atrocious crime, some of whose features are of a character attributed only to the Sioux, or to the Boxers, or to the wild tribes of the Sudan. Were they to be published in Europe it would be extremely difficult to convince the readers of European newspapers that the whites of South Carolina are not as badly in need of Christianizing as any of the inhabitants of Central Africa or of China. Gov. Heyward has ordered State Solicitor Hildebrand "to prosecute the lynchers regardless of expense and trouble," and that official is leaving no stone unturned to bring the guilty before the bar of justice. He states, however, that he cannot go into all the details in his reports, as they are "too horrible."

Many Southern white men, while favoring the new constitutions, believe that no negro properly qualifying under them should be prevented from voting by force or fraud. The latest appeal of this kind was made by Mr. Fabius H. Bushbee of Raleigh, N. C., at the recent meeting of the Alabama Bar Association in Montgomery, who spoke on "The Southern Lawyer and the Negro." The amendment restricting negro suffrage, but permitting the educated negro to vote should be enforced, Mr. Bushbee contends, "with absolute fairness to every citizen, white or black." He called upon his hearers, as men who had in good faith sworn to uphold the Constitution, "to unite in building up a public sentiment which will see that the amendments are honestly carried out in letter and spirit." This is very encouraging talk in view of the time and place, and is fresh proof that a Tillman and a Vardaman have not an undivided following in their section.

The steamboat inspection disclosures have naturally called forth a number of remedial proposals. We are assured, on the one hand, that the only way to put the service on the proper basis is to turn

it over to the Revenue Marine. Its officers have to patrol our harbors and coasts, to fix anchorage limits in each port, and to guard against customs frauds. What more natural, say its adherents, than to give them complete authority over all ships entering or plying on our bays and rivers? Equally insistent that the service should be turned over to them are certain naval officers. The reputation of the navy for honesty and integrity is so great that no frauds upon the public would be perpetrated under its management. The *American Shipbuilder* editorially protests against this plan, on the ground that naval men are totally unacquainted with the needs and requirements of the merchant service. It then enunciates the following sound doctrine: "All that the inspection service needs to make it what it should be is an entirely new code of laws governing steam vessels, whether passenger or freight; and, second, a corps of competent, practical, honest officers to administer the laws." Given these two things, and the lives of passengers will be adequately safeguarded, no matter whether the service is directed by a civilian, by a Revenue Marine Captain, or by a naval officer.

Imitation is the sincerest flattery, and consequently our national pride ought to feel subtly titillated by Canada's deportation of such of our citizens as have been recently employed as civil engineers upon Canadian railroads. We were formerly wont to boast that in the act of keeping our markets for ourselves, we furnished an example of industrial patriotism to all the world. It is an example which the world has not been slow to follow. England, Germany, and even Canada, under guise of preventing our "dumping," are contemplating the monopoly of their own markets. Our ingenious exclusion of contract laborers at the instance of job-monopolists, who want their wages kept high by law, is at last being copied by our Northern neighbors. In Winnipeg, despite the anxiety of contractors to secure the services of our civil engineers, the mounted police are evicting the American offenders on the ground that there are too many Americans there now "holding down good jobs that belong to Canadians." How we can object to this way of putting the matter and remain consistent to our avowed principles is a puzzle. A generous reciprocity arrangement, such as is advocated in the Democratic platform, would peacefully solve all these difficulties. But until such a treaty we must expect the Canadians to display simple human nature.

Mr. Balfour's favorite theory of the right of Ministerial colleagues to disagree was sustained in the Commons on Monday by considerably less than the usual Government majority. The occasion of Campbell-Bannerman's motion of censure was the presence of several Cabinet Ministers at a meeting of the Liberal Unionists, at which Mr. Chamberlain's fiscal plan received a resolution of sympathy. The debate from the Opposition benches was an attempt to show the indecency of a Ministry divided on the most important question of the day. Mr. Balfour, it was easy to point out, had refused to commit himself to more than retaliatory duties, or to a food tax at all, but here were his subordinates openly for Imperial reciprocity, with a food tax as its basis. Mr. Balfour succeeded in getting his majority, which implies that fiscal reform is still in the pre-political stage—one of those fictions at which even the Parliamentary mind revolts. Mr. Chamberlain, in fact, would have none of it: Mr. Balfour's "retaliation" was almost worthless—quite so in comparison with Colonial preferentials. The question, so far from being merely economic (Mr. Balfour's constant plea), was ripe for reference to the electorate. Mr. Balfour should become a whole-hogger and promptly call a Colonial conference before the accepted hour shall have passed. So Mr. Chamberlain. Evidently, Mr. Balfour's perfunctory vote of confidence was of little value when he was told to his face that he was a man of half measures, and that his policy of postponing prorogation was folly.

Great Britain has protested against the Russian definition of contraband, and Russia, yielding to superior force, has conceded the point. Forced apologies of this sort prove nothing. To see how fraught with peril the present condition of neutrals on the high seas may be, one has only to imagine that not Russia, but a strong naval Power, say England, were scouring the high seas for contraband, and sinking prizes. Under the present condition of international law, no weaker nation would have any basis of appeal. The world would be dependent solely on the moderation of the Ministry in power, and on the discretion of the average British captain. Russia evidently does not desire war with any European Power, but to protect herself she has had to oppose the contentions of certain great maritime nations. Her excuse is that the practice is by no means settled. For the moment, since, unlike England, she has no fanatical sentiment of omnipotence on the sea to drive her into war, Russia's apologies and amends will suffice to compose matters; but we have no guarantee against a clash to-morrow or in the next war. All these considerations urge the need of an international congress which shall once for all define contraband of war, and the status of neutral ships that carry it. The mere growth of steam shipping has made many of the old customs quite obsolete. For example, it would seem preposterous to seize the *Deutschland* for a case of rifles mislaid in her hold. The penalty would be out of all proportion to the offence. We should have law on this subject before some rash belligerent seizes or sinks a great liner on the off chance.

The significant feature of the latest fighting in Mantchuria is the capture of Simucheng by Nodzu's army. This brings him within fifteen miles of Hai-Cheng, and will relieve Oku's wearied regiments, which have had more than a week of rearguard engagements with Zarubaieff. To the northward it appears that the Russians are offering a stalwart defence to Kuroki's advance, disputing the minor passes beyond Motien foot by foot. Hold Kuroki at a distance they must, for in case of defeat below Liaoyang he could strike a retreating force with crushing effect, and possibly cut it off entirely. Rumors that Kuropatkin may withdraw beyond Mukden should be doubted, if only because the time for a strategic retreat has passed. With Oku and Nodzu hanging to his shattered right flank, he can hardly extricate himself without abandoning the railway altogether. Everything points to the imminence of a decisive battle, in which Kuroki's army is likely to play a striking part.

What is to be the result of the assassination of M. von Plehve upon the internal policy of Russia? This is the question of greatest importance in connection with the crime. If the future is to be judged by the past, it will mean severer measures than ever before. The murder of Gen. Bobrikoff was followed by a letter from the Czar declaring that his Finnish subjects must submit absolutely if they desired any favors from their royal master. But the evil consequences of the killing of Alexander II. are even more striking, and stamp it as one of the most stupid of crimes as well as one of the most sensational. The decree instituting constitutional government, which the murdered Czar signed on the day of his death, was never promulgated—not even by his idealistic grandson. Von Plehve himself was brought into prominence by the killing of the Czar. The universal indignation over the inability of the St. Petersburg police to prevent a crime of which they had had repeated warnings, led to the appointment of Von Plehve as head of that body, from which place he rose rapidly until he became the most powerful minister in the kingdom. May not his death bring forward a still more tyrannical ruler *de facto*? Will it not steel the Czar's heart and frighten him into measures still more at variance with the liberal ideas of which he once seemed possessed? These are questions the Nihilists should have asked themselves, even if they did not remember that two wrongs never make a right.

THE PRESIDENT'S ACCEPTANCE.

Whether it was good political strategy for Mr. Roosevelt to roar so gently through all the 3,000 words of his speech of acceptance it is too soon to say. Undoubtedly his humdrum prosings will be as balm to many Republicans. Their President had got upon their nerves so many times, and they had so dreaded fresh imprudences from him, that his dull commonplaces, his strict adherence to all the party conventionalities, his sudden fondness for peace, and his meek stand-pattisms, will be immensely reassuring. On the other hand, the picturesque Roosevelt, the man of dash and vigor, whose motto was always audacity, who "took things into his own hands" and "did things" while all the world wondered, has been too long before us and has won too many admirers not to cause a start of surprise and disappointment when he comes forward ruefully to say, "I am not what you think me."

For our own part, however, we are free to say that we like him better in this mild-mannered guise. We do not sigh once over the missing heroics and strenuosities. His speech is, indeed, tame to the point of flatness. It is ludicrously at odds with the conception of the flaming martial hero that ex-Gov. Black presented to the Chicago Convention. No war or battle's sound is heard in all the President's utterance. He fairly "ingeminates peace" like another Falkland, and rejoices in the fact that "there is not a cloud on the horizon." Not a word is spoken of "policing" neighboring republics; Mr. Roosevelt's rash threats of intervening in other countries whenever he does not like their style of government are not renewed. Are we to class these omissions among those "unsound opinions" which, the President alleges in the case of the Democrats, "for the moment they think it inexpedient to assert"? Time alone can tell; but, for the present, at any rate, it is most grateful to make the acquaintance of a subdued and sweetly submissive Rough Rider.

This "second Roosevelt manner," as the critics may yet come to call it, is nowhere more pleasing than in the President's references to the Philippines. There is not a particle of the old nonsense about the flag's "staying put." Mr. Roosevelt is far more ready to give heed to the imposing petition of the college professors and the clergymen than were his platform-makers. To be sure, he sticks in the bark, along with Secretary Taft, about the mortal peril of promising "independence"; but he does promise "self-government," which means the same thing in the case of the Filipinos, and he distinctly contemplates a gradual withdrawal of American control. This will give new hope to the advocates of Philippine independence, as they see even Republicans compelled to follow a growing public opinion on this subject.

Mr. Roosevelt's remarks about the money question read as if they had been written before Judge Parker's telegram, and reluctantly revised, He practically admits that the issue is dead for all purposes except that of making faces about it. One of his grimaces, however, is rather hard upon Mr. Root. "We are for the gold standard," exclaims the President, "not because of shifting conditions in the production of gold." Then what about the triumphant statistics of an increased gold production which Mr. Root flourished in the face of the convention at Chicago? However, Mr. Roosevelt contradicts himself as readily as he does a friend. Gliding deftly over the postal frauds, he commits himself to a statement which is best characterized by putting it in parallel columns with what the President himself said last December:

From the Speech of Acceptance.	From the Message to Congress.
"Never has the administration of the Government been on a cleaner and higher level; never has the public work of the nation been done more honestly and efficiently."	"While there may have been as much official corruption in former years, there has been more developed and brought to light in the immediate past than in the preceding century of our country's history."

Mr. Roosevelt's utterances on the tariff show him to be immune from all possible thought-contagion, on that subject at least. In his speech of acceptance as well as in his message of December, 1901, he assumes the identity of high wages and a high labor cost of production. Our standard of living, says Mr. Roosevelt in his late speech, cannot remain high "unless we have a protective tariff which shall always keep as a minimum a rate of duty sufficient to cover the difference between the labor cost here and abroad." But now Mr. Chamberlain's Commission, which has been investigating the condition of the British iron and steel industry, reports that "not only are the hours of labor shorter in the United Kingdom than with our competitors, and wages higher (except in the case of the United States), but that the cost of labor per ton in existing conditions is on the whole greater." What can Mr. Roosevelt and the Republican press say to this? Even granting that a tariff ought to be based on the excess in labor cost here over labor cost abroad our tariff on iron and steel would have to be less than nothing. Are they willing to abide by their own principle in this matter, or will they eat their own words? When will they be able to see that a man at two dollars a day who mows an acre is cheaper than a man at a dollar a day who mows a quarter of an acre? The argument for protection based on the higher level of wages in this country is little but an ignorant complaint of the exceptional bounty of nature, and a purblind denial of the exceptional efficiency of the American laborer.

"Wages are higher than ever before," the President proceeds. That will go right home to the 30,000 operatives in Fall River whose wages are cut 12½ per cent. on the heels of a previous cut of 10 per cent. So it will to workmen in all parts of the land who know, if the President does not, that their pay is less, their employment more uncertain, and their living expenses higher. In view of the reality known of all men, it is particularly absurd for Mr. Roosevelt to explain that the tariff is an infallible device to keep up American wages. In all this part of his speech, he is, in fact, still in the beggarly elements of protection. The fallacy that wages determine labor cost has been punctured a thousand times—by the reports of United States consuls, for example. The President's contention is one that is never used by serious students of economics. It is clap-trap to catch votes, and cannot even do that when the most ignorant voter knows that, in fact, the tariff has not prevented a reduction in his wages. And Mr. Roosevelt is more alliterative than sound when he attempts to distinguish between tariff "readjustment" (the Republican plan, and, therefore, wise), and "repeal" (the Democratic way, and, *ipso facto*, wicked). Why, did not President Roosevelt himself, in the first ardor of his tariff speeches in 1902, distinctly advocate the "repeal" of tariff duties that shelter monopolies? The fact that he has been frightened out of that position—at least, till the campaign is over—is no reason why he should rail at those who still maintain it.

But it is, after all, the total impression made by his speech which is the main thing. It is a chastened, a timid, a hedging Roosevelt which it presents to the country. McKinley himself could not have sidled away more carefully from dangerous issues — negro disfranchisement, for example—or taken refuge more gracefully in unmeaning platitudes about capital and labor. The question is, can this last? If the campaign lags, will not those favorite old properties, the spurs and sabre and slouch hat, be brought again upon the stage? All will depend,we suspect, upon the popular reception of the actor in his new rôle. But for to-day, at any rate, the temporarily sane and safe Roosevelt stands as the leading trophy, thus far, of a sane and safe Democracy.

ROOSEVELT TO DONNELLY.

The following letter is one which President Roosevelt *might* have written, with advantage to himself and his country:

"To Michael Donnelly, President of the Amalgamated Meat Cutters and Butcher Workmen.

"Sir: You state that the strike in the packing industry is now 'up to me.' And you add that 'one word' from me would settle the strike in favor of organized

labor. I see in this a combined threat and challenge under which no one but a weakling would be silent. I propose, therefore, to give you a word, but only to tell you and men of your mind some wholesome truth, since I feel that, if I were to hold my peace in the presence of such extraordinary demands as you make, the very stones would cry out.

"I first have to say to you that I resent from the bottom of my heart your attempt to drag this strike into politics. Your implication that I would do for you in a Presidential year what I would not do at another time is an insult. If I cannot be elected without getting on my knees to labor unions, then, in the spirit of my distinguished opponent, let the election go. Nothing does more to degrade our political life than such efforts to put pressure upon a candidate, in the hope that, to win a few votes, he will lose his self-respect. That is dearer to an honest man than a thousand Presidencies, and I tell you frankly that you only hurt your cause with me when you intimate that the electoral vote of Illinois may be hanging in the scales of the beef strike.

"Furthermore, I must enlighten you about the nature and objects of government in this country. You seem to imagine that the President of the United States is to be run to with every trouble that seriously affects a locality, especially if a labor union is in any way involved. Let me inform you that you are grossly mistaken. Things would have reached a lamentable pass if that were true. Americans are to stand on their own feet. In town, county, or State they are to rule themselves. The idea of hurrying to Washington with every disturbance with which the police power of the States is alone competent, and by itself is fully able, to deal, is abhorrent. It would make of local government a nonentity and of the President an earthly Providence. I have all that I can do in attending to the legitimate business of my office, and I shall not budge from my position of non-intervention unless you imitate the strikers in your city in 1894, and interfere with the mails or with interstate commerce. In that case, and failing adequate action by the State authorities, I stand ready to do as my illustrious predecessor, Grover Cleveland, did, and assert the power of this nation against all local nullifiers.

"I must also improve the occasion to address to you a word on your policy of disorder and violence. Last summer I felt impelled to write a letter calling upon my countrymen to put down lynching by a due enforcement of the law. But labor-union terrorism and crime are as great a national menace as lynching. To club, torture, and kill a man because he is a 'scab' is as monstrous as to burn a criminal to death because he is black. The rioting, the intimidation, the assaults, and murder of which labor unionists are guilty violate not only the American spirit of fair play, but the principles of American government. If a strike cannot succeed without crimes of violence, then it ought to fail. And let me tell you that the first duty of the officers of the law—whether they be sheriffs, constables, municipal police, mayors, governors, or the President himself—is to maintain public order, and to put down the mob with an iron hand. Any sworn officer who falters in this obligation is a craven, and any citizen who deprecates vigorous dealing with rioters, or who asserts that magistrates will suffer at the polls for keeping the peace, is at heart an anarchist. I include in that description Senator Hopkins of Illinois, who says that the Republican party will not suffer, because Democrats are the ones who are enforcing the law. All honor to such Democratic officials, say I, and woe be to my own party if it ever becomes dastardly enough to dally with armed disturbers of the public peace.

"My final advice to you, Mr. Donnelly, is to quit when you have had enough. It is evident that your strike was ill-advised. This is proved by the fact that your employers are able to get plenty of men to take your places. The right of the latter to work unmolested is one that must be upheld unless this Government is to sink into the pit. Accordingly, I counsel you to make the most advantageous terms you can. You have staked all and lost; now make the best of it like a man. In any case, be assured that I shall keep my hands off, unless your folly brings you into collision with the laws of the United States, when my hand will go *on* in a way you will not like. As far as I am concerned, you have barked up the wrong tree. I am to be neither wheedled nor frightened into meddling with what is none of my business. This is a government of laws, not of dictators or of busybodies, or even of anxious candidates. The law must take its course, and it will run over you if you get in the way.

"Sincerely yours,

"THEODORE ROOSEVELT."

SECRETARY SHAW AND HIS DEFICIT.

Our amusing Secretary of the Treasury has "gaed o'er the border" once more, and this time with a vengeance. The restraint with which he said nothing in seven different ways in his speech which was to have opened the campaign, has evidently proved galling, and his intelligence is at large again. What used to be called "the Cleveland deficit" is unmistakably reappearing, though, strangely enough, it is not mentioned among the Republican "Signs of Prosperity." The excess of expenditures over receipts for the month of July is about $18,000,000. In part, this is to be attributed to the large quarterly disbursements which fall in July, but even with this allowance the current deficit is nearly three times as great as the corresponding figures in July of last year.

When this fact was brought to Secretary Shaw's attention, he broke into an economico-financial dithyramb which simply leaves Hamilton and Gallatin in another class. He smote the rock of financial offence, and folly gushed forth. He touched the dead corpse of a defunct theory of foreign trade, and it stood upon its feet. "Two years ago," said he, "I called attention . . . to the dependence of the present revenue laws upon a very high standard of business if they were to yield enough to meet the large expenditures of the Government." But surely this savors of the superfluous. Can aught but a very "high standard of business" be possible under a Republican Administration buttressed by the Dingley tariff? This expression of doubt is bad tactics; but worse remains behind. The finance minister went on to say that if the conditions of business should approximate those of 1894 again, "we should have a deficit of $90,000,000, as against the $70,000,000 actually reached in that year. In other words, the Wilson-Gorman act was a better revenue-getter (though not so good a protective measure) than the present law."

By the "stand-patters" this must be reckoned simple blasphemy; but to the dispassionate student of finance it is the most delicious nonsense, inasmuch as the $70,000,000 deficit in 1894 did not arise under the Wilson-Gorman act at all, but under the sacred McKinley act. In other words, the head of the Treasury is as ignorant as an oyster-opener of the revenue laws in force in his own department within a decade. He adds the admission that the Dingley act is potentially a bigger deficit-creator than the McKinley bill, and acknowledges that the accursed Wilson law was a better measure for bad financial weather than either of the inspired enactments of his own party.

As if this were not enough to discredit himself and his party, the Secretary went on to acknowledge that there would be a large deficit during the current fiscal year. In his last annual report he had set the year's deficit at $23,000,000, but fortune, kinder than his figures, has given him his estimated deficit in the first three weeks of the present fiscal year. He refuses, however, to revise his estimate of the year's deficit until he knows what the business conditions of the coming twelve months will be; but he commented on the impending shortage, remarking with what is termed "the characteristic twinkle in his eye," "This is a good argument for tariff revision and lower duties, isn't it?"

Evidently, the Secretary is under the pathetic delusion that the infallible way to augment the total yield of the customs

is to raise the rate of duty. But even the depth of intellectual density must realize that if all duties were at once made so high as to be absolutely prohibitory, there would be just as little revenue as under absolutely free trade. It would, of course, be folly to quote to the gentleman from Iowa who runs the Treasury, the words of such a theorist as Adam Smith, who over a century ago shrewdly observed: "High taxes, sometimes by diminishing the consumption of the taxed commodities, and sometimes by encouraging smuggling, frequently afford a smaller revenue to Government than what might be drawn from more moderate taxes"; and who added sagely, "When the diminution of revenue is the effect of the dimunition of consumption, there can be but one remedy, and that is the lowering of the tax." This very sensible view of the matter suggested itself, as it happened, to a newspaper man to whom the Secretary was delivering his orphic utterances on finance. When his attention was called to the fact that sometimes lower rates increase the revenue by opening the way for large importations, Mr. Shaw replied: "In the present condition of labor this would be a good time to advocate a policy of buying more from abroad, wouldn't it?" But what does Mr. Secretary mean by "the present condition of labor" when the President tells us in his speech of acceptance that "wages were never higher"? The second reply to Mr. Shaw is, that "a policy of buying more from abroad" involves as its normal effect that "abroad," in consequence of our greater buying from them, must buy more from us. International trade, Mr. Shaw, "is an organized and elaborate system of barter." But Wisdom herself would despair of ever cudgelling that simple proposition into the cranium of a man capable of Secretary Shaw's latest economic utterance.

LORD CURZON ON INDIA.

Lord Curzon's Guildhall speech, on receiving the freedom of the City of London, abounded in that apocalyptic sentiment on which convinced Imperialism thrives. The Viceroy of India dwelt upon the magnitude of his great task with a warmth and reverence which must win sympathy, if not assent. His picture of the marvel of British rule in India was impressive:

> "Where else in the world, my lords and gentlemen, has a race gone forth and subdued, not a country nor a kingdom, but a continent, and that continent not peopled by savage tribes, but by races with traditions and a civilization older than our own; with a history not inferior to ours in dignity or romance, subduing them not to the law of the sword, but to the rule of justice, bringing peace and order and good government to nearly one-fifth of the entire human race, and ruling them with so mild a restraint that the rulers are the merest handful among the ruled, a tiny speck of white foam upon the dark and thunderous ocean? I hope I am no rhapsodist, but I will say that I would sooner be a citizen of the country that has wrought this deed than I would be of the country that defeated the Armada or produced Hampden or Pitt."

Here is sharply raised the issue that Mr. Chamberlain perceived on the "illimitable veldt"; the romance of conquest and dominion oversea is deliberately weighed against those "parochial" services which make a nation great at home. The dream of empire, in thinkers of Lord Curzon's type, far transcends those humdrum processes of education and reform which establish a nation in righteousness.

The eloquence of such a plea should blind no one to the fact that it rests upon a manner of thought and feeling equally vague. Before an Indian viceroy, says Lord Curzon, is always "the haunting question, like a riddle of the Sphinx, What is in the heart of all those sombre millions, whither are we leading them, what is it all to come to, where the goal?" Crucial questions these, none of which Lord Curzon answers, none of which, apparently, he feels it necessary to answer. Instead, he falls back upon swelling generalities: British rule "must depend on the eternal moralities of justice and righteousness." This he assures you is no mere phrase of the conventicle, since, "unless we can persuade the millions of India that we will give to them absolute justice as between man and man, equality before the law, freedom from tyranny and injustice and oppression, then your Empire will not touch their hearts and will fade away." And again he cries, "Depend on it, you will never rule the East except from the heart, and the moment imagination has gone out of your Asiatic policy your Empire will dwindle and decay." We have intentionally selected the nobler portions of Lord Curzon's oration, not to cavil at its tremendous assumptions—in the tribune no man is bound to syllogisms—but to point out its curious mixture of intense feeling and loose thinking. Britain is bidden to rule by the heart and the imagination a sombre race, to search whose heart is admittedly to face a veritable riddle of the Sphinx. Righteousness and justice for India are assumed to inhere in the present well-paid and complacent bureaucracy. In this willingness to father the present order upon the God of things as they are, and then to monopolize that Deity for the Empire, Lord Curzon betrays the inordinate Hebraism which Matthew Arnold detected and ridiculed in his fellow-countrymen.

Arnold saw in such an attitude a lack of culture. To culture, however, Imperialists rarely lay claim; they profess to scorn it as an anæmic virtue. To historic intuitions they do lay claim, for they undertake by a kind of divine warrant to shape the course of history. It is surprising, then, to note in Lord Curzon's oration a complete lack of the historical sense. One would imagine that yesterday England found India, as Pharaoh's daughter the waif Moses, whereas England is facing no sudden and unexpected duty that may be discharged by a single gush of compassion. England has not been driven into India by an inexorable decree from above. England went to India to make money. For two centuries and more she misruled that prostrate people through a territorial trading company, whose malfeasances she has now for nearly a half-century been slowly repairing. Righteousness and justice were neither at the beginning of the enterprise nor in much of its conduct; they are afterthoughts, most imperfectly realized in practice to-day. They certainly have little to do with Lord Curzon's Tibetan war, fought on an empty point of honor, nor yet with the policy that would forcibly "introduce some measure of enlightenment into that miserable, monk-ridden country."

No one would wish to see the Viceroy of India openly doubtful of the great Imperial experiment committed to his charge. Every one will commend his desire to do justice, and only captious persons will dwell too much upon his conception of destiny, though, like Scapin's, it would at a pinch excuse "all the imaginable crimes." Every serious Englishman will, however, see that the real and palpable problems of Empire are not made more easy by such mysticism. On the contrary, this sacerdotal ideal of colonial rule tends to obscure the desires and needs of the governed people and to emphasize merely the infallibility of the pontiff. Lord Curzon has in many respects been a wise and practical administrator; but it is a curious juxtaposition that associates immutable principles of justice to India with the convenience to England of the Imperial military establishment supported by peasant rupees. This point made up almost the burden of Lord Curzon's argument. Nothing, surely, could be more characteristic of British Imperialism than such rolling together (always in the name of a pious regard for the welfare of the mild Hindu) of the will of God and a cheap auxiliary for contingent military requirements.

THE MANTCHURIAN CAMPAIGN.

The baffling movements of the three Japanese armies for the past three months will best be understood by regarding Ta-Che-Kiao as the Japanese objective, and their plan as a converging advance upon that important junction, the terminus of the Peking-Niu-Chwang railway. Its possession means the control of the Gulf of Liao-tung and of an important source of Russian supplies. To the control of the head of this Gulf the siege of Port Arthur has been subordinated, and all the obscurer operations in the mountains may be interpreted as attempts to deceive the Rus-

sians as to the real objective. Thus the persistent small demonstrations on the northern roads to Mukden have been calculated to draw off the Russians from the real line of attack near Niu-Chwang. Similarly, Oku's swift acceptance of Stakelberg's challenge, and subsequent hot pursuit, were to draw Kuropatkin down towards Kaiping until the eastern passes should be taken, while Kuroki's recent concentration near Liaoyang has prevented the assembling of a sufficient force on the Russian right at Ta-Che-Kiao. Accordingly, the capture of that town and the occupation of Niu-Chwang mark the successful termination of the first campaign. A great victory by Kuropatkin might yet undo the patient work of three months; his defeat would, barring some unexpected change in the naval situation, secure to the Japanese the fruits of victory.

Looking at the Japanese operations chronologically, one is struck by the sharp contrast between the conservatism of the plan of campaign and the brilliancy of its execution. Kuroki, who might have landed in Mantchuria, made his cautious way through Korea in March and April. Strong political considerations dictated the occupation of Korea; any loss of time from a military point of view could be made up later. As it turned out, the single battle of Kiu-lien-cheng (May 1) drove Zassalitch's division more than a hundred miles back—to Hai-Cheng—and left Kuroki the next day in control of the fine strategic centre Feng-Wang-Cheng, from which trails radiate to Mukden, Liaoyang, Hai-Cheng, Ta-Che-Kiao, and Kaiping; in short, to all the important Russian positions on the railway. At this point Kuroki must have felt the temptation to push his advantage beyond the point of safety. Kuropatkin at this time could have put in the field a bare 40,000 men, and good judges believe that he was ready for a retreat towards Harbin. To have accepted the chance, however, would have been to stake the fortune of the war on a single engagement in unfamiliar country far from supplies. So Kuroki remained about six weeks at Feng-Wang-Cheng, perfecting the discipline of his army, and merely probing the Russian outposts along the western roads.

Meanwhile the landing of two more armies offered the Russians an embarrassment of objectives. Less than a week (May 5) after the battle of the Yalu, Oku's army began to debark at Pitsewo, to fight on the 26th the successful battle of Nanshan. From the second week in May, Nodzu's army was gradually landed at Takushan, between Oku and Kuroki. By June 1, Kuropatkin, then concentrated about Liaoyang, had to consider three armies—Kuroki on the left, ninety miles away at Feng-Wang-Cheng; Nodzu in the centre, one hundred and sixty miles distant, near Takushan; and Oku, on the right, a little farther off, near Pitsewo. If left to himself he would have stood on his defence. It was the interference of St. Petersburg that gave the opportunity for the crucial operation of the campaign, the inclusion of Oku's army, at the south, in the concerted movement towards Niu-Chwang. If the landing in force at Pitsewo and the sensational battle of Nanshan had been merely a lure, it could not have worked better. Kuropatkin, against his better judgment, sent Stakelberg down the peninsula, and thus sacrificed his great advantage of the defensive. From that time he has been constantly outmanœvred.

On June 8 Nodzu's army occupied Siuyen. This brought the Japanese to within forty miles of their objective, Ta-Che-Kiao. Stakelberg, who might long have delayed the capture of this important mountain centre, was hurrying to his punishment at Wafanku-Telissu. After those disastrous three days, June 13-15, Kuropatkin had no choice but to dispatch his main force south to cover Stakelberg's retreat. The concentration between Kaiping and Ta-Che-Kiao undoubtedly drew heavily upon the garrisons of the passes, which the Russians still held, for on June 26, by prearrangement, Nodzu forced Fenshui and Ta Passes on the routes respectively from Siuyen to Ta-Che-Kiao and Hai-Cheng, while seventy miles north Kuroki drove the Russians out of the famous Motien Pass, which commands the eastern road to Liaoyang. Since that time Oku and Nodzu have been in a position to act jointly, while the fear of Kuroki at Motien Pass has drawn Kuropatkin far north of the Japanese line of advance. So Kaiping, a fortnight ago, fell to Oku almost without a battle, and Ta-Che-Kiao on Monday week was defended only by some twenty thousand men. The objective of a three months' campaign was won cheaply at eight hundred casualties.

To appreciate fairly the extent of the Japanese success, it should be recalled, first, that they have in the four main engagements contrived to throw an army against a greatly inferior body; second, that while they have not met Kuropatkin nor his main force, they have defeated every one of his four generals: Zassalitch, of the Second Army Corps, at Kiu-lien-cheng; Stossel, of the Third, at Nanshan; Stakelberg, of the First, at Wafanku, and, finally, Zarubaieff, of the Fourth, with his newly arrived Siberian regiments, only the other day at Ta-Che-Kiao. As for the Japanese, Oku's army has borne the brunt of the fighting: Nanshan, Wafanku, Ta-Che-Kiao, constitute its honorable record. Kuroki at Motien Pass has fought only one battle of any account since crossing the Yalu. Nodzu's Takushan army has had only two or three small mountain engagements; upon it will naturally fall the brunt of any further advance northwards. If an unbroken series of successes, due almost in equal measure to the gallantry of the troops and the strategy of the commanders, means anything to an army, the Japanese ought to face their new problem of attacking larger forces on level ground with hopefulness.

FRANCE AND THE VATICAN.

The remaining diplomatic representative of France at the Vatican is to be withdrawn, the Papal Nuncio at Paris will receive his passports; relations maintained throughout a century are sharply broken. The famous treaty negotiated by Napoleon with his captive Pope still stands—the Concordat, indeed, can be denounced only with the assent of Parliament—but no organization now exists to make the treaty effective. It would be more sensible to abrogate it once for all than to let it lapse through disuse. For this famous pact is in the nature of a gentlemen's agreement; it presupposes good will and good faith on both sides. To-day, the situation seems hopeless because of mutual suspicion. M. Combes will not believe that the Pope's attempt to discipline two French bishops is devoid of political animus; the Pope will not concede that M. Combes's pretension to supervise all Papal correspondence with the French Church is based on an honest construction of the Concordat.

When Napoleon had agreed, in return for the right to nominate Bishops and to regulate the relations of Church and State in France, to subsidize the Roman Catholic Establishment, he desired to define still further the rights of the Nation. Accordingly, he added to the Concordat by way of interpretation the Organic Articles, an *ex-parte* document which the Church has never formally adopted. Of these Organic Articles the first stipulates that all Papal correspondence with the French Church shall pass through the Government and shall require its authorization; while the second denies to the Papal Nuncio or other personal representative of the Papacy the right, without similar authorization, "to exercise, on French soil or otherwise, any function relative to the affairs of the Gallican Church." In other words, Napoleon clearly intended to be the exclusive medium of communication between the French Church and its head; in the smallest as in the greatest matters the State was to be informed and consulted.

Such being M. Combes's view of the rights of the State, no wonder that he feels that he has caught the Pope in flagrant dereliction. The Bishop of Laval has received from the Papal Secretary of State and from Cardinal Vannutelli letters summoning him to meet charges at Rome. The Bishop of Dijon has received directly an order from the Papal Nuncio at Paris, and later one

from the Papal Secretary, bidding him come to Rome or suspend the exercise of the episcopal function. These direct communications from the Curia and this intervention of the Nuncio constitute glaring contraventions of the Organic Articles. Premier Combes cannot yield a hair's breadth at this point without throwing the articles overboard.

Pius X. will undoubtedly take his stand on the Concordat, and deny the validity of the Organic Articles. That position is strong morally, but in the present bitterness there seems no hope of any compromise. It is clear also that the Pope desires to distinguish between his political jurisdiction in France, which he admits is subject to confirmation by the State, and his spiritual jurisdiction, which he maintains is free and absolute. It seems absurd to him that, when investigating the orthodoxy or the personal morality of a Bishop, he should first consult the Minister of Cults. Such matters lie between the individual believer and the Vicegerent of Christ. This position, too, would be strong if it were possible infallibly to discriminate spiritual from political cases. As a matter of fact, it is almost impossible. Trustworthy people are convinced that the Bishops of Dijon and Laval are being investigated on trumped-up political charges, solely because the Jesuit reactionaries wish to overthrow two loyal clerics; others equally trustworthy are equally certain that Church politics has nothing to do with what are essentially personal scandals. Clearly, the case may, as a matter of fact, be both spiritual and political. We cannot see how the French Government, which pays the stipends of the clergy, could afford to let anybody but itself be the judge. That would mean that all Papal communications must, if only *pro forma*, pass through the hands of the Government. Thus the stipulations of the Organic Articles, oppressive as they appear to be to the Pope, seem to be wholly in accordance with the common sense of the situation.

Before accusing Pius X. and his Secretary of mere blundering or meddling, we should inquire if they are not deliberately embarking on a new policy which entails the abrogation of the Concordat. Possibly the Curia prefers the undisguised hostility of the State to the bondage of its subsidies. The Pope has seen the religious schools of France swept away ruthlessly; he may well have feared that the party now in control would next smite the Church itself. If his foresight be correct, he is perhaps wise to declare frank war, on the theory that in negotiations with an unscrupulous enemy he is sure to be worsted. This view of the matter fits in with the constantly provocative attitude of the Vatican since the accession of Pius X.; it also squares with the simple and forceful character of the Supreme Pontiff. To one who desires uniformity and lacks the historic sense, the anomalous independent character of the Gallican Church is necessarily distasteful. He possibly hopes to see a free church flourish in France as it has flourished in America. Here we fear that his hopes deceive him. It will be no easy matter merely to man the French parish churches without the State stipends. The abolishing of the Concordat must upset both the organization of the Church and the habits of society throughout the provinces. The temporizing policy of Leo XIII. and Rampolla was less logical and austere than the pragmatism of Pius X. and Merry del Val; we believe, however, that the opportunism of the "political Pope" was more truly humane and religious, in subordinating the pretensions of the Curia to the needs of the faithful in France.

WALTER REED.

Within the century ending with 1898 it is believed that there were more than 80,000 deaths from yellow fever in this country. Nine-tenths of these were of children or of persons in the vigor of life with a long expectation of intellectual and physical productiveness. So much vital capital was destroyed. The 80,000 deaths represent at least 300,000 cases, which imply an annual average of 3,000 separate attacks, one year with another. Besides the computable loss in time and money and energy consumed in attention to the fatal cases, and to those which ended in recovery, there is an expenditure of emotion which cannot be measured, and this not merely on the part of those whose families are involved, but of those who fear such invasion. The barbarous shot-gun quarantine is but a crude manifestation of one form of this distressing anxiety.

It is, however, well known that, so far as this country and the West Indies are concerned, the occasion for all this waste of material and vital wealth and strain of anxious sympathy has recently been swept away by the demonstration that the disease is distinctly preventable. Where yellow fever prevails elsewhere and the precautions can be applied, similar results will follow. Hereafter, yellow fever in the United States will be prima-facie evidence of some one charged with its preclusion having been derelict, or of its introduction through a byway insusceptible of being guarded. In either case the further spread may be promptly stopped. This revolution has been effected by the courage, the intelligence, and the devotion of a medical officer of the army and the loyal self-denial of his colleagues and subordinates.

In 1901 there was no hope that yellow fever might be abolished, but study of its pathology was in progress, as it had been for years. In that interest Major Walter Reed, of the Medical Department of the army, was sent by competent authority to Havana to investigate, in what might be called the storm-centre of the disease, the nature of certain microscopical forms. One inquirer believed that he had discovered in a hitherto unknown micro-organism a cause of the fever. Another, that a form designated as *bacillus x* had a clearer claim to that disastrous distinction. Reed was perfectly non-immune, and bore no direct military relation to the troops then in Cuba. The detail carried him from laboratory work in Washington to a yellow fever focus. He was sent there because it was such a focus. He was sent there because amid the fatal cases of this disease, whose unidentified virus sooner or later infected every stranger, he would have the best opportunity to observe possible agencies, and it was important that specimens from the fatal cases should be under the object-glass of the microscope with as little delay as possible. He might have suggested that another important study would suffer by this interruption; that some one already on the ground could conduct it; that it was not of immediate practical importance to determine whether the *bacillus x* or some other infinitesimal was characteristic of the disease, as long as treatment could not be expected to be modified by the determination; and particularly that it would be extra-hazardous to him, non-exempt. He made no comment. As a scientist he noted his instructions, as a soldier he carried out his orders. He realized his risk, and neither foolishly underestimated it nor rashly defied the Fates. Nor did he suggest that possibly an immune expert could conduct the inquiry as efficiently, with a better chance of returning. He faced the situation fearlessly, and by careful examination satisfied himself and the scientific world that, whatever part the *bacillus x* might play, the discovery of Sanarelli was mythical and his hypothesis untenable. This service closely resembled forlorn-hope duty, without the excitement of battle and with no consciousness of great consequences impending.

That question settled, a new and independent one arose, and in the situation which then presented itself at Havana Major Reed found the opportunity which, developed, has given fame to him and security to nations. It had been generally believed that because yellow fever and filth are usually side by side, therefore they have a necessary connection, making this fever essentially and technically a filth disease. But Havana had been cleansed, and Santiago. The American occupation had not simply swept and garnished the two cities; it had removed their waste and had washed and disinfected them, so that they were clean according to a high American standard. Theoretically there could be no yellow fever. But yellow fever was there, and to a serious degree, so that, his original problem disposed of, Major Reed found before his face this grave and eminently practical question: How does yellow fever spread? That was no part of the mission with which he had been charged, except as incidentally it might have appeared that one of the presumed pathological organisms under investigation would infect the healthy, either by ingestion as in typhoid fever, or by inhalation as in tuberculosis. Under the new conditions of freedom from dirt and decay the old factors were cancelled, and the American commission, Agramonte, Carroll, Lazear, and Reed, with Reed at its head, having received authority from the Government, began under his guidance a careful investigation of this subject, vastly more important than the inquiry just completed. This is not the place to rehearse the method, but it was absolutely demonstrated, positively and negatively, that nei-

ther the patient, his personal effects, nor any of his evacuations directly convey the disease. The sick man or anything he had soiled is not a contaminating agent. Therefore, so far as their mere presence goes, the sick, their bedding, and their garments are harmless.

Nevertheless, the whole history of yellow fever shows it to be a communicable disease, and that an epidemic might follow the introduction of a single case. Not very long before, Manson had proved that the so-called malarial fevers were translated to the human subject by the mosquito acting as an intermediary host, a suggestion of which connection had indeed been published long ago by King of Washington. Finlay of Havana had suspected, twenty years before the Spanish war, that the same insect in some manner carried the agent of infection from one yellow-fever case to another. But this had not been demonstrated, nor was it seriously considered by those living among the actual conditions. Nevertheless, Finlay deserves great credit for acuteness in framing even a rudimentary hypothesis so opposed to the conceptions of the time. Having elaborately and irrefutably proved the innocuousness of the patient and his belongings, Reed turned his attention to the mosquito, and clearly demonstrated that at a certain stage of the disease one variety could withdraw, from the blood of the sick, material which, after a period of development within its own body, and not before, would give rise, again after a fixed interval, to yellow fever in the non-immune whom it may have bitten.

This was no mere happy guess, no leap in the dark with an uncertain landing-place. Major Reed's analytical mind, sound judgment, and long experience in biological investigation qualified him for the serious and successful consideration of the circumstances. He conducted a carefully arranged set of observations, "controlled" by another set, which finally authorized the announcement that the female *Stegomyia fasciata*, a domestic mosquito, propagated the disease; and it led to the formulation of rules by which an epidemic may be suppressed and an exposed community be kept inviolate. What the methods are is beside our immediate object, but intelligent military authority immediately put them in operation in Havana, with the well-known result that there has been no more yellow fever in a community that had been infected for a hundred and fifty years. Our foreign quarantine has been reduced to a short but rigid inspection for mosquitoes, disregard of what has hitherto been believed to be dangerous fomites, and detention of persons only so long as to cover a period of five days from possible infection. Cargoes and passengers are practically relieved from the costly and vexatious but necessary exactions of the former régime.

Walter Reed died from appendicitis in November, 1902, having received no other reward than the consciousness that he had conferred an inestimable benefit upon mankind. The Walter Reed Memorial Association has been incorporated in Washington, with a responsible board of trustees, to commemorate in some suitable way at the national capital the great services which he rendered to the world, and the admirable character which qualified him therefor. This project should especially appeal to the commercial public and to those interested in the happiness and advancement of the race. In the great cities the immediate benefit of his work is most clearly reaped, but the whole country is the gainer by his brilliant and perilous labors. And the world is in his debt. He has benefited humanity and has honored America. Philanthropy, commerce, and patriotism should unite to do him honor. Contributions to the memorial fund, for which the sum of $25,000 is set as appropriate, may be sent to the treasurer, Mr. Charles J. Bell, president of the American Security and Trust Company, Washington, D. C.

NEWFOUNDLAND REVISITED.

ST. JOHN'S, July, 1904.

Newfoundland has recently again come prominently before the world as the beneficiary in the treaty between England and France, and to our summer tourists it is becoming more and more popular as a fishing-resort and a place of relief from oppressive heat. Until within the last few years it was unapproachable in its northern isolation, except by a long sea-voyage. But now the Reid Railroad steamer *Bruce* makes tri-weekly trips in six hours between Sydney in Cape Breton and Port au Basque, the most southwesterly point of the island. There this good boat makes connection with Reid's Transinsular Railroad, one of the links in the chain of Reid's railroad and steamboat lines, the most amphibious system of transportation in our hemisphere. This main line runs along the west coast for 150 miles, dropping you at a dozen points where exist the best salmon pools available anywhere to the unprivileged fisherman. It then crosses, on its way to St. John's, the centre of the island, over a low, moss-clad, scantily forested plateau, to the head of Notre Dame Bay, one of those deep fjords into which the whole Atlantic coast of the island is carved, and which Norman Duncan, in one of his graphic tales of the 'Ways of the Sea' and the ways of its primitive toilers, aptly calls the frayed edge of the continent. Over these barrens so few trains pass that they have not frightened away the herds of caribou, which may be seen from the car windows like the buffalo and antelopes in the days of early Western railroading. From the eastern section of the main line some short branches diverge to Placentia, Carbonear, and other places famous in the early history of the island during the period of struggle between England and France for the control of the continent, when the value of Newfoundland and Cape Breton as strategic points was more fully appreciated than it seems to be now. But the 42-inch-gauge railroad, the only one of that gauge in the western hemisphere, is subsidiary to the steamboat lines of the same private company, which connect railroad termini, enter every important port on the south shore that the roads fail to reach, and encircle the northern half of the island, thus serving as the only medium of intercourse with the outside world of numberless fishing hamlets, which eke out a precarious living from the harvest yielded by the ocean. Another line of comfortable steamers runs up the Labrador coast to the village of Nain, whose very name bespeaks its Moravian parentage. There the good brethren are impressing docile Esquimaux more successfully than they did our Indians with the teaching of the Prince of Peace.

So much for the Reid system from a geographical point of view. Its political history is even more interesting. Some fifteen years ago the Government let a contract to an American company to build certain lines of railroad on the east coast. The company failed, leaving a legacy of incompleted road on the hands of the Executive, which, in its innocence, undertook to complete and then operate it. Ere long it discovered its incompetency, and was glad to let another contract to a Mr. Reid, who had won wealth and knowledge as a railroad contractor in this country and in Canada. He fulfilled all his obligations, to the great embarrassment of the Government, which had not yet learned how to run its own railroad, and therefore made a very liberal contract with Mr. Reid to run it for them. After being liberally paid for building it, he did not object to being liberally paid in money and land for operating it. Under these circumstances, the Parliamentary Opposition did not lack arguments for attacking the railroad policy of the Government. When, therefore, the Opposition came into power it decided to rid the country of the onus of ownership, seeing that it involved the expense of a subsidy, by accepting from Mr. Reid a million dollars in cash for what had cost it, as it stands on the Provincial accounts, nearly $11,000,000. In consideration of the relief which this purchase by Mr. Reid gave them, they increased his land grant, which already consisted of alternate blocks of ten square miles for every ten-mile section of road.

Mr. Reid then owned the road out and out, but with certain restrictions as to transfer of ownership. A hue and cry was immediately raised by the party out of power that this enormous land grant and the control of all transportation meant that Mr. Reid owned the island and all that it contained. It was a telling electioneering theme, and carried the old party back into power. Negotiations were then reopened with Mr. Reid to satisfy the electorate, and he was nothing loth to get back his million, and to sell the additional land at a price substantially higher than the other public lands were bringing, and to accept something like $120,000 a year, and whatever he could make out of the traffic by running the railroad, now again nominally owned by the Government. Mr. Reid, however, retains the sole ownership of his several lines of steamers. By every successive move made by the opposite political parties, Mr. Reid gained financially, the politicians gained politically, while the island lost pecuniarily. Each party has recovered power more than once through the railroad, and Mr. Reid would certainly not be averse to continue to buy and sell the same piece of property at an advance on each transfer, if it should so please political managers and their constituents, who are good fishermen, brave fellows, but very simple voters. Meanwhile, however, Mr. Reid of the Reid Newfoundland Company runs the boats and the railroads to the satisfaction of the travelling public, the through train being well equipped with sleepers and dining-cars, both well served, and he is using every means and effort in developing the scanty resources of the island.

Not only the railroad problem, but the management of the fisheries and of every department of Government, affords an interesting commentary on the working of representative institutions when conducted in small, ignorant communities, where no strong, intelligent, united public opinion can be brought to bear on the political leaders. Political partisanship seems even to follow denominational lines of cleavage. The present premier is a Methodist, and he not only carries his own church with him, but is said to have formed an alliance with the Catholics as against the Presbyterians and others. And education is still given in denominational schools, greatly to the economy of the treasury, but as greatly to the detriment of the people, a large proportion of whom cannot even read or write.

But if these fishing-folk—for but a very small proportion is engaged in any other calling—are poor scholars, they are sturdy, courageous men. A training-ship for the royal navy is anchored in St. John's harbor, and last winter some 450 men, who had received some preliminary training on the ship, joined the fleet on its southern cruise. Not a man on the fleet could handle an oar like them. They won every race without exception. These men of the naval reserve return to their fishing-boats in summer with their winter's earnings in their pockets, after having had a glimpse of the world and acquired habits of punctuality and tidiness which will not make them worse fishermen, though it is to be feared their morals will not be improved.

The railroad has made little impression on the industrial life of the people. Some copper continues to be made at Tilt Cove; Trinity Bay ships some iron pyrites, and Belle Island supplies the Sydney furnaces, when their men are not on strike, with iron ore. Coal exists, but has not yet been profitably worked, and we hear of gold and argentiferous lead and chrome ores; but none of them have attracted capital. Most of the island is covered by a forest of small coniferous trees, too small to supply much dimension timber, but well suited for paper-pulp making; and, as nearly one-twentieth of the island must be covered by rivers and lakes, which afford waterways for the cheap transportation of the lumber to central pulp works on the railroad, this industry might, to the saving of our own rapidly vanishing forests, be advantageously transferred to Newfoundland.

Farming on a large scale is unknown. A very small proportion of the area of the island is fertile, and agriculture is not a congenial occupation to seamen. Fishing, like cow-punching, is an occupation conducive to general idleness, though creative of rough and rugged virtues. The man who for short periods is exposed to great hardship, dangers, and intense exertion, considers himself entitled with reason to lounge during the rest of the year. Some of the fishermen have small patches of shallow ground fenced in as gardens or pasture. In the springtime when the caplin are caught in excess of the requirement for bait, they are simply strewn upon the land to decay, defiling the atmosphere with an incredible stench instead of fructifying the soil. Fishing always has been and always will be the occupation of the people. In the old days the English Government discouraged settlement on the island, because permanent residents fished in season and out of season, and used appliances which the transient summer fleet of codfishers did not employ, and thus destroyed the inshore fishing. To-day the fringe of settlements whose total population is not that of a second-class town, besides worrying the Imperial Government about French fishing-rights and other questions, recklessly destroy the source of their own livelihood by using nets of smaller than regulation mesh; and they do so with impunity, for the lawbreakers are so numerous that any Government venturing to enforce the law would offend so many voters that it would be summarily turned out.

But now fishermen of another sort are maintaining the reputation of the island as the best fishing-ground of the world, and the island's treatment of this new horde of summer fishermen is another of the many anomalous idiosyncrasies of this most original of modern communities. Maine, Canada, Norway, Great Britain, lease their lakes and rivers, and derive large revenue from wealthy fishermen. Newfoundland invites every one to come and fish gratuitously, and the invitation is cordially accepted, and her magnificent salmon rivers are being diligently thrashed by guests from Canada, the States, and England. But the guests themselves, especially those who return year after year, are proceeding, by the simplest process conceivable, to neutralize the hospitality of their hosts. They are framing a code of rules which they call the "etiquette of the rivers," and which they expect all new-comers to obey. One of these is that he who first pitches his tent on the bank of a pool should have exclusive right to it as long as he remains. Of course he cannot enforce his assumed rights, but if he can afford to hire guides enough, and make them wade out before dawn and occupy every favorite haunt of the salmon, the unfortunate fellow who comes along to enjoy "free fishing" enjoys simply the moral benefit of keeping, as best he can, his temper under control. The Government may just as well derive some revenue from the sale of fishing-rights, unless it can prevent this preëmption of the rivers by wealthy freebooters. Interference and irritation there must inevitably be, but rules might be made which would minimize the friction, and permit all to enjoy some good fishing; for in the pools, when the water is low, the salmon lie as thick as the boulders, and if they refuse to be beguiled by your fly, the inducement on your part to allow your fly to drop under them and commit the unpardonable sin of jigging is almost irresistible. There are, in fact, some very reputable fishermen who, as they mysteriously always catch twenty-pounders, lay themselves open to the suspicion of not resisting the temptation.

Of course, fishermen's luck and ill-luck follow a guest even to this country, and he is bewildered to know when the fish will rise, for one guide assures him that it will happen when the wind blows from the west, another when it blows from the east, one when the sky is clear, while another assures you that the salmon can then see you, and will not touch your fly unless the sky is overcast. Or the water is too high or too low; it is rising, or it is falling. At last one is forced to admit that some inexplicable, perverse spirit does possess betimes the whole breed. Be it how it may, a few days' salmon-fishing brings out the best traits of some human characters, and certainly the most reprehensible and selfish of others; and confirms the conclusion which a devout preacher, who was also an ardent fisherman, came to when preaching "on the marvellous draught of fishes," that "the ways of fish in the water are as mysterious as the ways of Providence itself." We five, however, had fair luck, considering that the water was low and clear and that the fatal easterly wind was blowing. We caught eighteen fish; but, allowing five casts per minute, it must have required between 4,000 and 5,000 casts to catch each salmon—nearly as many casts as bullets are fired in war to wound a man. Reducing them to horse-power, which is the energy required to raise 33,000 pounds one foot per minute, as we were fishing with both hands in whipping the stream with long sixteen and eighteen-foot rods, weighing, with their heavy reel, three pounds, we must have expended about one and a half horse-power in catching each poor fish. All but enthusiastic fishermen may be forgiven for doubting whether the game is worth the candle.

But the burning question on the island is the French Shore rights. Great Britain, with the concurrence and advice of the Newfoundland Ministry, supposed she had made a satisfactory settlement by conceding to the French certain fishing-rights, giving them a large share of Nigeria, and undertaking to pay for all the buildings owned by French fishermen on the French Shore, provided France would abandon all claims to proprietary rights in that portion of the island. Unfortunately, the Government of the island, in its haste (in advance of the confirmation of the treaty by the Chamber of Deputies) to secure all the political benefit it could from the treaty, issued notices last spring which were understood by the fishermen to mean that the French had abandoned the French Shore, and they might immediately occupy it. This the Newfoundlanders proceeded to do, and are now up in arms because "the British warships," as the Opposition press puts it, "are protecting French interests in British waters against British subjects." Then there is local agitation against a clause forbidding herring fishing after October, which the British legal authorities interpreted as referring only to foreign fishermen, not to Newfoundlanders, who are by the treaty at liberty to make their own regulations. Among others there is great agitation over the right of Frenchmen to catch lobsters; but, seeing that they cannot can them as formerly, on the shore, the right cannot be of great value. The treaty must be confirmed before October 8 to become operative, but there is no reason to suppose that two great Powers which by the same treaty are endeavoring to settle the Egyptian and Morocco complications, as well as the Siamese, the Nigerian, and all other imminent outstanding sources of international irritation, will allow the French Shore question to interfere. One cannot, however, fail to recognize the magnanimity of France in thus yielding, for the sake of peace, her last vestige of sovereignty on the continent which she once had reason to expect she would control. All she now owns is two little islands, St. Pierre and Miquelon,

at the mouth of the Gulf of St. Lawrence. D.

POPULAR EDUCATION IN ITALY.

FLORENCE, July 12, 1904.

The bill on elementary education, entitled "Provisions for Schools and School Teachers," presented by the Minister of Public Education, Signor Orlando, on the 30th of last January, has, with sundry modifications in committee, been sanctioned by the Chamber of Deputies and by the Senate, and has duly received the royal signature. Insufficient as are the reforms herein proposed, one must admit that, in the present state of indifference of the well-to-do classes towards the education of the masses, the fear of disturbing the barely attained equilibrium of income and expenditure, and the admitted impossibility of increasing taxation, any more radical measure for diminishing illiteracy would have been rejected by a large majority of the Chambers. The Minister was wise, therefore, to cut his coat according to his cloth, even though the garment produced is the scantiest existing in any civilized nation in the Old World or the New. Cavour, to whom old Piedmont chiefly owes its first radical impulse on educational lines; who, as early as 1850, taunted the Chambers with their constant "rhetorical declamation about the supreme necessity of popular instruction, without ever concreting a rational system for effecting it"; to whom we owe the first fundamental law (that of 1859, called the Casati law), said in the last year of his life: "If you want to waste the time of the Chambers, bring in a bill for public elementary instruction." As it was in his day, so it is at the present hour; hence Italy still enjoys the *primato* of illiteracy.

While all other civilized nations consider five years the minimum for enforced attendance at elementary schools, Italy contents herself with three; and as there is no penalty for non-attendance during these years, more than one-third of the children between the ages of six and nine do not attend any school at all. While other States spend from 6 to 11 lire for the instruction of every 100 children, Italy doles out 2 lire and 46 centimes for the same number. While she could find, in 1899, 303 millions for her army, she spent but 45 million for education; of this sum only 3,962,549 lire was spent for primary instruction, the provinces, on their part, spending 372,973 lire, and the communes 64,105,306; total, 68,440,828.

The question whether State or commune should direct and control elementary schools has long been and is still under discussion, but in reality now such discussion is useless. The large communes in Piedmont, Lombardy, and Liguria, which have spent enormously to bring their elementary schools to perfection, would not hear of State interference, while the communes of the middle and southern provinces which do not perform their duty in this respect (often because they have not the means) cannot be placed on a different footing from the flourishing towns and cities of the north. When the first census of Italy (minus only Venice and Rome) was taken, it was shown that more than two-thirds of the population were totally illiterate—actually did not know their letters. But little or nothing was done to wipe out the stain. After 1866, when Prussia's victories and Italy's humiliating defeats were apparent, Pasquale Villari and Aristide Gabelli, devoted educationalists, proclaimed the schoolmaster rather than the needle-gun the chief factor in Prussia's success, showing that in that country, for nearly a century, primary instruction had been made really compulsory and carried to a point which no other European nation had attained. But Italy, after a brief season of rhetorical declamation, left things as they were, and in 1872, two years after Rome was entered, was "shocked" to learn that she had eighteen millions of *analfabeti*, or total illiterates. The numbers were reduced to fifteen millions by deducting the children under six years of age, but even fifteen millions was an alarming figure. In 1876, the old Moderate party, which had held power exclusively for sixteen years, fell, and the Liberals inaugurated their rule with an effort to render gratuitous primary instruction compulsory. But the law of 1877 did little to better, and some things that worsened, the old Casati law of 1859. It abolished religious instruction unless specially demanded by the parents of the children, leaving the communes to decide the question, and, with the passion for decentralization which possessed them, left the communes absolutely free, reduced the primary instruction from four to three years, called it obligatory, but provided no authority and no penalty for rendering it so; gave the communes a free hand in the choice and pay of teachers. The natural result was that, during the next fifteen years, the diminution of illiterates for the whole of Italy amounted to only one per cent. annually in some provinces.

The Socialists, Republicans and Radicals cry with one voice, "Reduce the expenses of the army, and hand over the savings to the Minister of Public Instruction"; but they also agree in admitting that the ministry which should propose such a reduction would be overthrown on the same day, and that an appeal to the country would send up supporters of a grand army and navy in immense majority. Strange it is, but Italy clings to the "idea" of military greatness and glory as did old Rome herself, and, until this dream shall vanish, it is useless to strive against it.

The Minister of Public Instruction could get no assistance from the finance or war departments, though the preface to his bill detailed the state of other nations, proving Italy to be behind the lowest on the list, and referring, as did the commissioners in their report, to the very serious question of emigration (Italy has four millions of her people in foreign lands, and the tide of emigration increases yearly)—"now that the United States and Australia are resolved to exclude all illiterate emigrants." Unable to compel all the communes to open two upper grades (fourth and fifth), the attendance on these grades, where they do exist, is rendered obligatory on all children between nine and twelve. The syndic is bound to publish the list, and the prætor to enforce a fine of from one to ten lire on all parents who do not send their children to school. The communes are permitted to exceed the legal limit of their expenses in order to assist indigent children with "school breakfasts," clothing and books where no charitable institution or association exists for the purpose. This clause will benefit poor children when a majority of the "popular parties" forms the municipality. The fourth article proclaims the principle of mixed schools, to which the clerical factions are utterly hostile. Can anything be more ridiculous? While the two sexes mingle at all the secondary and classical schools and the universities from sixteen years upwards, what evil can result from their mingling between the ages of six and nine or up to twelve years of age? They mingle only too freely in the overcrowded habitations where two and more families are packed into one room, and in the streets where they chiefly congregate. The economy in the small communes and in scantily populated rural districts is obvious: instead of two classes for boys and girls, one suffices with one master or mistress. As the *Critica Sociale* observes, if the Government would offer only two lire for all children who pass the examinations for the upper grades, the communes would be more disposed to open them; but this would involve the immediate expense of a million, which would increase yearly, and hence is not to be thought of.

Important are the articles relating to the evening and Sunday classes to be opened for the instruction of children over twelve years of age who are found to be still illiterate because they have never attended primary schools, or because they have forgotten what they learnt there. The syndic is charged with finding out these; but how much better would the work be done if a commission of citizens would undertake the task! The State promises to open these schools in the communes where illiteracy is most prevalent, and the commissioners have raised the number from 2,500 to 3,500, the teachers to receive 150 lire in addition to their ordinary salary. The illiterates are to be examined at the end of the first year, and, if found wanting, to attend a second; failing to "pass" then, they are to be fined from five to twenty-five lire. While the certificate of attendance and successful examination at the end of the three compulsory years of primary instruction suffices for the right to vote in political and administrative elections (at the age of twenty-one), the license to carry arms will be refused to any one who, in 1905, cannot, in the presence of the prætor, write his name, stating age, occupation, and address. Many have proposed that the possessors of good educational certificates should be exempted from six months of military service, that no illiterate should be exempted from conscription save for physical imperfection; that none should be allowed to undertake contracts for the State; that the parents should be excluded from any public charity, and so on.

The provisions of the meagre bill are approved of by the "reforming Socialists," who regret that Orlando's ideas were thwarted by the categorical refusal of supplies, and pledge themselves to sustain his original proposals at the next elections, which, according to present rumors, will take place next autumn.

On the whole, the fixed salaries for male and female teachers are satisfactory, though many are disappointed that the salaries of women are not equalized with those of men. Possibly the reluctance to do this arises from the fact that women have in a great measure attracted to themselves the larger

share of the elementary educational department. In the olden days such was not the case; but if you look at the current statistics of normal schools, whence issue the elementary teachers, the attendance of females over males is surprising. As a year's practice in infant schools is now added to the programme, and as in these beneficent and too rare schools only female teachers are employed (about three thousand throughout Italy), this may account in some measure for the figures; but the fact is that, taken at their highest, the salaries are so low—so much lower than the wages of a skilled mechanic—that men do not care to compete for a pittance on which they cannot keep a wife and family in decency, whereas many, nay most, of the female teachers obtain a position in the towns, cities, villages, and rural districts where their families live, or, if married, generally get a position in the place where their husbands live, so that the difference in salary is not so unjust as it seems. Everywhere, we believe, and in Italy assuredly, women are the best instructors of boys as well as of girls.

To normal-school graduates, who can become teachers only at the age of seventeen and eighteen, the present bill accords a minimum of 1,200, a maximum of 1,500 to male teachers in towns and cities, 1,000 to 1,300 to female teachers. For the rural schools, a minimum of 900 and a maximum of 1,000, and about 500 lire to teachers in "unclassified" schools. Be it noted that this is an increase on former stipends, and that the Government is resolved at least to compel the communes to pay the sum monthly at the appointed day. By giving double classes to the same teacher—of course at different times of the day—by evening and Sunday classes, some benefit will accrue to a certain number; but with the income tax and the sums retained for future pensions, the position of teachers in elementary schools is not an enviable one. At the present moment, however, the supply exceeds the demand, all the more so as many women (I speak from personal knowledge) who hold diplomas from universities and the superior institutes, present themselves as candidates for positions in the elementary schools, having no hope to obtain any in the normal and complementary schools for which their diploma capacitates them. J. W. M.

Correspondence.

RICHEPIN AND MANGAN.

To the Editor of The Nation:

Sir: I have lately been interested in the resemblance between two rather unusual poems: "Le Bohémien," by Richepin, and "The World's Changes," by James Clarence Mangan. Mangan died in 1849, the year in which Richepin was born, so that if either of the two poets is to be charged with imitation, Mangan could certainly prove an alibi. The resemblance between the poems in their story, expression, and construction is so close that the theory of coincidence seems untenable, but perhaps not too close to be explained by the suggestion, which has been made to me, that both poets took some Oriental poem for a model.

The city, the plain, the sea, and the forest, each has a verse in both poems, and the refrains which follow them have this close resemblance:

Mangan:

"And after a thousand years were o'er
The shadow paused over the place once more."

Richepin:

"Cinq mille ans il s'écoule,
Je suis repassé par là."

Can any of your readers throw some light on this matter? I have the two poems before me in the following publications: 'Les Poètes Français du XIX. Siècle,' edited by C. Fontaine and published by William R. Jenkins, and 'Selected Poems of James Clarence Mangan,' edited by Louise Imogen Guiney and published by Lamson, Wolfe & Co. The editor of Mangan's poems prints "The World's Changes" among Mangan's original poems as distinguished from those adapted or translated from Gaelic or Oriental sources.—Very truly yours, L. C.

Baltimore, July 25, 1904.

JONSON'S "ALCHEMIST."

To the Editor of The Nation:

Sir: In connection with Ben Jonson's "Alchemist" analyzed in your last issue (p. 74), it is possibly worth while to mention a play of the same name by the well-known Turkish playwright, Feth 'Ali Akhondzade, published in Tiflis in 1860, reprinted in the *Journal Asiatique* in 1886, and translated in the same year in the Journal of the Royal Asiatic Society. The rôle of Bruno's painter is here taken, however, by a poet—Haji Nuri—who, after unsuccessfully reproving the audience for giving credence to the Alchemist, retires with the Turkish proverb "Dōru söz ajy olur" (A true word is bitter) on his lips.

Yours very respectfully, O. T.

Notes.

Doubleday, Page & Co. announce for autumn publication 'Recollections and Letters of General Lee,' edited by his oldest son, Capt. Robert E. Lee, from his return from the Mexican war to his death; 'A Belle of the Fifties,' being the memoirs of Mrs. Clay of Alabama; 'Confessions of a Club Woman,' by Agnes Surbridge; and Kipling's 'Traffics and Discoveries.'

Harper's fall announcements embrace volumes i.-v. of the coöperative history "The American Nation," edited by Prof. Albert Bushnell Hart in a total of twenty-six volumes; 'Imperator et Rex: William II. of Germany,' by the author of 'The Martyrdom of an Empress'; and 'River-Land,' by Robert W. Chambers.

The Oxford University Press looks to publish next fall two volumes, edited by L. G. Wickham Legg, of documents on the history of the Constituent Assembly (1789-91), drawn mainly from the Paris newspapers of the period, with a selection from the more important decrees of the National Assembly, proceedings of municipal assemblies, etc.

Mr. Thwaites's latest addition to his series of reprints, "Early Western Travels" (Cleveland: Arthur H. Clark Co.), is John Bradbury's 'Travels in the Interior of America in the Years 1809, 1810, and 1811' (second London edition, 1819, with a map, on which Missouri Territory stands for everything west of the Mississippi, except Louisiana). One of Bradbury's footnotes contains the dramatic story of John Colter's race for life with the Indians, which used to be current in our school readers. The English botanist met Colter, and also Daniel Boone. His narrative is further remarkable for his graphic description of the great earthquake of 1811, which destroyed New Madrid; for tales of buffalo, and of Indians, whose loose sexual notions in particular are illustrated. Bradbury's style is that of an educated man, and his journal is thoroughly interesting, as well as historically valuable.

Mr. Joseph B. Bishop has revised a trio of articles contributed by him several years ago to the *Century Magazine*, and has made a book of them with the title, 'Our Political Drama: Conventions, Campaigns, and Candidates.' They are purely popular accounts of the way Presidents have been made and candidates disappointed, and quote textually from a variety of sources of uneven authority. Reproduced at this time, they have a certain interest and convenience, and a moral if a machine-ridden constituency had any eyes for morals. Mr. Bishop sets forth Lincoln's efforts on behalf of his first nomination, as any candid historian must. When he says that Lincoln had no Presidential aspirations in 1859, he does not quite convince by citing a letter from Lincoln discouraging his friends from putting him in nomination, on the ground of unfitness. But the move was premature—a year in advance. Lincoln professed the same sense of unfitness to Mr. Villard in their now famous box-car interview in 1858, but he may well have been sounding a newspaper correspondent; and at all events he did not withhold the fact of his wife's domestic nomination of him. The illustrations, chiefly caricatures, are not printed as well as in the magazine. Two series are added—those of *Harper's Weekly* satirizing Lincoln's flight to Washington, and Gillam's presentation in *Puck* of the tattooed Blaine.

The story of Sophonisba, the Carthaginian Queen, seems to have had an unusual attraction for the tragic poets of Europe as soon as her adventures, described by Livy and Appian, were diffused by the revival of learning. The two earliest examples of "regular" modern tragedy, Trissino's in Italy and Mairet's in France, were devoted to this theme, and up to the present day playwrights have found pleasure and dramatic material in the episode of Massinissa and Sophonisba. It is to these reworkings of Carthaginian history that an Italian scholar, writing in French, has devoted the two hundred-odd octavo pages of 'Sophonisbe dans la Tragédie Classique Italienne et Française' (Turin: Paravia). The author, Dr. Carlo Ricci, has traced the story from Polybius to Dalban, almost in our own generation, with considerable care and acuteness. The value of such a comparative study, especially in making clear the differentiæ of racial imagination, would have been enhanced by the inclusion of other besides two Romance literatures. In England, for example, John Marston, Nathaniel Lee, and others have written Sophonisba tragedies. But on the whole the monograph may be commended as an impor-

tant study of the evolution of a poetic theme.

We would call attention to an interesting note which Mr. Alfred Marks has recently published in the *Athenæum* on the subject of the Popish Plot trials. It is not unknown to careful students that the printed reports have been garbled in the process of revision, or at least that they cannot be accepted as verbally authentic. This imperfection of the record is due less to the carelessness or incompetence of reporters than to malice prepense, and represents an attempt to put the evidence of informers like Oates, Bedloe, Prance, and Dangerfield in the best light. Mr. Marks, by comparing the report of a typical trial as given in Howell with a contemporary pamphlet now in the British Museum, secures a basis for testing the extent of the "revisions" made. The trial in question is not one of the most important which resulted from Oates's alleged disclosures, but Mr. Marks's collation shows clearly that the tangle of the Popish Plot (intricate enough at best) is made even more intricate by a wilful alteration of the reports that pretend to give a faithful account of the trials.

The *Shakespeare-Jahrbuch* volume 40 (Berlin), edited this year with even more than the usual care and thoroughness so as to give a complete and ordered conspectus of all the literature in its field, in pursuance of its current policy furnishes, in addition to other leading articles, a reprint of the pre-Shaksperean satirical morality, "All for Money," competently edited by Ernst Vogel. This curious drama presents (lines 606 ff.) a sort of "disputison" on the comparative advantages of learning and wealth,obviously imitated in form from John Heywood's play of "Love." Marie Gothein writes at length upon the subject of "Women in the English Drama before Shakspere," and Prof. F. W. Moorman makes clear Shakspere's indebtedness, in parts of two or three of his History Plays, to Daniel's 'Civil Wars.' W. Bang makes an ingenious suggestion in regard to the use of the "traverse" in the staging of Shakspere's plays—a suggestion which assumes the recent in-and-out stage theory as proved. Conservative scholars, however, may still be permitted to entertain doubts on that point. American and English students of their own literature can afford to leave Shakspere and Shakspere literature in the hands of the German Shakespeare-Gesellschaft and of the competent editors of its *Jahrbuch;* but it does seem a pity that the vast and increasing literature in the general field cannot be similarly summarized and classified in a yearbook planned and organized upon the same lines, but published in an English-speaking country.

The report of the Geographical Society of Berne for the years 1900-1902 contains six papers, of which the purely scientific are on the distribution of the medium altitudes in Switzerland, with numerous measurements and two charts, by Dr. H. Liez, an anthropo-geographic study of the canton of Graubünden, by Dr. H. Zivier, and an account of the "black waters" of South America, with the theories as to their cause, by Dr. J. Reindl. Of more general interest is the late Dr. E. von Fellenbergs's report of his archæological researches in Bosnia-Herzegovina. The "finds" are numerous, and include remains of buildings on piles, pottery, articles fashioned from deer's horns and bones of the Stone Age, and Roman baths, tombs, and roads. Some notes of his explorations in Spitzbergen are given by M. A. Brun, and a tour in Norway is described by M. Albert Gobat. He closes with a fine tribute to the Norwegian woman: "Not only was she one of the most active agents in the strife against alcoholism and the saloon, but for a long time she has given her strength to the work of education. She is upon the school committees; she supplies the deficiency of the school, which, in a country where thousands of children have to go more than three kilometres to recite their lessons, where the snow often cuts off all communication, is not easily accessible. Thus Norway, in spite of so many difficulties, occupies the first rank in Europe for popular instruction."

The *National Geographic Magazine* for July contains a statement of some of the work of the Bureau of Insular Affairs in the Philippines, by its chief, Col. C. R. Edwards, with facts relating to the new monetary system of the islands. In an abstract of a recent report by Prof. A. J. Henry will be found a description, illustrated by photographs, of the principal phenomena of the clouds and the air to be observed in order to forecast the weather. A provisional programme of the Eighth International Geographic Congress, to be convened at Washington on September 7, contains the titles of nearly 200 papers which have been submitted for presentation before the congress. Lord Kelvin will send a paper on oceanographic instruments, and Sir Harry Johnston is to speak on "Colonial Development in British Tropical Africa." Sir W. Willcocks, noted for his irrigation work in Egypt, will read a paper on the "Hydrography and Economics of the Nile Basin." Commander Robert E. Peary is to be president of the congress, and the diplomatic corps at Washington and the presidents of previous congresses, including Sir C. R. Markham and Baron von Richthofen, honorary vice-presidents. Sessions will be held at Philadelphia, New York, Chicago, and at St. Louis in conjunction with the International Congress of Science and Arts. The New York session will be opened by an address on oceanography by Sir John Murray.

The story of the English and Swedish Antarctic expeditions is told in the *Geographical Journal* for July by their leaders, Capt. Scott and Dr. Otto Nordenskiöld. The impression left is of admiration for the men who, in the interest of science, could voluntarily endure hardships and face dangers almost incredibly great. In a striking passage the Swedish explorer describes the meeting, when on a sledge journey, with two of his fellow voyagers, who had started the preceding summer from the ship to join them, but had been overtaken by the winter which they had passed in this awful solitude. The biological and geological results of the English expedition will be organized and published by the British Museum. Major Powell Cotton tells of a journey in Uganda, in which he discovered a small tribe living on a mountain-top in two-storied huts, unmolested by their neighbors on the plains because of their supposed magical powers.

In the Quarterly Statement of the Palestine Exploration Fund for July, Mr. Macalister makes his eighth quarterly report of the excavation of Gezer. This completes the two years for which the firman was originally issued. The Turkish Government has now extended the life of the firman for one year, and the Fund appeals for special subscriptions to enable it to conduct the work on a larger scale. At the present rate it would require ten years to complete the excavations. Mr. Macalister has commenced work on the higher western hill, where he finds thirty-eight feet of débris, as against about twenty-eight elsewhere, and eight overlying strata, as against six at the deepest point on the eastern hill. In Palestine, as in all other places where archæological explorations have been conducted, the result of continued work has been to push back dates. When Lachish (Tel Hesy) and Gath (Tel es-Safi) were excavated, it was suggested that the earliest traces of a pre-Semitic troglodytic occupation might go back to about 1800 B. C. Macalister's earlier work at Gezer pushed back the date of the pre-Semitic occupation to a period before 2000 B. C. His later discoveries seem to show that the earliest city wall, of earth faced with stone, which he ascribes to the pre-Semitic inhabitants, may antedate 3000 B. C. This would in general synchronize with the results obtained by Babylonian exploration as to the date of Semitic occupation of that region. Large numbers of scarabs and other objects from Egypt testify to a close connection of Gezer with Egypt. Among the scarabs noted in this report is one of the great Hyksos King Khyan, one of Thotmes III., and one of Amenhotep III. and his Syrian wife Thii. Most of the Egyptian objects noted in this report belong, according to Petrie, who furnishes a note on the subject, to the Hyksos period, Dynasties XIV. to XVI. The cuneiform tablet discovered in May, and reported in a preliminary letter in the London *Times*, proves to be a fragment of an ordinary Assyrian contract for the sale of house, land, and slaves, dated in the year 649 B. C.—evidence of the Assyrian domination of this region in the reign of Ashurbanipal, and probably of the occupation of Gezer by an Assyrian garrison at that period.

The quarterly *Mitteilungen der Deutschen Orient Gesellschaft* for June contains reports of the German explorations at Babylon and Ashur from February 16 to May 2. From Babylon there is nothing of interest or importance except the discovery, in the hill called Homera, of a theatre of the Seleucidan period, the first thing of the sort heretofore found on Babylonian soil. At Ashur the explorers have found the south wall of the ancient city, and, in and by it, phallus-shaped clay cones containing building inscriptions of various monarchs from Tukulti-Ninib (1300 B. C.) onward. The excavations at this site proved from the first far more successful than the excavations at Babylon in the discovery of inscribed material which has thrown much light on the history of this city and of Assyria. Some of the recently discovered inscriptions show that the previous supposition of scholars that the earliest rulers of Ashur were priest-governors, dependent upon Babylon, is incorrect. These inscriptions designate the same rulers indiscriminately as king or *patesi*, hitherto rendered priest-governor. The two titles belong to the same man, considered according to his pontifical or his secular office, and it would

appear that from 2000 B. C., and even before, the rulers of Ashur were independent sovereigns. One inscription shows that the famous king Esarhaddon bore also the name Ashur-etil-ilani, and it may be that some documents found at Nippur and elsewhere heretofore ascribed to the reign of the son of Ashurbanipal bearing that name, should have been ascribed to the reign of his father. Among other objects the explorers report the discovery of two interesting alabaster stelæ of the Parthian period, which show the effort on the part of the Parthians to imitate and adapt Assyrian art and also the Assyrian religion. These reports also contain a plan and description of a small two-roomed shrine or temple, almost exactly similar to one found at Nippur by the University of Pennsylvania Expedition to Babylonia. From the University of Chicago expedition at Bismya in Babylonia, Dr. E. J. Banks, field director, reports, in the *Biblical World* for July, the discovery of large numbers of inscribed clay tablets of a date as old as or older than the extremely ancient inscriptions found at Nippur. Inscribed bricks found at a low level identify Bismya as the city of Adab or Ud-nunki, and not Isin, as was conjectured. Most unusual for Babylonia is a temple, also of very early date, constructed, in part at least, of stone, instead of the clay or bricks which have been the universal building materials of that country from the beginning until now.

We believe our readers have heard enough for the present about jū-jutsu, and we must therefore ask Mr. Lafcadio Hearn to excuse us from printing a controversial rejoinder to some remarks we made in our issue of June 2. We extract, however, a bibliographical passage: "A paper prepared by Mr. Jigorō Kano (a member of the Japanese Higher Educational Council, and for many years a very celebrated professor of Jiujutsu), with the aid of the Rev. J. Lindsay, appeared in the Transactions of the Asiatic Society of Japan in July, 1888. It was entitled 'Jiujutsu: The Old Samurai Art of Fighting without Weapons'; and it dealt with the general history of the art both in China and Japan. In 1892, a more elaborate paper, by Mr. T. Shidachi, fully illustrated, and explaining various details of the grips, throws, etc., appeared in the Transactions and Proceedings of the Japan Society (London), entitled 'Jiu-jitsu [*sic*]: Self-Defense by Sleight of Body.' "

—The August *Scribner's*, according to well-established custom, is devoted almost entirely to fiction. The roster of short-story writers for the number fairly bristles with names of distinction, though but two of the stories are calculated to make any lasting impression upon the reader. Mr. Kipling's contribution shows a tender, spiritual element in his make-up which the reader of his most characteristic work might well suppose to be lacking. Perhaps the idea—a blind woman, childless, but with a mother's yearning, attracting to herself in an out-of-the-way mansion the ghosts of dead children—might have been more deftly handled by a pen less accustomed to run in material rather than spiritual lines, but it is a good piece of work, nevertheless. Easily next to Mr. Kipling's story, if not ahead of it in vital interest, is Katharine Holland Brown's story of a broken-down physician going into camp in winter on an island in the bleak Straits of Mackinac, and regaining control of his physical and mental self through the necessity of immediate and skilful professional service to another in distress. In the field of art Ernest Flagg urges a radical improvement in the general plan of New York city, the narrowing of Central Park to a strip one thousand feet in width, with a traffic way of one hundred and sixty feet running through its centre, and the acquisition of the lands necessary to extend this parkway from Christopher Street at one end through to the Harlem River at the other, a distance of ten miles. The expense, he argues, could be met by the sale of the lands thus detached from the present area of Central Park, and the increased taxes upon the enhanced value of the property all along the great traffic way which would thus be created. There need be no fear of the realization of this fancy, so far as Central Park is concerned.

—The continuation of Andrew D. White's reminiscences of his service with the American legation at the court of Russia during the Crimean War is the one piece of serious interest which will attract special attention among the contents of the August *Century*. The blockading fleet at the mouth of the Neva, a visit to the old capital, the death of Nicholas I., and the accession of Alexander II., are among the themes. Both these rulers made a very powerful impression upon Mr. White; the former, with his imposing stature, his dignified and yet kindly bearing, seeming to be "the most majestic being ever created." The son had the towering Romanoff frame, the beauty and the dignity, but less of the majesty and none of the sternness of his father. "Of all the ghastly miscalculations ever made, of all the crimes which have cost the earth most dear, his murder was the worst," throwing Russia back into the most stringent reaction ever known, which has already lasted a half century and bids fair to continue for generations yet to come. The lighter contents of the number are unusually inviting, the descriptive papers including an account of the recently discovered colossal natural bridges of southeastern Utah, by W. W. Dyar; Lombard Villas, by Edith Wharton; and a reception by the Empress Dowager at the Chinese Summer Palace, by Minnie Norton Wood. Readers will await with interest more authoritative and complete measurements of the Utah bridges, but it seems to be proved that they are so gigantic as to dwarf out of all comparison any structure of the kind heretofore known, the largest of the three being high enough to clear the dome of the Capitol at Washington by fifty feet. Mr. Dyar's article is based upon notes by a mining prospector, Horace J. Long, who viewed the bridges in company with a cattleman named Scorup, early in 1903. So far as is known, only three or four white persons have ever visited the locality, which is very difficult of access, both from the roughness of the ground and from the lack of water. A survey of the region should be made under Government auspices.

—Prof. John Bassett Moore's sketch of our early struggles with piracy, and with the British claim to the rights of search and impressment, is followed in the August *Harper's* by an account of the efforts to find relief from more purely commercial restrictions, such as the discriminating duties which were once so common a manifestation of the spirit of national monopoly. Our efforts to secure reciprocal concessions give him the occasion to take a fine shot at the "reciprocity" of the present day, as "a policy recommended by free-traders as an escape from protection, and by protectionists as an escape from free trade, but distrusted by both and supported by neither." Martin Hume brings forth little that is new to his easy task of impeaching Queen Elizabeth's right to be called "good." The reflections from the Editor's Study continue their characteristic note of optimism concerning the literature of the present age. We have greater simplicity than our literary ancestors, crave more the trait of direct appeal, rejecting the unessential. The vesture of our thought may have every fold called for by the involutions of the thought inself, but no ruffles and tucks for mere adornment. Lincoln at Gettysburg, not Everett, is the ideal of the present age.

—The Ruskin-Norton correspondence, in the *Atlantic*, deepens in interest with the passing of the years which it covers, commensurately with the increasing personal intimacy between the two men. The death of Ruskin's mother and his entrance upon the Slade professorship at Oxford are the most important events of the period covered by the letters of the August instalment. George W. Alger contributes a timely paper on unpunished commercial crime, comparing in a very suggestive way our severe attitude towards crimes of violence against individuals with our easy tolerance of the wrongs perpetrated against large numbers by the slippery methods known to modern commerce and finance. David Starr Jordan and Vernon Lyman Kellogg are the joint writers of an article on Tutuila, our inheritance from the Samoan entanglement. Credit is given to our authorities there for the beginning of an effort to stamp out the mosquito which has been discovered to be the disseminating agent of the scourge of elephantiasis. More than one-third of the native population are said to be afflicted, and no remedy has thus far been discovered. On the other hand, the insistence of the missionary on clothing as a *sine qua non* of Christianity, irrespective of other conditions, has brought upon the natives a second scourge in the form of pneumonia. The rain upon the shining oiled back and shoulders of the half-naked native fell harmlessly, but the cheap shirt or jacket "clings wet and clammy to the skin, the quick chill strikes through the blood, and the end comes with appalling swiftness and certainty." The clothing demanded by the missionaries is flatly pronounced injurious both to health and to morals, and well calculated to enable the converts "to test quickly the power of their new religion."

—Mr. Craigie's second instalment of R in the Oxford English Dictionary (H. Frowde) carries on the letter from Reactively to Ree. The prefix re- naturally dominates the situation, and introduces much old matter in the root word; but much new, also, as in the series beginning with Recrudescency, for which there is no parallel under C. This word is cited from 1651, along with Recrudescence (1721), Recrudescent (1727), Recrudesce (1884). So Recurrency (1611) antedates Recurrence (1646), and Redundancy

(1623) Redundance (1638). The distinction of Recollected and Re(-)collected might well have been illustrated from a classic passage in Crabbe: "Smile at the recollected games. . . . And then the recollected soul repairs Her slumbering hope, and heeds her own affairs." Our parliamentary mode of gaining the floor by catching the speaker's eye is set down under Recognize, after Mr. Bryce; but the corresponding meaning of Recognition is not allowed under that word, as, "He failed to obtain recognition." The use of Recognize (in the sense 'to perceive clearly, realize') with a clause for its direct object—"that," for "the fact that"—is not illustrated; but in this country at least it is common. For example, at page 395 of the first volume of Mr. Frederic Bancroft's Life of Seward (1900) we find: "The anti-slavery men of New England did not recognize that there were different parts to be played." Recondite is here stressed on the first syllable, and pronounced with long *i*. Bailey and Sheridan stressed it on the final syllable, Johnson on the penult, all with long *i;* some recent dictionaries indicate clipped *e* for the first syllable and either long or short *i*, stressing on the penult. This is surely to go as you please.

—Reason is one of Mr. Craigie's major rubrics. "Hit standeth with reason" is met with in 1528—"to good reason" in 1632. Very full, and full of interest, is the treatment of Red. It can, we think, seldom occur to the general that the proper name Read(e), Reed, Reid is a color name. Our American red cent is said to have been "formerly" made of copper, but the process still goes on. The correctness of the epithet as applied to our Indians (Red man, Redskin) "has been denied by some writers"; but only by a narrow definition of Red. "The precise shades of color to which the name Red is applied," says Mr. Craigie, "vary from bright scarlet or crimson to yellow or brown." The use of Realize in the sense of "to conceive or think of as real" finds contemporary English and American exemplification in John Newton and Abigail Adams (1775)—"realize what we suffer" wrote the lady; but it was "frequently condemned" as American "by English writers about the middle of the nineteenth century." Record, "the leading facts in the life or career of a person, especially of a public man," was long a stumblingblock to our British cousins, but is "now in common English use." Greeley is quoted for it in 1856. "I reckon," used parenthetically or finally, was "formerly in English literary use; still common in English dialects, and current in the Southern States of America in place of the Northern 'I guess.'" Rebeldom is borrowed from the gentle but intensely loyal Asa Gray. Under Rebellion we should have liked to find quoted, if only for the regimen, which is matched in Shakspere, "Rebellion to tyrants is obedience to God"—most unfashionable doctrine in our Imperialistic time. Finally, let us direct attention to the multifarious significations of Rector as an officer, here set down in a manner characteristic of 'A New English Dictionary on Historical Principles,' and of no other.

—All subjects nowadays tend to grow so bulky that a busy man finds it impossible to keep up his interest in them without the aid of a periodical summary which will keep him up to date. And now that the publications of the Society for Psychical Research extend over a couple of yards of book shelf, there is need for popular compilations which will bring out the salient points from this mass of material. Accordingly, M. Sage's study of the strange case of 'Mrs. Piper and the Society for Psychical Research,' which has been translated by Miss Novalie Robertson, officially prefaced by Sir Oliver Lodge, the Principal of Birmingham University, and for some years the President of the Society, and published by the Scott-Thaw Company, should prove decidedly serviceable. It is a skilful, lucid, and readable condensation of the detailed reports of Dr. Richard Hodgson and Professors Hyslop and James; and though the serious student will still have to go to the original records, the ordinary reader will get a very fair notion of the evidence from this little book. We have noted only one inaccuracy in it, which represents "George Pelham," Mrs. Piper's noted "communicator," as having been killed by a fall *from his horse*. In his interpretation M. Sage abstains from excessive theorizing, but seems to incline, like most of those who have gone into the matter thoroughly, to the spiritist view. At the same time he realizes that far more investigation is needed, and that this costs money, ingeniously suggesting (p. 186) that "if a thousandth part of the sum devoted in a year to the art of killing were devoted to the solution of the problem of immortality," the question could be settled in ten years. This seems sanguine, even though a deduction of a tenth of 1 per cent. from the sums annually squandered on militarism would mount up to anything between two and three million dollars. Still, the advocates of peace might easily adopt less expeditious and efficacious means of convincing mankind of its present folly than inquiries which might end by discrediting the noble art of killing by discovering that, after all, enemies could not be annihilated in such fashion.

—Like an orchard, the Asiatic Society of Japan has an occasional "lean" year, and the past year has been such. Its Volume XXXI., with but sixty-eight pages of text, is the thinnest yet issued, but Dr. E. Baelz's paper on "A Visit to Tonkin," where, in December, 1902, he attended the Congress of Orientalists held at Hanoi, the capital of French Indo-China, is rich in matter, for Dr. Baelz, so worthily decorated by the Emperor of Japan, is one of the leading authorities of the world on Far Eastern anthropology. He shows what the French have done for the making of settlements, and that, while from the point of view of hygiene and general modern smartness they have succeeded handsomely, yet commercially these colonies do not pay, for the French merchant does not travel from home. Tonkin lies outside of the great routes of travel, not one of the great steamer lines of the Far East touching there. Although the distinguished Orientalists of France had in Paris formed the committee of initiative of the Congress, not one of them put in an appearance at Hanoi. Tokio sent more numerous representatives than any other place, the four delegates having each an important and carefully prepared paper. Dr. Baelz believes that the general characteristics of the yellow race are so pronounced that there is no decisive difference between the Japanese, Chinese, and Koreans on the one side, and the so-called Malay races on the other. As matter of fact, neither he nor his Japanese fellow-travellers could distinguish Tonkinese dressed in European style from Japanese. In one case, concerning which Dr. Baelz was in doubt, the three Japanese delegates felt certain the man was a Japanese, but he turned out to be a pure Tonkinese. Dr. Baelz notes that from Borneo to Saghalien the island races, except the Japanese, are given to tattooing their cuticle. While praising the French Government, he sees too much officialdom everywhere and too little private enterprise. Furthermore, the general spirit of the French press in Tonkin itself is too much that of the proverbial emigrant who was "agin' the Government." Nevertheless, Tonkin, being so rich and fertile, ought to have a brilliant future. Mr. Kawaguchi tells of his experience in Lhassa. He entered the forbidden city of the Lhama in the garb of a Tibetan, and lived there two years as a Chinese physician. He describes the Lhama, of whom he had audience, as a man of twenty-six. He prophesies that England, if she only pursues the right method, must inevitably become the protector of Tibet. The new president of the Asiatic Society, Professor A. Lloyd, presents a critical chapter on Indian history, fixing upon the year 481 B. C. as the exact date of Buddha's death.

WAR AND NEUTRALITY IN THE FAR EAST.

War and Neutrality in the Far East. By T. J. Lawrence. The Macmillan Co. 1904.

Mr. Lawrence writes with clearness and a mastery of the principles of international law. His only blemish is a style occasionally a little too vivid and rhetorical to suit the gravity of the subject. The effort to fix the reader's attention drives him into the use of metaphors and similes which may be picturesque, but are certainly not juridical. To say of the "leasing" of Port Arthur to Russia without prejudice to China's "sovereignty" that the language employed disguises "the reality of territorial transfer" is true enough; but to liken it to "the jam which renders palatable the child's powder, or the courteous formula which conceals the social rebuff," really obscures the true point. The fact is, that juristic ideas and conceptions cannot be popularized by such means.

His present volume is a very good popular account of the leading international questions suggested by the outbreak of the Eastern war, and also gives an intelligible statement of the causes which have led to th quarrel. The book foreshadows the trouble which has arisen since its publication over the right of search. Of course, the right of search for contraband, and the right to condemn ships for carrying contraband, in rare cases, exists to-day in as full force as ever; but with every advance in civilization and the peaceful arts and intercommunication, the extreme exercise of these belligerent rights is becoming more and more impossible. The Suez Canal is neutralized—that is, its waters cannot be used for any warlike purpose; but the Gulf of Suez, which is merely a natural prolongation of the artificial waterway, can be so used. The result is, that the fleet of a belligerent

can lie in wait in the Gulf, and overhaul the entire neutral commerce of Europe as it issues from the canal. This involves the stoppage and search of mails, and a general paralysis and dislocation of commerce appalling to contemplate. Mr. Lawrence thinks that by neutralizing the Gulf the difficulty would be got over, as, "once out in the wider expanse of the Red Sea, a trading vessel could take her chance of search and seizure under the ordinary rules of maritime warfare." But is this so clear? Cannot an active belligerent so patrol the Red Sea as to make it practically unnavigable by neutral merchants except by its permission? The situation is one which, during the present war, can be made tolerable only by much forbearance and concession, and, looking to the future, the neutralization of the Gulf would probably be merely a palliative.

What is the true solution of the difficulty? It does not lie in the exemption from seizure on the high seas of private property, for this measure (always favored by our Government, and by treaty with Italy adopted into practice) contemplates as a permanent exception the right of search for and seizure of contraband. Yet it may be doubted if the right to seize enemy property at sea and destroy enemy commerce is not a far more valuable right than that of marine search for contraband. The latter is a right which has had little or no effect on the issue of any modern war, but the exercise of which falls with ever-increasing weight upon neutral commerce; without its abrogation, it is difficult to see how the constantly recurring turmoil over its exercise with every recurrence of war is to be avoided. Possibly the present war may bring it home to both England and Germany that the right of belligerents to arrest neutral commerce on the high seas "costs more than it comes to."

To put the matter in a different way, is it not at least worth discussing whether the interests of the modern world do not require the abandonment of the right of search for contraband? Is not this a more immediately feasible and important reform than the abolition of the right of capture of enemy ships and property? Suppose it abandoned in the present war, would either belligerent be a sufferer? The right of blockade, and confiscation for violation of it, would still exist—this is necessary, so long as war is necessary; so would the right to destroy enemy commerce. The only privilege which either Japan or Russia would lose would be that of throwing the whole commercial world into a turmoil, breaking up its postal service, and doing irreparable injury to thousands of innocent merchants and travellers, in order, perhaps, to seize a few packages of gunpowder or sticks of dynamite or cases of cartridges, so trifling in quantity as to have no possible effect on the result of the war. If the right of search were effectively exercised, *e. g.*, at the outlet of the Suez Canal, it would drive neutrals into becoming parties to the war, for no powerful neutral nation will submit to *Trent* affairs or *Malacca* affairs every day in the week, nor to its mails being habitually stopped, nor to its "liners" being carried into prize courts. Yet of the existence of the right there is no question.

Mr. Lawrence's observations on the subject of wireless telegraphy are very much to the point. The pretension that correspondents sending wireless dispatches containing information obtained by cruising on the high seas can be treated as "spies" is, of course, baseless; they are not within the lines; they are not gathering information for the benefit of the enemy, and they are not carrying on their operations secretly or in disguise, or on false pretences. But he suggests the case of neutral territory being used by a belligerent for wireless stations by permission of the neutral, which would apparently be as distinct a violation of neutral duty as the use of a port as a base of naval operations, or a line of railway for transportation of troops.

To the question of coal, Mr. Lawrence gives much consideration. He is the supporter of a theory that the use of neutral ports by war vessels for the purpose of obtaining a supply of coal "to get to the next port" opens the door to a great abuse. Under cover of it, a belligerent which has few ports may send a fleet round the world to attack its enemy, getting its motive power from neutrals on the way. There is no doubt that neutrals *may* close their ports to belligerents; and Sweden and Norway, we believe, have done so in the present war. Why should not all neutral ports be closed except to ships in distress? Mr. Lawrence thinks this question entirely distinct from the other, how far coal is contraband; and so it is. Coaling a belligerent ship is a different operation from sending a cargo of coal to a belligerent country for the peaceful use of the inhabitants. One answer to the question asked is, as he perceives, that the adoption of his rule would greatly redound to the advantage of England, a country having an abundance of ports of its own, and be very inconvenient to a country like Russia.

But, after going over the various questions interestingly discussed in this volume, the reader sees in the end that the one which overshadows all the rest is the irrepressible conflict between the right of neutrals to carry on their commerce, notwithstanding the existence of a war, and the right of both belligerents to harry and interrupt this commerce in the search for contraband. It is a curious fact that England's interests have been for three generations nearly continuously neutral, while it was in great measure through English adjudications during the Napoleonic wars that the right of search was established on its present foundations. One consequence of this English origin of the rules is, that English writers still discuss the matter as if the relation of England to it had not entirely changed. It is of the rights of neutrals, commercial nations, that England is the great modern champion, and, as every one sees in the present war, she must uphold them. The right of search is nowadays the great anti-English weapon, and so it will continue to be just as long as England remains a great commercial nation—no matter how large her navy, nor how "imperially" her statesmen may learn to think. To make the right of search of any actual use to England, that country must become involved in a war of such proportions that the mere contemplation of it appals the world—a war, too, which would probably transfer her commercial supremacy to more prudent rivals. No matter how the present disputes growing out of the seizures in Eastern waters may be arranged, this right of search must become a greater and greater menace to the repose of the world, and a more and more intolerable international nuisance.

THE SOUTH BEFORE THE WAR.

A Journey in the Seaboard Slave States in the Years 1853-4. With Remarks on their Economy. By Frederick Law Olmsted. [Originally issued in 1856.]. With a Biographical Sketch by Frederick Law Olmsted, jr., and with an Introduction by William P. Trent. 2 vols. G. P. Putnam's Sons. 1904.

Of the various monuments to the senior Olmsted erected by his own modest self, the three books of ante-bellum Southern travel and observation, of which the one here reprinted was the first in order of publication, have the special immortality which belongs to the printed book. A statue to the pulse of our Sanitary Commission machine, or to the creative genius of our public parks, would do less to perpetuate Mr. Olmsted's renown than the journals of his tour through the section about to stake everything in arms for the perpetuity of what Professor Trent calls "the plague of slavery." These journals were fortified by unimpeachable Southern evidence of "the blight [again to cite Professor Trent] slavery was casting over the immense region stretching from beyond the Potomac to the Rio Grande." The later volumes grew polemic in response to criticisms which, without success, sought to discredit the earlier—"We must, unless we are wedded to partisanship," says our Southern introducer, "accept, however reluctantly, his [Olmsted's] general picture of Southern conditions." This controversial matter might seem omissible in a reprint, and if the new edition proceed further the question of omitting may arise; yet it would be a pity to have the shortened work handed out over the counter of public libraries, even in more elegant form, rather than the original weapon in the great struggle between the two civilizations.

The calling in of Professor Trent as a sort of sponsor seems calculated to propitiate Southern readers and bookbuyers; and he must surely have had them in mind in intimating that Mr. Olmsted was no abolitionist. Everybody at the North knows that the abolitionists desired peaceful emancipation by the masters themselves, as of course Mr. Olmsted did likewise, whether from a humane or an economic point of view. John Brown, not a technical "abolitionist" any more than Mr. Olmsted, would have welcomed the same consummation as a substitute for Harper's Ferry. Until the Southern mind can digest this simple proposition, it will to no purpose be invited to review these faithful Southern panoramas, so graphic, so moderate, so just, so benevolent to all classes in the South. But, in fact, Professor Trent falls short of inviting it; nor does he hint at the profitableness of comparing the South today with that of fifty years ago—how much it has changed, how much remained the same.

We propose, therefore, by a handful of extracts, to make good that omission,

for the sake both of those who knew slavery and of the generation, North as well as South, that, like Professor Trent (born in the second year of the civil war), knew it not. We believe the extracts can be left to speak for themselves. Not a few of those for whom we cull them will probably wonder why Olmsted thought it worth while to record, and we to copy now. Still, we will

"help them try
Familiar things to view with a peeled eye."

"While calling on a gentleman occupying an honorable position at Richmond, I noticed upon his table a copy of Professor Johnson's Agricultural Tour in the United States. Referring to a paragraph in it, where some statistics of the value of the slaves raised and annually exported from Virginia were given, I asked if he knew how these had been obtained, and whether they were reliable. 'No,' he replied; 'I don't know anything about it; but if they are anything unfavorable to the institution of slavery, you may be sure they are false.' This is but an illustration, in extreme, of the manner in which I find a desire to obtain more correct but *definite* information, on the subject of slavery, is usually met by gentlemen otherwise of enlarged mind and generous qualities" (I., 61).

"Mr. W. also said that he cultivated only the coarser and lower-priced sorts of tobacco, because the finer sorts required more painstaking and discretion than it was possible to make a large gang of negroes use. 'You can make a nigger work,' he said, *'but you cannot make him think'* " (I., 101).

"What would Frederick Douglass [or Booker Washington] have been had he failed to escape from that service which Bishop Meade dares to say is the service of God; had his spirit been broken by that man who, Bishop Meade would have taught him, was God's chosen overseer of his body? What has he become since he dared to commit the sacrilege of coming out of bondage? All the statesmanship and kind mastership of the South has done less, in fifty years, to elevate and dignify the African race than he in ten" (I., 148).

"Among the police reports of the [Washington] City newspapers, there was lately (April, 1855) an account of the apprehension of twenty-four 'genteel colored men' (so they were described), who had been found by a watchman assembling privately in the evening, and been lodged in the watch-house. The object of their meeting appears to have been purely benevolent, and, when they were examined before a magistrate in the morning, no evidence was offered, nor does there appear to have been any suspicion, that they had any criminal purpose. On searching their persons, there were found a Bible, a volume of *Seneca's Morals; Life in Earnest;* the printed Constitution of a Society the object of which was said to be *'to relieve the sick and bury the dead';* and a subscription paper *to purchase the freedom of Eliza Howard*, a young woman whom her owner was ready to sell at $650. . . . One of the prisoners, a slave named Joseph Jones, he ordered to be flogged; four others, called in the papers free men, and named John E. Bennett, Charles Taylor, George Lee, and Aquila Barton, were sent to the Workhouse, and the remainder, on paying costs of court, and fines, amounting in the aggregate to one hundred and eleven dollars, were permitted to range loose again" (I., 16).

"It was a large log-cabin, of two rooms, with beds in each room, and with an apartment overhead, to which access was had by a ladder. Among the inmates were two women; one of them sat at the chimney-corner, smoking a pipe and rocking a cradle; the other sat directly before the fire, and full ten feet distant. She was apparently young, but her face was as dry and impassive as a dead man's. She was doing nothing, and said but little; but, once in about a minute, would suddenly throw up her chin, and spit with perfect precision across the ten-foot range into the hottest embers of the fire. The furniture of the house was more scanty and rude than I ever saw before in any house, with women living in it, in the United States. Yet the people were not so poor but that they had a negro woman cutting and bringing wood for their fire" (I., 368).

"A planter told me that any white girl who could be hired to work for wages would certainly be a girl of easy virtue; and he would not believe that such was not the case with all our female domestics at the North. The Northern gentleman who related to me the facts repeated on the last page, told me he was convinced that real chastity among the young women of the non-slaveholding class in South Carolina was as rare as the want of it among farmers' daughters at the North. . . . I am not unaware that it is often asserted, as an advantage of slavery (in the elaborate defence of the institution by Chancellor Harper, for instance), that the ease with which the passions of men of the superior caste are gratified by the loose morality, or inability to resist, of female slaves, is a security of the chastity of the white women. I can only explain this, consistently with my impression of the actual state of things, by supposing that these writers ignore entirely, as it is a constant custom for Southern writers to do, the condition of the poorer class of the white population" (II., 145).

"A fine-looking, well-dressed, and well-behaved colored young man sat, together with a white man, on a seat in the cars. I suppose the white man was his master, but he was much the less like a gentleman of the two. The railroad company advertise to take colored people only in second-class trains; but servants seem to go with their masters everywhere. Once, to-day, seeing a lady entering the car at a way-station, with a family behind her, and that she was looking about to find a place where they could be seated together, I rose and offered her my seat, which had several vacancies around it. She accepted it without thanking me, and immediately installed in it a stout negro woman, took the adjoining seat herself, and seated the rest of her party before her. It consisted of a white girl, probably her daughter, and a bright and very pretty mulatto girl. They all talked and laughed together, and the girls munched confectionery out of the same paper, with a familiarity and closeness of intimacy that would have been noticed with astonishment, if not with manifest displeasure, in almost any chance company at the North. When the negro is definitely a slave, it would seem that the alleged natural antipathy of the white race to associate with him is lost" (I., 19).

"A friend of mine once said to a Georgian: 'I confess, whenever I am reminded that your power in our Congress, by reason of the hundred slaves you own, counts as sixty-one to my one, because I happen to live at the North and choose to invest the result of my labor in railroads instead of niggers, I have a very strong indisposition to submit to it.' 'I declare,' answered the Georgian, 'I should think you would; I never thought of it in that light before; it's wrong, and you ought not to submit to it—and, if I were you, I would not' " (II., 170).

PIANOFORTE TONE-PRODUCTION.

The Art of Touch. By Tobias Matthay. Longmans, Green & Co.

"Up to now," we are informed by the author of this elaborate treatise, who is a professor at the Royal Academy of Music in London, "owing to the prevailing ignorance of the whole subject, it has been only the few gifted ones who have arrived at beauty and variety of tone" in pianoforte playing; consequently, the art of touch has been regarded as a special "gift" of favored individuals. In Professor Matthay's opinion, it is no more a gift than is the art of articulate speech itself, and "can be acquired by every person of average intelligence." If this be true, it is the most important news communicated to the musical world in many years, even if we do not go so far as the author, who defines the art of touch as "command over the means of expression." His aim is to place the problem on an entirely new and scientific footing. The old method of pianoforte education consisted in choosing exercises and pieces and setting the pupil to perform them; the failures resulting from his helpless flounderings being "corrected" by scolding, bullying, or encouraging him to try again. The author's plan consists in analyzing the subject to be taught, analyzing also the doings of successful artists, and thence deducing the laws governing successful playing; then directly communicating such laws of procedure to the pupil, instead of leaving him to discover them for himself. He has exemplified this plan in the present volume, which is to be followed by similar ones on Practice, Performance, and Teaching.

His aim is best made clear by comparing organ playing with pianoforte playing. The reason why, among the many semi-automatic musical instruments in the market, those of the organ class are more satisfactory than those involving the use of a pianoforte, is that in an organ the power is supplied by the bellows, and the depression of the key is always a purely mechanical act—like opening a valve or tap; whereas at the pianoforte the sound is the direct outcome of the performer's own physical energy, delivered to the key during descent. The author thinks there are no fewer than forty-two distinct kinds of key attack in the case of the pianoforte, whence we get a chameleon-like variety of tone-colors. At the one extreme we have the brilliant but short tone; at the other the singing or sympathetic tone, of good carrying power. The first has its uses, but the second is what makes the best impression, and what so many pianists lack. The main object of Professor Matthay's book is to show how to acquire it. His thesis is that all differences in tone-result depend on the speed attained during the short transit of the key from its surface level to its full depression, and on the manner in which the ultimate degree of speed is attained: if the total energy is applied suddenly we have the brilliant tone; if gradually, we get the rich, singing tone. The cause of this difference is that too sudden application of energy makes a string vibrate in segments, thus sounding the higher, harsh overtones, whereas gradual attack of the string results in whole-length vibration, which gives a rich tone of good carrying quality.

It seems at first thought almost incredible that we should be able to grade the motion of a key (as demanded for a rich, sympathetic tone) during the minute interval of time expended during key descent; but, as the author remarks, many of the muscular acts of our every-day existence are found, on analysis, to be equally minutely graded. The actions of baseball, cricket, tennis, and billiard players afford analogies. Or, take this:

"If we desire to give a person seated in a swing a good 'shove-off,' it is useless to endeavor to do so by means of a sudden jerk or knock. . . . The only (and familiar) way to secure an effective result is to apply force gradually: by allowing our hand gently to come into contact with the

person—without concussion therefore—and realizing the degree of the resistance to be overcome, we increase the energy of the push given, as the speed is felt to increase by virtue of it."

The author is equally illuminative when he makes fun of the pupils who, after having learned that they must "aim" the propulsion of the key during its short descent, follow the example of novices with a gun who, after aiming carefully, close their eyes at the moment of pulling the trigger. Unfortunately these illuminating sentences are rare in Professor Matthay's book. His treatise, indeed, would be a clumsy specimen of literary composition even for a German professor. His best and most instructive remarks are apt to be in the footnotes or appendices, and of perspective he has no more idea than a Chinaman. He frankly concedes that there is much tautology and repetition in his pages, "and no doubt many other literary sins," and he excuses himself on the ground that he wanted to produce a useful rather than an ornamental work. But the utility of his book is precisely what he has destroyed by his atrocious method of composition and his illogical sequence of ideas. On reading him one cannot but recall Goethe's

"Mir wird von alle dem so dumm
Als ging' mir ein Mühlrad im Kopf herum."

Nor is this confusion much improved by the amazing number of analytical chapter introductions, preambles, summaries, recapitulations, and re-recapitulations. It is doubtful if many, even among the most serious teachers and pupils, will have the courage to wade through Matthay's 328 pages; and this is to be regretted, for even if one may not accept all his views, it must be conceded that he has written a book which stimulates thought; and, notwithstanding its forbidding style, pianists cannot be too strongly advised to study it as a guide to the art of tone-coloring. By directly acquiring a tone-palette (or touch-palette) they may thus, as the author justly claims, save years of time, which would otherwise be wasted in futile experiments and in forming bad habits.

Professor Matthay never tires of condemning the habit of key-striking, or hitting, and he devotes a special appendix to it. He has much to say about the way the tone quality is influenced by the attitude the pianist adopts with his fingers and upper arms—the clinging, or flat-finger attitude, which makes for beauty of tone, and the thrusting, or bent-finger attitude, which results in brilliancy. He doubtless goes too far in asserting that "not even in fullest *forte* is there any real occasion to make the finger tip impinge upon the key with more force than could be borne with impunity by one of those glittering balls of thinnest glass so much in evidence at Christmas." Indeed, he rides his hobby rather hard at times, as on page 27, where he makes expression practically synonymous with tone-shading. He incidentally admits that hardness of hammer and the make of the instrument have much to do with the quality of tone; but he does not seem to realize—and this is by far the greatest blemish of his book—the very important part the sustaining pedal plays in the production of a beautiful tone. We feel inclined to maintain that the feet have even more to do with the attainment of a rich tone than the fingers and arms. But, while failing to emphasize this point—which deserved a special chapter—the author makes partial amends by his tirade against those pianoforte manufacturers who, for the sake of convenience and cheapness, omit the mechanism for playing on one string only *(una corde)*, and by his violent condemnation of that "execrable contrivance," the strip of felt shoved between the hammers and the strings. He also, in a footnote (p. 19), qualifies his extreme view regarding the manner of tone production by admitting that a beautiful tone does not necessarily denote "musicality" on the performer's part (being simply one phase of the music produced—the sensuous). Another truth, too often overlooked, is that "a bias towards music does not always bring in its train those valuable muscular talents that render the acquisition of technique so much more easy of attainment." One more point, and we must take leave of this suggestive if badly written book. The remarks in the first appendix, on incapacitating nervousness at a public performance being usually only the result of inattention to the music, are alone worth the price of this volume.

The Balkans from Within. By Reginald Wyon. Imported by Charles Scribner's Sons, 1904.

It is not from very far within that Mr. Wyon views his subject. Many of its most curious and basic elements—the remarkable survival, for instance, of the ancient Aryan family-tribe—he scarcely hints at. Statistics, too, and such dry, though occasionally useful, matters are beneath his notice. But for what may be termed the rapid-fire picturesque, be it in scenery, manners and customs, or the fascinating game of politics, he has a quick eye and a facile hand. Nor is he merely the ordinary tourist. Given that wonderful modern product known as a special correspondent, let him be an Englishman, a fair linguist and a good shot, arm him with triple brass, add some previous knowledge of the country and an enviable capacity for absorbing apparently unlimited "tots of raki," and you have his nearly ideal qualifications as an observer in the Balkans. Mr. Wyon speaks, therefore, with considerable authority of persons, places, and occurrences not easily accessible to the average globe-trotter. And while he manhandles his native tongue rather more than we expect of a true-born Briton, yet his enthusiasm and descriptive force are fairly infectious. He carries the reader along for dozens of pages at a time on a single rush of narrative or incident that can no more be interrupted or left unfinished than one of his own rifle balls in mid-flight.

He opens, however, in stock-market parlance, rather dull, with a series of disquisitions on the latest developments in Turkey and the insurgent provinces. Like every one else who would speak of the Unspeakable, he falls into violent extremes, sounding a raucous blast in the advance-guard of the Turkophobes. Every crime in the Newgate calendar he sets down to the Turks, and many more. He dwells with disproportionate fury on the ragged uniforms of their army. Their very virtues are mere cloaks for vice—hospitality for treachery, loyalty for fanaticism, and so on. Per contra, the Bulgar insurgents are the incarnation of chivalry, intelligence, and heroism. Their campaign last year was a triumph, this year's will be the Turk's Waterloo. And with sundry wise waggings of a head weighted down with insurgent secrets, Mr. Wyon rushes into print to bid us watch the developments of the spring of 1904. This evident haste explains, but hardly extenuates, all manner of slips in composition, both his and his printer's. Now, most unfortunately for his pose as a prophet, recent "understandings" between the parties have rendered the spring of 1904 particularly peaceful in European Turkey; so that this portion of the book falls doubly flat.

The real meat of the volume follows—a series of brief and brilliant impressions, instantaneous pen-photographs, as it were, of life to-day in Macedonia, Southern Bulgaria, Montenegro, and Albania, obscured occasionally by "newspaper English," and with practically no relief from the present tense, yet admirable for fidelity, sympathy, vigor, and variety. To one who knows something of the country, especially, they appeal irresistibly. Many and cordial were the welcomes our author received—from smart officers of Bulgarian garrisons, who learned with immediate gusto how to sing "Auld Lang Syne" with one foot on the mess-table; from holy hermits in well-nigh inaccessible mountain monasteries; from perspiring consuls in bedraggled border towns, hag-ridden with fear of a fresh outbreak; from lean, hawk-eyed mountaineers, inseparable equally from their Martinis and their politeness (and why will he persist in speaking of their white coats and leggings as made of "serge"?); from sole survivors of unspeakable massacres, huddled in dim corners of ravaged hamlets, and telling their awful tales in sobbing whispers; from the happy inmates of the Podgorica prison, whence if one escapes the others are sent out to look for him and lead him gently back to the fold; from village revellers on saints' days, when the all-overshadowing blood-feud is forgotten and sworn enemies kiss in the streets; and even from the much-telegraphed-of Vali of Monastir himself. As a fit climax, he winds up with a short trip into Albania, the "bad man's country" of the East. True, he was chaperoned by the itinerant Italian priest of the region, and even then did not get very far, but he kept his eyes open and made the most of his time; and it is a good deal to say that you have crossed that border at all.

The bulk of the volume, which is not remarkable as a piece of bookmaking, is distended with over a hundred rather poor photographic reproductions. An appended map considerately indicates some, though not many, of the places mentioned in the text. There is no index.

Aristote et l'Université de Paris pendant le XIIIe Siècle. Par G. H. Luquet. Paris: Ernest Leroux. 1904.

In this brochure, issued lately from the École des Hautes Études under the auspices of the Minister of Public Instruction, Professor Luquet discusses with learning and lucidity the attitude of the University of Paris towards Aristotle in the thirteenth century, and the relations, friendly or the reverse, which existed between the Church and the supreme authority in philosophy. The Faculty of Arts was at that period preliminary and subordinate to the Faculty of

Theology; the method of instruction in each faculty was the same—a method based on authority. The sources of theology were the Scriptures and the Fathers; the sources of scientific instruction were the works of classical antiquity, with the interpretations of Latin or Jewish or Arabic commentators. The alchemists alone conducted *research*, in the modern sense, such as it was; but in the schools each science was studied, not from nature and observation, but in a book, which was supposed to sum up all that was known on the subject; the study of any particular science was identified and confounded with the study of the treatise in which it was summarized. Not only did the Faculty of Arts follow the method of the Faculty of Theology; its investigations and decisions were also limited and prescribed. The students and instructors must walk in a straight and narrow track. Certain fundamental doctrines, such as that of the Trinity and the Incarnation, they must not presume to question or discuss; others which bordered on theology they must decide "according to the Faith." The study of philosophy they must regard as a useful gymnastic to train the intellect for the defence of the Faith; it is a sword of defence and attack—a mundane ornament and jewel, which, say St. Augustine and Gregory IX., as a spoil from the Egyptians, the faithful may wisely appropriate for the enrichment and adorning of the Church and its chosen people.

In spite, however, of ecclesiastical bars and warnings, each Faculty tended in its teaching and discussions to trespass and to stray beyond prescribed limits. In 1277 the Bishop of Paris, Étienne Tempier, complains that certain members of the Faculty of Arts are maintaining heresies, on the pretext that "though false according to the Faith, they are true according to reason." By a delicious imbroglio, he condemns in the same epistle some proposition of St. Thomas, who himself castigates a zealous tyro, ensnared by the teaching of Averroes, for declaring, "By reason I necessarily arrive at one conclusion, but by faith I firmly hold the opposite." Such were the somersaults and acrobatic feats of the unfortunates condemned to ride two horses that pulled in opposite directions.

So immense was the vogue of Aristotle at this period, so completely did it dominate the minds of men, that, after a brief struggle, it imposed terms even on the Church itself. In 1210, a council held at Paris condemned his works, except the treatises on Logic, and their reading was prohibited under pain of excommunication. But this prohibition was practically removed in 1237; and from the middle of the thirteenth century the entire range of his writings not only are tolerated by the Faculty of Arts, but make part of the official programme. From this date he becomes an honored ally, and, as it were, a thirteenth Apostle. His treatises on formal logic had always lent themselves easily to the methods of theology. When applied to certain premises drawn from Scripture texts whose truth was assumed, they led to orthodox conclusions; they played admirably the rôle of *ancilla theologiæ* which the Middle Ages ascribed to philosophy in general.

The strictly philosophic works, however, received through the medium of the Arabs, presented very serious stumbling-blocks. They seemed to impugn the doctrine of a Creator and of the immortality of the soul. What was to be done with this formidable opponent? After a brief period of denunciation, a *modus vivendi* was brought about, and an alliance was secured with so great a name. This was accomplished by the labors of Albertus Magnus, and especially of Thomas Aquinas, who by their commentaries tried to purge the Peripatetic philosophy of the errors of Averroism, or at any rate to reconcile it with Christian doctrine. Such a policy, M. Luquet remarks, has often been pursued by the Church—to attack and proscribe, so long as she believes herself the stronger; to make terms, if she cannot conquer; to conciliate adroitly; to pass over differences; to create a perhaps illusory *modus vivendi*. From Galileo to Mivart, from Aristotle to the Abbé Loisy, these tactics have been consistently followed; and at this very moment Pius X. is scolding France and discovering the virtues of "that great and noble nation, Germany."

There is nothing controversial in Professor Luquet's dissertation; he simply cites from contemporary documents and draws conclusions dispassionately. The present study is the forerunner of a work in which he promises to discuss the knowledge of the works and teaching of Aristotle possessed by the Middle Ages, and incidentally to sketch the development of thought in that period, with its anticipation of modern ideas. Such a treatise would be distinguished by the merits of this preliminary chapter—ample learning, constant reference to original sources, precision, clearness, and sobriety of judgment.

New England in Letters. By Rufus Rockwell Wilson. A. Wessels Co. 1904.

The contents of this volume represent a series of actual visits to the spots associated in a more or less intimate degree with New England writers of all sorts. The pilgrimage which covered so much ground was not continuous, but apparently considerable sections were included in each separate itinerary. The emphasis of Mr. Wilson's journal is much more personal than topical. Little is made of the scenery of any given writer's region or of the character of the local situation (whether town or country) in which his childhood or his later years were passed. What results is some brief and superficial account of the more prominent writers, with briefer mention of the less prominent, but without any nice corresponding proportioning of space. In many instances there is a word of honorable mention and no more. A good deal of pains has been taken to identify, with street and number, the houses in which the different poets and other writers of the extended catalogue have lived and died. Over and above the satisfaction of such curiosity as there may be with regard to these particulars, the prosperity of the book depends very much upon the ignorance of the person reading it. One must know very little of the life and work of New England's principal men of letters who does not know a great deal more than is here meagrely set down.

A very general impression of Mr. Wilson's book is likely to be that he is resolved to "claim everything" for New England, but it should be remembered that he avails himself of every circumstance of birth, residence, and literary association to lengthen the roll of his *dramatis personæ* and to increase its interest. Poe may have been the least New Englandish of American writers, but accidentally he was born in Boston, and his early 'Tamerlane and Other Poems,' published in Boston, was avowedly "by a Bostonian." Mr. Howells was born in Ohio, but for a time he lived "as far away as Belmont," Mass., from his native town.

The personal association has been worked, perhaps, more carefully than the literary. The Isles of Shoals, for example, fail to suggest Lowell's splendid "Appledore," and Marblehead is silent except for Agnes Surriage and Skipper Ireson, though Longfellow's "Fire of Driftwood," Whittier's "Sea Dream," and Lucy Larcom's "Hannah," are all Marblehead poems. It is, perhaps, hardly worth while to correct so persistent an error as "Floyd" Ireson. The skipper's name was Benjamin, and Mr. Wilson's correction of Whittier's ballad is as far as that from the literal truth of Ireson's history. Moreover, the Fountain Inn, of which Agnes Surriage was the pretty maid, was "down town" and not, as Mr. Wilson writes, "in the upper reaches of the town." Similar errors that obtrude themselves here and there suggest a fear that Mr. Wilson took little pains to verify his local information. When we read of Salem that "there was reared 'The House of the Seven Gables,' " we might think the tale was written in Salem if we did not know that it was written in Lenox, especially as it is ignored in connection with Hawthorne's Lenox year. It is a good story that tags the frigate *Constitution's* escape from her pursuers with Dr. Bentley's famous text, "There go the ships," but we had supposed the occasion for this text was Jefferson's famous embargo.

There is considerable loose writing in the eleventh chapter, "The Berkshires and Beyond." The uninformed are permitted to believe that Cummington, the birthplace of Bryant, is in Berkshire County instead of Hampshire. More positively misleading is the statement, "The site of the house in which the poet was born is not in Cummington." What is meant is that it is not in the present village street. It is now, and always was, in the township, and at the time of Bryant's birth was in its more thickly settled part. There is not a word concerning the interesting building which was Dr. Bryant's office, and in which he discovered the manuscript of "Thanatopsis" in that form in which it was first printed in the *North American Review*. The advice to travellers from Cummington to Pittsfield to "shape their course through Plainfield and Lanesboro," is queer, to say the least, or would be if the exigencies of a literary pilgrimage had any respect for the conveniences of ordinary travel.

The index is of personal names only, and as there are about three hundred of these, the extent of Mr. Wilson's inquiries and his information is evidently so wide that even the best informed must find here many items that will refresh their memories if they do not increase their knowledge.

South Carolina as a Royal Province, 1719-1776. By W. Roy Smith, Ph.D. Macmillan. 1903. Pp. xix., 441.

Mr. Smith's attractively printed book naturally suggests comparison with the late

Edward McCrady's great history of South Carolina, the second and third volumes of which deal with the same period. As a matter of fact, however, the two works have comparatively little in common either in subject-matter or in method of presentation. While Mr. McCrady gives us a detailed political and military history, Mr. Smith devotes himself to a study of the political and administrative institutions of the colony during the period of direct royal control. In the choice of material, too, there is a noticeable difference. Mr. McCrady appears to have relied almost wholly upon printed matter, while Mr. Smith has made careful and painstaking use of the manuscript records and Assembly journals of the province. The result is a volume which not only is a welcome and valuable addition to the still scanty literature of American institutional history, but also opens up a considerable mass of historical material hitherto little used, but of first-rate importance.

After a brief introductory chapter on the events of the Proprietary period, Mr. Smith proceeds at once to a detailed examination of the land system of South Carolina, with particular reference to the land frauds to which the early system of grants gave rise, and to the long and bitter controversy over the payment of quit-rents. Then follow instructive chapters on the development of governmental activities, executive, legislative, and judicial, the duties of the colonial agent, the organization of the militia and colonial defence, and the financial history of the province, ending with a chapter on the downfall of the royal Government and the events leading directly to independence. The survey of the financial history, with its paper-money controversies and its steady resistance (on the part of the commons House of Assembly) to the claim of the Council to a share in financial legislation, is particularly full, as is the account of the critical years from 1760 to 1776. We could have wished for a fuller treatment of the colonial agent, but as a whole the apportionment of space is adequate.

We must leave unnoticed most of the numerous matters of detail on which Mr. Smith's researches shed a needed light, and confine ourselves to one or two general observations. Mr. Smith, as he tells us in his preface, has had in mind more than simply an institutional history of colonial South Carolina. To him, the whole period has added significance because of its bearing on the causes and nature of the Revolution. We are not, indeed, now told for the first time that the causes of the Revolution are to be sought far back of 1763, but few scholars have as yet applied themselves to a study of the neglected years subsequent to 1688, in which the preparation for revolt and independence was everywhere being made. It is because of this point of view that Mr. Smith's volume will have, for students of the Revolutionary age, unquestioned value. In the quarrels with the Crown over land grants, quit-rents, and official salaries and fees, and with the Governor and Council over the control of legislation and the colony purse; in the contempt for the crowd of needy place-hunters who monopolized executive offices in the colony; and in the stout insistence on the rights of Englishmen, albeit those rights were in the eighteenth century as much theoretical as actual, South Carolina learned through two generations the power of stubborn and united resistance. No more than other parts of the empire was it mindful of consistency or scrupulous about means, but it was at one with its neighbors in opposing external restriction and control. It is surprising that historians should so often have treated the American revolt as an outbreak developed *de novo* in ten or a dozen years, instead of as the culmination of a development whose beginnings are not far from the establishment of the colonies themselves.

In one or two respects Mr. Smith's book is (perhaps designedly) incomplete. There are two reactions, if so we may call them, in American colonial history to which no writer has thus far paid adequate attention. One is the influence of political and social events in England on the colonial policy of the Board of Trade and the Crown; the other is the relation between local conditions and local opinion in the colonies and the policy of the colonial assemblies. So far as England is concerned, we do not yet know very much about the effect of public opinion, as itself largely determined by changing political and economic conditions in the eighteenth century, on the growth of colonial policy; while in no colony are we yet sure as to the accuracy with which the representatives of the people reflected the real attitude of the people themselves. On neither of these points does Mr. Smith's book afford great additional light. The colony rather than England is the object of his scrutiny, and that, too, on the colonial rather than on the local side. We still want to know, on the one hand, not only what England did, but also what she thought she was doing; and, on the other, to what extent colonial officials and assemblymen recognized a colonial public opinion. Mr. Smith has set forth so admirably the institutional side of the case as it appears in South Carolina that we should be glad to anticipate a broader treatment of the same period at his hands.

BOOKS OF THE WEEK.

"Ask Mamma." New ed. D. Appleton & Co.
Brassey, Lord. Fifty Years of Progress and the New Fiscal Policy. 4th impression. Longmans, Green & Co. $2.40 by mail.
Crashaw, Richard. Steps to the Temple, and Other Poems. Cambridge (Eng.) University Press; New York: Macmillan.

Leroy-Beaulieu, Pierre. Les Etats-Unis au XXe Siècle. Paris: Armand Colin; New York: Dyrsen & Pfeiffer. 4 fr.

The BOOKMAN says:

"Much of that exquisite egotism, the huge, artistic Me and the tiny universe, that gluttony of the emotions, of the whole peculiar compound of hysteria, inspiration, vanity, insight and fidgets which goes to make up that delightful but somewhat rickety thing which we call the artistic temperament is reproduced. . . . **THE DIARY OF A MUSICIAN*** does what most actual diaries fail to do—writes down a man in full. It is an entertaining study in naivete and nerves, art pains and genius-consciousness."

* Illustrated. 2d printing $1.50 net. (By mail, $1.62.)

BROWN BROTHERS & CO.

NO. 59 WALL STREET, NEW YORK.

AN EDUCATIONAL DIRECTORY.

I.—*The Nation* stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in *The Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

RENSEIGNEMENTS GÉNÉRAUX

L'Enseignement de l'École des Sciences Politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves sont admis sans examens, avec l'agrément du Directeur et du Conseil de l'École; il n'ont à justifier d'aucun grade universitaire.

L'enseignement comprend un ensemble de cours répartis en deux années, mais la durée des études peut être étendue à trois ans. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1904-1905.—L'année scolaire commencera le 7 novembre 1904 et finira le 5 juin 1905. On s'inscrira au Secrétariat à partir du 2 novembre 1904. **Inscription d'ensemble** donnant entrée à tous les cours et conférences reguliers et complémentaires et à la Bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers).....PAR ANNÉE: **300 fr.**

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'Ecole et sur les carrières auxquelles elle prépare.*

RECENT NOTABLE MACMILLAN PUBLICATIONS

JUST READY

Manchu and Muscovite

By B. L. PUTNAM WEALE

Cloth, $3.00 net. (Postage 18c.)

"The most interesting publication that has appeared for some time in connection with the Far Eastern struggle."—*The Morning Post*, London.

"Without hesitation, Mr. Weale's book may be pronounced to be the most complete and illuminating that has yet appeared on the Russian occupation of Manchuria. . . . He has marshalled his facts with the utmost skill, so that the subject grows under his hand, and is never for a moment dull."—*Daily News*, London.

"Infinitely superior to most of the work on the Russians in Manchuria which has been read."—*Athenæum*, London.

"The most absorbingly interesting and vivid document that has been published in recent months on this subject . . . a volume no one should miss reading."—*Brooklyn Eagle.*

MISCELLANEOUS

War and Neutrality in the Far East

By **T. J. LAWRENCE, M.A., LL.D.,** Author of "Principles of International Law."

Crown, 8vo, $1.25 net. (Postage 10c.)

This exceptionally valuable handbook deals with all the disputed questions which have come up in the Japanese war; its causes, the charges of treachery in the opening of it, coaling in neutral waters, floating mines, the purchase of ships in neutral countries, the passage of the Red Sea, mail privileges, international law in Korea and Manchuria, etc., etc. It is an exceptionally useful book to all who desire to form an intelligent opinion of the conduct of the Eastern War.

"It is rare indeed that a book is published so exactly at the right point of time as this."—*Outlook.*

The Masters of English Literature

By **STEPHEN GWYNN,** author of "Tennyson: A Critical Study," "The Life of Thomas Moore, etc."

xiii +423 pp. 12mo, cloth. $1.00 net. (Postage 10c.)

A survey of English literature which concerns itself only with authors, of whom some knowledge is deemed essential, and presents such information in a manner to awaken the interest of the general reader.

Chinese Made Easy

Royal 8vo, cloth, gilt, $6.00 net. (Carriage 24c.)

By **WALTER BROOKS BROUNER,** M.D., of Columbia University, and **FUNG YUET MOW,** New York.

With an Introduction by HERBERT A. GILES, LL.D., Professor of Chinese in the University of Cambridge, Eng., and late H. B. M. Consul at Ningpo, who writes: "Any one may gain, with the assistance of this book, a knowledge of the Chinese language, colloquial and written." It is of great importance to the student of languages and those whose commercial interests are in the Far East.

The Nation.

NEW YORK, THURSDAY, AUGUST 11, 1904.

The Week.

Alton B. Parker's resignation of the highest judicial position in the State is characteristically fine. He declined to yield to the wishes of those of his fellow-judges who believed that he could properly and legally retain his office until the election, and urged him to do so that the State might not lose his valuable services. Moreover, he chose to resign before August 8, thereby laying down his office for all time. Had he vacated his position after that date, he could have become a candidate to succeed himself next autumn in the event of his defeat in the fall. This is merely fresh proof that with Mr. Parker office-getting is entirely subsidiary to considerations of good taste, courage, and straightforwardness. No fair man could have criticised him had he chosen to resign a few days later. Every fair man, even if he be a chained Republican editor, ought to acknowledge the manliness of his present attitude. But this is too much to expect. Doubtless we shall be told that no other course was really open, and that his secrecy in not announcing the date of his resignation until he actually handed it in, is highly reprehensible.

We had always supposed the Paris *Temps* to be an intelligent and sedate newspaper, and, in particular, had thought of M. de Pressensé, its foreign editor, as a man of singular sobriety and poise. Yet we find him writing in the *Temps* of July 25 that "the name of Judge Parker, wholly unknown six months ago, has now made the round of the universe." It was his telegram that made the change. It showed the world that "a calm and simple gentleman," who was "neither a soldier nor a cowboy," could display surpassing courage. "Enfin, il s'est fait connaître. Et voilà sa candidature lancée." There is more of this sort of thing. It simply shows, of course, that the *Temps* has, in one mad moment become "hysterical," "ecstatic," "gushing," and "wildly exaggerated." And any rash man who suggests that we have the verdict of posterity in such contemporary foreign judgment, will get the trimming down he deserves.

To inform a man that he has been nominated Vice-President is, as things go, not an inspiring task, and Mr. Root in six hundred words found little to say about Senator Fairbanks, except that he was likely to keep his mental faculties for the next four years. That he keeps them carefully in reserve was shown in the speech of acceptance. Mr. Fairbanks had evidently been warned against the rhetorical figure called anti-climax, and his address of acceptance was beyond all cavil duller than Mr. Roosevelt's. "Uncertainty undermines confidence, and loss of confidence breeds confusion and distress in commercial affairs," was a characteristic gem. In fact, if safety is to be measured by insipidity, its apostles should have nominated Mr. Fairbanks for the Presidency to begin with. Mr. H. G. Davis, as Mr. Root did not fail to remark, was born under President Monroe, and may or may not be capable of a sustained effort. For an oratorical spurt, however, he need ask no odds from Mr. Fairbanks. We warrant him, when his notification comes, to show a younger wit, and possibly a personal idea or two wherewithal to enliven the stipulated party platitudes.

There will be little cheer for despondent New York Republicans in the announcement that the President and Chairman Cortelyou have determined to put it squarely "up to Odell" to carry this State for the ticket. Odell and what he stands for count as one of the chief reasons why the Republicans are in danger of losing New York. He has made himself nearly as hated as Hill, and on much the same grounds. Therefore, to put him in charge and make him all-powerful is merely to inflame a condition already feverish. We have heard a disgusted Republican official in this city say, "Why, it begins to look as if, in case Odell comes down here and applies his methods to the campaign, we shan't get any votes at all." Moreover, Odell is in a position not to care a straw about all the grim talk of holding him sternly "responsible" in the event of Democratic success. It would be the easiest thing in the world for him to say that the finest and most loyal organization on earth could not pull through such a load as Roosevelt; and then, having meanwhile made his position as Republican boss absolutely unassailable, he could enjoy himself dictating nominations and selling legislation.

The effort to smoke out Lodge on reciprocity did not amount to much. He showed, in his Saturday's speech before a Massachusetts Republican club, that he was prepared to cover the whole question—to stand on both sides of it at once. He quoted the Chicago platform's declaration for reciprocity that shall not injure "any" American industry. He agreed to that. Then he cited President Roosevelt's restatement of this passage with the word "any" left out. He agreed to that also. Next, he faced the demand of the Massachusetts reciprocity advocates that our business with the Provinces shall "not be confined to non-competitive products," and added: "With that, too, I am in full agreement." Of course he is, for any reciprocity agreement with Canada "must of necessity involve competitive products." There you have the whole of Lodge's reciprocity philosophy—you must and you must not. Surely, no good Republican could ask for more. If any member of the party thinks he has a grudge against Lodge, he is mightily mistaken. This whole fuss is the result of a wicked Democratic plot. The 15,000 or 20,000 Republicans who have signed the petition for Canadian reciprocity are being pulled around by the nose by the Parker leaders. Lodge urges them "not to be led by Democratic misrepresentations." Such dense ignorance among Massachusetts Republicans will certainly startle the country.

President Roosevelt has declined to commute the death sentence imposed upon a negro ravisher, and has improved the opportunity to comment both on the crime itself and on the conventional plea of insanity advanced to palliate nearly every crime of passion. Mr. Roosevelt rebuked the tendency to attribute brutal crimes, not to depravity, but to mental derangement. In the case of "a crime so revolting that the criminal is not entitled to one particle of sympathy from any human being," the President felt that the punishment should be stern, sure, and swift. He deplored the law's delays in such cases, and hoped that, in order to remove the last provocation to lynching, the courts might adopt a special swift procedure for the abominable crime in question. The President's comments should do good in the South, where the monstrous opinion has grown up that what it calls "negrophilism" in the North regards rape by negroes with an almost apologetic toleration. On the other hand, apologists for lynching will find small comfort in characterization of that practice as "of equal infamy" with the outrage it avenges.

Secretary Hay's note on contraband, addressed to the American ambassadors in Europe, has been published. Against the theory that "conditional contraband"—food, fuel, cotton, horses, etc.—may, wherever found, be seized by a belligerent, he excepts vigorously. There must, he holds, be reasonable evidence that such conditional contraband actually is intended for military uses. To maintain an absolute right of confiscation over commodities that might become

contraband would be to put all the trade of neutrals with a belligerent in the position of contraband. It would amount "to a total inhibition of the sale by neutrals to the people of belligerent States of all articles which could finally be converted to military uses." In other words, any nation with a few active cruisers and as broad a definition of contraband as, say, that of Russia, would be able to effect by a mere definition that general embargo which international law admits only where an effective blockade is proclaimed. Secretary Hay's lucid presentation of this principle is in accordance with the best traditions of our diplomacy, which has ever tended to limit the pretensions of belligerents as against neutrals. But there is still needed something like a code by which neutrals and belligerents may act in specific cases. For this reason one must hope that some of the late Russian seizures may come before the Hague Tribunal, and that later that body may pass authoritatively upon the whole question of contraband.

As anticipated, the Russians have maintained their right of search in the Red Sea, and have not admitted any irregularity in the status of their volunteer cruisers. In the case of the *Malacca* they had the good fortune to be able to prove that the captain had refused to show his manifest. In short, we have the familiar phenomenon of an apology without explanations or pledges for the future. In remarkable contrast with the tension over the *Malacca* is the quiescence of Germany in the face of the detention of mails carried by the *Prinz Heinrich*. In all ways this was a graver international offence; there was no reasonable suspicion of contraband in the mail bags, and no insubordination of the captain gave color to extreme measures. Germany herself has leaned to the theory that international mails are inviolate. When the British seized the mailboat *Bundesrath* during the South African war, the German ministry took the ground before the Reichstag that the post is an international service with which belligerents may not interfere. But it makes a difference who does the holding up, and the phlegm of the German Foreign Office in the days just past is a very significant sign of official friendliness between the two Empires.

It would be a dull year in Turkey that did not see one or two minatory descents of Christian fleets upon Smyrna. In the present case, the Sultan is probably congratulating himself that no little bill is being collected, and that accordingly no custom house is likely to be seized. The infidel, as represented by Mr. Roosevelt, is simply seeking concessions that cost nothing but the sacrifice of a little dignity. Our claims are just. Our diplomatic representative at Constantinople should have direct access to the Sultan; their unaccredited envoy at Washington should assume the full responsibility of an Ambassador; our schools, colleges, and missions in the Turkish Empire should receive the treatment of a most-favored nation. In worrying these concessions out of the Porte, the President and Secretary Hay are following established precedent. We cannot wonder that Ottoman diplomacy has worn out their patience, but we deplore the necessity of a naval demonstration simulating warfare. Everybody loves to scare the Sultan to death; nobody really wants to fight him. Some day the Osmanli coon may refuse to come down, and that will be an awkward pass for any Captain Scott who then happens to have his guns trained on Smyrna.

The Boston Steamship Company is doing yeoman's service in the ship-subsidy cause. Its president, Mr. Alfred Winsor, labored hard with the Merchant Marine Commission in the East, and Mr. Frank Waterhouse, its agent at Seattle, has taken up the work in the West. "There is no time to experiment," he said at the Seattle hearing of the Commission; "the case demands relief which will be prompt, specific, and sure." We must have subsidies in order to overcome the high cost of constructing and sailing American ships. Mr. Waterhouse does not confine himself to glittering generalities; he gives figures which speak for themselves. For instance, the daily fixed charges of the steamer *Shawmut* include $19.90 for corporation expenses and taxes, while a corresponding steamer of the Japanese transpacific line eats up only $8.79; the insurance and interest are also much heavier; and as the American ship costs a great deal more than the foreign, its depreciation charge towers high above that of its rival. It is not right that our shipowners should have to worry over such details. It is their business to sail steamers, and the Government's to pay the bills. One way to solve the problem, says Mr. Waterhouse, is for Uncle Sam to lay up all his Pacific transports—on which he has spent $20,000,000 in the last six years, exclusive of first cost—and use subsidized vessels. The Boston Steamship Company would save the Government a large amount of money in this way—if you do not count the subsidy.

It is to be hoped that the Republicans will not have many more such flag-raisings as the one in Fall River. There were actually timorous souls among the party leaders who believed it would be wiser not to unfurl the national emblem, certainly not to have a band concert and a parade. There could, of course, be no doubt about the attendance. About 25,000 persons are out of work in Fall River, and the streets seldom are as thronged as at present. But the local Republican leaders were undoubtedly afraid that the cry might go up, "Do wages follow the flag?" But to ignore the ceremony altogether would, of course, occasion equally embarrassing questions. The flag was flung out, but very quietly. Then "several local members of the party" adjourned to a hall and listened to speeches. The orators spoke of the "glorious past and glowing future" of the party. But it is not recorded that any one quoted President Roosevelt's remark that "wages were never higher."

Mr. Charles M. Schwab is obviously a thorn in the flesh to the steel manufacturers of this country. Their industry, though not exactly an infant in years, is nevertheless a weakling in strength. Everybody has had a chance to know that; for has not a high tariff always been needed to protect our steel rails, ingots, and billets against the more virile products of Europe? Even the tariff was incapable of accomplishing this single-handed, and a billion-dollar Trust was necessary to put the finishing touch upon the work. The public have scant liking for Trusts in general, and, of course, they jumped to the conclusion that, if large dividends could be paid on vastly inflated steel capitalizations, there was really not so much need for tariff duties, after all. Friends of protection have been working hard to show the people how mistaken this view is, but now along comes Mr. Schwab and plays right into the hands of the "enemies of prosperity." Landing in this country on Friday from an inspection of the Krupp works, his first words were: "My observations in the works at Essen confirmed my belief, stated many times, that the American steel manufacturer can make better and cheaper steel than any other on the face of the earth." And Mr. Schwab has been accounted by some people the ablest steel manufacturer in this country, if not in the world.

The full report of Mr. Chamberlain's Tariff Commission on the iron and steel trades brings to light some important facts not disclosed in the summarized accounts. The earlier statements made much of the feature that Germany and the United States have greatly outstripped the United Kingdom since 1876 in the production and consumption of steel and iron. We were told that average consumption of pig iron in Great Britain had grown from 5,430,000 tons in 1876 to 7,880,000 tons in 1903; but this was as nothing compared with an expansion in Germany from 2,210,000 tons to 9,640,000 tons, and in the United States from 2,200,000 tons to 18,580,000 tons. The summarized statements, how-

ever, ignored one salient feature: On a per capita basis, the United Kingdom increased its consumption of pig iron from 361 tons to 412 tons, Germany from 114 tons to 367 tons, and the United States from 101 tons to 517 tons. To be sure, there is to-day a larger per capita use of steel in both this country and Germany than in Great Britain; but undoubtedly this is largely due to the much greater railroad mileage required by the two former than by compact and densely populated England.

As to "dumping," the report does not make out a good case after all. It abounds in such assertions as these: "We are not conscious of having suffered any diminution of trade in foreign and colonial markets or *at home*"; "no goods which we manufacture are sold in this country below cost"; "we gain far more from cheap foreign billets than we lose from competition in our own manufactures." It should be stated, too, that in many cases the information imparted to the Commission is of a hearsay character. The evidence, on the whole, is as valuable to the free traders as to the Chamberlainites. The situation could easily be duplicated in this country. No end of affidavits could be secured from American manufacturers regarding low prices made by foreign competitors in our market; and yet we are not living under British free trade, but under that most beneficent of human enactments—the Dingley tariff. The fright over dumping springs from an hallucination. The people seized with it are like the people who "enjoy" poor health, which is generally imaginary. According to Board of Trade estimates, the total iron and steel trade of Great Britain amounts at least to $700,000,000. The imports, however, are only $25,000,000, and many of these are indispensable to the success of the British ironmaster. Certainly, if the Commission's conclusions regarding other trades are no better founded than those on iron and steel, they will, as British critics point out, be worth little.

Mr. Chamberlain touched his lowest depth on Thursday night when he promised the Nottinghamshire farmers protection equal to that which manufacturers are to enjoy under the fiscal-reform plan. One can imagine the joy of the honest leaseholder when he was assured of 50 cents a quarter on all foreign grain (about 10 per cent.), and a prohibitive duty on foreign flour, with 5 per cent. on dairy, poultry, and garden products. Moreover, Mr. Chamberlain promised abundant and profitable employment, and he enunciated the novel doctrine that the general depression preceding the repeal of the Corn Law was due, not to the price of food, but to lack of well-paid work. The speech was apparently an open appeal to the self-interest of his hearers. Fortunately, there are Asquiths to explain how rubbishy the promise of agrarian protection is, and also the ascription of hard times to lack of employment. Ten per cent. on grains may look very grand, but England, in the nature of the case, can grow only an inconsiderable quantity of grain, and of that very little wheat. Grain taxes, particularly if they are remitted in behalf of the Colonies, are a mere pretence. As for lack of employment causing hard times, it is probably a jest in Notts as elsewhere that shortness of breath is a universal cause of death.

In the mouth of a less potent individual than Mr. Chamberlain, this nonsense would be negligible. He, we believe, cannot long continue to promise the farmer dear food without falling foul of the factory workman. Foul of Mr. Balfour, who has steadfastly opposed food taxes, he is already. Three weeks ago he predicted that the "whole-hogger would beat the half-hearter." Later, he gave ironical thanks for Mr. Balfour's sympathy, saying that he would on the whole prefer his support. Mr. Balfour believes that fiscal reform should be discussed at length; Mr. Chamberlain believes in an immediate appeal to the constituencies. When these two pots meet in the parliamentary rapids, the Brummagem pot will have no need to dread the collision. Such unquestionably is Mr. Chamberlain's thought when he shifts the fighting from iron schedules and Imperial unity to the food tax.

With the opening of the Subway Tavern, under Bishop Potter's auspices and with the singing of the doxology, begins a very interesting social experiment. The promoters assume that the chief evils of liquor selling to-day are the inordinate profits that can be made by selling vile stuff and encouraging the habit of drinking at a bar. Accordingly, this model saloon is planned to pay its stockholders 5 per cent., any surplus going towards similar taverns. The site chosen, Bleecker and Mulberry Streets, is admirable for experimental purposes. If a model saloon can remain exemplary in that region, the case for the model saloon is proved. Probably no scheme of this sort has reposed such confidence in the people; there is no discrimination in favor of fermented against distilled beverages; there is no attempt, unlike Earl Grey's "Trust" public houses, to make the managers' profit depend on the sale of food; in short, there is no paternalism of any sort in the plan. The public-spirited gentlemen who have financed the scheme fly simply the flag "Good whiskey and good order." Superior worldly wisdom appears only in the installation of a soda-water fountain for women—a feature as likely to shed a certain domestic aura about the Tavern as it is to repel confirmed topers.

The beauty and beneficence of a Chinese wall tariff seem to suffer a sad sea change when it appears in Rio Janeiro. The Brazilian Chamber of Deputies has passed on its first reading a bill which raises the Brazilian customs tariff to a prohibitive height. This would seem to imply, according to the Republicans, that the canny Brazilians knew a good thing when they saw it. One would suppose that we ought to rejoice at this evidence of advancing civilization in the tropics. But just the opposite view is apparently taken by our high-tariff Administration. Our representative in Rio Janeiro, along with the representatives of Germany, France, and other Powers, "simultaneously approached the Government, asking it to use its influence" for the maintenance of the present Brazilian tariff. The force of hypocrisy could no further go. A high tariff is the sheet anchor of prosperity north of the equator, but a sad mistake, even an international menace, to the southward. One can picture the repressed exultation with which the Brazilian Government might suggest to the representatives of the Powers, that the one among them without sin may properly cast the first stone at the wicked Brazilian Congress.

That must have been a thrilling moment for Younghusband and Macdonald when their brigade halted under the walls of Lhasa. At a blow they had knocked over century-old traditions of inviolability; their quick-firers were ready to reduce by one the not overgreat supply of holy cities in the world. Meanwhile, their mission lags. The Dalai Lama has fled, and only the Chinese Viceroy remains to treat with the conquerors. One would like to believe with Lord Curzon that the expedition is bringing to the Tibetans anything better than they have had. But we are forced to recall the fact that only a diplomatic point of honor is at issue; that the harmless fanatics of the mountain tops have been mowed down because negotiations of nearly twenty years' standing were not moving quickly enough to suit Lord Curzon. That was a point of honor; now let us watch the test of honor on the British side. Mr. Balfour has declared that the expedition seeks nothing but a satisfactory treaty with the Lama. That attained, nobody may demand a resident at Lhasa, cite the tea trade and the treachery of the Russians, prate of introducing the blessings of civilization among this "miserable, priest-ridden people" (Lord Curzon's words), without convicting himself of using the old cant to cover a new usurpation. We shall see.

A DISSOLVENT CANDIDACY.

It is already evident that Mr. Roosevelt's candidacy is to be like Mr. Bryan's in 1896 in at least one respect—that of breaking up the previous alignment of parties. A series Republican defection exists. It is not nearly so great as the falling away of the Gold Democrats from Bryan; it is not organized, and will not be; but it is both undeniable and extensive. Many Republicans openly declare that they will not vote for Roosevelt; more say so privately; still more express their dislike of the President's methods and policies, and admit that they are uncertain what to do in November. No candid friend of the President's can go about the country without discovering Republicans of all these classes. The *Evening Post's* special correspondent at the Chicago Convention, after mingling with delegates from all parts of the land, reported it as a well ascertained fact that "many Republicans" would refuse to support Mr. Roosevelt.

That many Democrats, on the contrary, would vote for him was a conclusion embodied in the same dispatch. Events have since borne it out. The dissolvent candidacy of Mr. Roosevelt has already won Democrats as well as repelled Republicans. A few Gold Democrats of high standing, like Mr. Oscar Straus and ex-District Attorney Philbin, have declared for him. Their preference is frankly put on personal grounds. But their numbers are certainly not great, and invite, of course, comparison with the thousands of their way of thinking who came out for McKinley in 1896. Looking at their class alone, Roosevelt would appear wofully weaker than McKinley. But the expectation, and the evidence, is that a great many Democrats at the other end of the line will go over to Roosevelt. Several ferocious Bryanites have noisily proclaimed their allegiance to him. Others are saying more quietly that "Roosevelt is good enough" for them. So are a horde of Populists and Socialists, people with crotchets and nostrums and short-cuts to the millennium. For every high-toned Democrat that Roosevelt wins, he will get a dozen of the agitator kind with wild notions in their heads.

Now, why is this? Why do so many rolling-eyed Democrats feel themselves gravitating to Roosevelt. It is not that they are angry and spiteful on account of the waning of Bryanism within their own party. They are moved by no special hatred or special distrust of Judge Parker. No; the fascination of Roosevelt for them is to be explained on the ground that they perceive a real affinity between him and them. He is one of their kind, they think. It is not a question with them of free-and-easy manners or of likes and distastes, but of the fundamental attitude towards political problems. They see the President rash and heady like themselves. In his impatience of study or deliberation; in his impetuous desire to apply a political remedy instanter, without waiting to see if it be not worse than the disease; in the hospitality of his mind to radical suggestions; in his way of looking at law, too, as something to be got over or knocked down if it stands in his path, they feel themselves strangely in sympathy with him. If they could have their wish, they would employ his rapid-fire method in all branches of public administration, letting nothing alone, making footballs of ancient landmarks, and reading their duty in their own transient whim or wish, not in statute or Constitution.

The upshot of the whole is, clearly, to make that dividing asunder of parties for which Mr. Roosevelt stands appear painfully like a separation between steady intelligence and impulsive ignorance. The candidate drives away thoughtful Republicans; he makes the vacancy good by welcoming the half-baked upheavers who, whether they call themselves Democrats, Populists, or Socialists, perceive in Mr. Roosevelt something which attunes him to them. Like another Lord Randolph Churchill, he has flung himself upon the raw passions of the country, instead of appealing to its reasoned convictions, and he has his reward. He has created a sort of Tory Democracy, fed on promises of a social heaven on earth. By a sure instinct, the visionaries and destroyers are drawn to the man who has shown himself willing to let the educated classes go, if only he could entrench himself in the affection of the unthinking multitude.

This kinship between Rooseveltian ideas and the residuum of Bryanism, as developed in the readjustment of parties going on under our eyes, is a political phenomenon of the deepest significance. It goes far to explain the profound distrust of the President which he has inspired in so many who were once his ardent admirers. They are ready to say of him, as David Hume said of Sir Robert Walpole: "As a man I love him; as a scholar I hate him; and as a Briton I calmly wish his fall." That is to say, Mr. Roosevelt's personal charm cannot conceal from a penetrating eye the fact that he has proved recreant to his antecedents and training, and has so made himself the protagonist of all who are for hazardous experiment, lawless method, swollen outlay, and a dulled sense of honor in public affairs, that his political rejection would be for the good of the country.

AFTER "THE MANDATE."

One of Hearst's campaign managers, A. S. Dulin of Washington, declares that many of the army of discontent and disturbance which was rallied under the Hearst banner are going to support Roosevelt. He is nearer their ideal than is Judge Parker. Mr. Dulin explains that they expect the President, once safely elected, to be more to their mind than ever. "Many of these Democrats believe that, with a popular vote as his endorsement, he would feel that he had a freer hand to punish all Trust transgressors." This intimation that an accession of strength is coming to the Republicans from a source which they were a little while ago describing as a grave peril to the country is printed with every appearance of satisfaction in a leading organ of their party.

Now, of course, no candidate for the Presidency is bound to refuse the support or votes of men whom he dislikes or even thinks dangerous. Roosevelt has to accept the aid of Quigg and Payn and such Republican cattle; Parker cannot decline the support of Devery or McCarren. Men put up to be voted for have to take the votes that are offered. In so far, therefore, Mr. Roosevelt is under no obligation to disclaim with indignation being made the residuary legatee of the Hearst movement. If the enemies of property and of society who were carried along with it propose to vote for him, there is no way of stopping them. They cannot be enjoined from casting their ballots for him. At the same time, the fact that they prefer him, that they believe their unsettling policies more likely to be furthered by him than by Judge Parker, is a fact which may fairly, and should be carefully, taken into consideration by those who wish to vote, not to gratify their personal or party prejudices, but to consult the best good of the country for the longest time.

The effect of the coming election upon the wild-eyed, agitating classes in this nation—the men who dream of the vast exaltation of labor at the expense of capital, who are, at heart, levellers and destroyers, who would recast all laws bearing upon property, and would pull down the social edifice in a night so as to make it over according to their visionary plans—the effect upon them of the choice of the next President is one which every thoughtful citizen should take seriously into his reckoning. One thing is evident: if Judge Parker is defeated, the tendency will be to throw the control of the Democratic party into the hands of the revolutionaries of the baser sort. They will say: "Oh, you tried being respectable and conservative, but failed. Now give us our turn." Hence we should be apt to get Hearst or worse four years from now. That is a contingency before which patriotic Americans may well stand aghast; and the argument that such a calamity might be forever averted by the election of Judge Parker, with its inevitable result of steadying and solidifying the Democratic party in sound political methods,

is certainly one which must weigh heavily with the reflective.

But, it will be said, to suppose that President Roosevelt is a Hearstite is absurd. Doubtless. Nevertheless, it may be true that he has done much to feed the hopes of those who are looking for sweeping changes in the laws affecting property and individual rights. Mr. Roosevelt has, in fact, shown once more how true it is that concession to an unsound agitation is the poorest of all ways of meeting it. Instead of causing it to abate, you only inflame it. Take the present arrogant and perilous attitude of organized labor: who can doubt that the President's obsequiousness to the unions, with his unconcealed catering to the labor vote, has been one efficient cause of the epidemic of senseless strikes this year? His loose talk about the need of new laws in control of private property has also helped on those whose recipe for social happiness is confiscation. We are not arguing for a policy of repression, or for maintaining an absolutely unyielding attitude in the presence of complaints and of political unrest. But the way to meet agitation is not by rash personal intervention, but by the application of the old resources of liberty and law, by patient discussion, by the slow working out of appropriate remedies, and not by off-hand panaceas. A man of Judge Parker's temperament would strive to allay discontent by the deliberate use of the healing measures in the treasure-house of the law; and would not be so disposed as Mr. Roosevelt to create ten new demands where he yielded to one.

We are frank to say that we do not think, with the sanguine Hearstites, that the President, after getting a mandate from the people, would at once start out on a mad career of "Trust-busting." His real temptation would come in another way. If elected, he is going to be plunged into severe financial troubles. Income will be far behind expenditure. To retrench would be intolerable to Mr. Roosevelt. He has a thousand lavish schemes to put through—rural free delivery, higher pensions, more irrigation, a $500,000,000 canal, a bigger navy. New taxes will have to be laid, and what kind the President would favor is little in doubt. Taxes that the people would directly feel he would never think of; and to foot the bills for all his paternalistic plans he would turn to socialistic taxation. Along that line—that is, in the form of confiscatory legislation—corporations have much more to fear from him than in the way of spectacular (but exceedingly prudent) "busting" of Trusts. And that would please the followers of Hearst just as well.

WAGES AND THE COST OF LIVING.

The July Bulletin of the Bureau of Labor makes possible an estimate of the changes which the last decade has witnessed in the ability of the average family budget to keep pace with what has generally been an upward movement in the expenses of living. It may be said at the outset that the effort to make political capital out of this report of the Bureau of Labor will prove wholly nugatory. Nowhere in the statistics cited is there even the shadow of an attempt to indicate the causes of variations in either incomes or prices. The figures do not cover the present calendar year, and the estimates of wages are not of aggregate wages, but only of the comparative rate of wages for given time-periods, like the hour or week, without prejudice to the inquiry whether the total hours or weeks of employment are greater at one time than another. It is fortunate, from the scientific point of view, that the tables are mere bloodless statistics. They are thus protected from current partisan misrepresentation, and allow as dispassionate study and analysis as the *Nautical Almanac*—though it is to be hoped of somewhat more general interest.

What we have in the Bulletin is practically a summary and forecast of the eighteenth and nineteenth annual reports of Commissioner Wright's Bureau. What it gives us, therefore, is an abridged account of three investigations which have been in progress since the winter of 1900-1901. They were made by special agents, and had for their object to ascertain, first, the cost of living in 1901, or, more accurately, the analysis of the average family budget of expenditure for that year; second, the statistics of retail prices from 1890 to 1901, though it was found possible to include also 1902 and 1903; and, third, wages and hours of labor for the same period.

The first inquiry was of a character similar to the study of family budgets first begun by Engel. Some 2,467 families, distributed throughout the country, and receiving incomes never in excess of $1,200, were approached by special agents and induced to give information of the percentage of their total expenditure which went for specified objects in 1901. The families averaged 5.31 persons each, and, of the total average family expenditure of $768.54, the distribution upon particular objects was as follows:

Food	42.54 per cent.
Rent	12.95 per cent.
Clothing	14.04 per cent.
Fuel and light	5.25 per cent.
Furniture and utensils	3.42 per cent.
Miscellaneous	21.80 per cent.
Total	100.00 per cent.

The second inquiry was an investigation of the course of retail prices of food for the period 1891-1903. The prices tabulated and averaged were those of thirty different articles of food sold to consumers in the same places where the study of family budgets had been made. This is the first extended investigation into retail prices over a considerable period that has been made in this country. The result as to retail prices of food in the period 1891-1903 shows that in general they were least in 1896 and highest in 1902, the level of last year being 15.5 per cent. above that of 1896.

From the ascertained variations in the prices of food and an inspection of the relative wholesale prices of other items of family expenditure, the conclusion is drawn that the "increase in the cost of living, as a whole, in 1903, when compared with the year of lowest prices (1896), was less than 15.5 per cent." The expert statistician is apt to remark here that "the inductive hazard" involved is taken very lightly. There seems no reason in the nature of things why the cost of housing could not be ascertained in the same places where the cost of food was discovered. And when we remember that 57.46 per cent. of the family expenditure is not itemized in the same method as the cost of food, and that clothing (14.04 per cent. of the total outlay), and fuel and lighting (5.25 per cent. of the total outlay) are presumed to conform to the rise in foodstuffs, we are bound to wish that before the appearance of the final report there may be a more careful inquiry into this rather inconclusive procedure.

The last inquiry, into wages, is the necessary supplement to the investigation into prices. The method pursued was to obtain access to the payrolls in 3,429 typical establishments in manufacturing and mechanical industry. From the examination of these records the attempt is made to ascertain for the period 1891-1903 the number of hands employed, the hours of employment per week, and the wages per hour. The most serious criticism, from a statistical standpoint, to be passed upon the report connects itself with the method made use of to calculate the percentage of employment of hands at different years during the decade. In the calculation of the prices of foodstuffs, it was eminently proper to take as a norm or base of comparison the ten-year average price of each commodity, in order to eliminate the various accidents that in any given year reflect themselves in the price of a single commodity. But in comparing the numbers of employees for each year of a period, it is wholly illusory to take as a base of comparison the average number employed for the period. The reason is that while there is a certain normal price for each commodity which will, barring accident, be the same one year with another, the number employed per annum, barring oscillations of prosperity and adversity, is *growing with the annual growth of the population.* To illustrate: if in 1850 there were 10,000,000 people in gainful occupations, and to-day there are 20,000,000, it would be manifestly absurd to take the average—let us say 15,000,000—as a base wherewith to designate the relatively greater

or smaller percentages employed at the two extremes. The employment of this method would inevitably show that employment in 1850 was 66 2-3 per cent. and in 1900 was 133 1-3 per cent. of "the base." The base of comparison in this case is a ghostly penumbra of "an hypostatized abstraction," which is bound to disclose increased employment for the latter years of the series.

So far as the deduction concerning the hours of labor per week are concerned, the showing of the investigation is wholly unimportant. At most a decrease of 4 per cent. appears. To interpret even such a decrease as evidence of improved conditions of employment is dangerous. For, notoriously, short orders and slack employment often reduce the working day. When, finally, the relative purchasing power of weekly earnings per employee is tabulated, the variations in the statistical average wage for the last decade are remarkably small. Thus, the purchasing power of the weekly earnings of the average employee appears to have varied from 96.9 in 1893 to 103.0 in 1900, the figures for 1903 being 101.8. Taking a comprehensive view of the entire phenomena of the period, it is clear that wage incomes on the average have not very greatly varied. If they have not shown a continuous growth upward, neither have they shown any indication of a normal tendency to decline. Another fact which the report proves is the inability of statistics of average wages to indicate even faintly the sufferings induced by hard times among large sections of the laboring class. Pascal's remark that the ordinary man judges of most things rightly because he is in "the natural state of ignorance," seems applicable to the common-sense verdict passed by the man on the street upon the nature of industrial depressions.

WORLD'S FAIRS AND TARIFFS.

The managers of the World's Fair at St. Louis continue to complain that it is not sufficiently advertised. The press of the country has not, in their opinion, devoted enough of its space gratuitously to the ventilating of the wonders of the Exposition, which ought to appeal to the editors as news.

On that point the management of the Fair must concede to the management of the press the right to a difference of judgment. Newspapers, like shows, have to be conducted on a practical business basis in order to succeed; and editors are in the best position to discover what interests their readers. They long ago ascertained that the public at large had ceased to crave information of the conventional sort about world's fairs. It now requires something out of the common order to stir the pulses when that subject is concerned. The Centennial Exposition at Philadelphia followed so long an interval of quiescence, and had so many sentimental considerations in its favor, that people gladly flocked from all parts of the United States to attend it. The gap of a half-generation between that and the Columbian Exposition at Chicago, the admirable location of the latter, and its combination of magnitude with compactness and artistic unity, attracted great crowds. But the St. Louis Fair, magnificent as all accounts agree in representing it, trod too close upon the heels of its immediate predecessor to hope for a general revival of public interest in its behalf; and the funds appropriated for its publicity department were spent for the most part on the preliminaries —in the glorification of projects rather than the exploitation of achievements— so that when an artificial stimulus to the flagging curiosity of the world seems necessary, the managers are short both of advertising and of money wherewith to procure it.

There is one way in which the Exposition Company can set people talking again about the Fair and get all the advertisement desired. Let it come to the front with a frank statement of the troubles of world's-fair management as it has found them out by experience. Let it confess that at the bottom of everything lies a protective system which insists upon plucking both fruit and flowers from the same tree at the same time: the fruit of profit by an excessive margin of tariff taxation, and the flowers of display in a barmecide feast called a universal industrial exhibition. On its industrial side, where is there anything at the St. Louis Fair from which either Americans or foreigners can derive practical business advantage? American producers have nothing to gain from the study of products which are not permitted to compete with theirs in their own market, and therefore are not to be feared; and foreigners certainly have nothing to incite them to a show of skill in comparison with people who will not give them a chance for rivalry on an equal footing. It is an open secret that the rest of the world did not, as a rule, take at all kindly to the idea of another world's fair in the United States when it was first broached to them a couple of years ago, and that the so-called diplomacy which finally won them over was but thinly disguised begging. In some instances, it is said, it became necessary to hold out an implied promise that the present Fair should be the last of its kind in whose behalf the charity of the outside world would be solicited in this manner. It was a humiliating concession, yet the only response that could be made to the question raised abroad on every side: "Of what use will such an outlay be to us? As long as our American rivals in trade control the conditions on which our goods may enter your markets, what reason have we for showing our handiwork to your people? As for showing them to others, there are better opportunities nearer home."

In keeping with the spirit which excited these complaints is the treatment accorded the exhibitors who have charge of foreign departments. The idea that even museum specimens and curios must wear a customs label, though never intended for sale, impossible to appraise had they been so intended, and perfectly easy to identify if, through theft or carelessness, they escaped from the hands of their custodians, is absurd on its face. It is rendered still more obnoxious to the æsthetic sense by the rule which requires the plastering of ancient shields and Oriental silver work, lent by royal collectors, with little disks of paper as emblems of the vigilance of our customs officers. Even the wrappings in which these unique objects came into the country must be preserved so as to cover them when the time comes for sending them home again; and a four-dollar-a-day employee of the Treasury Department will stand guard to protect the Government of the United States against the assumed willingness of some eminent man of science to float through the junk-shops a relic or two of priceless value which he is in honor bound to return to the collection from which it was borrowed as a favor to the American people!

It is such things as these that do more damage to a world's fair than could be undone by any amount of advertising. The managers of the St. Louis Exposition are not to blame, individually, for the shortcomings of our tariff system, with its universal premise of the dishonesty of all mankind outside of our own country, as well as of any of our compatriots who, in Stanley Matthews's classic phraseology, "have to do with abroad." Every world's fair held while such a system remains must suffer from its effects. The conductors of the one now open could jog the memory of the public as to its existence in no more effective way than by speaking their honest minds on this phase of the subject.

RUSSIA AND GERMANY.

Despite the calmness with which the German Government and people have received the news of the taking of the mails from the *Prinz Heinrich*, the capture of the *Arabia*, and the sinking of the *Thea* by the Russian cruisers, there is a noticeable change in the general tone of press and public towards their Eastern neighbors. From the first, the sympathy of the army has been with the Russians. "They are our only friends," is the way the officers have put it. With certain commercial classes the war has been popular, notwithstanding the falling off in trade with the East and the Baltic ports, because of the enormous sums which the Czar's ministers have spent and are spending in Germany. The

Krupp shipbuilding yards in Kiel, the Schichau works in Elbing and Dantzic, the great Loewe Arms Factory, the Vulkan Ship Works in Stettin, and several torpedo factories have received enormous orders for ships and weapons, while the cable brings news of fresh efforts to acquire German vessels for immediate naval purposes.

More weighty than all these influences has been the attitude of the Government. As if there were a survival of the old Kaiserbund, the Emperor and his Chancellor have left no stone unturned to show their friendship for the embattled Czar. The Kaiser's telegram to his Russian regiment, on its departure for the front, and the comparative ease with which the Russian commercial treaty was renewed, bespeak the friendliness of the two governments quite as much as does the polite way in which the German Ministry has proceeded in regard to the questionable actions of the Russian warships. Indeed, so far has this amicability been carried as of itself to cause a popular reaction, and to create a widespread belief that there is some secret agreement between the Emperors, if not between the nations, although this has been denied on good authority.

Perhaps the most important factor in bringing about a change in sentiment has been the recent trial at Königsberg of a number of German subjects on the charge of high treason in sending incendiary and nihilistic documents across the frontier. It was alleged that this was a crime as prescribed in the treaties and laws of Germany. But it speedily appeared that, as Russia had never agreed to undertake the same procedure in the case of German citizens, there was no obligation whatever on Germany's part to do police work for Russia within the dominions of the Kaiser. The case at once recalled the readiness with which the Chancellor last winter expelled from Berlin Russian students of both sexes who had participated in mass meetings criticising their own Government. The suspicion then aroused that Von Bülow, to attain his own ends, was quite ready to do any dirty work required by the Russian bureaucracy, was confirmed by the treason prosecutions. The best that the Government's friends could say was that its prosecuting officials in Königsberg had been a little blind in their zeal. As it turned out, the trial resulted in the acquittal of all the prisoners on the charge of high treason, and the conviction of three of the nine for conspiring in secret, for which offence they were lightly punished. This fiasco has naturally reflected credit on neither Government.

As if this were not enough, the revelations of Russian methods brought out in the course of a trial of two weeks—whose proceedings appeared verbatim in the leading German dailies—have been truly sensational. It appeared that the state's prosecutor called in the Russian consul to help him translate the offending documents, and that that honorable official had inserted in his German copy of one pamphlet sentences demanding the murder of the Czar. This was, of course, deliberate cheating and forgery. But, not content with that achievement, this worthy, in translating a portion of the law of Russia upon which the prosecution was based, carefully omitted the all-important phrase that such a procedure must depend upon mutual agreement between Russia and the other nation involved. Naturally there was a storm of indignation that the German officials should thus have become parties to or victims of Russian deceit and subterfuge.

As is so often the case when tyranny seeks to suppress the truth, even with the aid of the law, its procedure has become a veritable boomerang. The prisoners, defended by the most skilful counsel, were able to introduce a flood of evidence relating to the horrors of Russia's internal rule. The long list of assassinations of Russian officials was brought out in full, together with the terrible cruelties which gave birth to the party of terrorism. Among other revelations, it was sworn that the attempt to assassinate Prince Obolenski by Katshur was due to his having had the men of an entire village flogged and having turned their women over to the brutalities of a band of Cossacks. And this Prince is the new governor-general of Finland, appointed by the Czar to bring about the absolute submission of its people! Needless to say, the atrocities at Kishenev were gone over again in great detail, particularly with relation to the complicity of the officials, in order to prove the truth of the revolutionary documents at issue.

It was brought out, moreover, that each assassination, save that of the Czar Alexander II., was due to some definite act of cruelty or tyranny on the part of the victim. Thus, the death of Minister Bogelpow was the result of his having ordered hundreds of students at Kiev to be forced into the army because of their public demonstrations. When Tsipiägin then ordered the military to shoot the students if they made any further trouble, a Kiev student promptly ended this official's career. Similarly, when Governor von Wahl of Wilna had innocent onlookers at a demonstration given thirty blows from the knout, on their bare bodies, he was instantly shot at.

All of these and a host of other gloomy pictures of Russian conditions have now been sent out through the world because of the stupid insistence of the Russian authorities that Germany proceed against the Königsberg offenders. Doubtless the Nihilists are giving thanks today that such publicity beyond price has come to them, and are rejoicing that this misstep of their enemies has gone a long way towards depriving Russia of the friendship of the German people.

THE 600TH ANNIVERSARY OF PETRARCH'S BIRTH.

FLORENCE, July 24, 1904.

Arezzo is one of the most pleasantly situated Tuscan hill towns. Perhaps no other place of its size in Italy can boast of so many illustrious sons, all the way from the prince of literary patrons, Mæcenas, to the genial artist and architect and man of letters, Vasari. But Arezzo's chief glory is that here was born, during the temporary exile of his father, Francesco Petrarcha, justly styled the first modern scholar. He was born July 20, 1304, and this day has been celebrated in a fittingly impressive manner by not a few eminent scholars and men of letters from all parts of Italy as well as from abroad. That the Aretines fully appreciated the importance of the occasion itself as well as the tribute paid by the presence of so many distinguished outsiders, was evidenced by the gala appearance of the whole town. From all the windows hung gay drapes of silk brocades and damask stuffs richly embroidered. The street from the railway station to the heart of the town was lined with painted banners and large medallions of Arezzo's fourteen greatest heroes. Every night for a week appropriate illuminations have taken place.

The festivities began on the morning of the 20th with the arrival of the Count of Turin, who came to represent the King. He, with his staff, as well as Orlando, the Minister of Instruction, the orator of the day, drove to the Municipio, in the antique rooms of which a reception was held under the auspices of the Petrarch committee and the chief dignitaries of the town. After the guests had partaken of iced refreshments that served to abate in part the great heat of the day, we all went across the beautiful piazza to the palace of the prefect adjoining the Via dell' Orto, in which is situated Petrarch's birthplace. From the balcony of this palace Commendatore Gamurrini pronounced a brief address at the unveiling of a commemorative tablet.

We then adjourned to the Politeama Theatre, where Minister Orlando delivered an animated address upon Petrarch. The specially invited guests, delegates from abroad, and the Aretine officials were comfortably seated on the stage, grouped about the Count of Turin. The pit and boxes were packed with an attentive throng of enthusiastic spectators. For more than a month the papers have given abstracts from various lectures and addresses made in various parts of Italy in commemoration of the Petrarch anniversary. More recently still there have been reported the festivities celebrated at Avignon and Vaucluse. But none of the various speeches have approached the oration of Minister Orlando, in point either of eloquence or of substance. The elegance of his diction was very marked, even in the land of oftentimes over-elaborate periods. A more adequate, more forceful, clearer, or more stirring address on his subject could not be imagined. And it is a subject that richly merits scholarly and thoroughly sympathetic treatment. As the minister justly remarked, Dante (who, to

so many Italians as well as to nearly all foreigners, represents the *summum bonum* of Italian literary art) was, after all, not so universal a poet as at first sight he may appear. He was intensely patriotic, but often in that peculiarly local (I will not say provincial) sense best expressed by the singularly apposite word *campanelismo*. His fancy ever and ever reverted to his "bel San Giovanni"; and while no one has ever reviled Florence as did Dante, no one ever loved it so well by half, ungratefully exiled from it though he was. Petrarch, on the other hand, loved *Italy* as Dante loved Florence. To Dante, Italy was an abstraction; to Petrarch, Italy was a far more clearly realized possibility.

In the evening a dinner was given in honor of Minister Orlando. At this there sat down some seventy persons, most of whom, in common with all who could gain admission to the opera-house, attended a gala performance of "Tosca."

The morning of the 21st was devoted to the inauguration of a Petrarch Congress, presided over by Minister Orlando, who announced a new edition of the great humanist's works, to be undertaken under Government auspices with the best editorial talent obtainable. Then followed the introduction of delegates, who, amid lively applause, tendered their university's or their city's cordial greeting. It was a matter of great satisfaction to see that the American representatives outnumbered those of the other and nearer countries. Foremost among them was Prof. Minton Warren, who brought the good-will and hearty greeting of Harvard. Professors McKenzie of Yale and Joselyn of Boston spoke a few moments each in extemporary Italian, which was warmly applauded by the appreciative audience. The Countess Evelyn Cesaresco Martinengo (whose masterly life of Cavour and other works have rendered her as well known in her adopted country as she is in England) being mentioned by name, the entire audience rose and burst into frenetic demonstrations.

In view of the recent cementing of a logical and genuine friendship between France and Italy, it was pleasant to observe the numerous French delegates' enthusiastic reception. Baron Guillebert, secretary of the Academy of Aix (who, at the close of Minister Orlando's address on the 20th, offered a beautiful wreath of flowers culled from Laura's garden near Avignon), the mayor of Avignon, and others, were cordially received, but none more so than the famous Petrarch specialist, M. Pierre de Nolhac. In the evening the Patronesses of the Committee held a delightful reception, somewhat after the informal manner of a garden party. The unwearied kindness and hospitality shown in every way by the Aretines will be long remembered by their grateful guests.

The 22d, Friday, was devoted to the reading of papers before the Congress by French, English, and Italian scholars. In the afternoon Monsignore Salvadori, a Petrarch scholar in Rome of Aretine birth, delivered an inspiring address upon the poet, both learned and eloquent. Following close upon the heels of this came a very delightful pageant intended to portray Petrarch's return to Arezzo in 1350. The costumes were brilliant, that of the Podestà being especially gorgeous. The Petrarch very successfully counterfeited the accepted portrait. A joust then took place. An account by the romanticist, T. Grossi, was followed, in the presentation, by the breaking of lances on horseback against a *quintin*, the likeness of a Saracen's bust mounted on a pedestal and serving as target.

On Saturday the 23d a party of ninety persons were taken by special train into the Casentino, that wonderful region so full of present beauty and of Dantesque associations. At Poppi we were driven in carriages to visit the castle dwelt in of old by the "fair Gualdrada"; and there the mayor most courteously offered us refreshments. Thence, after a brief inspection of the library, we were driven by way of the battlefield of Campaldino to Romena, another of Dante's temporary resting-places during his exile. This impressive hill, flanked by a beautiful abbey church as well as by the Fonte Branda and crowned by its ruined castle, is owned by the Florentine Count Goretti-Flamini, who had ready for us a sumptuous lunch on the green turf of the court. A threatened shower which did no more than threaten kept the air cool, and the clouds racing past gave most wonderful effects all the way from the peak of Falterona and Porciano's towers that once held Dante, to Poppi, Bibbiena, the mountain of La Verna, and the Pratomagno range, beyond which lies Vallombrosa. Our return to Arezzo, in the late afternoon, brought to a close one of the pleasantest anniversary celebrations of recent years.

THOMAS D. BERGEN.

MORILLOT'S LA BRUYÈRE.

CHANTILLY, July 27, 1904.

There has not been much change in the park which surrounds the castle of Chantilly. The castle itself was demolished in part during the Revolution and rebuilt on a new plan by the Duke d' Aumale; but there are still the great parterres, as they were designed by Lenôtre; the great alleys; the great canal, where flows the water of the River Nonette, the work of the Great Condé, the hero, as he was called in his time. How often, during his long retreat at Chantilly, he must have taken a walk in these immense gardens, to the pleasant murmur of "Ces eaux qui ne se taisent ni jour ni nuit," as Bossuet said in his celebrated funeral oration on Condé. Here, also, he saw familiarly La Bruyère, who was so long attached to his house.

I brought with me to Chantilly a Life of La Bruyère, written lately by M. Paul Morillot, a volume which takes its place in that excellent series, "Les Grands Écrivains Français," published by Hachette. As usual, this study of a great French writer is subdivided systematically. The author deals successively with "l'Homme," "l'Écrivain," "le Peintre," "le Philosophe." I must confess that I do not much approve of this method. I find it difficult, for instance, to separate the man from the writer, and the writer from the philosopher. I prefer the old-fashioned biographical method, which follows a man from the cradle to the grave and gives us his development in full, according to the accidents of his whole life. It is true that a biography of La Bruyère is difficult to write. We know hardly anything about the thirty-nine first years of his life, and he comes to light only towards 1684. Where was he born, and when? It was for a very long time impossible to answer these questions with any certainty. His baptismal act was found only in our time: we know now that in the Church of Saint Christopher, near Notre Dame, in the heart of Paris, was baptized, on the 17th of August, 1645, "Jehan, son of *noble homme* Loys de la Brière, comptroller of *rentes* of the city of Paris, and of demoiselle Izabelle Hamonyn."

The La Bruyères were among the "Ligueurs" at the time of the League. One of them was a member of the famous Council des Seize. They were not real noblemen, but Paris *bourgeois*. It is supposed that La Bruyère was a pupil of the Oratorians in his youth; like Racine, he knew the Greek language, and the Oratorians were the best teachers of Greek, together with the Port-Royalists. At the age of twenty, he took his degree of Licentiate in Civil Law, and wrote a thesis "De tutelis et donationibus." He was admitted to the bar in Paris, but there is no trace of his having long remained a lawyer. In 1673, we find him general treasurer in the financial bureau of the generality of Caen; this charge allowed him to entitle himself Esquire. He did not sojourn much in Normandy, and in 1686 he resigned. He was now forty years old, and so far had remained unknown and obscure. After the death of his father and his uncle, he continued to live quietly with his mother, a sister, two brothers, a sister-in-law, nephews, and nieces. He seems to have been in easy circumstances, for a curious document found by M. Servois (who edited with much care La Bruyère's 'Caractères' in the large and beautiful edition of Hachette) shows that he had servants, a carriage, and horses.

La Bruyère entered the household of the Great Condé at that time. In what capacity? "Was it as a preceptor?" asks M. Morillot. "Nothing in his past seems to have predisposed him to this exceptional life. On the contrary, everything seems to have withdrawn him from it. He had ordered his life well; he was free, he could philosophize and write at his ease; he had no calling for the life of a professor, and he liked children only moderately." Had he suffered any loss of fortune? Did he have the plebeian desire to enter a court? Did he wish to have a new, a larger field for his powers of observation and his general study of the society of his time? The Abbé d'Olivet says that "Bossuet generally gave to the princes the men of merit whom they needed." Did Bossuet indicate La Bruyère for Condé's choice? We can only make conjectures on this point.

The philosopher had from this time two apartments—one in Paris, at the Hôtel de Condé, the other at Chantilly. The Great Condé did not like the Court, and preferred to any other the society of littérateurs. He suffered much from gout, and had the disposition of an invalid. His son, the Duke d'Enghien, had not realized the hopes which his father formed of him. Saint-Simon, the severest of judges, has left a portrait of him which is terrible:

"There never were so many useful talents, there never was so much genius, put to no use. Only fit to be his own executioner and the scourge of others, . . . a bad son, a cruel father, a terrible husband,

a detestable master; lacking friendship, destitute of friends, incapable of having any; jealous, susceptible, . . . of an angry disposition, and carried by his anger to the utmost excesses, keeping everybody trembling before him."

His wife, Anne of Bavaria, one of the daughters of Anne de Gonzague, the Princess of Clèves, was "alike ugly and virtuous," says Saint-Simon. Bossuet, in the famous funeral oration on the Palatine, says of her: "She often paid visits to her mother, and received consolations which made her forget the evils from which human life is never exempt."

La Bruyère's pupil was Condé's grandson, the Duke de Bourbon, who had inherited many of the traits of his father's character; he was impetuous, self-willed, despotic. Great pains were taken with his education; La Bruyère was not his only preceptor. We have a few letters of La Bruyère to Condé on the subject of the young prince, which tend to show that his education was too often deranged by amusements and by the necessity of joining the Court. The prince was as often at Versailles, at Paris, at Chambord, at Fontainebleau, as at Chantilly. He had to figure at balls during the carnival of 1685, at the very time when La Bruyère was expounding to him the 'Principles' of Descartes. He was soon afterwards married, at a very early age, according to the fashion of the court. The Great Condé died on the 11th of December, 1686, and the work of education was completely interrupted; it had lasted not more than eighteen months. La Bruyère remained, however, in the house of Condé. For what reason? He became a "gentilhomme" of the prince, with vague and ill-defined functions. He had few real friends among the other gentlemen of the household; we can hardly give that name to Canon Santeul, who was very expert in Latin verses, and who was one of the *familiers* of the house. La Bruyère liked him for his easy and simple ways, but he pitied and probably despised him. "Imagine," he says of him, "a man simple, credulous, playful, a child with gray hair. . . . He talks like a madman and thinks like a sage; he says true things ridiculously, and sensible and reasonable things madly." There is a single portrait of La Bruyère by Saint-Jean, which shows him to have been plain, with a harsh and contracted face. The fear of appearing too serious and pedantic sometimes led him into an opposite ridiculousness. The young minister Phélippeaux de Pontchartrain alludes in a letter to these maladroit outbursts of La Bruyère. Valincourt has a line on this subject which is significant: "During all the time he spent in the house of M. le Duc, people always laughed at him." They undoubtedly also esteemed him, and regretted him after he was gone.

Fortunately, La Bruyère could find consolation in letters. In March, 1688, there appeared at Estienne Michallet's, first printer to the King, a volume entitled 'The Characters of Theophrastes, translated from the Greek; with the Characters and Manners of this Century.' This first edition, which appeared without the name of La Bruyère, has become exceedingly rare, and fetches a very large price, especially when it is found in an original morocco binding. The volume begins with a "Discourse on Theophrastes," which is followed by the translation of the great moralist; the "Characters" come modestly only in the last two hundred pages. The name of the author of these admirable "Characters" was not long a secret; their success was immediate. Bussy, who was a good judge, wrote to La Bruyère: "The book will greatly please people of any wit, and in time it will please them still more." A second and third edition appeared the same year as the first, and are also much prized by bibliophiles. The encouragements of the public were so great that La Bruyère decided to add new "Characters" in every successive edition; the fifth edition, published in 1690, had 154 new ones; the sixth, published in 1691, had 77 more, some of them of very great importance; the seventh, published in 1692, had 77 more; the eighth, published in 1694, had 42; the ninth appeared three weeks after the author's death. It had been corrected and revised by him, and is therefore the most complete and the definitive edition. The genesis of this great work of La Bruyère has its importance, and bibliophiles take care to collect all the nine editions. As the work, so to speak, *crescit eundo*, La Bruyère becomes by degrees more independent, more bold in his criticisms; it is quite possible to find in every new edition a trace of some of the events which have taken place in recent years. Moreover, the succession of the editions has an indirect historical importance, and throws light on a period of the "grand siècle." La Bruyère was elected a member of the French Academy, not without difficulty, as the "Characters" had made him as many enemies as friends. He spent his last years in quiet meditations, seeing little of the world and of the agitations of Chantilly; he had a paralytic shock on the 10th of May, 1696, in Paris, and expired the next day. He was buried in the Church of Saint-Julien, in the Rue Sainte-Geneviève. The inventory of his rooms in the Hôtel de Condé at Versailles and at the Petit-Luxembourg is still preserved, and shows the great simplicity of his life and his habits. About five hundred volumes were found in them, on wooden shelves, and were sold at an average price of 14 *sols* apiece.

Correspondence.

PHILIPPINE OFFICEHOLDERS.

To the Editor of The Nation:

Sir: Your paragraph in the issue of July 28, on the "Official Roster," leaves one with a very unpleasant feeling; with an impression that somebody must have, either carelessly or wilfully, made a mistake.

When we read in Mr. Roosevelt's reply to the address of the Notification Committee: ". . . . but we are governing the Philippines in the interest of the Philippine people themselves. . . . The great majority of the officials of the islands, whether elective or appointive, are already native Filipinos" (I quote from a Chicago daily), we were inclined to the feeling that we, the conquerors, were acting a generous part, and that the Administration deserved credit for its course. Then comes your paragraph and spoils it all. It may be that such a government is for "the interests of the Philippine people themselves," but that "Official Roster" gives such a prepotent idea that the Government is very much more for the interests of some others that Mr. Roosevelt's cue is a little hard to follow. In the next place, perhaps you, Mr. Editor, have made a mistake. You say: "Take the Executive Department. Here we find 175 American officeholders and 111 natives. . . . In other branches of the Government the comparison would bear still harder upon the natives." There is a positive clash here, for 111 is not a great majority, and if the other branches bear still harder upon the natives, what does Mr. Roosevelt mean? Perhaps you have blundered.—Yours, etc.,

F. J. LeMoyne.

Isham, Tenn., August 3, 1904.

GENERAL STARK'S CORRESPONDENCE.

To the Editor of The Nation:

Sir: Can any of your readers give information regarding correspondence of General John Stark before the battle of Bennington?

The letters desired are:

(1.) From John Stark to the New Hampshire Committee of Safety at Exeter, N. H., August 7, 1777; received at Exeter August 12, 1777.

(2.) From John Stark to General Benjamin Lincoln, August 13, 1777; acknowledged by Lincoln August 14.

(3.) Letters said to have passed between John Stark and General Philip Schuyler relative to Stark's plan to stay and fight at Bennington, between August 7 and August 16, 1777.

These letters are not in print, and they have not been found in the libraries of the State Historical Societies of New Hampshire, Vermont, or Massachusetts; the State Library at Albany, the Boston Public Library; the Boston Athenæum, the American Antiquarian Society, the Portsmouth Athenæum Libraries; or in the Sparks manuscripts in the Harvard Library. Search, so far unavailing, is being kindly made among papers in Manchester, N. H., and Hingham, Mass. Perhaps some of your readers may know of the existence or possible presence of the desired letters among private papers. It would be of great service in the preparation of an historical address if access to such letters could be had or copies made, and the courtesy would be very gratefully acknowledged. Herbert D. Foster.

Dartmouth College. Hanover, N. H., August 2, 1904.

RICHEPIN AND MANGAN.

To the Editor of The Nation:

Sir: "L. C.," in his recent communication, under the title of "Richepin and Mangan," is right in his supposition that both poets took the idea of the "Bohémien" and "The World Changes" from the same poem—namely, from Friedrich Rückert's "Chidher," first published, I think, in his collection, 'Oestliche Rosen,' in 1822.

The poem consists of five stanzas, four of which have the refrain;

> "Und aber nach fünfhundert Jahren
> Kam ich desselbigen Weges gefahren;"

and the last concludes:

> "Und aber nach fünfhundert Jahren,
> Will ich desselbigen Weges fahren."

Max Landsberg.

Rochester, N. Y., August 6, 1904.

Notes.

Tolstoy's article on the war, "Bethink Yourselves," which appeared in the London *Times* of June 27 with thrilling effect, will be shortly printed in book form by T. Y. Crowell & Co.

P. S. King & Son, London, will soon have ready 'Canada and the Empire: An Examination of Trade Preferences,' by Edwin S. Montagu and Bron Herbert, who write from local studies.

An interval of two years separates the appearance of the second part of Mrs. Devonshire's translation of Taine's Life and Letters (E. P. Dutton & Co.) from that of Part I. The present instalment covers the period 1853-1870. The rendering is, as we formerly remarked, painstaking and correct, but not idiomatically free. Always we feel ourselves following closely the French—"Why do you not also try your hand at it, you who have plenty of leisure?" for "Why don't you too try your hand at it, since you have plenty of leisure?"

The latest volume in the series reviving the fiction of the day of colored illustrations (D. Appleton & Co.) is Surtees's '"Ask Mamma"; or, The Richest Commoner in England,' which first appeared in 1858. This date shines in the crinoline of Leech's heroines; and Leech's numerous designs, partly in color (though these suffer by reduction as the readability of the letterpress by condensing), are the chief attraction of this reprint apart from its reflection of contemporary manners.

Mr. G. W. Headlam's edition, in the original text, of Tocqueville's 'L'Ancien Régime' (H. Frowde) is now issued in a handy volume of 338 pages, including the editor's notes as well as the author's, and a brief index. The superiority in typographic accuracy over the French editions we will not question, but the necessity of compression into a single volume has deprived the page of some attractiveness. A brief biographical introduction is provided.

There is no particular reason why a foolish man should not be interested in writing a foolish book, but it is difficult to imagine a canny publisher persuaded into publishing such a baseless tissue of vagary as 'The Alternate Sex,' by the late Charles Godfrey Leland (Funk & Wagnalls). If every incongruous idea that entered anybody's head were allowed to expand into something that has all the seeming of a book, this world would be even a more difficult place to live in than it is now. It is a pity that the friends of the genial author of the Breitmann Ballads were so ill-advised as to let this manuscript ever see the light of day.

It is not surprising that Lord Avebury brings his good sense to bear on the proposition that England should adopt a protective tariff. Under the title 'Free Trade' (Macmillan Co.) he states the facts of the case, and the obvious conclusions therefrom, in his usual lucid way. It is now almost impossible to say anything new on this subject, but Lord Avebury directs attention to a point hitherto little considered. Almost the only complaint of the Protectionists that deserves serious examination is that of the "dumping" practised by the German Kartells and other foreign agencies. But the report of the Board of Trade for 1903 shows that this policy has enabled English manufacturers of the finer grade of goods to undersell their German competitors. The latter are now complaining bitterly to their Government that their foreign market has been ruined by the Kartells' policy of selling abroad cheaper than at home.

The reproach that free trade is a doctrine of theorists is met by an *argumentum in homine* in the person of Prof. William Smart of the University of Glasgow. In the preface to his book entitled 'The Return to Protection' (Macmillan) he tells us that he was a free-trade manufacturer in England and a protected manufacturer in the United States long before he became a teacher. His book is based on a series of popular lectures, and is very well adapted to ordinary comprehension. It is perhaps distinguishable from others on this subject by the attention given to Protection, "especially to its aspect as delegated taxation. There are two sides," he observes, "to the question now before the nation: the gain or loss, economically and politically, of the return to Protection, and the gain or loss, economically and politically, of the abandonment of Free Trade. It is only . . . when these two sides are fully considered that the dangers of the present proposals reveal themselves."

Pierre Leroy-Beaulieu's 'Les États-Unis au XXe Siècle' (Paris: Librairie Armand Colin) resembles many other economical volumes in being mainly descriptive. We get for the most part a picture of a great industrial community, as seen by a statistician. What we miss is conclusive deductions; at the end we long, not for more facts, but for more light as to what they mean. The author's general theory seems to be, if we understand him, that the present moment divides an era of the past from one of the future—the past epoch having been that of a great exportable agricultural surplus, that of the future being destined to be mainly industrial. In other words, population is catching up with agriculture; there are no longer abundant supplies of virgin soil to be worked almost for nothing. It is rather "very new countries," *i. e.*, Canada and Argentina, which, in the century to come, will supply what the rest of the world lacks in wheat; but our industrial period is only just begun. Of the Trusts, M. Leroy-Beaulieu thinks the importance exaggerated. In our internal free-trade he sees one great source of our prosperity. The whole book is rather conservative than startling, and none the worse for being so.

The colleagues and disciples of Prof. Adolf Noreen of the University of Upsala have recently done him the honor of dedicating to him on his fiftieth birthday (March 13, 1904) an imposing volume of 'Nordiska Studier.' It comprises forty-one short articles, dealing for the most part with details of Scandinavian philology, in which field Professor Noreen has made himself a distinguished authority. He is the author of many learned and popular articles on various aspects of the Northern languages, including the admirable account of their history in Paul's 'Grundriss der Germanischen Philologie' (1901). The best-known of his larger works are his indispensable Old Icelandic and Old Swedish Grammars, and his Old Swedish Reader. To his previous reputation as an inspiring lecturer, the 122 scholars whose names are subscribed to the address of dedication in the 'Studier' bear new and abundant witness.

The *Meteorologische Zeitschrift* reports that an observatory has been established on Monte Rosa, and is, next to that of Vallot on Mt. Blanc, the highest in Europe, 4,560 metres above the sea. The Italian Alpine Association, with the financial assistance of Queen Margherita, the Duke of Abruzzi, and the Italian Cultus Minister, has established the observatory, where not only meteorological, but also physical researches are to be made. In connection with it there is an annex hut open to foreign as well as to Italian savants. This is the third mountain observatory in Italy, the other two being on Mt. Etna, 2,492 metres high, and Monte Cimone, 2,167 metres. Observations will be made during the present summer on Monte Rosa.

The association at the back of the J. J. Rousseau Archive in Geneva has decided to begin its work by publishing a new critical edition of the philosopher's writings. The prime mover in the propaganda is Prof. Bernard Bouvier. The society's scope being international, all lovers of Rousseau are asked to join it and to send material for the collections. The annual fee is twelve francs; life-membership costs 100 francs, to be sent to M. M. Tremby, Geneva. The society has displayed exceptional vigor and enterprise, and has a comparatively large enrolment of members.

At the recent annual meeting of the Association of Sciences in Christiania, Professor Brogger reported that the Nansen fund, established eight years ago, amounts to 2,000,000 kroner, and that, according to the statutes of the Association, a Norwegian Academy of Sciences could now be founded. The fund has already been used for scientific investigations; 76,000 kroner has been spent in the preparation of the scientific reports of Nansen's explorations. The last two volumes are about ready, and will appear before the close of the current year.

The death of Antoine Tcheckoff at Badenweiler, Germany, of consumption, is announced. He was a physician, but also a writer of very great talent. The wonderful account, in one of his novels, of the last days of a medical-school professor who has been obliged to give up his post from ill health, and who lives with a sentence of death hanging over him, will be recalled with emotion at this time. The much overestimated Gorky could better have been spared. The moment is opportune for a translation of Tcheckoff's novels.

G. Bourgin, member of the French School in Rome, has published a comprehensive report on the destruction of the library at Turin, in which so many valuable documents were burned. The library contained 4,183 manuscripts, and in this department the fire did the greatest damage. Only about one-fifth of the collection could be saved. Among others the flames devoured four manuscripts of the 'Roman de la Rose' of the fourteenth century. Of curious interest are the saving of the single Provençal MS. of the collection, 'Bladin de Cornvalha,' through the error of its being classified with the Latin codices; and the finding, almost uninjured, of the early French translation of Dante. A numbered list of the lost manuscripts has been prepared. Immediately after the fire it became neces-

sary to avert another danger. The manuscripts threatened to rot on account of the dampness and fermentation in the soaked parchments. The Academy of Sciences in Turin has, accordingly, asked the Cultus Minister for the necessary credit to have photographic reproductions of the most important manuscripts saved made at once.

The progress of civilization in Uganda, the country which Stanley first brought to the notice of the Western world, is perhaps the most remarkable instance in history of the rapid uplifting of a savage race. It was in 1875 that the great explorer, in response to King Mtesa's entreaty, "Write, Stamlee, and say to the white people that I am like a child, sitting in darkness, and cannot see until I am taught the right way," sent the appeal to his countrymen. Then the only dwellings were dark huts, with a single opening in which a wholesome life was impossible. Now, though these are still to be seen, they are fast giving way to European houses with several rooms, a home in the true sense of the word. Systematic labor was a thing unknown to the native of that day. Close by his hut grew the bark-cloth tree which supplied him with clothing, and the wondrous plantain tree which gave him food and drink, and the women were the sole cultivators of the ground. Now the lesson of the dignity of labor is being learned. The Government offers every encouragement to agriculture, and there are ready sales at remunerative prices for all the produce of the soil. Trades are being taught, such as carpentering, brickmaking, building, and printing, and the people are proving apt and ready pupils. So the sloth and idleness, deeply rooted in the native character, are being undermined. Only a quarter of a century ago the woman was simply a slave to the man with whom she lived; and the children, in obedience to a peculiar belief that parents could not bring up a child, were given to others to care for, and grew up practically strangers to their fathers and mothers. To-day in thousands of homes there is family life similar to our own, husband and wife looking upon their children as gifts from God, and caring for them accordingly. Last year 21,687 children, more than a third of them girls, an increase of 9,118 over the previous years, were scholars in the 170 schools. Stanley found a most cruel people, king and chiefs punishing the slightest offences by mutilation, flaying, and burning. Eloquent testimony is borne to the character of native rule by men and women still living who are without hands, noses, lips, ears, teeth, or eyes. No one was safe. Slavery was an integral part of the people's life, and the surrounding countries were periodically raided for slaves, who were absolutely at the control of their owners. Now cruelty is a thing of the past.

"I send you," writes a subscriber, "some correspondence from 'The International Magazines Association,' in the course of which I am promised ten volumes of Ridpath's Library in return for a favorable notice of that work. As my opinion can be worth very little, I suppose the Library must be worth less."

—The Boston Athenæum has published, as the first number of the Robert Charles Billings Fund series, 'Le Forestier's Relation: Autobiography and Voyages of François Le Forestier (1749-1819), a Refugee from Mauritius and a Teacher in New England.' It is a work of seventy-seven pages, in large and agreeable type, and gives in French the story of the author's life, which he wrote out in 1812 in his ship voyage from Salem, Mass., to Mauritius, for the benefit of a young pupil of his, Miss Mary Cobb of Portland, Me., where the author had been French teacher for about a year (March, 1811-12). Le Forestier was well connected and educated. His father had been lieutenant of the marshals of France in Normandy, which office made him manager of duels for the nobility in the province. After twenty-five years of wedded life, and when father of eleven children, his wife, a rich Picard lady, sought and obtained a divorce. This event proved unfavorable to the son François, who had taken his father's part in the quarrel, and, in 1780, some years after the latter's speedy death from chagrin, he concluded to sail for Mauritius, where an elder brother was already established. He practised law there, was successful, obtained other Government employments, reared a family, and sent to Phillips Andover Academy one of his sons, whose portrait adorns its walls. After some years, however, he fell into financial difficulties, and as receiver of taxes had to account for the mysterious disappearance of about $21,000 of public funds. To avoid arrest, he thereupon sailed for the United States, and, proceeding to Salem, was hospitably entertained for nearly a year by Gen. Elias Hasket Derby. Gen. Derby in his young days had made two voyages to Mauritius as supercargo. While there, in 1788-89, he fell sick, and was taken care of on a sugar plantation, presumably Le Forestier's, though on one side and the other a precise statement seems to be wanting. After two years more in Andover and Beverly, just mentioned, he concluded to try teaching French in Portland. He had some success and good introductions; but, Mauritius having become a British colony, it was now safe for him to return home. The volume tells a variety of entertaining adventures. It is edited by Dr. Hasket Derby, and is illustrated with portraits of Gen. Derby, of Le Forestier's son, and two of his pupils. Notes about the Portland people mentioned are furnished by Gen. John M. Brown. The French MS. was found about two years ago by accident in the attic of the Boston Athenæum.

—The journal of an exploration of the Red, the Black, and the Washita Rivers, made by William Dunbar in 1804, at the instance of President Jefferson, has been published in handsome form under the title 'Documents relating to the Purchase and Exploration of Louisiana' (Houghton, Mifflin & Co.). The original manuscript was given to the American Philosophical Society in 1817, and is now printed for the first time, with an admirable map, based on the Journal, and portraits of Jefferson and Dunbar. The expedition formed a minor incident in the series of ventures planned by Jefferson. Lewis and Clark on the Missouri, Pike on the Mississippi, and Freeman on the Red River were the greater undertakings. Freeman was unsuccessful, and Dunbar, a "citizen of distinguished service," living in Natchez, engaged to explore the Washita to the already famous Hot Springs. The story is a plain, blunt record, interesting now for the information it gives on the social condition of the country, rather than for its scientific qualities. The immense grants by the Spaniards (one being twelve leagues square), the few French stations, individual settlers rather than a community of people, and the Indians within the neighboring territory, are described very briefly, but enough is told to show why progress was hopeless while Spain controlled the land. The natural indolence of the people was aggravated by absurd regulations, such as prohibiting the working of mines. Salt, mineral coal, millstones, and clay suitable for pottery were found, and the most important was salt. The fur trade still constituted the principal employment of the few settlers other than Spanish, the furs being left exposed on forked sticks on the river banks, to be gathered on the return journey. "These deposits are considered as sacred, and few examples exist of their being plundered." Arriving at the Springs, the party remained a few days, and, taking advantage of the rising waters, floated down the stream in much less time than had been consumed in the ascent. The description of the boat, which was badly designed for such a voyage, and the estimates of the loads proper for a man to carry, are suggestive of the difficulties attending these explorations, even though the woods supplied abundant food. The helpers were soldiers, and were not so efficient as Canadian woodsmen would have been, besides being indolent under the lax discipline. They demanded whiskey, and, hoarding their rations of the spirits, they celebrated a holiday on December 25th, "which terminated with inebriety, but no ill consequence ensued." The publishers prefix a rather inconsequential paper by Jefferson on the limits of Louisiana, a subject which he confused. The dozen letters in existence which passed between Jefferson and Dunbar relative to this exploration would have been much more pertinent, as well as an addition to the information given in the Journal. The absence of an index is hardly excusable.

— G. P. Putnam's Sons publish the second volume of Prof. Paul Wernle's important book, 'The Beginnings of Christianity.' Thanks to the subject-matter, possibly, the presentation is simpler and more effective here than in the former volume. That dealt with the rise of Christianity as manifested in the personality and teachings of Jesus and his immediate followers. "This was the creative period, the period of great men." In the present volume we follow the fortunes of the new faith when to its great early founders succeeded the formality of a vast ecclesiastical organization. The attempt is to exhibit the religion of Jesus striving to perpetuate and extend itself within the hampering limits of the ecclesiastical forms. Professor Wernle views the ecclesiastical period as a period of decadence, while at the same time he regards the institutional development as the necessary outcome of the conditions of the sub-apostolic times. In his opening chapters we see the successors of the first Christian teachers gradually falling into disrepute, and the Church organizing itself on an episcopal basis. "It is interesting to watch the rise of the bishop from an humble and subordinate place in the community to a position of dignity and power, which ultimately makes him the centre of the new ecclesiastical system." Once organized, the Church was confronted by Judaism, Hellenism, and Gnosticism, and

Professor Wernle's account of its struggle with these three great forces is an excellent piece of work. We see that in each case the price of victory was the admission of the most characteristic elements of the inimical force into the body of Christian thought and worship. "The Theology of the New Testament" is discussed in an admirable chapter, which did not appear in the first German edition. Scant reverence is paid to Paul's theology or to that of the Fourth Gospel, which is, we are assured, substantially Pauline, subsequent to Paul, and not by any means to be considered the work of the Apostle John. The Pauline and Johannine writings are differentiated from the Synoptic Gospels as immensely inferior. But, even in the Synoptics, "it is but a broken impression that we obtain of Jesus." "No writing of an eye-witness of Jesus has come down to us." A concluding chapter, "Personal Religion in the Sub-Apostolic Age," pleads for the superiority of Christianity to the surrounding paganism, from which, nevertheless, it took over much impurity, in addition to the defects of its own characteristic qualities.

—Since Macaulay, no one has condemned the Restoration court and its sovereign with more effect than Dr. Osmund Airy, whose 'Charles II.' has just been republished in a new and cheaper edition (Longmans). In this volume the moral question is made preeminent, and the King receives such unmeasured censure as belongs to one who sets a flagitious example before the eyes of the nation. Since Charles's cleverness has dazzled several of the recent writers on his reign, it is interesting to see the old view of his character set forth with fresh force, and justified by an overwhelming weight of evidence. Dr. Airy says in his preface: "The narrative has been founded entirely upon contemporary authors, whose words I have generally preferred to quote rather than paraphrase." This statement is fully warranted, and it should also be said that the severity of Dr. Airy's tone is not to be associated with a capricious use of the sources. Charles II. may have had enough sense to let his opponents hang themselves with their own rope, and he may even be credited with some political intuitions of an unusual order; but when we come to write his epitaph there is little to set down except the record of brilliant and wasted opportunities. Gifted with many of the qualities which carried his ancestor Henry IV. to the hearts of the French people, he had all of Henry's failings without his strength of purpose. Dr. Airy thus sketches his character as it had developed down to the date of the Restoration: "From the age of sixteen he had given the rein to his animal passions. He was without love, save for his child-sister; without friendships. Too healthy and too indolent to be ill-humored, he concealed under the easy good temper which so fascinated little minds an inveterate selfishness, and an Oriental ingratitude. . . . He had grown accustomed to beg with effrontery, and to betray without shame. . . . For the rest, he had a cool head, much astuteness, considerable insight into character, adaptability, and imagination, a certain curious individuality of view and of action, and a sense of humor." Seeking, as he does, to maintain the standard of moral currency, Dr. Airy is careful not to admit the plea of extenuating circumstances except in the matter of early training. Clarendon's sad but graphic account of a society unsettled and debauched by revolution has evidently weighed with him, but he holds the King guilty of his own demerits, and pictures with abhorrence the degradation of his age. This sketch of a wasted life is tellingly, even brilliantly, written, and with the apparent purpose of giving no quarter to evil, however veneered by intellectual keenness.

—The bulky volume which Dr. I. K. Funk has humorously entitled 'The Widow's Mite, and Other Psychical Phenomena,' is written round a pleasing tale of how his firm borrowed a specimen of the said coin from Prof. C. E. West, for the purpose of illustrating with it the Standard Dictionary; preferred to use an unauthentic coin (because it was smaller, apparently), and forgot to return the genuine coin to its owner, who, though he valued it at $2,500, forgot to reclaim it, and subsequently died. Nine years after, Dr. Funk was told at an ordinary spiritualistic séance that Mr. Beecher wanted him to return the "Widow's Mite" to its owner. Dr. Funk denied the imputation, and was told that the mite had got lost in a safe. On being told to search the safes, the cashier of the Funk & Wagnalls Company produced an envelope containing *two* coins, of which the smaller and lighter had been used for the Dictionary. On confessing to this at a later sitting, Dr. Funk was further told that he had used the wrong coin, that its owner had been a friend of Beecher's and had had a school on Brooklyn Heights, all of which proved correct. Then follow affidavits and assurances from the cashier and other parties concerned, to show how completely the whole transaction had been forgotten. Around this little incident (which may conceivably be traceable to a hoaxing of Dr. Funk by some one who had accidentally discovered the omission to return the coin and did not venture to own up when he saw how seriously the matter was taken), Dr. Funk has constructed a volume of over 500 pages, by reprinting a selection of the best psychical literature of the last thirty years and adding copious comments of his own.

—One of his best ideas was to circularize a number of professors of physics and psychology in order to elicit their opinions of the affair. A considerable number responded, and, though their answers often exhibit the strength of their antecedent prejudices, the patient reader will find in them suggestions for every conceivable theory of the event. Unfortunately, none of them took occasion to tell Dr. Funk that single incidents can always be disputed and never be established against antecedent objections. A science is a coherent body of propositions, and until the facts cohere in a system, they can form no science. But there is an easy trick to prevent them from cohering, viz., to take them and explain them away one by one. To meet this and to render possible the cumulative growth of proof, Dr. Funk must not only put the evidence for each case into the best form, but must also provide for the continuous and systematic recording and study of such evidence. Probably, indeed, he realizes this; for in his preface he admonishes all his readers to join the Society for Psychical Research. In this he is quite right, for it is becoming manifest that here, as elsewhere, nature will yield her secrets only to sustained investigation, to which, whatever the merits of this particular case, the book may certainly be said to contribute the doctor's mite.

—Dr. A. J. Evans's campaign of this last season at Knossos has been chiefly concerned with the opening of one hundred tombs evidently dating from the last period of the House of the Double Axe. The most conspicuous of these was on a height about two miles away, and seemed at first quite plausibly to associate itself with the legendary tomb of Idomeneus. But although a smaller tomb of about the same date was unearthed near by, nothing came to light of sufficient magnitude to be identified with the tomb of Meriones, so that the more non-committal title of Royal Tomb has been finally adopted. Among the numerous vases in this tomb was found one fashioned in brilliant porphyry. The shape of it is unmistakably Egyptian, and alongside of it were found a number of alabaster vases which were certainly imported from Egypt at the time of the early Eighteenth Dynasty, and show the then persisting style of the Middle Kingdom. Among the other tombs excavated on a hill nearer to the palace, the largest contained a skeleton crowded into a rectangular cist, in much the fashion exemplified at Mycenæ. Near by were remains of an ivory casket, a bronze dirk, and a tripod-hearth of plaster with charcoal above. A curiously primitive type of bronze tripod with two riveted handles and three legs soldered onto the caldron sides was also found, along with a remarkable assemblage of vases, all of bronze. In other tombs, stirrup vases of the familiar Mycenæan type were constantly found. One example of a stirrup vase had previously been found, not in the palace, but in the royal villa northeast of the palace, while on one clay tablet in the palace proper had been found an outline sketch of this same type of stirrup vase. Forms approximating to this were found at Hagia Triada by the Italian excavators, so that the Mycenæan stirrup vase or *Bügelkanne* seems to have been evolved in Crete at about the end of the latest period of the House of the Double Axe. The style of decoration and modelling of these funeral stirrup vases shows affinities with the latest pottery of the palace, but must be separated from it by an interval of time. These tombs, then, belong to a period shortly after the destruction of the palace. One long sword (like all the rest of them, made for thrusting, and not for cutting) has rich chasing in gold upon its handle, which shows a definitely "Mycenæan" design. In general, the traces of Mycenæan design unearthed in these tombs belongs to the maturer period of that name, as contrasted with the earlier phase exemplified in the latest period of the palace. Taking this into consideration, and also the fact that no fibulæ have come to light anywhere upon the site, one must conclude that there was no great break or change in Knossian handiwork and civilization immediately after the palace at Knossos was sacked. Another year's campaign, to be devoted mainly to the opening up of a series of magazines just discovered northwest of the palace, and some further investigation of tombs, will be necessary before work on the site is closed. Only in the tombs and these remaining magazines

can handiwork in metal be recovered, since the palace itself, including its magazines, has been completely denuded—as every site has been—of everything of the kind.

RECENT POETRY.

Not the least interesting of the volumes before us are 'The Poems of a Child,' "being poems written between the ages of six and ten," by Julia Cooley (Russell), and 'The Sea Gulls, and Other Poems' (Putnams), written, as the preface tells us, by Enid Welford, "between the ages of six and ten years." Miss Cooley's age at the present time is, as Mr. Le Gallienne informs us in his rather excessive introduction, exactly eleven. Miss Welford's is not given, but her portrait shows her to be strictly a contemporary of Miss Cooley. We are not quite prepared to be so astonished at the performance of either of these poets as their respective introducers wish. A mystical fancy is not at all a rare attribute of the age when common sights still wear "the glory and the freshness of a dream," while the disposition to lisp in numbers and to rhyme is the commonest of phenomena in the childhood of the individual, as of the race. Given only a little more than the ordinary individuality of imagination and suavity of metre, and we have verses like those in these two volumes.

The æsthetic and psychologic implications of these compositions need not detain us long; it happens, however, that the two books illustrate the cleavage of two great modes of poetry with extraordinary clearness. The American, Miss Julia, represents the primitive, immediate, quasi-Emersonian style of poetification, while the British Miss Enid composes distinctly in the academic, mediate, Tennysonian mode. For the most part Miss Julia eschews regular rhythms and rhyme, she has few reminiscences of other poetry, and her little pictures of nature, for all their faëry mythology, their "bright shoots of everlastingnesse," are drawn directly from the object. Yet, despite the outdoor setting of nearly all her verses, there is something a little spooky, so to say, in the quality of her mind; and the queer pseudonyms which she favors, "Praecros Belmarz," "Pronvae Valese," intimate strange subliminal visitations as from the personages of the Ouija board. Nevertheless, the eeriness of this infant muse is not without its true charm of wonder, which may be felt in these characteristic verses entitled "Magic Music":

> When I stand on the mountain top,
> When I stand on the mountain top, I gaze
> O'er the country wild, and wonder
> If some great thing will happen there,
> If some battle will be conquered there,
> If some spirit will alight in its woods.

Compared with the writing of Miss Julia, the writing of Miss Enid is strikingly considered and, in the better sense, literary. Her metrification and syntax are more accurate, and she more frequently attempts rhyme, even adventuring some fairly difficult stanzaic schemes like a b b b a and a b a b c c. She also employs the remote verbal echo and the nearer repetend with considerable felicity, while assonance and alliteration are child's play for her. Though she rarely imitates other poetry slavishly, there are many reminiscent images and cadences which show that she has had the advantage of hearing good poetry read aloud. Indeed, it is possible to put a finger on stanza after stanza which, by their movement and color, recall definitely specific passages in Tennyson, Longfellow, Poe, Kipling, Burns, and Robert Greene. She has also some dramatic imagination, and where Julia is all for flowers and fairies, Miss Enid concerns herself with the lost souls of Vikings, and expresses the emotions of bereaved husbands and wives. In short, Miss Enid stands for the humanist mood in poetry. As in her artistry she works, whether consciously or not, with tried colors, so in her envisagement of life the world looms before her through the golden, dust-laden atmosphere of poesy. She writes herself,

> "Like a mist before my eyes,
> Dreamy, dreamy poetry lies";

and in her lines called "Genius and the Child" her sense of her poetic impulse is yet more clearly shown:

> "Grand Genius, with her forehead of flame,
> Is calling, dear child, to thee;
> In the heat of her fire thou shalt rise higher,
> O'er city, hilltop, and lea.
> She will bear thee away from the haunts of men
> To a home by the sounding sea;
> And thy music wild shall blend, dear child,
> With the roar—with the moan—of the sea."

We wish her very well.

After the work of these old little girls the volumes by various young men which we have to consider seem oddly artificial and immature. 'Arcades Ambo,' by Richard Mott Gummere and Charles Wharton Stork (privately printed), contains, we are told, poems composed in the "Arcadia of college life." The verse attempts no Icarian flights. It follows the more wholesome models of the undergraduate muse, and it has for the most part a great sprightliness. The immaturity of it is shown by the lack of integrity of tone, the tendency of any given piece to go shrill or flatten toward the end, a fault of which Miss Julia and Miss Enid are rarely guilty.

The anonymous author of 'The Last Days of Theodoric the Ostrogoth, and Other Verses' (London: Simpkin, Marshall & Co.) is obviously a rather recent graduate of Oxford. He has a fair aptitude for poetic reflection, which is all but sterilized by his passion for a deadly and copious explicitness.

In the first poem of his 'Secret Nights' (Nutt) Mr. J. A. Nicklin thus describes his Muse:

> "A sudden silent horror in the night,
> A heavy hand that grapples at the throat,
> A masked face leering with a maniac's eyes."

Mr. Nicklin seems to have endeavored more or less consciously to be the lyrist, not of the pathos, but of the horror of life. Despite his considerable ability as a versifier, Mr. Nicklin does not contrive so to express horror as to afford his readers any considerable pleasure of any kind. In the larger, Lucretian mood of sad wonder he is sometimes a little more successful, as in

THE QUESTION.

> When this dull moaning in my ears
> Has ceased, and ceased for evermore,
> When, done with all the vacant years,
> At last life's lingering torment's o'er,
>
> I wonder, when the breath of Spring
> Sends throb and thrill through man and maid,
> I wonder, can Desire still sting
> Down in the dust where I am laid?
>
> And when, in Autumn's hovering mist,
> Old dreams and fantasies are lurking,
> Does longing need an exorcist
> Where the blind, hungry worms are working?
>
> I wonder, when the feeling veers,
> In friends, from mourning round to mirth,
> If there is any room for tears
> In that corruption in the earth?

An appropriate companion volume to Mr. Nicklin's is Mr. J. Redwood Anderson's 'The Music of Death' (Simpkin, Marshall & Co.). Mr. Anderson's text seems to be a sentence in his prose apologue, "Azrael's Dream." "But what is the horror of death unto the horror of life?" Yet the effect of his poetry is less macabre than that of Mr. Nicklin's. Mr. Anderson has a stronger poetic impulse, and his quality is fine enough to suggest some honorable literary analogies. In "Love and Death," the most notable poem in his volume, a temper not unlike James Thomson's goes along with a luxurious sensuousness that recalls Keats, and a kind of symbolism that is Shelleyan; and there are passages which suggest qualities as opposite as the monumental gravity of Blair and the sweet lyrical wildness of Beddoes. It is inevitable that poetry of this sort written by any hand not perfectly master of poetic craft should contain many morbid and some ridiculous lines. Mr. Anderson's book contains lines of both sorts, but his workmanship is on the whole so sincere that we prefer to pass these by and content ourselves with exhibiting a single representative passage. We select that in 'Love and Death' in which Death enters the Love-bower, which has just been described in an ample pre-Raphaelite manner:

> "Death entered silently that silent hall,
> Musingly gazed around him, while a smile
> Curved the pale corners of those sensitive lips;
> For well he knew that time, in season due,
> Would grant these things to him—the sculptured roof,
> The marble pillars and the frescoed walls.
>
> . . . . . .
>
> And on each side a veiled form appeared.
> A man with arms outstretched, a woman fair,
> Longing to fold each other once again;
> And sorrowful cries broke on the startled gloom.
> 'O come, O come, my Love,' the woman cried;
> 'Alas! alas! I cannot! Misery!'
> These wailings smote the delicate ear of Death;
> He looked no more, but, with a heavy sigh,
> Entered the dim recess. Behind him fell
> The purple folds; 'twas as the wind had passed,
> The balmy, fragrant wind of Summer nights."

This curious idealization of Death is certainly not a very good kind of poetry, but it *is* poetry, and good of its kind.

We regret to have to record that Mr. Cale Young Rice's tragedy 'David' (McClure, Phillips & Co.) shows a retrogression from the ability of his 'Charles di Tocca,' of which we lately had to speak. The earlier play—if it was the earlier—had two decided merits, vigor and individuality of phrase, and a true tragic fable. In 'David' there are passages of fine poetry, but vigorous phrasing too often passes into that which is violent and uncouth. Thus, at the very end of the play, where if anywhere there is need of faultless diction, we have the perverse line,

"Hush now thy woundedness, my Michal, now."

The handling of the plot is of a piece with the phrasing. Sincere tragic impressiveness is sacrificed to striking melodramatic situations. Some of these are excellent of their kind; yet the tricky emotional intensities of melodrama are out of place in presenting the story of Saul and David, round whom the centuries, despite the prosing of preachers, have spread something of the purple gloom of high tragedy.

'The Red Branch Crests,' Mr. Charles Leonard Moore's privately printed trilogy of plays based on old Irish legend, has the interest of narrative rather than of dramatic poetry. We have nothing but respect for his pains in writing nearly three hundred pages of verse in the trochaic, three-and-four-beat couplet; yet, despite its speed, the measure grows wearisome. The

darkening of fate over the busy scene of love and hate and war is well managed, the Celtic wonder of wizardry and enchantment is well employed, and there are many crisp turns of dialogue. Yet the ensemble fails quite to convince us. The total impression is of an able *tour de force*.

The 'Ballads of Valor and Victory' (Revell), composed by Clinton Scollard and Wallace Rice, have a similar hothouse flavor. Nevertheless, though they miss the woodsy tang of true ballad literature, the workmanship is good in a pedestrian sort, and we are conscious that the poetic chronicle of notable American deeds from the time of the first American Sailors to the death of Colonel Liscum of the Ninth may prove useful for declamation. At times, as in these stanzas from "Richard Hakluyt's Men," by Mr. Rice, the verse, despite a stanzaic scheme unduly complicated for ballad-poetry, has the true poetic lift:

"What of grey dangers afar
In spaces uncharted, untrod?
What though the heav'ns are a-change,
And engulphed is the Cynosure-star?
What though the sun has grown strange,
And the deep has been made molten brass?
At their peak flies the Cross of their God,
And, wherever their rudders may range,
'Tis His voice in the tempests that pass.

. . . . . .

"Here, from the page of a priest,
The friend of these seamen of old,
May be heard the reverberant cheer
That the centuries have but increased
Till it comes like a blast to the ear.
Rest they well, these invincible dead.
Ships' captains and companies bold,
For the ocean itself is their bier,
And the continents stones at their head."

We regret that motives other than æsthetic have so prevailed with the authors that a full third of the pieces have to do with the "valor and victory" of the strenuous years since 1898.

'War Songs and Poems of the Southern Confederacy,' compiled by H. M. Wharton (Philadelphia: John C. Winston Co.), is a volumé of considerable historic interest, and one not without instruction for the student of sectional tendencies in American poetry. The æsthetic standard of the volume is naturally low. There is no poem in it that carries quite the solemn music and righteous conviction of "The Washers of the Shroud"—not to mention Lowell's Odes—nor is there any to compare in vividness and power with the incomparable battle-pieces of Henry Howard Brownell. Yet all the songs and poems are noticeably fervid and facile, with a characteristic preference for the poetic diction and swinging metres of Byron and Moore; those by such men as Fontaine, Hayne, and Simms are excellent specimens of effective occasional writing; and the selections from Timrod are poetry of a fine and individual quality, though inspired by a more general poetic impulse, and but accidentally related to the war. It is unfortunate that the collection should be marred, not alone by the contemptuous execration of the "invaders," but by some extraordinary editorial interpretations of history. Such notes as this which follows are not quite negligible by even the critic of poetry:

"Another gentleman present [at a recent gathering in London], speaking of the war, turned to me and said, 'Give me a history of that war,' to which I replied that it might be done in one sentence: 'The people of New England brought slaves from Africa, and traded them to us in the South for molasses and sugar and cotton, and then came and fought us and took them away from us.' This seemed to satisfy my questioner, and I hope it will not be denied or severely criticised by my reader. Amen."

Mr. Sheridan Ford's 'The Larger Life' (Croscup) is remarkable chiefly for the author's original conception of the nature of poetry.

"The real man of letters is *en route*,
To laughing Truth he clings,
He has turned from the mummery of words
To the poetry of things."

How successful Mr. Ford has been in eliciting the poetry of things will be seen in this specimen of his work as a poetic observer:

"The new Title Guarantee companies
Reveal the restful rise
Of the competent governing organs
That men of insight prize."

Or take him as a seer:

"The telephone and the telegraph lines
Will come in time to be
But extensions of the post-office Trust
When functioned full and free."

It is pleasant to come at the end of our survey to three volumes of poetry thoughtful, imaginative, and lovely. Mr. Sturge Moore has elected to print his work in shilling volumes in a form that recalls the issue of Browning's 'Bells and Pomegranates.' The three volumes that have thus far appeared in stout paper covers of brown are 'The Centaur's Booty,' 'The Rout of the Amazons,' and 'The Gazelles, and Other Poems' (Duckworth). The salient quality of Mr. Moore's work is a fine originality. This first appears to the reader as a matter of metre. In the beginning his verse strikes one as abnormally harsh and awkward, like Donne's redundant with consonants. Yet as the ear becomes accustomed to his curious movement this impression wholly wears away, and we become aware of a strongly marked beat that falls as insistently upon the ear as the march of the staves in 'Boewulf.' This alone gives Mr. Moore's work a masculine distinction in our day of suave cadences; yet the color of the imagination that furnishes the content of the verses is still more remarkable. 'The Gazelles' may be taken as typical. The poet describes the hunting of a herd of gazelles by a troop of Persian princes in a series of vivid and lovely pictures; then at the end he proceeds to make plain his symbolism in the following stanzas:

"Why are they born? ah! why beget
They in the long November gloom
Heirs of their beauty, their fleetness,—yet
Heirs of their panics, their pangs, their doom?

"That to princely spouses children are born
To be daintily bred and taught to please,
Has a fitness like the return of morn:
But why perpetuate lives like these?

. . . . . .

"Like the shadows of flames which the sun's rays throw
On a kiln's black wall, where glaziers dwell,
Pale shadows as those from glasses they blow,
Yet that lap at the blank wall and rebel,—

"Even so to my curious trance-like thought
Those herds move over those pallid hills,
With fever, as of a frail life caught
In circumstance o'er-charged with ills;

"More like the shadow of lives than life,
Or most like the life that is never born
From baffled purpose and foredoomed strife,
That in each man's heart must be hidden from scorn.

"Yet with something of beauty very rare,
Unseizable, fugitive, half discerned;
The trace of intentions that might have been fair
In action, left on a face that yearned

"But long has ceased to yearn, alas!
So faint a trace do they leave on the slopes
Of hills as sleek as their coats with grass;
So faint may the trace be of noblest hopes.

"Yet why are they born to roam and die?
Can their beauty answer thy query, O soul?
Nay, nor that of hopes which were born to fly,
But whose pinions the common and coarse day stole.

"Like that region of grassy hills outspread,
A realm of our thought knows days and nights
And summers and winters, and has fed
Ineffectual herds of vanished delights."

This startling subtlety of thought and image runs through all three of Mr. Moore's books; it often gleams into a flash of natural humor, and at the end it seems to have put before us something very like an original view of modern life. This is clearest, perhaps, in "The Centaur's Booty," wherein is set forth how two Centaurs, the last of their race, holding a stern creed,

"Nothing is pitied of the Gods and Fate,"

steal a human child and propose to rear him into a being quite superior to the effeminate race of men. Something of the same meaning of the desirability of the return to the healthy pagan gust for out-of-doors lurks, though more implicitly and by the suggestion of opposites, in 'The Rout of the Amazons.' A faun who has seen it tells of the destruction of the Amazonian army by Greek horsemen, in something of the same pitying spirit that guided the hands which loved to carve this scene on the sides of ancient tombs:

"It were better to have been a horse in that battle;
The strong steed knew not
Where he planted his hoof;
He ruined bosoms
That should have suckled heroes,
The children of a god;
But he knew it not.
If he broke the thigh of beauty,
Or crushed the loins
That had sate him so firmly,
With such elegance as the moon has—
The moon that rides white clouds—
Or the sea-nymph whom a dolphin
Bears with pride as with pride he bare her,
This the dumb steed knew not;
But they, the men,
Knew what they did."

The class of subjects that Mr. Moore has chosen to treat in these volumes is full of insidious dangers. A preoccupation with animal pain, or with such half unwholesome creations of the old-world imagination as centaurs and Amazons, a preoccupation so intimate and hypersensitive, is likely to lead a poet into a realm of morbid phantasmagoria. Cases have not been wanting of poets so preoccupied who have shut themselves into a Shalott of "curious trance-like thought" to weave poetry of a pallid, unhuman beauty. We look to see Mr. Moore saved from this danger by his joy in out-of-doors, his strong intellect, and his sense of humor.

RECENT NOVELS.

The Crossing. By Winston Churchill. The Macmillan Co.

Romance. By Joseph Conrad and Ford M. Hueffer. McClure, Phillips & Co.

Lychgate Hall. By M. E. Francis (Mrs. Francis Blundell). Longmans, Green & Co.

The Cost. By David Graham Phillips. Indianapolis: The Bobbs-Merrill Company.

The Gates of Chance. By Van Tassel Sutphen. Harper & Brothers.

A Case of Sardines. By Charles Poole Cleaves. The Pilgrim Press.

The Woman Errant: Being Some Chapters from the Wonder Book of Barbara, the Commuter's Wife. The Macmillan Co.

The Givers. Short Stories, by Mary E. Wilkins Freeman. Harper & Brothers.

Old Hendrik's Tales. By Captain A. O. Vaughan. Longmans, Green & Co.

The Castaway. By Hallie Erminie Rives. The Bobbs-Merrill Co.

In the choice of events and characters for his latest book, 'The Crossing,' Mr. Churchill is less fortunate than in his former romances founded on American history. His subject is the white man's

movement across the Alleghanies, settlement on the eastern side of the Mississippi, and relations between the English settlers and the older French and Spanish establishment in Louisiana. He has given three years of labor to the book, and tried to combine many elements and types enumerated in an "Afterword" (page 597). He expresses his sense of the "incompleteness" of his achievement, but the word is less fitting than incoherence or ineffectiveness. He has tried to do too much, and rather exaggerated, if not the ultimate importance, at least the exceptionalness of Col. George Rogers Clark's campaign against the Indians and French in the Kentucky wilderness. Our pioneers were courageous men, fond of adventure, reckless of life, but they existed in great numbers, and their character and exploits were very similar, so it is almost impossible at this late day to invest them with enough interest to carry a long novel.

Such criticism may, however, imply nothing more than personal indifference to frontier scrimmages, which is hardly a valid reason for belittling the result of so much conscientious toil. A better explanation for failure may be found in the author's statement that he has tried to give an historically true account of events, an account "trammelled as little as possible by romance." Why should a man who sits down to write a novel assume such an attitude? Should he not rather take pains to trammel his romance as little as possible with history? A great solicitude for fact is inimical to imaginative freedom and intuition—qualities which were rather conspicuous in Mr. Churchill's earlier work, but are barely discernible in 'The Crossing.'

It might be supposed that the only reason for a successful author's taking a collaborator would be to have his weakness supported by another man's strength. Such supposition does not account for Mr. Conrad's choice of Mr. Hueffer in the wild book entitled 'Romance.' Mr. Conrad's constructive faculty is so weak that his long novels are always inconsequent; 'Romance,' written with the assistance of Mr. Hueffer, is positively chaotic. The tale of mad adventure in the West Indies a century ago is put in the mouth of John Kemp, a sturdy English lad who made a mistake in packing his marvellous experiences in one volume; he should have taken at least ten, and doled out his wares at discreet intervals to the joy of his youthful compatriots. Though John Kemp lives in his deeds, in the words used to describe them, he vanishes, and there remains Mr. Conrad, unrestrained by Mr. Hueffer, letting loose his lurid imagination and his amazing vocabulary in defiance of probability or even reason. There is a prodigality of action, of vitality, of color, a revel of deviltry—in fact, an enormous waste of power, and neglect of the commonest rules of literary art.

'Lychgate Hall' is the story of a beautiful young lady named Dorothy, who lived in England during the reign of Queen Anne. Lychgate Hall wanted a tenant. It was barely habitable, and was infested with family ghosts, so when Dorothy asked for it, offering her rent in advance, she was promptly accepted. The unfolding of the mystery that surrounded Dorothy makes the tale, which is spun through 400 pages. Dorothy appears as good as she is beautiful. The respectable yeomanry cherish her; Sir Jocelyn Gillibrand makes love to her, and she challenges contemptuously his mother's curiosity. A noble lover visits her and rides away in despair, and in the dead of night an ancient servitor drives through the darkness with a load of human bones, which he deposits in a graveyard near Lychgate Hall. Whenever highwaymen are mentioned Dorothy starts and trembles, and there are moments when one suspects that the innocent-seeming maiden is in league with gentlemen of the road. But in the end her association with them is shown not to be criminal, and she comes honorably out of all complications, even the mystery of the bones. All the circumstances are highly improbable, but they are pleasantly narrated, and the action is broken with good descriptions of the country, and of rural festivities common in England when it was still ostentatiously merry.

'The Cost' belongs to a class of works which are coming in hundreds from Western publishing-houses. They turn on the financial or political triumphs of some shady boss, ending or not in downfall, but invariably possessing a young and high-minded wife and a rival candidate who is the incarnation of the wife's ideals, and who, if the author kills off the boss, marries the widow. One act of the drama is usually played at the co-educational college where the true hero and the heroine exchange ideas and ideals; and of course there must be always a scene in the New York Stock Exchange where millions are tossed about like beanbags. 'The Cost' has all these features and in addition a few new ones. In the broker's leading scenes he is found shut in with his home telephone instead of on the floor of the Exchange, thus converting the play into a sort of Punch and Judy show. In addition to the farm and the college and the opera we are introduced to the novel institution of a "Western School for Book Agents," where we see the teacher of the agents declining an offer of ten thousand a year and a commission in a publishing-house. Another leading feature of these books is the scorn heaped upon "Europeanized Americans." Thus, a certain flouted Arabella is described as one who "married a rich man, lived in the city, and, under the inspiration of English novels and the tutelage of a woman friend who visited in New York and often went abroad, was developing ideas of family and class and rank." All the characters who set foot in New York go more or less to the dogs, while the independent hero, who as a collegian, in his wrath against caste and faction, had bolted at a society meeting and had sprung upon the convention the nomination of Frank Adee of Terre Haute, is kept, with a few temporary aberrations, in the path of straightness by absenteeism from any point east of Indiana and by election to the Governorship after nomination in "the second largest auditorium in the State." There are side touches in 'The Cost,' when it strays from geography and dimensions, that show a certain degree of originality and of skill in reading motive. Machine politics and questionable fortune-making, however, even when as well drawn as Mr. Phillips undoubtedly draws them, begin to pall upon the palate.

The opening chapters of 'The Gates of Chance' excite a sense of looking at a cinematograph which has gone wrong. But, once having accepted the pace, the reader is whisked agreeably along through ways of entertaining adventure and ingenious mystery. Into the composition of the stories go a foundation of the Arabian Nights, a strong flavor of Sherlock Holmes, a seasoning of latest-day science, and all the intimate knowledge of New York, old and new—and it is a goodly store—that the author had in the house. Mr. Esper Indiman truly describes himself as a "connoisseur of the adventure grotesque." The stories are told as a gentleman would tell them—as naturally as they are unnatural; they offer clean and rational absurdity for the season's reading. The adventures overlap the chapters, so that each ending plunges us into a fresh tangle; and as we leave Mr. Indiman vanished into the wide world screwed up in a clockcase, we are sure we may look forward to the pleasure of meeting him again, for on such adverse environment the Esper Indimans of story grow fat and prosper.

'A Case of Sardines' gives a picture of the sardine industry in a town of the Maine coast. Not only the details of the canning factory are furnished forth, but the local manners, morals, dangers, and salvations that flourish either indigenously or as imports. A cynically disposed young city doctor takes his vacation at Echo Bluffs, and records his experiences, which, needless to say, range from fish to love. Prominent features of the sketch are the fight with the liquor traffic in the State of prohibition, and the uplifting, through song and sermon, of the factory workers, by the musical heroine and the athletic minister. Any reader who thinks "this down-east tale is overburdened with moralizing and philosophy" may at least admit that both are sound and sweet, and not without humor. Witness the native who says: "Ez fur ez my observation goes, the population here ain't tryin' to resist temptation. The majority of 'em's 'round hunting it up."

Friends of Barbara, the commuter's wife, will welcome her utterances on homemaking and the modern woman. "The woman errant, God help her," explains Barbara's father, the Doctor, "it seems to me, is she who either from choice, hazard, or necessity, seeks a cause outside of the protecting wall of her natural affections." Barbara pictures the woman who is errant from choice, and makes her most conclusively unlovely. She, the fascinator, of the "strange eyes with topaz glints," who leaves her betrothed and goes forth to college and to the life of assistant to an editor, burns her own fingers so badly that she may be left to point her own moral. Next to the leading lady, the woman doctor whose prejudice sacrifices her own child, may be put in the same category. The case really deserving attention is the brief eposide of poor Delia Mullins, who couldn't marry her best young man because her own sister Rose got his job at the iron works, supplanting him, for the reason given by the Boss—"She's all right, and she's cheaper." This is an economic puzzle which calls for deeper consideration than the very black and white cases more conspicuously presented, where the situation is comparatively clear, but the individual reprehensible beyond the pale of

sympathy. In truth, we find Mrs. Barbara's philosophy rather onesided, though she herself is so manysided. Her richest wisdom is found in the nuggets sparkling on the path, as is her highest literary attainment. The hoof and horn of purpose are rather painfully evident, and the array of virtues and graces and rewards suggests an arrangement in sheep and goats. But, off and on, as they journey, she and her friends are human and not unprofitable. What there is of sentimental and of slipshod in the story is offset by much of sound and sensible in the story-telling. The saying (in relation to an elderly man): "The secret of his lingering at the point of perfect ripening is his wisdom in dropping the little non-essential tasks that add to the day's fatigue," is good enough to make the reader forget about "the rhythm of the home heart-beats." "I am convinced that it is the *life mussy* that very largely passes current for the simple life," offsets the "flower greeting table in the hall." "If you take personality out of teaching, and regard the children as a progressive lot of *its*, I'm afraid interest does go," breathes a wisdom that supports one while reading that the laughed-at importance of Easter millinery "comes from the underlying eagerness for renewal in all its variations—the turning of the back on cold darkness and despair, and blooming forth anew." To some readers the horticulture and ornithology will seem superabundant. To others the fine arts may appear primitive. For every one there is something wholesome and suggestive. A few will hope to see Mrs. Barbara in a future volume the mother of a daughter who shall reconcile her to the sex.

The Christmas-story form usually handicaps the writer who feels in honor bound to certain traditions. All molasses is not too much sweetening for the occasion; philanthropy, evolved from curmudgeon hearts, flows like wine. Mrs. Freeman's Christmas stories are singularly and happily not open to this charge, and, of eight short stories in her latest volume, five hang on Christmas trees. In every one is found the homely element which it would be a public shock to miss; and characteristically the homeliness is by turns comic, pathetic, tragic—sometimes all at once. There are only two standards with which to compare Mrs. Freeman's work—herself and Nature. Judged by the former gauge, "The Givers" and "The Last Gift" are at the high mark of finish and pungency. Nature there is, in profusion, in all the stories. The details of village life are not more true than those of the inner man and woman. The human beings as well as the houses have their kitchens and best parlors, their spring and fall renewals, their attics with old memories stored in hair trunks, and this without too great a complexity of structure. Complex they are, to be sure, to the dramatic point, but they do not invent their own complexities nor glory in them. The writer is content to let nature straggle without torturing it into motiveless vagaries. Tucked cautiously into the middle of the book lie one or two stories which suffer by comparison with either of the suggested standards; notably "Eglantina," which has a strong motive, but is of an almost comically rantipole execution.

In 'Old Hendrik's Tales' we have a volume of animal stories collected by Capt. Vaughan from the Hottentots during the late Boer war. They bear, suitably, the mark of the beast and of authenticity—the latter all the more from their resemblance to the Uncle Remus stories. To this likeness the publishers call attention, surmising that both sets of legends are from a common source. The sly or "slim" hero of most of the tales told by the old Hottentot Hendrik, is 'Ou' Jackalse," who combines the astuteness of Br'er Fox with sundry individual traits of his own. "Ou' Wolf" is usually his foil and his pal in crime till it comes to dividing the spoils, when "Ou' Jackalse" is sure to be a solo performer. "Little Hare," or "Klein Hahsie," is called by the children "such a skellum," but Old Hendrik softens the aspersion by saying "he is a bit smart, but den he don't get nob'dy's bones broke anyhow"—a refinement which cannot be affirmed of the Jackal, the Wolf, or the "Baas King Lion." The Kaffir dialect is toned down to the readily comprehensible point without so disappearing as to forfeit the strongly local garb that all such stories should wear. The oddest note, perhaps, in the transcription is the modern slang of which, no doubt, there is a plenty ready-made to the hand in South Africa, but which reads queerly in legendary tales. Such phrases may be specified as "Git a move on you," "Where's that meal for the breakfas' I don' know" (assuredly Irish this). "A gall darn sorry" (Stars and Stripes please observe), "So twenty-shillins-in-de-pound comfy like" (Britannia rules the wave). The stories are readable and amusing. They have a decided value as a contribution to animal folk-lore, and within limits are suited to children, though from the nature of the *dramatis personæ* the vehemences are more prominent than in nature tales of a temperate zone.

"My history will furnish materials for a pretty little romance. . . . I hate things all fiction. . . . There should always be some foundation of fact for the most airy fabric, and pure invention is but the talent of a liar." Thus wrote Lord Byron, and thus quotes him Miss Rives for the prefatory mottoes to her romance, 'The Castaway,' a story built on Byron's life. She has adopted its outlines from his boyhood to his death, and has brought to the filling-in many of the actual incidents of his career, though by no means always placing or timing them in accordance with the facts. "The Gentle Reader," says our modern essayist, likes history to be reproduced through the imagination. Miss Rives interprets Byron and his times for us rather through dislocation. For example, the well-known incident of a prayer for the unknown poet's conversion, written by an Englishwoman and found among her papers after her death, is transferred to the Countess Guiccioli, and is made the beginning of the acquaintance with George Gordon, he finding it written in a copy of "The Prisoner of Chillon," near a shrine in an olive grove. Again, the actual suggestion of the Countess that she should take a Juliet-like potion and "pass for dead," is in Miss Rives's romance carried out in fullest details. It is not strange that, having embarked upon embellishment, she should take the Countess of Guiccioli to Missolonghi, with a friar from the Armenian convent, in time to receive Gordon's latest sigh. But romance itself writhes in pain when Teresa finds Byron's "River that rollest by the Ancient Walls"—nine verses—newly etched by the author into a fungus at the root of a tree. Debarred, however, by the authoress's motto from complaining of fiction, we can only shift the impeachment, and say that she has given us far too much truth. To meet by name Shelley and Moore and Sheridan and Godwin, not to speak of Miss Milbanke, Lady Caroline Lamb, Jane Clermont, Marianna and the Countess Guiccioli, is to be entitled to the plain facts of the case. But if invention is to rule the hour, let the characters be called John Doe and Richard Roe. Miss Rives has shown reasonably good taste in treating the more obvious difficulties of her subject, shielding her Gordon, to be sure, by making him the defendant in most of his *causes célèbres;* and she has exercised discretion in her touch upon what could neither be omitted nor defended.

Of her style there is little to be said in extenuation. It shines the more luridly from its contrast with her theme, for if Byron's style was sometimes lurid, it was never viscid. Compare the real Byron on himself: "It is odd, but agitation or contest of any kind gives a rebound to my spirits and sets me up for the time," with Miss Rives on her hero: "In that night at Geneva the tidal wave of execration which had rolled over his emerging manhood had left as it ebbed only a bare reef, across which blew cool, infuriate winds of avid recklessness." What would have been Byron's feelings at reading that his hatred of his country "had darkled in the silt of ignominy"? Everywhere we meet the cool, infuriate and avid. A short anthology may serve to support this statement: "The mullioned worship that to his life seemed only the variform expression of the futile earth-want." "A night of Italian sorcery, the sky an infinite wistaria canopy nailed with white-blown stars." "The polar glaze spreads its algid mockery." A curl of "litten gold." "The buzz of undammed talk crisped by the tap of the gavel." Nor absent are the adverbs usual in such cases, the "wetlys," "palelys," "leadenlys" and their kin; the adjectives like "heaven'd." Truly, as Maurice Hewlett has said, "The adjective is the natural enemy of the verb."

Through all of too little and too much, there is no denying that the story holds the interest, nor that Miss Rives has caught and conveyed, in however artificial a tone, some points of the Byron likeness—the wilful wish to appear worse than he was; the "sheer sense of justice and hatred of hypocrisy"; the kindness, the courage and the passion for freedom. As to her treatment of other traits, Byron's characteristic dislike of "refutation" would certainly find much to batten on in 'The Castaway.' Does Miss Rives remember what he once wrote to Murray?—

"It is enough to answer for what I have written, but it were too much for Job himself to bear what one has not. I suspect that when the Arab patriarch wished that his 'enemy had written a book,' he did not anticipate his own name on the title-page."

TWO FISHING BOOKS.

Book of the Black Bass. By James A. Henshall, M.D. New edition, revised and ex-

tended. Cincinnati: The Robert Clarke Co. 1904.

Trout-Fishing. By W. Earl Hodgson. With frontispiece by H. L. Rolfe, and a facsimile of a model book of flies. London: Adam & Charles Black; New York: The Macmillan Co. 1904.

The twenty-three years since the original publication of Dr. Henshall's book have not served to cool his enthusiasm. The black bass is still, for him, "inch for inch and pound for pound, the gamest fish that swims." However widely anglers may differ from him on this particular point, there is no question as to the service which he has rendered to the cause of angling in general by his enthusiastic devotion to the development of tackle for bass fishing, and to the propagation of bass in countless lakes and streams previously devoid of game fish, or at least of any species which the introduction of the black bass could injure—for Dr. Henshall is better supplied with sense and conscience on this point than many who have meddled in the business. A new edition of his book is therefore an event to be welcomed, and the fire which hastened this event by the destruction of the old plates need not be lamented.

Without exception, we imagine, readers of the volume will welcome the radical excisions which have reduced the first two chapters ("Scientific History of the Black Bass," and "Nomenclature and Morphology") from 134 pages to 44. It would be unfair to Dr. Henshall, however, not to state that this shortening is due to the scientific acceptance of that for which he contended so earnestly in the original edition, viz., the restoration of the generic and specific names given by Lacépède in the original edition of his famous 'Histoire Naturelle des Poissons.' There are many other excisions not of sufficient importance to be noted here, much has been rewritten, and many additions have been made. Under the latter head, we notice a very earnest maintenance of the assertion that the large-mouthed variety of the black bass is fully equal to the small-mouthed in its fighting capacity. Various explanations are attempted to account for the prevalence of the contrary opinion, and several anglers are quoted in substantiation of our author's own view, but the argument remains unconvincing. If the two will fight equally, "all things being equal," then the average bass angler will wonder why all things are so persistently unequal. Certainly, experience on lakes and streams where the two are found together leaves most anglers with the firm conviction that the small-mouthed bass is quicker in its movements, fights nearer the surface (thus avoiding the deadening effect of a long stretch of line under water), is much more prone to jump into the air, keeps up the struggle longer when well hooked, and gets off more frequently when not, than the large-mouthed. Possibly Dr. Henshall is too enthusiastic for the "Black Bass" in general to admit a defect in anything entitled to the name.

The chapter on rods is considerably expanded, and the previous claim of priority for Samuel Phillippe in the construction of the split-bamboo rod is now established beyond cavil, while the date of the invention is pushed back three years, to 1845. The chapter on reels gains by the insertion of a detailed account of the evolution of the Kentucky reel. Much of the material for clearing up these historical problems was collected by Dr. Henshall for the Columbian Exposition, where he was appropriately in charge of the angling exhibit. On the subject of hooks, we are glad to note in the new edition an emphatic protest against the murderous gangs of hooks so commonly displayed by the dealers for trolling and casting. The practised angler finds them really no more effective than the single hook, and they unquestionably lacerate many fish which are not taken. Dr. Henshall still retains his sane opinion that much that is written of artificial flies is sheer humbug, and is correspondingly modest in his own observations. We think, however, we detect one of the commonest fallacies of the fly enthusiast in his contention that the live grasshopper should be used exclusively as a surface bait, always on the windward side of the water, and only when a stiff breeze is blowing, because it is under such conditions that the bass naturally secure these insects as food. Many an angler can testify that the small-mouthed bass, as well as other fish, take them readily under entirely different conditions.

When the original edition was reviewed in these columns, regret was expressed that Dr. Henshall had not kept clearer of the sentimental side of fishing. The sentiment has not departed with years, however, and "good old father Izaak Walton" is drawn upon rather more than less. The original poetic description of "The Capture of the Bass" is retained, but the rhythm and metre have evidently been the object of much loving care in the meanwhile; still, we cling to the opinion expressed twenty-three years ago, that by this specific evidence the author is proved to be no poet. We can also repeat, concerning the new edition as a whole, what was said of the old, that it is the only source of full and reliable information on the habits and pursuit of one of the finest of American fresh-water fishes, and supplies a great want.

We strike a very different type of angler in the author of 'Trout Fishing.' If Dr. Henshall tends to weary us with his rhythmic "Capture of the Bass," what shall we say of Mr. Hodgson, who insists upon dragging us through the mazes of Fate and Free Will, Calvinism, Agnostic Evolution, and what not, in pursuit of the brook trout? We are perfectly willing to take the trout on trust, leaving to some future state of existence the settlement of the question whether "the First Cause intended trout to be caught by the methods of sport, so that men might find pleasure in the capture of them"; nor do we feel the need of bolstering up our devotion to the rod by the knock-down argument that the whole idea of design in nature must be abandoned unless our sport be admitted to have no less a sanction than that of having been a part of the creative plan. If this too must be a part of the higher order of angling, then let us hark back to the days of our boyhood, and go fishin' off the river bank with a willow pole and a can of worms.

Mr. Hodgson has a good deal for the reader after all this is cut out. The only difficulty is that, like his own village anglers along the lowland streams in time of flood, you cannot be quite certain in any given case whether it is a good, juicy trout or a wriggling metaphysical eel at your hook. Out of it all the discriminating angler may pick many valuable suggestions of practical value in his sport; but along with the metaphysical chaff already noticed he must also sift out a considerable element of faulty natural science. Curiously enough, the one bit of really vivid writing in the book deals not with trout fishing at all, but with the capture of a salmon. We have mentioned Dr. Henshall's incredulity on the subject of flies; doubtless he would look askance at the model book of flies reproduced in facsimile which forms the introduction to Mr. Hodgson's volume. There are over one hundred and fifty varieties, each carefully reproduced in its original colors, under the supervision of Mr. Mortimer Menpes. It must be said, however, that Mr. Hodgson is in general no stickler for "fads" in angling. He counts it no blasphemy to assail the "dry fly" craze; nay, he will even fish with a live minnow or a worm on due occasion—that is, when the large trout of any given locality can be lured forth in no other way. The interest of the strictly American angler in the book will of course be diminished by the fact that it deals with the sport only as practised in the British Isles. The dedication is to the memory of the Marquess of Salisbury, to whom the book was to have been inscribed by his own permission. And here we are reminded that the author's familiarity with persons of note, generally indicated by initials, is occasionally obtrusive. In mechanical execution the book is all that one could ask.

Lectures on Classical Subjects. By W. R. Hardie, Professor of Humanity in the University of Edinburgh. Macmillan. 1903.

Every schoolboy knows that nowadays classical studies are everywhere put upon their defence. Fortunately for them, arraignment is not the same thing as conviction: history can point to a number of scholastic acquittals. Yet it is a curious coincidence that the four new books on classical subjects that we have last had occasion to open, begin each with a deprecatory preface. Whither is gone the Roman belligerence and the Greek calmness of self-assurance? Can it be that he is only a myth of ancient origin, that Oxford don who welcomed with such superb scorn the founding of the newer English universities because they would provide for modern trashy subjects, and leave Oxford and Cambridge to pursue their solid and comfortable way in peace? Mr. Hardie need not apologize for the unambitious character of his book, for, even though he traverses for the most part familiar fields, and plucks his posies in leisurely fashion, it is such toil as his which brings to the much-scorned average reader the fragrance of the ages. We cannot all in this workaday world keep up our earlier sauntering over the fields of Enna without a guide, but we welcome all the breaths from that faery land that kind Favonius may grant us.

Of the ten lectures, or essays, that Mr. Hardie puts before us, the first six are of distinct interest to all intelligent students of human feeling as it is expressed in literature. They trace in easy manner from age to age, and set forth in a clear style, the feeling for nature in the Greek and Roman poets, the beliefs of the Greeks

and Romans concerning a life after death, the supernatural in ancient poetry and story, the older ideas concerning an age of gold, the vein of romance in Greek and Roman literature; and finally discuss, from the standpoint of classical literature, that ever-interesting theme of the language of poetry. In a number of instances these topics tempt comparison of Mr. Hardie's treatment with that of others. One cannot forget Von Rohde's 'Psyche' in any discussion of the ancient belief in immortality; Friedländer's essay on the Roman feeling for nature, though not sympathetic in touch, has been to many a source of suggestion; the discussion of the romantic element in literature will call to mind the writing of Mr. Hardie's colleague, Professor Butcher, in his 'Aspects of the Greek Genius.' With the second edition of the last-mentioned work Mr. Hardie was unacquainted at the time his own essay was written. On these and the allied themes, however, Mr. Hardie's purpose was narrative and descriptive rather than critical and constructive; yet the reader who assumes from the modesty of the preface and the simplicity of the method that he has before him only such stunted and dry-as-dust collections as juvenile candidates for the doctorate occasionally succeed in accumulating, will be pleasantly undeceived. Mr. Hardie's essays embody much more than he professes. They abound with lucid and suggestive analysis and comment pleasantly expressed. The characters of Plautus, so said Aelius Stilo, speak as the Muses would if they spoke Latin. Mr. Hardie's writing is such as we should like to find in the statistical dissertations of our students of literature, but they would need closer kinship with both the wisdom and the grace of the Muses in order to compass it.

A good example of the author's critical manner and good sense is found in his treaatment of the sixth Eclogue of Virgil:

"It is full of echoes from the past, and yet it is at the same time a new thing. Virgil transmuted what he touched. . . . Old memories and fancies of an age of gold he has woven into a new idyll, a vision of Italy as it might be under happier conditions. In this respect, though there are many points of divergence, the eclogue resembles Shelley's poem on the regeneration of Greece, which would be treated with equal injustice if it were resolved into the classical ideas or allusions which appear in it. Both poems have in some degree the vagueness or obscurity which belongs to a prophetic vision: the seer is trying to read the story of a strange future, and has no language in which to express it save the ideas and traditions of the past, which are of necessity inadequate. It would be as idle to try to identify Shelley's 'loftier Argo' and 'new Ulysses' as it is to rationalize with prosaic literalness the dream of Virgil."

Yet the *puer* Mr. Hardie finally inclines (with Skutsch) to think is a real child, the expected offspring of Octavian and Scribonia.

Sometimes we must be allowed to differ with Mr. Hardie's conclusions. He remarks, for example, that "the epithets applied to mountains by the Greek poets would show, if they were collected, a wonderful appreciation of the varied features of mountain scenery—"many-fountained Ida," "clad in waving woods" (*εἰνοσίφυλλον*), "full of wooded glens" (*πολυπτύχου ὑλήεσσης*), "snow clad," "touched by the sun's first ray" (*πρωτόβολον ἀλίῳ*), etc. But may it not be said, after all, that the feeling thus indicated seems to be aroused by elements that are not essentially connected with mountains? Nor can we quite accord with the idea that one of the "ways in which mountains did exercise a spell over the Greek" was in arousing his emotion of patriotism. The instances Mr. Hardie cites are all those of return from absence, where either the mountains are merely the landmarks first seen, or else the traveller's actual home is among them, in which latter case he would experience the same emotion had his home been in the plains, if only he could have caught sight of it as easily. The mountains in each case are but accidents of the situation.

Again, the essay on "The Vein of Romance" seems to us not quite as clear-cut and fruitful as it might have been if the author had framed more narrowly and sharply his definition of romance. His own conception seems to be lacking in precision. He says:

"I do not think that we can really include the poems of Sappho under this head. The white heat and glow of real passion, the expression of what one feels at the moment one's self, this is hardly what is meant by romance strictly. . . . Romance results rather when we sympathize with the emotions of a hero or heroine of story—when the emotions are not the actual ones of the moment, not those we are ourselves feeling intensely, but at most our own feelings projected, as it were, into a remote region, idealized and reproduced in new conditions. In romance we are, to a certain extent, outside of our own emotions—thinking about them, making much of them, looking at them."

Part of what Mr. Hardie thus says does not seem to us sufficiently exclusive of other qualities to serve as even part of a definition of romance. Sympathetic emotion is not necessarily romantic, though romance must surely have a personal appeal and captivation. Of course, on the other hand, no one could possibly take exception to the statement that "the white heat and glow" of passion, like that of Sappho or of Sulpicia, is not romance. Mr. Hardie need not have spoken with such unusually awkward hesitation on this point. We should be disposed to avail ourselves of some of the elements that he suggests, and to discard others, insisting that romance, though the sublimation of passion, the idealization of emotion, passion lifted above both sensuality and realism into the purer and remoter regions of a sort of mystery, is yet truly and intensely personal and absorbing. The difference between our conception of romance and that of Mr. Hardie is perhaps better shown by examples. He includes under romance mere passionate or pathetic stories of love. Apollo's amours are hardly what we should call romantic.

The last four essays of the book are of less general interest. The one on the metrical form of poetry, though doubtless meant as a companion piece to that on the language of poetry, yet discusses almost exclusively certain detailed and technical questions of ancient metrics. The special student will find it the most interesting of all. The lecture on literary criticism at Rome treats in a sketchy way the theme that was more solidly handled by the late Professor Nettleship in the *Journal of Philology* for 1890, and was later included in the second series of his Lectures and Essays. Mr. Hardie's sketch of the revival and progress of classical studies in Europe is clear and just, but calls for little remark, and the concluding lecture on the aims and methods of classical study is not concerned with philosophical or pedagogical questions, but summarizes didactically the way in which the classical student should go about his work. These last three are ordinary class-room lectures, and that is all; the book evidently exists for the first seven, and we trust Mr. Hardie will some time give us more of the same excellent sort.

Kings and Queens I Have Known. By Hélène Vacaresco. Harper & Bros. 1904.

A lady-in-waiting seldom publishes her diary; probably it is not often that she has the time or the spirit to keep one. One does not look to a valet for the imagination that will transform his master into a hero; and to a *dame d'honneur* her royal mistress is usually, no doubt, a perfectly commonplace person who causes her acute physical discomfort. She sees the seamy side of court life too close to idealize it, and realism in such a connection would be ill-bred. Fanny Burney's revelations are quite exceptional. She belonged to the English middle class, and naturally felt that in sacrificing her literary career to become the Queen's dresser she made a brilliant exchange; but she had truthful instincts and a weak constitution, so that the interlude at court was brief and her record of it sincere. Mlle. Vacaresco is no less out of the common run of ladies-in-waiting. Her poetry, though not equal to that of "Carmen Sylva," has been crowned by the French Academy, and she has a vivid and picturesque imagination, which her close association with the Queen of Rumania has done nothing to suppress. The conception of royalty is not usually attractive to poets. You will not find Homer idealizing his kings—what appeals to him is the youth and strength and passion of Achilles, the beauty and grief of Helen; and though many a court poet since Homer has enjoyed the friendship of kings, he has usually preferred to sing of something else. But Mlle. Vacaresco is more royalist than all the kings and queens she has known. The most trivial incident connected with a royal personage thrills her imagination because it symbolizes the power of kings, or illustrates their divine condescension to inferior mortals. Her style is highly rhetorical and her point of view wholly feminine, so that two-thirds of the volume before us will appeal chiefly to the readers of periodicals devoted to the fashions and fashionable gossip, such as one encounters in great variety in the average British drawing-room. No one else, one imagines, could read with patience Mlle. Vacaresco's description of the wonderful eyes of the German Emperor—

"eyes whose color and depth and sternness can be compared to jewelled Toledo blades, where gold and iron blend like blazing rays of the sun and cold flashes of stormy lightning . . .—that look, as it lingered and plunged to the very depths of the assembled people, made every nerve thrill like the muscles of the Arabian steed who feels his master's fingers creep lazily through his mane. . . . The firm gaze of the imperial sun-god is not abased before the brilliant rays which concentrate their fierce light upon him."

Or again, of the Queen of Italy's smile—

"so subtle, so pure, so lavishingly spent—a smile at the same time fascinating and

haughty, careful to betray royal serenity, yet anxious to hold the popular favor, a jewel which the lowest and most obscure might find on the road to daily labor, as welcome as bread or flowers."

Few twentieth-century courtiers, few of any century, could write like this at close range and be sincere. But Mlle. Vacaresco is thoroughly sincere. We cannot doubt that the moment in which the Princess of Wales handed her a shawl on a chilly evening in the Highlands will, as she asserts, remain alive in her memory forever; nor does her extravagant praise of her own mistress, "Carmen Sylva," read like flunkeyism. From childhood she has devoted an extraordinary capacity for hero worship and a transfiguring imagination to the chief personages of the European courts. But for certain political considerations, she might herself have taken her place among them—a fact to which she more than once alludes. The Queen of Rumania, her poetic gifts and private sorrows, have been described once for all by Pierre Loti. Mlle. Vacaresco's extravagant rhapsody can add little to the impression given by the author of 'L'Exilée,' though her picture of the Rumanian court in the Carpathians is interesting.

The most dramatic figures in these sketches are the mysterious Crown Prince Rudolf of Austria and his unfortunate mother. The former, Mlle. Vacaresco describes from a childish but vivid recollection of an unpleasant and degenerate personality, whose mysterious death has made him a hero of romance. The romance is, of course, all that she consents to see. An upstart queen like Draga of Servia is quite another matter. In her chapter on "The Sovereigns of Servia," Mlle. Vacaresco describes Madame Draga Maschin at a garden-party in Paris, in attendance on Queen Nathalie:

"Her countenance was well calculated to charm, though not to command attention; the features, though delicate, lacked refinement, and there was about the nose a deficiency of classical lines, while the mouth twitched in a nervous way as if moved to smile without the courage to do so. The glossy black hair waved round a low forehead, where furrows were already settled, traced not by age, but by stern, resolute, thought and action. The eyes and eyebrows alone were perfect and spoke of an Oriental houri's power. 'I would never go to Servia again,' she said, 'if I could help it. It is my country, but I have enemies there, whereas here every one loves me. But you understand the Queen is such a devoted mother. She will one day desire to see more of her son than she does at Biarritz, where he comes only for a short time. She will return to Belgrade, and then I shall have to accompany her, and if she settles there—oh, then farewell flirtations, farewell all hopes of marriage. But I won't marry again; I am too old and plain and I don't flirt. I am getting so cosmopolitan that, only think, the young King, when he came to Biarritz this summer, discovered that there were many words in Servian I did not understand, and he laughed—he teased me. But then he is so young—quite a child.' "

Perhaps the most interesting, because least rhetorical, pages are those in which the lady-in-waiting who has not married the Crown Prince of her court dissects the lady-in-waiting who has actually mounted the throne. The minor royalties furnish on the whole more amusing gossip than the exalted personages. Mlle. Vacaresco occasionally shows a gleam of humor, as when she describes the petty German princes and princesses assembled with some of the lesser Hohenzollerns under the same roof with the German Emperor, who may or may not deign to admit their vague kinship; they uncertain, meanwhile, whether to behave as vassals or relatives, outwardly obsequious, inwardly chafing—a most unattractive house party.

Therapeutics of Mineral Springs and Climates. By Dr. I. Burney Yeo. Chicago: W. T. Keener & Co.

From immemorial times thermal and chemical waters have been invoked for the relief of disease, and Dr. Yeo's is the latest geographical dictionary on this subject. The famous English physician has written for English invalids, and his view is chiefly, not exclusively, of places easy of European access. It is not astonishing that the "samples of weather" which pass for climate in Great Britain should impel invalids (who are able) to change their skies, especially in the drearier seasons; a trustworthy volume is therefore valuable alike to those who would fly and to those who should advise their flight. But we do not find, as we might expect, stress laid on the character of the soil as well as on atmospheric humidity and temperature, as an essential for wholesome residence as well as a factor of climate itself. That change of air is in great degree change of soil, and, when helpful, is largely an escape from the noxious conditions of damp and ill-drained sites, is no new conceit.

The United States is dismissed with scanty reference to California and Colorado, where we find "Boulder in the heart of the Rocky Mountains" (p. 606). But Egypt, which has become, "since the British occupation," a very popular winter resort, is well treated, with an impartial account of the sanitary disadvantages of Cairo. One of the most interesting chapters discusses sea travel, so changed on steamers from what it was on ships under sail. Merited stress is laid on the remarkable improvement that tropical intestinal complaints, otherwise lifelong or fatal, undergo in a month or so at sea when undertaken promptly. Such convalescence in military patients has been misinterpreted (where intelligence did not equal authority) as clinical deception or professional ignorance or both. In the longer voyages between European coasts and Asiatic ports the author ignores every line but the P. and O., quite forgetting that both the North German and the French ships from China surpass in all points of attractiveness those pioneers so long and formerly so justly celebrated in British story.

To the greatest number of invalids the chapter on the mountain-air cure for consumption, which is practically that of dry and unpolluted air, the "open-air" of selected localities, is probably the most valuable. As Dr. Yeo remarks, Sydenham's "sufficiently long journeys on horseback," which he thought the best remedy for consumption yet discovered, was an anticipation of the advantages of the open-air treatment. This very favorable combination is as useful now as it was two hundred and fifty years ago, for the horse implies money, and is the germ from which develop the more abundant fresh air, the dry soil, and the reasonable food that constitute the wealthy consumptive's special "climate" of to-day. But the horse is a luxury, delightful but not essential in the treatment.

The action of medicinal springs and especially of baths, as distinct from the same elements artificially combined, is still a puzzle. There are famous baths in this country where analysis shows little more than that they are wet and hot; but unless all observation is fallacious, they are important therapeutical agencies. It has been suggested, and Dr. Yeo in his preface quotes the suggestion without disapproval, that the "newly-discovered property of radio-activity" may account for much of the profitable balneal action of "indifferent" springs. It may. And the same may be true for those waters that are best "taken" on the spot. But as radio-activity is an evanescent quality, experiment to determine its presence must be made at the source, and the transported waters should be less efficient than those used as they emerge from the earth, as indeed is sometimes the case. The great group of mineral springs that have made the geological fault at Saratoga celebrated are not mentioned, any more than are other natural sanitaria of this country.

James Lawrence, Captain, United States Navy. By Albert Gleaves, Lieutenant Commander, U. S. N. G. P. Putnam's Sons. 1904.

It is not likely that another life of Lawrence will be written, so thoroughly has Lieut.-Commander Gleaves performed his task of searching the Navy Department archives and of drawing upon private sources of information, many of which were not available to his predecessors. He has presented the results of his painstaking labors in a narrative accurate in statement and of marked fairness in criticism, so that little remains for others to tell concerning one of the most picturesque and popular characters in our naval history, and yet one of whom, he says, "less is known . . . personally than any of his contemporaries, except, of course, his immortal order, 'Don't give up the ship.' "

Lawrence's life may be said, quite truthfully, to consist of but two episodes—his victory in the *Hornet* over the British sloop-of-war *Peacock*, February 24, 1813, and his loss of the frigate *Chesapeake* to the *Shannon*, on the first day of June, the same year. To the former, Mr. Gleaves devotes enough space to secure a satisfactory setting for his picture of the brilliant action which placed Lawrence's name high on the roll of our naval heroes, and raised hopes for his future, and confidence in his combination of luck and capacity, that were quickly changed to national grief for his untimely fate, mortally wounded at the very opening of his last battle.

To construct a biography of such scanty elements was by no means easy, and this should be borne in mind as we read the opening chapters, penned with the intent of giving a general idea of the service into which Lawrence entered in 1798, while yet in his seventeenth year, and of the political situation during the early part of the nineteenth century. The padding is very evident; but if it had to be used at all, this padding is excellent, although sometimes rather trivial. We are interested to learn that ships of that day had already discarded casks for tanks to carry their water supply; we wonder whether the author really meant to say that when Capt. Broke was made a Knight Commander of the Bath

he was admitted into the peerage; we are led to inquire when "Commodore" John D. Sloat, the annexer of California, changed his name to James B. Sloat; and we fear enthusiasm for his subject has carried Mr. Gleaves too far in asserting that, as a frigate captain, Lawrence "had no superior in the service."

It is pleasant to think that young Lawrence's remonstrances to Admiral Collingwood, when three of his men were forcibly taken out of his little gunboat "No. 6," by Capt. Rotheram of H. B. M. S. *Dreadnought* off Cadiz in 1805, may, possibly, have borne fruit two years afterwards, as that splendid type of the officer and gentleman wrote:

"When English seamen can be recovered in a quiet way, it is well; but when demanded as a national right which must be enforced, we should be prepared to do reciprocal justice. In the return I have from only a part of the ships, there are 217 Americans. Would it be judicious to expose ourselves to a call for them? I see in the journal of the —— that when cruising they spoke an American from Leghorn, bound to Salem, and the only remark about her is, that they pressed a man out of her. What should we say if the Russians were to man themselves out of English ships?"

It would appear from the beautiful letter written to Lawrence by the surviving officers of the *Peacock* thanking him for his "kindness, attention, and hospitality," that American naval officers, in their courteous reception and treatment of Cervera and his men, but followed the honorable traditions of a humane service, which in this respect continues to be without a rival.

The luckless story of the *Chesapeake* reminds us that, in flagrant violation of international ethics, we have given to a new vessel that title which we lost in a fair fight, and to which we therefore have no shred of claim; and it suggests an inquiry into the mental condition of the Congress which perpetuated, in one of our newest and best battleships, the equally unfortunate name of *Maine*. The average reader will be chiefly interested to know the reasons why the *Chesapeake* was the only one of our frigates to suffer defeat in an engagement with a British ship of her class, and whether the allegations of Cooper that "some disaffection existed among the crew. . . . The ship had an unusual number of mercenaries in her. . . . It is known that Capt. Lawrence went into this engagement with strong reluctance. . . . In addition, the *Chesapeake* had an unusual number of landsmen in her, etc.," together with the whispered suggestion that Lawrence weighed his anchor and bore down upon his adversary in a state of vinous exaltation following a noonday banquet on shore, would be substantiated or refuted by Gleaves's more recent investiagtions. We must refer the reader to the book and its admirably clear and impartial account of the action for the proof that all these statements were erroneous, and that the *Chesapeake* was lost, primarily because her captain committed the tactical blunder of not raking the *Shannon*, which lay still in the water on the approach of the *Chesapeake*, and of closing to such a distance on the weather beam that, when the first broadsides of the *Shannon* carried away her headsail, she flew up into the wind, was taken aback, and promptly driven astern on top of the Englishman, an easy target and at the latter's mercy. An overwhelming disaster followed swiftly upon the heels of an initial blunder, as is frequently the case.

The publishers have done their full share towards making this an attractive book, while to the care of preparation the author has added a smoothness of style and evidences of wide and varied reading, not usually to be found in the kit of the seafaring man.

Natural Music Course. By Frederic H. Ripley and Thomas Tapper. American Book Co.

This course consists of a Harmonic Primer and Harmonic First, Second, Third, Fourth, and Fifth Readers. There is considerable repetition, both in the reading matter and in the musical illustrations, but this is intentional, for purposes of review and to enable the slower pupils to keep up with the procession. Less justifiable is the use, in several of the volumes, of one of Schubert's "Miller-Maiden" songs with Longfellow's inapposite "Tell me not in mournful numbers," and of the wedding march from "Lohengrin" to the words "Flag of the free, fairest to see! Borne thro' the strife and the thunder of war"; etc., which would have made Wagner's hair stand on end. Apart from these infelicities, little but praise is due these volumes, which will doubtless serve their purposes very well.

The leading American pianist of the fair sex, Mrs. Fannie Bloomfield-Zeisler, recently wrote in the *Music Trade Review* that "women have done the lion's share of the work in developing a love of good music in this country." How true this is, especially in the schools, is emphasized by the fact that the authors of these Harmonic Readers take it for granted that they are addressing a feminine audience chiefly, and therefore always refer to the teacher as "she." The lessons and songs are for both boys' and girls' voices, and special directions are given regarding the critical period when boys begin to suffer from the break in the voice. The Fifth Reader includes songs with bass. "Some boys," the authors state, "anxious to emulate the example of their bass-voiced companions, demand the bass clef for exclusive use. Still other boys, and this class includes nearly all those who show some changed tones, have two registers, and can sing either soprano or bass within limited ranges." Sections are devoted to solfeggio work, ear training, eye training, enunciation, part singing, dictation exercises, etc. The music in the First Reader is intended to make pupils familiar with the best of the American folk music, but there are also, as in the other volumes, many miscellaneous tunes; harmony plays a more and more prominent part in the successive Readers. The preface of the last volume contains a strong plea for music in schools, concluding with this noteworthy sentence:

"When, therefore, we reflect upon the fact that nine-tenths of all the crime that is committed is the direct result of ill-spent leisure, and that nearly all of our poverty is due to the lack of personal resource or creative power, we must agree that a study which, properly conducted, affords innocent amusement for leisure moments, and at the same time arouses and cultivates those faculties upon which creative, original, and independent action is based, cannot safely be disregarded by those who have our national welfare at heart."

"In its power to give this 'feel' of life—of instability yet of permanence, of divinity allied to dust—the book has a peculiar charm. . . . Mr. Colton is a man with a faculty for cramming his phrases full of meaning, and with a keen perception for the hurrying, telling life-current seething below the unrevealing surface of the commonplace. . . . He looks deep into his man, and in portrayal has often a Giotto-like dash that whirls the circle true at one sweep. . . . Mr. Colton seems to have a certain affinity with George Meredith in his approach to life and literature; . . . but Mr. Colton has not characteristically the 'Meredithyrambic' obscurities and involutions."—*Literary Digest.*

The Independence of The South American Republics

A STUDY IN RECOGNITION AND FOREIGN POLICY

By FREDERIC L. PAXSON, Professor of History in the University of Colorado, and sometime Fellow in the University of Pennsylvania. 12mo, cloth, $2.00 *net*.

Rise of The Doctrine of Recognition

"The title to this excellent little volume gives its intention and scope, and Mr. Paxson has, with rare restraint, confined himself strictly to his subject. . . [He] outlines clearly the rise of a doctrine of recognition, and as clearly recounts the events passing in South America which led to the revolt against Spain and eventually to independence. . . . His study is based upon original resources. . . . Mr. Paxson has justly emphasized the influence of John Quincy Adams."

—WORTHINGTON C. FORD.

American Historical Review, January, 1904.

Revolts of the Spanish Colonies

"This little book, which reviews comprehensively and brilliantly . . . the inception and culmination of the revolts of the Spanish colonies in the Southern continent, is especially timely to-day."

Boston Transcript, September 2, 1903.

John Quincy Adams the real author of the Monroe Doctrine

"Mr. Paxson has done one signal service in bringing out the fact that, even more completely than has been surmised, John Quincy Adams was the real head of the Monroe Administration, and was the real power behind the throne as regards the Monroe Doctrine. Furthermore, the author shows that the Monroe Doctrine itself was in process of formation for many years before it was enunciated in 1823. Finally, the present study throws new light upon the rivalry between John Quincy Adams and Henry Clay. Thus we have a work which will attract the immediate attention of every student of American history, and the attention will be well repaid."

The Outlook, August 29, 1903.

The Nation.

NEW YORK, THURSDAY, AUGUST 18, 1904.

The Week.

The President has taken the proper stand in publicly rebuking the Federal district attorneys and marshals in Alabama who have attempted to remove subordinates for political reasons. He justly says that "of all offices of the Government, those of the Department of Justice should be kept free from any suspicion of improper action on partisan or factional grounds." Without meaning to detract in any way from the credit the President deserves for these words, we venture to hope that no Southerner will be so unkind as to assent to their correctness and then ask Mr. Roosevelt why he does not apply the same doctrine at home. There is the District Attorney's office in this city, for instance. Why should not it also be protected from any suspicion of improper action? Most persons are apt to think that this branch of the legal arm of the Government is quite as important as that of Birmingham. Why, then, should it have been burdened with William M. Byrne, lately a Federal district attorney in Delaware, and now a full-fledged assistant here? No one has yet discovered why Mr. Roosevelt should go out of this State to fill the position, except the more than suspicious fact that this tool of Addicks was very useful in reassuring in 1900 and 1902 certain Irish Catholic circles which had become very uneasy over the Administration's attitude towards their Church in the Philippines.

The semi-official defence of President Roosevelt's action in appointing a civilian fifty-four years of age to a majority in the army only puts the President in a worse light. Congressmen Bradley of Newburgh and Secretary Cortelyou—not Governor Odell, it appears—obtained the promise of the job for their friend, so ready to don the uniform after thirty years of laborious practice of the law. The President, then, is giving away eagerly sought army offices to oblige a Congressman and the chairman of the Republican National Committee. The statement that Mr. Fowler was not Mr. Roosevelt's own choice, and that he would rather have given the place to one of those Rough Riders for whom he has so thoughtfully been providing offices ever since he entered the White House, only aggravates his renunciation of the appointing power. Nor does the excuse that the place in question was previously filled by a civilian help matters. It is a highly important military office. As a veteran officer writes us: "The position is one that can be properly filled only by an officer who has had long experience, as it is really an appointment in the Adjutant-General's Department." The truth of this statement appears in the fact that Major Fowler will be promoted to the position of lieutenant-colonel and assistant adjutant-general of the army next year—after only one year's service.

"How sharper than a serpent's tooth it is to have an ungrateful" bantling must be the reflection of the Administration over the unpleasant reaction against the United States again manifest in Panama. On Friday President Amador invited a number of prominent citizens to the Government palace, and a declaration was then launched that "the Panama Government should firmly demand a full compliance with the text and spirit of the treaty, and should by no means tacitly permit its violation in any shape or manner which would be derogatory to the nation's dignity before the world." The Panamans persist in thinking that the President is unwilling to relinquish control over Panaman ports, and to comply with the treaty which recognizes Panama as an independent and sovereign State. If Panamans think that this Administration, after violating its treaty obligations with Colombia, and after having overthrown Colombian sovereignty under the pretext of our guarantee of the neutrality of the Isthmus, is going to be sedulously regardful of the rights of such a comic-opera republic as Panama, we fear they are doomed to disappointment. It will only be necessary to trot out the stalking-horse of an "international easement" in Panaman ports to grab just as many of them as may be convenient.

The mighty fabric of our Imperial judicature is slowly but surely rising. Already there has emerged into distinctness the general principle that an appeal lies from the decision of South American courts to the Executive Department of the United States. Thus, in Venezuela, where the Castro Administration has brought suit for damages against the New York and Bermudez Asphalt Company, although our State Department admits that "the course of the Castro Administration is entirely within the law," our State Department proposes to "examine with the utmost care the proceedings of the Venezuelan courts." If the allegations of gross injustice made by the New York concessionnaires are found by our State Department to be correct, Minister Bowen will at once receive word to inform Castro that "the property of the Americans must be promptly and wholly restored." There is here a curious analogy to the bifurcated prætorian jurisdiction developed under the Roman Empire. The *praetor urbanus*, whose code regulated the procedure of the city, has a parallel in our Supreme Court with its restricted continental jurisdiction; while the jurisdiction of the *praetor peregrinus*, whose code held in suits to which foreigners were party, seems to be devolving upon the Secretary of State and the Secretary of War.

"Reconstruction in Samar" has a familiar sound, bringing up sweet memories of "Hell-Roaring Jake" Smith, the cold-blooded killings of Major Waller, and some other attractive happenings in the spring of 1902. Then we were told, particularly after the capture of Lucban, that the war in Samar was over, that peace reigned over a desolate country. We have been repeatedly informed since then by Gov. Taft and others that only the Moros were in arms against the triumphant United States. But the children under twelve, who alone were to have been spared by Gen. Smith's orders, have apparently grown up and taken arms into their small hands, for Gov. Wright, in despair of subjugating this pacific island, has ordered the immediate forcible concentration of the populace into those hateful camps which disgraced Spain in Cuba and England in the Transvaal, and about which we were once so terribly indignant. When is the war in the Philippines to end, and when is the needless waste of American lives to stop?

Turkey has yielded, as usual, to the naval demonstrations at Smyrna, and American institutions will receive the most-favored-nation treatment. Secretary Hay will record another facile "triumph," and everybody will be pleased except Minister Leishman, who has no assurance that next time he will not be obliged to pass again through the circumlocution office. Most of all, perhaps, the missionaries will be delighted, for have they not proclaimed, in the land of the Koran or the sword, the Gospel or the battleship? Everything is settled until next time, and with this instance of American intervention, which fortunately has ended well, the Concert of Europe has one more argument for undertaking the regeneration of the sick man of the East.

The Federal Government's employment policy is very properly that of "the open shop." The strike of the union bricklayers on the buildings of the War College at Washington, because of the employment of a non-union negro certified to the superintendent by the Civil

Service Commission, has collapsed. On the 10th instant seventeen additional non-union bricklayers from Philadelphia were at once set to work upon alighting from the train, thus securing the full complement of forty-five first-class men —all that were required to finish the job. The majority of the strike-breakers are negroes, and the report comes from Washington that "they lay more brick and are less inclined to discuss labor questions and hours than their striking predecessors." The Government's policy in this matter of making no distinction between unionists and non-unionists not only is required by the spirit of the Constitution, but is eminently politic, so long as only a very small fraction of wage-earners are unionists. To adopt the policy of "the closed shop" in Federal employment would be to invite speedy political destruction.

The Reign of Terror in Colorado has been challenged, and the return to sanity and the reign of law promises to begin. The Rev. Thomas S. Leland, pastor of a Methodist church at Cripple Creek, who has taken no part in the industrial disturbances except that about a month ago he inveighed against the lawlessness of the deportation system, was warned recently by masked men to leave the Cripple Creek district. He has very properly and courageously declared that he intends to remain, and, if necessary, to defend himself against mob violence. The situation in Colorado has ceased to be a local disturbance, and has become a national peril. Between the unionists who originally used dynamite to murder their non-union competitors, and the Ku-klux Klan, which, in the interest of the operators, has terrorized whole sections and deported suspects without warrant of law, there is as little to choose as between the negro ravisher of the South and the miscreant mob that roasts him. It is time that both were made to bow before the majesty of the law. It is also significant that the brave stand of the Rev. Mr. Leland and the support which he is receiving at the hands of the non-combatant residents of Cripple Creek, follow so closely upon Judge Parker's emphatic insistence upon the menace to our republican institutions which comes from the disregard of law.

The establishment of the open shop would considerably clear the somewhat polluted atmosphere in the Building Trades. From it not only would honest labor gain, but honest capital. For years unions and employers in Manhattan have worked together in an unholy alliance. The unions have aimed at controlling the labor market; the employers at controlling all contracts. By working together both parties have succeeded. In return for the employers' favor of putting only union men on jobs, the latter have refused to work for outside contractors. As a result, building contracts in Manhattan have been kept in the hands of a few. Many out of town concerns have attempted to get business, but have almost invariably retired in bad condition. Their success has been impeded by strikes and boycotts, and their affairs have frequently been settled in the bankruptcy courts. The adoption of the arbitration agreement a year ago was regarded by some as the fine flower of this system. Its foundation stone was the exclusive employment of unions. The open shop, however, means the end of the non-competitive era; if it is enforced, outside builders can take contracts. For this reason it may seem incredible that the employers should favor it. There have been many signs, however, that the employers have had to pay dearly for their monopoly of union labor. Under it, building is about 50 per cent. more expensive in Manhattan than in other American cities; and, on a large scale, has all but ceased. Thus the builders as well as the public would gain by a return to early conditions.

A bolt from the blue has carried consternation to the friends of protection. Lodge has turned traitor and has been denounced by the American Protective Tariff League. His recent reciprocity speech has been placed in the Index Expurgatorius by that high keeper of protectionist orthodoxy. Lodge's fall from grace is complete. When a large number of Massachusetts Republicans declared that Canadian reciprocity was of "vital" importance to the United States, he jumped up and affirmed that he and all his Republican colleagues from the Bay State were of a similar mind. He recanted all he had previously said about the superiority of the "American idea" to the "Massachusetts idea." But he grossly misrepresented Republican sentiment "when he asserted that there is no disagreement with the Massachusetts idea." To have stated otherwise in the hope of placating an enemy "bent upon the downfall of himself and the Republican party was," in the opinion of his austere critic, "an act of folly, an act of cowardice." Indeed, we are bluntly told that Henry Cabot Lodge may fail of reelection to the Senate.

Every man on the list of names which comprises the officers and founders of the new Parker Constitutional Club is a lawyer of note in this community, and many of them, like Wheeler H. Peckham, John E. Parsons, W. B. Hornblower, and Austen G. Fox, enjoy the highest standing at the bar. Every one of these showed his independence and courage in the Bryan days by opposing that candidate for the Presidency. Now they believe that the issue of Constitutional as against personal and autocratic government in the United States is so pressing as to demand their best efforts, precisely as did the gold-standard issue in 1896 and 1900. They cannot be sneered at as mere alarmists, nor can their motives be questioned. Here is plain proof that men accustomed to dealing with matters judicial and legal have responded to the clear notes of Judge Parker's speech.

Two more human beings burnt alive at the stake—in Statesboro, Georgia; black, of course; the mob striking a proper attitude to allow of the photographer's seizing the psychologic moment; small boys looking on, imbibing the higher education in race hatred and cruelty; the crowd fumbling in the ashes for bone souvenirs. There was nothing new in this, or, alas! in the dreadful crime avenged; but the men (part of a gang) had been tried, convicted, and sentenced without delay. The Rev. H. A. Hodges, brother of the murdered man, was permitted to offer a petition before the regular session of the court, praying Christianly "for the spirit of a sound mind, a godly judgment, and an unbiassed verdict." He also prayed for the observance of the laws of the land. Judge Daly admirably seconded this appeal by urging discrimination between the innocent and the guilty. "The entire country applauds when you observe the law, but no one is with you when you violate the law." The military precautions against mob violence were prompt, but the soldiers were armed with Quaker guns—unloaded. This discovered, the mob had its way. Once more is disproved the false pretence that tardy justice is the cause of lynching. Not justice, but torture, but terror; and, above all, the "spectacle"—*panem et Circenses.*

The frantic buying of wheat reminds one of the cotton situation in 1903. That there will be a considerable reduction in the American crop is beyond doubt, but that conditions at the moment warrant the present high quotations is by no means certain. With the Government's August 1st figures as a basis, experts figure out a total wheat crop of about 605,000,000 bushels. But since the first of the month there have been reports of injury to spring wheat in the Northwest, and there is the greatest difference of opinion as to how far the actual yield will fall below 600,000,000 bushels. Mr. J. J. Hill estimates the harvest at 500,000,000 bushels. The most that can be said is that this year's yield will be the smallest since 1900, when the crop amounted to 522,229,505 bushels. As the world's wheat harvest is likely to be small rather than large this year, prices bid fair to range comparatively high for the next twelve months. But recent quotations have been based on what

speculators think of the future, not on the present actual demand for consumption. As the cotton manipulators figured that the staple would go to 20 cents a pound, so wheat boomers are in some cases predicting $1.25 a bushel. The world will gamble. When the stock market collapsed, it turned to cotton, wheat, and coffee, and is now taking up wheat a second time.

Spanish cotton manufacturers are among the latest to fall under the fascinating spell of "dumping." According to the Manchester *Guardian*, the loss of her colonies has greatly hampered Spain's cotton mills. They are now without an outlet for a part of their production, and an agent has been travelling over Europe to find out for them how to remedy the situation. As a result of his inquiries, the Barcelona spinners have been asked to form a syndicate and by common action export the surplus, which amounts to about 20 per cent. It is frankly proposed to sell this at a loss of 10 per cent., if need be; but it is asserted that this can "easily and without appreciably enhancing prices" be recovered in the sale of the remaining 80 per cent. Very likely the Spanish people will not protest. But if they were so disposed, they might say: "Perhaps prices of cotton goods at home will not be 'appreciably' enhanced, but how will it be if the cost of everything else is also increased by 'dumping'? If 'dumping' is good for one set of manufacturers, it is good for all, but in that case it would ruin us." According to Mr. Chamberlain, nations on whom foreign goods are "dumped" ought to be ashamed of themselves for buying them. But their shame is not likely to be so great as the anger of the countries whose manufacturers supply these odious goods. Bye and bye the cry may go up, "Dump and let dump!"

Mr. Balfour's refusal to call a colonial conference sets him more than ever at odds with Mr. Chamberlain, who only the other day affirmed that the colonies desired preferential trade, and practically dared the Premier to poll them on the subject. Mr. Chamberlain is for prompt action; Mr. Balfour for delay. How under these circumstances a clash can long be avoided it is hard to imagine. The two men are not only preferring different policies, but pursuing opposed ends. Mr. Balfour desires to save the Unionist organization as it is, and makes it a point of loyalty to postpone an inevitable defeat. Mr. Chamberlain would throw over the Unionists to-day as cheerfully as he did the Liberals twenty years ago. Again he is willing to build his political fortunes on secession. Delay he feels only strengthens the Liberals —a view emphasized by the return of North East Lanark to Liberalism—and so puts off the triumph of the new Protectionist party. So Mr. Chamberlain has been pleading with Mr. Balfour for a prompt reference of the fiscal issue to the constituencies and to the colonies; and the strength of Mr. Chamberlain's position is that he does not need to beg. He votes two hundred of Mr. Balfour's majority, and may turn the Premier out whenever he pleases. Mr. Balfour must appreciate as never before the proverb, "Needs must when the devil drives," and nobody can regard it as a happy lot to go half-way with Mr. Chamberlain.

The fact that Lord Cromer calls for $107,000,000 for irrigation and railroad schemes in Egypt and the Sudan does not mean that anything like that amount will be borrowed now, if ever. It is stated that about $40,000,000 will be needed for Egypt and $65,000,000 for the Sudan, but that the work of improvement will be carried on gradually. The White Nile is to be used for the wider irrigation of the one country, and the Blue Nile for the benefit of the other, and the Suakim-Berber Railroad has still to be completed. Nature has imposed a limit to the canal and railroad development of Egypt. It is conceivable that the irrigating capacity of the Nile may be reached at no distant date. And as for railroad expansion, the larger part of the work has already been accomplished in Egypt, though the Sudan may call for a good deal of new mileage from time to time. How are these improvements to be paid for? In his last annual report Lord Cromer discussed this question, and, as regards Egypt's part in the programme, was of the opinion that it ought to be possible to obtain all the capital that would be needed in the near future without borrowing. It will astonish Americans to learn that he proposed to do this by rigid economy in the handling of his receipts from year to year.

Since the wreck left by the Commune was repaired by Thiers and his associates, no man has done more for republicanism in France than the late Waldeck-Rousseau. He was a man to whom the country looked in emergencies. Wealthy both by inheritance and by his great skill as an advocate, it is probable that he honestly preferred his leisure as a cultivated man of the world to political triumphs. Like our own Mr. Whitney, he dispatched his political duties with supreme ability and ease, almost with indifference. A Gallic Cincinnatus, M. Waldeck-Rousseau turned reluctantly from his paint-brushes to the tiller of the State. All the world knows that he took hold of the French Republic in 1899 when it had fallen into the perilous staleness of early middle life. That is often a bad time for an individual or a nation. It was a bad time for France. Under the fanatical Dupuy and the complacent Félix Faure, the Dreyfus affair had stirred the dregs of the ugliest passions that afflict the French soul. All that was most violent or most frivolous in the republic had come to the top. The old Moderate Republicans were helpless in the confusion; the Déroulèdes wildly hoped that the day for a new *coup d'état* was approaching. At this point M. Waldeck-Rousseau consolidated into a Party of Republican Defence practically all the Radicals, many of the Moderate Republicans, and the Socialists.

The accession of the Socialists has been beneficent. It has changed a faction that might have been subversive into a party of gradual social reform. To M. Waldeck-Rousseau's sagacity in making M. Millerand a Minister and M. Jaurès an adviser, is due the absorption of the Socialists into the normal political life. Incidentally, this left the Nationalists in an insignificant minority. The appeal of the Dreyfus case, although inconclusive morally, was one of M. Waldeck-Rousseau's finest achievements. How far he would have gone with his Socialist allies we can only guess. He passed the famous act dissolving the religious associations, but, later, criticised M. Combes's harsh application of the law. He had promised old-age pensions —a promise still unfulfilled. It is probable that he would have kept a tighter rein on his Socialists than M. Combes has wished or dared, and would gradually have built up out of the coalition a progressive republican party. France can ill spare him. She has abundant political capacity, but no such high political intelligence in reserve, for the next emergency. That, however, may come later, and less ominously, because M. Waldeck-Rousseau undertook the reconstructive work of 1899.

From every point of view the capture of a Russian destroyer in the Chinese port of Chefoo was an outrageous act. It was due, apparently, to the officiousness of a Japanese lieutenant who assumed in enforcing the neutrality laws to act for the Emperor of China, and to the hotheadedness of the Russian commander who descended to fisticuffs and the mock heroics of preparing to blow up his ship. But because this most foolish and indecent exploit puts Japan in the wrong before all civilization, it should not be forgotten that only China in the first instance, and Russia through China, have the right of formal protest. We assume that Japan will give the fullest satisfaction; she is so far in the wrong that she cannot afford to do otherwise. It is a case for apologies, damages, and the cashiering of the Japanese officer who gave so discreditable an exhibition of hotheadedness.

JUDGE PARKER'S SPEECH.

Ever since Judge Parker's telegram declaring that the Presidency must come to him right or he would not have it, his greatest peril has been that of an anti-climax. Could he hold the ear of the country which he had so instantaneously gained? Or would his act of bold initiative be followed by timidities of speech? His highly dramatic first appearance on the national stage made it the harder, yet the more necessary, to fix the eye of the spectators when he stepped forth a second time. But all doubts of his ability fittingly to follow up his great stroke are solved by his speech of acceptance. It is the utterance of a man who does his own thinking, who has something to say, and who says it with the utmost frankness. The country will pronounce him a man worth listening to, and will gladly hear him further.

His speech is long, but not rambling, and a single conception runs through and vitalizes the whole. It is the old American conception of liberty under law. Not for nothing has this man been giving his mind to the study and exposition of jurisprudence. From it he has drawn that doctrine of American government which never was so much in need of being proclaimed and enforced as to-day, and which he expounds and illustrates so powerfully—the doctrine, namely, of a free people decreeing orderly liberty by law, and determining the authority while limiting the powers of those set to execute the law. Judge Parker applies it with vigor and pungency. He shows how it cuts both ways, striking alike at grasping oppression and mob violence, protecting the workingman against arbitrary deportation at the same time that it inhibits his interference with "the right to labor" which others enjoy. The growing impatience of the restraints of law has alarmed Americans who stop to think, and Judge Parker puts his finger surely upon that ailing spot. He names no names. He does not say who those executives are that have rashly done what seemed to them good, law or no law. His attitude is that of Chapman, who characterized an offender without naming him, and added: "I have stricken; single him as you can."

This same idea of law as at once bulwark and weapon, guarantee and remedy, Judge Parker carries into his discussion of Trusts and the tariff. He has no nostrum to offer. None of the conventional candidate's promises of a millennium after his election fall trippingly from his tongue. He calls simply for the enforcement of the laws we have before flying to others that we know not of. To him no way of orderly government is conceivable except due process of law. The absolutely honest way in which Judge Parker's mind works is shown by his words about the tariff. He will not promise what he knows his party cannot perform. Emphasizing the existence of gross tariff injustices, he frankly admits that the Senate will remain for a time an insuperable barrier to sweeping revision, and says that the best a Democratic House and Executive could do would be to dash at the doors of the Senate with bills repealing the more flagrant tariff schedules, in the hope that an aroused public opinion would compel even that fortress of monopoly to surrender. This may be an humble tariff programme, but it honestly faces the facts as they are.

The money question is treated most happily. Judge Parker reaffirms his own declaration for the irrevocable gold standard, but does it incidentally as a part of his acknowledgement of the honor done him in nominating him with his convictions upon that subject known. That is all, but that is enough. Why linger upon dead issues? The silver question is defunct. Let us turn to subjects in which the people take a live interest.

It is a noble passage of the speech which shows how un-American is the tawdry militarism which the Republican party has of late been flaunting. And in speaking up so emphatically as he does in behalf of Philippine independence, Judge Parker shows how precious to him are American traditions. It is the casting away of our ideals, the stretching of our Constitution to the breaking-point, the abhorrent thought of a free people having subject peoples, which are to Judge Parker the grievous things in our Philippine delusion. The ring of indignation in his voice as he speaks of that wandering away from the true path is unmistakably honest. We happen to know that he was warned by some timid Democrats against putting such plain-spoken words in his speech, but he merely said: "Make votes or lose votes, those are my honest views, and I shall state them."

Sincerity and elevation of mind appear unmistakably in Judge Parker's explicit declaration of intention to serve but one term, if elected. Much may be said for or against making a President ineligible for a second term, but nothing can be said against the reasons which Judge Parker gives for his own decision. He wishes to be above suspicion. To him, any attitude but the judicial is intolerable. That he should ever be approached as President with the argument that the course he thought right would lose delegates, is a prospect which he will not contemplate for a moment. Consequently, he takes his clear stand. If *he* is chosen President, we shall not witness an Executive feverishly working night and day to perfect the machine for a renomination. There will be many cheap jests about Judge Parker's putting aside what may never be his, but nothing of that kind can obscure the simple dignity of his announcement that, if his fellow-citizens elect him President, he will devote himself for four years entirely to their affairs.

Not that Judge Parker placed himself in a holier-than-thou position as regards his competitor. He was quick to say that he made no criticism of any President who had served two terms or sought to do so. Yet the very reasons that he gave for reaching this conclusion—which so astonished the professional politicians—have made thoughtful men run over in their minds the actions of President Roosevelt within the last year or year and a half. Why the *rapprochement* with Addicks? Why the readiness to sign the famous pension order merely to save Congress the trouble of legislating? Why the installation of Senator Quay's notorious son in the Naval Office in Philadelphia? And, since the nomination, why the reconciliation with "Lou" Payn and the appointment of Gov. Odell's white-haired civilian neighbor to a majority in the regular army over the heads of hundreds of officers of long and faithful service? Do these and many similar acts bespeak the President who is, in Judge Parker's words, "unembarrassed by any possible thought of the influence his decision may have upon anything whatever that may affect him personally"?

The speech at Esopus makes it plain to all that Judge Parker was the right candidate with whom to oppose President Roosevelt. The two men stand for antithetic ideals, and it is for the nation to make its choice between them. It is Constitutionalism versus Imperialism. It is law against impulse. It is the man of calm and poise and judicial habit against the impetuous meddler who leaps first and asks afterwards what the law is, who violates a treaty and thinks it defence enough if he says his own "sense of honor" was satisfied. If Americans have got tired of all the fret and sham of militarism and the meretricious glitter of Imperialism, they will turn with relief to Judge Parker. But, whether they do or not, he has shown himself a man worthy of their confidence and their suffrages, and has already wrought a great work for his country by pointing it to the things which make for peace and true grandeur.

THE WISCONSIN TANGLE.

Now that the Wisconsin difficulty has been brought into court, many loyal Republicans will breathe easier, regarding the dispute as in a fair way to be settled. Such confidence that, however complicated the knot may be, a lawsuit will untie it, comes naturally out of that pervading respect for the courts and belief in the supremacy of law which lies at the root of the American character. The prophecy which is most respectfully listened to regarding the Wisconsin situation is, that if the Su-

preme Court gives to Gov. La Follette's faction the label of regularity, he will win, while if the Stalwarts are successful in court, they will draw from La Follette not enough votes to win, but enough to divide the party vote somewhere near the middle and thus elect a Democratic Governor. In other words, the balance of power is held by those Republicans who are waiting for the voice of the Supreme Court and will vote as it decides. The plausibility of this view lies in the fact that the issue which caused the split was such a matter as the courts are especially qualified to decide with authority.

Two years ago the "Stalwart" faction saw just the same dangers as to-day in La Follette's hostility to the railroads, his ignoring of all precedents in his demand for primary legislation, and his generally radical programme. Dissatisfied factions of both State and national parties have bolted in the past on grounds of much the same sort without pretending that they constituted a majority of the party. Yet in Wisconsin, Spooner and Quarles and Babcock have given at least their nominal support to the Governor in his two campaigns. It was not until the question arose whether Gov. La Follette was entitled to 497 5-6 or 574 5-6 votes in the State Convention that his opponents walked out and formed an organization of their own. Now, if anybody can bring order out of the chaos of conflicting claims which it takes some 400 printed pages merely to state, it is a court of justice.

If the court does undertake to go through the voluminous records and the precedents—which it is by no means certain to do—and then decides that under the party rules and precedents the Spooner men were justified in bolting, or that La Follette's committee acted within its rights, fair-minded citizens everywhere will be disposed to believe that the court has found the truth as to which faction was right in the second week in May. But how will the voter regard this in the second week in November? To decide the merits of the complicated and technical issue which furnished the pretext for a bolt, is not the same as deciding the merits of the larger but simpler issues which made the Stalwarts desire to bolt.

Combined with his reverence for legal process, the American voter has an extremely practical and direct desire to accomplish results. "Grant that La Follette dealt high-handedly with his opponents," he may say. "Grant, if you please, that he deliberately stole the State convention. Nevertheless, I believe in the policies for which he stands, and the other side represents everything that I abhor." The question, "Which of these two men do I want for Governor?" will overshadow, in the minds of nine men out of ten, when principle is involved, the other question, "Which of these two men got his nomination in the regular way?"

Gov. La Follette's surprising tactics at the National Convention were, in fact, based on a truer understanding of the considerations which influence voters than those of his partisans who are now devoting all their arguments to the merits of the State split. What the everyday man likes above all things is an excuse for disregarding technicalities. "I decline to present my case," said La Follette to the credentials committee at Chicago. "You have prejudged it against me." Very well. The next day the committee did decide against him. "That's what you expect in politics," says the voter. "When one side controlled the committee, it 'won out.' When the other side controlled it, that side won out." So he sets the two decisions over against each other, and forthwith prepares to vote for the side in whose principles he believes.

As to the State tickets in Wisconsin, then, we feel sure that the practical effect of the forthcoming Supreme Court decision has been much overestimated. How will it influence the electoral ticket which alone gives this Western squabble its exceptional national interest? Here, again, there is no reason for expecting much from the courts. The contestants are vying with one another in protestations of loyalty to Roosevelt. If the Democrats carry the whole or a part of the State's electoral vote, it will be due partly to the difficulty of securing a full vote when every Republican must split his ticket, voting for eleven electors in one column and two in another, and partly to the resentment of La Follette men against the treatment they have received at the hands of the national party. Democrats in large numbers will unquestionably vote simultaneously for La Follette and for Parker electors. There will be, at the same time, a group of Stalwarts voting for Roosevelt electors and a Democratic Governor, which may counterbalance these. And while they are adjusting their various views on the Presidency and the Governorship, almost anything may happen with respect to the Legislature which chooses a Senator for the seat of Mr. Quarles. Apparently, a majority there will be almost impossible for any one of the three parties to secure.

That some voters will interpret a Supreme Court decision as a final pronouncement on the merits of the whole controversy cannot be doubted. There are some, indeed, in every State who never look farther than the word "Republican" on the ballot sheet. But voters in general can be trusted, after four years of continuous agitation, to know what they want and what is the simplest way to get it. If certificates of regularity could change the minds of men fighting for a principle, J. Edward Addicks, to look no farther from home, would have a united party behind him in Delaware.

FALLACIES ABOUT FOREIGN TRADE

"Next to love and religion, nothing has filled so many lunatic asylums as money and the exchanges"—particularly the foreign exchanges. Almost every popular utterance upon this subject is infected with error, and the complexities of the matter itself would deceive the very elect. The recent publication of the statistics of our exports and imports for the last fiscal year ending June 30, 1904, has been the fruitful occasion of a renewal of this crop of fallacies. The condition of the error-crop for the current season is, indeed, far above the average.

The truth of first magnitude in the firmament of international trade is that, on the whole, merchandise exports pay for merchandise imports. No considerable fraction of our imports do we purchase, nor can we purchase, with gold, inasmuch as our annual merchandise imports exceed in value our total stock of gold. Moreover, if we were foolhardy enough to make the attempt to pay for imports solely with gold, long before the process had continued for six months the enhanced purchasing power of gold in this country, due to its relative scarcity here, and the diminished purchasing power of gold abroad, owing to its relative abundance there, would turn the gold outflow in our direction, and set up a goods efflux to every nation on earth. Exports, therefore, pay for imports. What lessens the volume of one is bound to lessen the volume of the other. They are chained together by a causal nexus, and any denial of their inevitable correlation is merely the blind preference of darkness to light. It is unnecessary to say that a tariff, especially a tariff as unreasonably high as the Dingley abomination, results in making both exports and imports less than they would otherwise be. If in 1894-5 our exports were $807,000,000 and in 1903-4 they were $1,460,000,000, the growth was in spite of the obstruction to the free exchange of commodities. To the *Tribune* this is unthinkable. That journal would argue that a growing boy who in a decade has attained the stature of a man despite his over-indulgence in whiskey and cigarettes, must necessarily have grown because he smoked and guzzled. This is Error No. 1, and shows its victim to be in the bond of economic bitterness and in the gall of financial iniquity.

Another deduction, somewhat more involved and therefore more excusable than the first, has come from the analysis of our exports for the last fiscal year. More than 60 per cent., it appears, of our total exports are of agricultural products, and in particular we are found to export 65 per cent. of our cotton and 30 per cent. of our wheat. This is a

cause of sorrow to those economic wiseacres whose analysis extends about as far as their noses. They can see that the raw cotton which is here converted into textiles creates, first, a demand for the labor of the cotton-raiser, and, second, a demand for the labor of the operative in the cotton mill. They imagine that when we export a bale of raw cotton we thereby surrender all further employment for our laborers who might otherwise have made cotton cloth out of the bale in our New England or our Southern cotton mills. That this is the naïve doctrine propounded, the following extracts will demonstrate. The *Times* says:

"The nation would gain immensely in the economic sense by a policy which would tend to increase the home consumption of its agricultural products. It is better that wage-earners engaged in our industries should consume our wheat and corn, in order that, instead of exporting foodstuffs and raw cotton, we should send into foreign markets a vastly greater annual volume of manufactured products."

And the *Sun* sets its seal to the *Times* being true in the following passage:

"Of course, we should be the gainers if every pound of it [raw cotton] were exported in manufactured form. Every process through which the raw material passes in its conversion into fabrics would mean employment for American wage-earners. . . . It is better for the country to sell $200,000,000 worth of boots and shoes, hardware and tools, sewing-machines and typewriters, cotton cloth, and print goods, and a miscellany of manufactured wares, than to sell $300,000,000 worth of raw cotton, copper ingots, and mineral oil."

Even admitting, for the sake of argument, that the amount of employment afforded is the ultimate index of the profitableness of foreign trade, this argument will not hold water. We sell $300,000,000 of raw cotton, copper ingots, and mineral oil for what, let us ask? Not for money ultimately, esteemed contemporaries; for let us remind you for the second time that international trade in the last resort is barter, *barter*, BARTER. For our cotton and copper and oil we buy raw sugar and raw silk and unmanufactured tobacco, among many hundreds of other articles. Does the conversion of this raw material in our sugar refineries, our silk mills, and our tobacco factories occasion any employment for labor? That is the side of the matter which this short-sighted argument always fails to grasp. J. S. Mill puts the matter tersely when he says:

"The alternative is not between employing our own people and foreigners, but between employing one class and another of our own people. The imported commodity is always paid for, directly or indirectly, with the produce of our own industry; that industry being, at the same time, rendered more productive, since, with the same labor and outlay, we are enabled to possess ourselves of a greater quantity of the article."

THE FIGHTING AT SEA.

Russia had little to expect from the sortie from Port Arthur. Wittsoefft, like Cervera before him, preferred to go down fighting to being pounded to pieces in harbor. The most he could hope was to sell his fleet dearly, and possibly to get a handful of the swifter vessels through to Vladivostok. On every count such hopes have been disappointed. The flagship *Tsesarevitch* and the armored cruiser *Askold* are being dismantled in Chinese ports. Of the torpedo flotilla, numbering thirty-two originally, only eight, most of which are out of action, took the sea with the fleet. Several of the torpedo boats, which apparently followed at a distance and attempted to slip past in the confusion, lie wrecked on the Shantung coast. Five battleships and one armored cruiser have crept back to Port Arthur, where their dockyards are swept by the Japanese batteries, and must lie in the outer roadstead subject to attack from a victorious fleet. Add to this that Kamimura on Sunday sunk the *Rurik* and drove the great armored cruisers *Rossia* and *Gromboi* back to Vladivostok, and that in all this fighting no Japanese vessel of the larger classes appears to have been disabled, and the measure of the Russian disaster is complete. Command of the sea, which, had the Russian fleet been kept intact until reinforced from the Baltic, would have been seriously in question, now belongs unqualifiedly to Japan.

The battle of August 10 was the first engagement between fleets of modern armored vessels fighting on approximately equal terms. Wittsoefft's line of battle included six battleships, four of which had undergone serious repairs; three armored cruisers, one protected cruiser, and eight torpedo craft. The powerful armored cruiser *Bayan*, for reasons unknown, was left behind, and the torpedo fleet apparently had orders to avoid a fight and run individually to Vladivostok. Togo's fleet comprised five battleships, the entire complement; three armored cruisers, and the *Chin Yen*, a coast-defence vessel of heavy armament; three protected cruisers, and a great flotilla of destroyers and torpedo boats, which, as the battle was mostly fought at long range, were practically out of the reckoning. Togo's nominal inferiority of one battleship was more than made up by the damaged condition of at least half the Russian vessels, and more particularly by the superior armament of the Japanese cruisers, which mounted main batteries of 8-inch guns. Since the Russian warships commanded nothing between twelve and six inches, they were at a great disadvantage in long-range firing.

Togo, who may later need his fleet to meet the Baltic squadron, pursued his usual cautious tactics, and his victory was due to the accuracy of the Japanese gunnery and their greatly superior weight of metal at the long distance. An observer reports that the *Askold*, at Shanghai, had over two hundred shell holes; the *Tsesarevitch* lost a third of her crew; the *Retvizan* had her great guns silenced—these items give some idea of the punishment the Russians received. It seems probable that of their five battleships still afloat only the *Peresviet* and *Poltava* can be fit to go into action. And the shattering of the fleet has cost the Japanese only a few score casualties and not a single ship.

A great dread is removed from Japan, for there has always been the off chance that the control of the sea might pass to Russia. Had the Vladivostok and Port Arthur squadrons made the Japanese give ship for ship, a new fleet from Russia could have easily commanded the sea, and cut off the Japanese army from its military supplies. Such a disaster seemed hardly possible when one considered the often demonstrated incapacity of the Russians on the water, but the sensational raids of Skrydloff had taught the Japanese not to despise even a clumsy foe, and had shown that their naval superiority hung wholly on the success of Togo. Now the long waiting is over; nothing, apparently, can menace their control of the sea; the siege of Port Arthur is no longer urgent; a great victory about Liaoyang would put the Russians in a position in which they might have to sue for peace. In other words, the incalculable element of the war has been largely eliminated, and the Japanese are apparently beyond the point where they need fear any sudden or overwhelming catastrophe such as hitherto has impended.

Scientific deductions from the sea-fighting, experts will make in due time. Already it is apparent that the effectiveness of dirigible torpedoes has been grossly overestimated. Frequent hits have been made under the most favorable conditions, but no vessel struck was sunk, and five of the Russian ships which on Wednesday week underwent the far severer ordeal of gun fire had been torpedoed at Port Arthur. The battle of last week seems to show that, barring that treacherous weapon the mine, the gun is still the most destructive arm, and the battleship still the master of the seas. Persons who are not experts will read of the shambles aboard the *Tsesarevitch*, and, shuddering at the death that left only a red blot where a brave admiral had stood, will pray that some method may yet be found to turn to peaceful uses the valor and intellect which in such a battle are focused for purposes of slaughter.

A PUBLIC-SPIRITED MERCHANT.

The full extent of the late Samuel P. Avery's usefulness may never be known. Conspicuous as his position here in New York was, he gave modestly from the surplus of his collections to many coun-

try institutions, ever fostering the love of art in its feebler beginnings. When one recalls that his considerable wealth was made in the sale of pictures, it is remarkable how true his professional conscience remained to his personal taste. The humbug that so often surrounds picture-dealing he was incapable of practising; he would no more have thought of following the more permissible methods of puffery than of practising the baser exploitations of the artist and the public.

To the art dealer who is also a true amateur of the beautiful there must be a constant tragedy in the thought of the beautiful things that have passed—if profitably—out of his hands. Unlike his colleagues, Mr. Avery was permitted to build something like a permanent monument to his taste through his fortunate association with the late W. H. Vanderbilt. With an uncommon humility Mr. Vanderbilt interposed between himself and the importunities of the commercial world of art the trained skill of Mr. Avery. What is still called *par excellence* the Vanderbilt collection represents, in the main, what Mr. Avery would have done a generation ago had he been collecting for himself. The greater part of these pictures are now loaned to the Metropolitan Museum, and every one may judge how carefully Mr. Avery executed that trust. There hangs "Les Gorges d'Aprémont" of Rousseau—one of the most impressive landscapes ever painted; the "Sower" of Millet, Diaz in all his modes, besides admirable examples of Couture, Meissonier, Alfred Stevens, and the military painters. Taste has changed in a generation; the brilliant and somewhat metallic qualities of Fortuny, Villegas, and Zamacois are now depreciated, yet no one can say as he runs over the list that the examples are not the best of their kind, nor deny that the collection has a permanent artistic value. "I never have seen so many good bad pictures in my life," said a connoisseur who dislikes the art of the Institute. That was a handsome compliment to a discernment that always contrived to find the grain of art in the desert of its academic counterfeits.

We have dwelt somewhat at length on this professional phase of Mr. Avery's activity because it shows how little compromise the connoisseur ever made with the picture dealer, and because it illustrates the fact that the element of personality was as strongly felt in the business man as it was later in the gentleman of refined leisure. The Avery Architectural Library at Columbia University, which was founded in memory of Mr. Avery's architect son, and chosen and catalogued in the most careful manner by the donor himself, was naturally the benefaction nearest to his heart. He made its enlargement a personal care, and found a librarian most inventive in devising helps and conveniences for the student. Every year this gift becomes more valuable. Hardly less a service to the cause of art was that of starting a print department of the New York Public Library. To this cause Mr. Avery gave the large collection of nineteenth-century etchings which he had been accumulating for forty years, and to the day of his death he made it a pleasure to add rare specimens or to fill gaps in the portfolios. By this one donation the new department gained importance in the world of art—a reputation that subsequent gifts, prompted, no doubt, by Mr. Avery's initiative, have further enhanced.

In both of these cases Mr. Avery gave far more than the money represented by the foundation; the experience he had won as an art dealer was the essential feature of the benefaction. This is perhaps the pleasantest feature of his remarkable career—that it would be quite impossible to say just where should be drawn the dividing line between his personal interests and public services. He never presented the somewhat pathetic spectacle of the man of great riches who brings money only, but no personal idea as to its proper spending. In all his association, as trustee, with the Metropolitan Museum he loved to think out and arrange personally the little collections which he gave or lent. In fact, he was, for a philanthropist, individual almost to excess; more set upon carrying out the many plans that came to him than eager to associate himself actively with the hundred and one organizations that make for art. Even so, this aloofness was not invariably successful (the Grolier Club managed to make him their president); but it cost him something of public appreciation, while, on the other hand, it spared him much talk and nonsense that would have been distasteful to him.

His long and honorable career seems to us peculiarly exemplary because of the dignity with which he filled public positions, and more especially because of the ease with which he turned from his business to public service. There is often a feeling that philanthropy of whatever sort is a formidable occupation. This is so only because benevolent people often rush ill-advisedly into causes which their regular pursuits least fit them to understand. Mr. Avery's discriminating use of his own special abilities may well remind us all that we are responsible only for our own talents, but for those strictly; and that a willing heart is all the better for being backed up by a wise head.

"OBLIGATORY AUTHORS."

That certain books, which, however, need not necessarily be read, should be in every gentleman's library, is generally admitted. The agreeable essayist and poet, Mr. Stephen Gwynn, in a little handbook, 'The Masters of English Literature,' takes the austerer view that "in English literature there are certain authors who may be classed as obligatory—concerning whom total ignorance is a defect at least to be concealed." His book will point out these obligatory authors to the ambitious, or supply the indispensable minimum of information to the indolent. To be well read, then, a person must know something about every author treated by Mr. Gwynn; to be totally ignorant of any of them, is to display a horrid gap in one's literary culture.

The questions, When is a person well read? and, What ignorances are compatible with culture? are worth pursuing for their own sakes. For if there is really a determined body of reading to which we may all measure up, by which we may regulate an order to the bookseller, it greatly behooves us to learn the list and fall to and read. If, on the contrary, there are great numbers of important authors whom one need not read at all, why, then, we shall be the easier in our minds, and reading will become no longer a stern matter of literary salvation, but rather of irresponsible pleasure. But no man may follow Mr. Gwynn without taking things seriously. Peruse the tablets of your memory; do you find thereon engraved Edward Young, of the "Night Thoughts," James Thomson—not of the "Dreadful Night," but of "The Seasons"; Blake, Cowper, Crabbe? If not, go down in poetry. In prose the case is hardly better: Smollett you must have read, and Charlotte Brontë, Cardinal Newman is obligatory, and eke Macaulay; Gibbon and Burke may not safely be neglected. In modern poetry the burden is lighter to be borne: of the Victorians, only Tennyson is indispensable. *A bas* supererogatory Browning Clubs.

Now, all this formalism may be very good for the people Mr. Gwynn addresses. We are willing that the literary riot act should be read to all lovers of *Tidbits* and readers of storiettes, though we doubt if it will draw them to any more consecutive joys; but what, in the name of Jemmy Thomson, has this summation to do with us who are free of the republic of letters? Who shall tell us that on our immortal souls we must read 'Perigrine Pickle' before the year is out? For him who knows how to read there are no obligatory authors. Of Egyptian darkness concerning that indispensable poem, "Night Thoughts," he is no more ashamed than he is of not owning, say, a motor boat; while if you tell him that any particular combination of poets and prosers is necessary to his reputation as a reader *teres atque rotundus*, he will disrespectfully liken you to equally grave counsellors who disadvise combinations of yachting caps and long coats. And his

ridicule will be warranted, for the measure of culture through reading is not the obligatory, but the unnecessary, authors one reads. Show us a man who keeps to the Hundred Best Books, and we will show you a well-informed fool, perhaps, but a fool. Show us, on the other hand, the lad who devours Malory or Sidney's Sonnets; find us a drummer who travels with Sir Thomas Browne or passes his evenings with the subtleties of Dr. Donne, and we would show you one whose culture in books need fear no reproach, though he had not read a novel of George Eliot or a line of Tennyson.

But to give the literary propagandists their due, they must needs have a programme wherewith to impress the indifferent. Mr. Gwynn, a charming humorist at times, perhaps chuckles well when he writes down Crabbe and Smollett as obligatory. It takes such beating of the drum to get some people to do so much as to read Shakspere. Crabbe, among severely prescribed authors, is perhaps the fraction of a convict's term that may be remitted for good behavior. And there is, after all, this amount of truth in the theory of obligatory books, that the truly well-read man must have adventured in many fields of sentiment. We conceive of sufficient culture in the Bible and Shakspere alone, for each is rather a world than a book. But such concentration would generally mean that neither had been perceived as literature. In a way, then, one may be suspicious of the man who reads no novels or no poetry, is aghast at biography or essays; for the defect in his reading indicates infallibly a blunted side of his mind. Or, again, no person needs to have read Fielding, Thackeray, and George Meredith; yet at least one of these authors may be called obligatory for every reader. Without them he will hardly realize in literature the full graciousness of the worldly point of view, and his personal training to that extent will be halting. But the principle holds firm, that it is less important what we read than how we read it. Sunshine was extracted from such a cucumber as Hobbes by the late Leslie Stephen, yet that is no reason why any one who has read the 'Leviathan' should be puffed up; nor one who has never heard of that admirable monster unduly dejected should a literary gospeller suddenly include it among obligatory books.

POBLET.—I.

MONTPELLIER, June 29, 1904.

The present anti-clerical spirit in France, proceeding against the religious orders with unwearied constitutional activity, offers a striking contrast to the disposition on the other side of the Pyrenees that produced some seventy years ago the devastation brought under my notice five days since by the chances of travel. Amid the passionate struggles for freedom of thought and action that naturally followed the Peninsular War, little heed was paid to the preservation of monuments and records symbolizing or enshrining ecclesiastical rule. One hears often enough in Spain or Portugal how French troopers at Saragossa used priceless manuscripts snatched from monasteries for swabbing horses, and fed camp-fires with the wood-carvings of Thomar; but it must in distributive justice be said that on the Iberians themselves rests a good share of the responsibility for the actual *vacuæ sedes et inania arcana.*

At the foot of the slopes commanding a pretty valley of the Sierra de Prades, within easy walking distance of the railway station of Espluga on the Tarragona-Lerida line, stands the shell of what still remained, less than three generations ago, the most superb example of clerical pride and power in the whole peninsula—a monastery hallowed by constantly renewed papal sanction and benediction, the Pantheon of kings, the treasure-house of Aragon and Catalonia. Its history, preserved in archives now mostly destroyed, stretches back through a succession of splendid generations to the very beginnings of mediæval monasticism in eastern Spain, and, according to tradition, was associated with grants from a Moorish king to a hermit whose inflexible piety had moved the feelings of the Mohammedan chief. Poblet, the anchorite in question, was so favored by Heaven that ministering angels broke his prison fetters, upon which the *wali* (according to one reading) gave him leave to found his simple hermitage, or (according to another) pledged the honor of the Moor not to lift Christian cattle pasturing in the infidel domain. A further legend dwelt, with about equal plausibility, on the sudden appearance of three distinct sets of celestial rays —one, two, and three—of which the last, by reason of its greater intensity, was selected as indicating the site of the monastery yet to be; and it was added that, the early builders running short of supplies at a distance from food-centres, obtained, without special prayer, a miraculous provision from above. Are not all these things, and more, to be found in the 'Historia de Poblet' by Finestras? "El misuro fenomeno observaron los naturales del pais."

Imagination, however, is in our day constrained to exercise itself in other regions than that of history. An uncompromising little pamphlet entitled 'El Monasterio de Poblet,' by D. Adolfo Alegret (Barcelona, 1904), makes short work of it all for want of *testimonio preciso:* there was no *wali*, there was even no Poblet, for the latter term is merely an early Catalan equivalent of *poblacion, pueblo,* or simply "village." There also exists another less naïve tradition in which the choice of site received its direction not through the illumination of a heavenly beam, but in complete harmony with the spirit of practical shrewdness often displayed by cenobites in establishing their *lares.* It is said by the cynical peasants of the neighborhood that the small group of monks proceeded to hang cuts of butcher-meat at various favorable points on the hillside, and erected their first modest dwelling on the spot where decay was latest in appearing; from that time on, many monks of Poblet lived to a great age.

Thus, before the searchlight of contemporary investigation, all the pretty historical illusions flee into the chaos of unverifiable fiction. What seems perfectly established is the fact that in 1149 Ramon Berenguer IV., Count of Barcelona, having become master of the territory about Lerida, gave authorization to a small company of Cistercians to found a house of their order with as much land as might be deemed requisite for the support of their community, which consisted at first of not more than a dozen monks—an example followed without a break by numerous successors, in such wise that the establishment in its growth represented the fullest approval that various powers could bestow. In due course followed honors and privileges. The Church was in time declared a Basilica. Its mitred abbot, besides holding the important office of *Limosnero mayor* to the kings of Aragon (and subsequently to those of Spain), possessed ecclesiastical and civil sway over numerous priories, with absolute feudal right over no less than seven baronies, in a region which to-day offers to the rapid traveller the aspect of a vast garden and orchard. The Aragonese kings sought burial inside its walls, after bestowing and taking honor in royal visits. The blessings of Heaven were shown in repeated miracles. Gifts of money, spent in adornment, streamed in, till the whole became more like a palace than a dwelling for the originally simple sons of God. Its reliquary, one of the richest in Christendom, contained as many as 290 examples which practically-minded irony might catalogue as of the first class; besides hosts of others of lesser importance. An interesting list is furnished in Ramon Salas's 'Monasterio de Poblet' (Tarragona, 1883), the reading of which gives one the impression of an almost inexhaustible ossuary. To vouch for the genuineness of all these is not my purpose; no one has yet invented the hall-mark of the sacred relique, and all these must be taken, as the French patents sometimes run, S. G. D. G. (*sans garantie du Gouvernement*). But to myself, I confess, it argues a certain grossness in religious ideals to accumulate in this way collections including the milk and the hair of the Blessed Virgin, a shred of the swaddling clothes used at the Nativity, pebbles and grass from the Jordan at the holy place of baptism, the circumcision-stone, a handful of earth from the field bought by Judas, and the like. According to the account given in this little work, the fragments of stone supplied to this collection from spots mentioned in the New Testament (including one thrown at Saint Stephen) would in themselves make a small mineralogical museum.

All these, together with riches not emblematic of spirituality, are gone. Such, for instance, were the books—4,300 volumes—presented by Don Pedro de Aragon, who had brought them from his conquests, including no less than 385 codices, from the most famous illustrators of Christendom, many of which were looted by the French during the Napoleonic wars, and fortunately escaped the general ruin. The most precious of all these was perhaps the famous illustrated Bible of the eleventh century. It stands to reason that all the Church furniture, decoration, utensils, etc., were quite beyond enumeration or valuation; as for the buildings, what stands to-day is an ample index of the princely pomp indulged in by the members of what was in

its time as aristocratic a group as the Knights of the Temple, for gradually the monks of Poblet became exclusive, and generally preferred to admit into their ranks chiefly young men of birth and connections, while of course the humbler brethren might come of commoner clay. In the Hospederia, open to all accredited travellers, distinctions were made and lodgings apportioned in accordance with the social standing of the visitor, with a special set of magnificent apartments (still fairly well preserved) for royal personages in the palace of El Rey Martin. One cannot but regret that Beckford, who left such a gorgeous account of his reception at Alcobaça, did not find his way to Poblet, though he calls the former "the most famous temple of gluttony in Europe." I am certain, from my own knowledge of both places, that the whole apparatus and *mise en scène* of feeding at Poblet were, as we shall presently see, much more elaborate than at the Portuguese establishment.

The record of visitors now and again furnishes interesting episodes. Thus, in 1213, we find the tradition of the "Mysterious Monk," who originally came as a knight in battered armor shortly after the battle of Muret, the disastrous nature of which is familiar to the student of history. Remaining in the monastery after conference with the abbot, this stranger continued for years to go about in absolute silence and isolation without ever passing the enclosure wall, and at his death, in order to preserve his secret, all his effects found in his cell were privately transmitted to a great ecclesiastical dignitary, who was probably aware of the man's identity. No doubt similar stories may be told of many another refuge, but this one is authenticated by record. Again, in 1552, it is related that a novice sought an interview with the abbot of that day, confessing with much emotion that *she* was a woman. In this case the intruder was quietly dismissed. There is no explanation of her motive in entering, remaining, or confessing; it is a pretty theme for a fantastic short story. To us English-speaking people, however, much the most interesting presence among such outsiders is that of Philip, Duke of Wharton, who died here, alone save for the kindly ministrations of the brethren, in 1731, at the age of thirty-two, after a career erratic and brilliant enough to call forth a celebrated satire from Pope (Mor. Ess., Ep. I., 3):

"Thus with each gift of nature and of art,
And wanting nothing but an honest heart;
Grown all to all, from no one vice exempt,
And most contemptible, to shun contempt;
His passion, still to covet general praise,
His life, to forfeit it a thousand ways.

. . . . . .

A constant bounty which no friend has made,
An angel tongue which no man can persuade.

. . . . . .

He dies, sad outcast of each church and state."

To be the subject of such an epitaph is perhaps, after all, not to have lived in vain. The local guidebooks are of course silent concerning the young English nobleman, because of the far greater importance of such visitors as the Catholic monarchs Ferdinand and Isabella, whose reception here is detailed with natural complacency in many a chapter well known to Spanish readers. Descriptions of the present general aspect, as well as of the details, of the whole magnificent structure, are to be found in such accessible works as those of Hare and Gallenga. My own impressions, not so leisurely, can pretend to nothing more than recentness, with perhaps the addition of one or two facts of interest disclosed through late investigation.

Correspondence.

JUDGE PARKER'S TELEGRAM.

To the Editor of The Nation:

Sir: I have taken the *Nation* and been a careful and consistent reader thereof for more than thirty-three years, but now find myself utterly at a loss to comprehend how it is possible for a staid paper like the *Nation* to go into rhapsodies over Judge Parker's "Gold Telegram." How is it possible for a sane man to see anything heroic in it? Now that your blood has had time to cool, please explain. Judge Parker voted twice for Mr. Bryan. It is admitted by every thinking man that if all Democrats had done likewise, we should to-day be on a silver basis in company with Mexico and China. After Judge Parker's vote had failed to do the mischief that votes like his were calculated to do, after the gold standard had been "irrevocably" fixed, and after it had become so plain that an ordinary wayfaring man could see that the only possible way of winning the election was to stand flatfootedly on a gold platform, and after it had become too late for the Democratic Convention to make another nomination, Judge Parker sent his now famous telegram. It was good politics to do as he did. It was far-sighted, and it was shrewd, but it was distant *toto cœlo* from the heroic, and of itself it doesn't, to a sane man, furnish the slightest evidence of fixed and lofty principles.

Yours very respectfully,

R. M. Wright.

Fort Dodge, Iowa, August 13, 1904.

[Thousands of citizens voted for Bryan who had no sympathy with his views on silver, as thousands voted for McKinley who abhorred his views and practices in the matter of protection. Our correspondent must know that votes are usually cast for President from mixed motives, with mental reservations as regards both the man and his platform, and from general conclusions as to what is best for the country. We have no apologies to make for Judge Parker's voting for Bryan even as an escape from voting for McKinley, but before condemning him we should need to learn on what grounds he did so. If because he was a silverite, his judgment is open to anybody's censure who has steadfastly adhered to the opposite doctrine. This rules out the entire Republican *party*, historically.

But the question, being historic, is therefore academic. The Republican party has seen the error of its ways; Judge Parker *ex hypothesi* has seen the error of his, and would rather forfeit the Presidency than seem to appear to have relapsed. His previous opinion and votes have no bearing on the question of the manliness of his telegram to the St. Louis Convention. The fact is, that Bryan had all but flung his dead body in the way of the Democratic party's cutting loose forever from silver, and had succeeded in removing the currency from the platform. His quondam New York supporter at the polls firmly put it back without equivocation or disguise, and presented the alternative of adopting the amendment in his own person or of dropping him as a candidate. The Convention might still have persisted, but preferred to be arrested in its course, like

"the obedient sphere
By bravery's simple gravitation drawn."

If our correspondent has, during his long reading of the *Nation*, been thrilled by many such examples on the part of Presidential candidates, we can understand his present phlegm. For our part, we adhere to our conviction that, like his namesake at Lexington, Judge Parker "fired the shot heard round the world."—Ed. Nation.]

PROFESSOR MUENSTERBERG'S NEW BOOK IN GERMANY.

To the Editor of The Nation:

Sir: When, about the middle of May of the present year, the first volume of Professor Münsterberg's new book, 'Die Amerikaner,' appeared, it seemed certain that it would attract immediate and intense attention, because here was a work much needed, written by a man who must be highly competent from his long and intimate acquaintance with Americans in the best walks of life. There was a real need of a book of this kind, for the ignorance in Germany concerning things American is great indeed. Besides, it was Professor Münsterberg's avowed purpose to befriend together two nations which really know so little about each other, yet whose nearer acquaintance would without doubt be fruitful of highly desirable results, not the least of which would be mutual esteem. A few weeks after the first volume, followed the second. Both volumes are full to overflowing with information of the most varied kind, the first volume dealing with administrative, commercial and political matters in a fashion of which Bryce's famous work seems to have been the prototype. The second volume is devoted chiefly to scientific and literary matters, to schools, colleges, universities, and American women.

Despite all this, the papers and reviews were and are silent, save here and there a short and altogether inadequate notice. Finally, a few days ago, seeing the book nowhere in the shop windows, I inquired of a prominent book-dealer why it was that Münsterberg's book was nowhere to be seen in the windows. "Oh," said he, "the reviewers all agree that the book is written in a spirit of optimism which knows no bounds. According to Münsterberg, the Americans are beings far above and beyond people as we know them upon this earth. Their self-determination is miraculous, their adaptability beyond comparison, their resourcefulness a never-failing fountain. Their women are all angels, and their men archangels. Almost free are they from those disturbing passions which everywhere else play such havoc in society. Your true American is devoid of passion.

Even money-making is only a kind of sport, and, after accumulating his pile, your true Yankee thinks nothing of spending it lavishly for some pet notion, maybe to found a popular library, or a professorship at some university, or a boxing academy."

Such was the bookseller's glowing account, and upon inquiry I heard similar opinions, though less extreme. Then what is the truth about this matter? Doubtless there are some grains of truth in what the book-dealer said. Professor Münsterberg's more intimate friends and acquaintances belong to the most estimable people that can be found anywhere, and it is possible that for this reason he formed judgments too favorable to apply to the generality of Americans. He falls into the opposite error from that which I have frequently observed in America concerning current opinion about Germans. In both cases judgment is formed upon insufficient evidence—that is, from material much above or considerably below the average.

In the highly meritorious work of making one civilized people acquainted with another, in order that the two may become nearer friends, it will be wise to avoid all exaggeration and not to pass too lightly over the darker portions of the picture. In America we have the great and growing danger of plutocracy invading the best society, lowering the tone in the universities, and setting misleading examples to the rising generation; we have the dying-off of the nation at the top by reason of the insufficiently fruitful marriages. These and other grave matters should not be lightly passed over. Yet, after these allowances are made, Professor Münsterberg's book is a rich fountain of information of the most varied kind, and, it is to be hoped, will in time be acknowledged as such. Meanwhile, many worthy people will begin to ponder over the new revelations. The earnest inquirer will find in Professor Münsterberg an excellent guide in what was hitherto well-nigh a *terra incognita;* he will see that, in the great and rising nation west of the Atlantic, there are many things worthy of admiration and imitation.

Would that some American with equipment similar to that of Professor Münsterberg would write a book about Germany and the Germans! What a mass of popular errors would be corrected and prejudices removed; what light would be cast upon things unknown and unappreciated! But let the author not omit to censure where censure is due; let him duly castigate the abominable drink habit among our students and those who acquired the accursed habit at the universities; let him expose the littleness and the emptiness, the sham and show, in the German bureaucracy. Then let him go below the surface and let him there discover much that is left of those sterling qualities which make for the higher aims and purposes of life, and which have given to the world results of quiet work, of fearless investigation, and works of art for which the German's fatherland is justly renowned.—Respectfully,

WERNER A. STILLE.

LEIPZIG, July 29, 1904.

[Our own too long delayed review of 'Die Amerikaner' will be published next week.—ED. NATION.]

Notes.

A ten-volume anthology, "Irish Literature," Justin McCarthy editor-in-chief, to be published by John D. Morris & Co., Philadelphia, aims, in Mr. McCarthy's words, "to give to the reading world a *comprehensive*, if only rapid, glance at the whole development of literary art in prose and poetry from the opening of Ireland's history." The managing editor is Mr. Charles Welsh, who supplies two of the special articles ("A Brief Glance at Irish History," "The Fairy and Folk Tales of Ireland"), while Mr. W. B. Yeats treats of "Modern Irish Poetry," Douglas Hyde of "Early Irish Literature," Morris Francis Egan of "Irish Novels," D. J. O'Donoghue of "Irish Wit and Humor," Stephen Gwynn of "The Irish Literary Theatre," etc. Brief biographical and critical sketches of each author whose works are exemplified will accompany the extracts. Portraits and photographic scenery will constitute the illustrations, in addition to facsimiles of illuminated MSS., old prints and the like. The tenth volume is given up to the Celtic language, and is largely bilingual, the translation facing the text. The total showing will be to many readers a veritable Expansion of Ireland, so many great names are involved for which England commonly gets all the glory.

The narrowness of range and pietistic content of Richard Crashaw's English verse make its interest now chiefly historical. He could thrash the metaphor out of "tears," for example, in a way to leave nothing to his successors, and his hymns and elegies have little in common with the spirit of our age. But he remains in the higher rank of English poets for his diction; and his influence upon his greater contemporaries, like Milton, is well known. Nor has his capacity to contribute to "familiar quotations" been exhausted. Many good lines never repeated nowadays are ready to the hand of the user. Such are these ("out of Barclay"), descriptive of "a religious house and conditions of life":

> "Hands full of hearty labors; do much that more they may,
> And work for work, not wages";

a state of mind over which our irreligious labor unions long ago read the funeral service, as we daily experience. The whole of Crashaw's poems have been collected for the first time in a single volume by A. R. Waller for the "Cambridge English Classics Series" ('Steps to the Temple: Delights of the Muses, and Other Poems,' Macmillan). This means that the Latin and Greek poems, which bulk a good third of the total, have been taken in. Great attention has been paid to textual accuracy, even to following a punctuation which often impedes the understanding. Some manuscript remains have been availed of.

Mr. H. Barton Baker has now brought his 'History of the London Stage,' of which we reviewed the first edition in January, 1890, down to date (E. P. Dutton & Co.). It contains a vast amount of accurate information in convenient chronological form, and will continue to be a valuable and trusty book of reference to students of theatrical history. Beginning with the Elizabethan houses, it traces the development of the London theatrical system, with notes of the principal plays and players, down to the end of the nineteenth century. Facts, of course, are necessarily compressed within the narrowest limits, but are lightened by occasional interludes of description and criticism. It is, however, a book for use rather than for recreation.

A neat little volume which lies before us bears the title 'Authors' Year-Book and Guide to 600 Places to Sell MSS.' (New York, 24 East 21st Street: W. E. Price). Its method is as unlike as possible that of the crabbed annuals with which a journalist is most conversant. Its temper is humane, not statistical; even the obvious calculation of the time it would take a manuscript to pass from the *Advertising World*, Columbus, O., at the head of the directory, to the *Youth's Temperance Banner*, at the foot, is omitted. In lieu of such uninspiring figures, a score of gentlemen and ladies who have successfully sold their MSS. give friendly counsel to those who have not. This advice by no means sticks at insisting on the enclosure of a stamp or on writing on one side only of unrolled paper; it takes higher flights, and guards the aspirant against all the pitfalls on the Heliconian steep. It is salutary to any beginner to be reminded, by a publisher who preserves his anonymity, that many authors "have an inflated and unimaginable conceit," and "hence, whatever royalties publishers may agree to pay, authors may consider that they are having a fair return for their labor." How different this from the view of the publisher as freebooter which the late Sir Walter Besant inculcated in the craft of letters! We like also the dictum of the equally anonymous sage who admits that "short-story writing in itself is a losing game." Few can create more than a dozen a year, fewer yet keep up that output for five years running. Accordingly, the prudent author will hold all his short stories as so many skeletons of novels. For "a well-written short story—one that will last—is really the synopsis of a novel. And a writer capable of producing it may, with more time and effort, expand it to seventy thousand words, and stand some chance of getting returns." To judge by the current novels, this advice merely represents the general practice.

Mr. Barr Ferree's 'Pennsylvania, A Primer' (New York: Leonard Scott Publication Co.) makes no literary pretensions, and aims at nothing more than being a handy book of reference. It is abundantly illustrated in a heterogeneous way. It gives the text of no one of Pennsylvania's Constitutions, but summarizes all. It nowhere alludes to party organization, or to the political powers superior to the Constitution. Lists of governors we have, but not of governor-makers. Quay is sought in vain in its index. This is a sad commentary on the ephemeral reputation of a boss. He is not even interred in a Primer dryer than his bones.

'A Notable Libel Case,' by Josiah H. Benton, jr. (Boston: Charles E. Goodspeed), is the title of a rather dry monograph on the criminal prosecution of Theodore Lyman, jr., by Daniel Webster in 1828. The indictment alleged that Lyman had charged Webster with having conspired with other leading Federalists in 1807-1808 to break up the Union and reannex New England to England. The case was tried in the Massachusetts Supreme Court by Chief Justice

Parker, and the trial excited not only local but national interest. The jury disagreed and were discharged, and the case finally nol-pros'd by the solicitor general. The curious fact about it is that hitherto the name of the person prosecuted and the facts of the trial "have been so far suppressed in general history that but few of even the best-informed persons are now acquainted with them." Mr. Benton states that Webster's biographers, with the exception of Curtis, do not mention the matter, while Curtis even suppresses Mr. Lyman's name in printing a letter from Clay to Webster directly referring to "the prosecution against ——." This suppression, "perhaps intended to avoid injury to the feelings" of the defendant's family and friends, "recently provoked inquiry from a prominent gentleman in a Southern State" as to his identity, and led the author of the present brochure to investigate the trial. The affair grew, indirectly, of course, out of the combination in New England against the Embargo acts; the contemporary disclosure by Adams of alleged treasonable designs in Massachusetts being revived some twenty years later by Mr. Lyman in the form of a direct accusation of certain Federalists, including Webster. The story is illustrated with portraits.

The controversy over the English fiscal policy has now attained such dimensions as to require not single volumes but series for its discussion. Under the editorship of William Harbutt Dawson, Messrs. P. S. King & Son of London are issuing a number of treatises on "Protection in Various Countries." The editor discusses protection in Germany, reviewing the fiscal policy or policies of that country during the nineteenth century. Mr. C. H. Chomley treats of the courses followed in Canada and Australia, and Mr. A. Maurice Low considers protection in the United States. All the books have merit, and may be commended to those who wish to be thoroughly informed concerning problems that we must face before long; but, of course, Mr. Low's book is of peculiar interest to American students. We may notice also Lord Brassey's 'Fifty Years of Progress and the New Fiscal Policy,' published by Longmans, a book crammed with facts, argumentatively set forth.

The letter L cleverly fills the whole of volume ix. of the mighty 'Catalogue of the Surgeon-General's Library' (Second Series, Washington). Nearly one-sixth of its 872 pages is devoted to Labor. Of special organs the Liver leads with 86 pages; the Lungs (46 pages) falling behind even the Larynx (76). Leprosy claims 31 pages, Lithotomy and Lithotrity 21, Lupus 16. The acquisition of early medical treatises is steadily maintained. Here is Paulus Lentulus's marvellous tale (1604) of a fasting maid, Appollonia Schreier, of the canton of Bern, with the testimony to her "prodigiosis inediis" of "doctissimorum nec non fide dignissimorum virorum"; and here, too, Licetus's 'De his qui diu vivunt sine alimento libri quatuor' (1612), with its chapter "de siderum, dæmonum, et consuetudinis viribus in inedia." Pope Leo XIII.'s malady and Louis Philippe's mortality also furnish entries. Cremation creeps in by way of the polysyllabic "Leichenverbrennungs-Verein," pure German, if a bit clumsy. Leftleggedness accompanies (on the page) Lefthandedness. Many interesting titles are grouped under Letters, especially a French series. As usual, numerous books and articles not to be expected in medical company are recorded—as, on Library construction, management, hygiene, etc.; Language (Vigor and Expressiveness of Older English, Reasons for the Establishment of a Sanskrit Chair at Edinburgh); Leland's Gypsy Sorcery; Leopardi's Prose Works. A Leipzig periodical for criminal anthropology contains Spitzka's statistics on North American Lynching.

Any American can read with interest and profit the little 'Guide Français aux États-Unis' prepared with special reference to visitors to the St. Louis Exposition, but good for all visitors and sojourners (Paris: Paul Dupont). It does not seek to replace Baedeker, but to supplement it with details of living, dress, and conduct which will help naturalize the foreigner—from a religious renewal of the crease in one's pantaloons (with the cost of pressing), to the size of the waiter's tip, and to the need of ascertaining the points of the compass in almost every American city. "Is this uniform laying out a survival of the time, not very remote, when Americans had to hew their roads through the dense virgin forest, gun in one hand and axe in the other, surrounded by treacherous Indians?" The author has lived in this country, and knows it so well that very little criticism can be passed upon his information. Moreover, he writes piquantly and without malice. His last word is significant, namely, a select list of recent works on the United States: (1) general—Bryce's 'American Commonwealth,' justly praised; (2) special, recently translated into French, and "indispensable to read in order fully to enter into the atmosphere of the country"—Booker Washington's 'Up from Slavery' ('Autobiographie d'un Nègre'), and Theodore Roosevelt's 'La Vie Intense' and 'L'Idéal Américain.' These four and no more. So, the other day, we heard two barefooted Italian boys singing "The Star-Spangled Banner," "Old Folks at Home," and "John Brown's Body," and knew that their naturalization was complete.

The Louisiana Purchase furnishes a chapter (viii.) in Baron Pierre de Coubertin's annual 'Chronique de France,' for 1903. Chapter ix. deals with the centenary of the establishment of the French Academy in the Villa Medici at Rome, and with the conclusion of the excavations at Delphi. Chapter x. is a literary *causerie* over the publications of the year. The fourth chapter laments the rows over the setting up of the Renan statue and the Simon statue, with the injection of politics into the former event by roping in the Premier, M. Combes. In chapter three, "A Minister's Cares," six pages are devoted to Difficulties with the Vatican, which will demand in next year's 'Chronique' a far larger space.

With the publication of the second *fascicule* of his 'Manuel de Bibliographie Historique,' Prof. Ch. V. Langlois has completed a work of great value for both the historian and the bibliographer. While the historian will turn with special interest to the second part, the bibliographer has already for many years counted the first part among his most important tools. Two editions have already appeared of it, the first in 1896, the second, much enlarged, in 1901, containing also the introductory chapter to the second part, describing the guides to and histories of historical study. In comprehensiveness, clearness of arrangement and soundness of estimates, this volume stands well nigh unequalled among general bibliographies; it embraces universal (*i. e.*, quasi- and would-be universal) bibliographies, national bibliographies, and the bibliography of bibliographies, as well as that of general and national history and of the history of the sciences. The new *fascicule* begins with a sketch, in two chapters, of historical learning up to the French Revolution. The remainder treats of the last hundred years, beginning with a chapter of general considerations. The author here compares the conditions of historical research in former centuries with those of the nineteenth, when governments vied with each other in the establishment of archives, libraries and museums, in fitting out scientific expeditions, and in devoting large sums of money to defray the cost of scientific publications. The private and social condition of the scholar has also been changed for the better; while in former days he was often the retainer of some great prince or statesman, he holds now honorable positions in the public service, most frequently in connection with some university. The 'Manuel' is not a formal bibliography, rather a continuous bibliographical foot-note to the history of historical writing, enabling the author to intersperse the enumeration of names and titles with sketches of a general and special character, such as on the condition of scholarship in France before the fall of the Second Empire, on the Berlin Academy, on German universities. The titles are mentioned without bibliographical details, too often even without dates of publication, which is a real defect; it is nearly the only defect.

To the other products of the centennial Petrarchan observances has been added a 'Bibliografia Analitica Petrarchesca,' from the expert hand of Emilio Calvi (Rome: E. Loescher & Co.). This catalogue connects itself immediately with Jacopo Ferrazzi's, beginning with Petrarchan publications of 1877, where Ferrazzi left off. Moreover, it summarizes contents as well as records titles and authors' names. The whole forms an admirable picture of scholarly activity in this field during the period in question. Calvi shows a remarkable increase in Petrarchiana by decades. The present rate of publication is thirty a year on the average—of course, not in Italy alone.

Recent bibliographical lists issuing from the Library of Congress are of Books (and Articles) relating to Proportional Representation; of References on the Popular Election of Senators; of References on Recognition in International Law and Practice; and of Works relating to the Germans in the United States. That on Senators contains also extracts from the debates in the Federal Convention of 1787, and from the 'Federalist.' The agitation for popular election dates preëminently from 1891. The compiler of this list has sometimes misreported the pros and cons. The German list does not include biographies.

Every lover of his kind will read with deep interest and gratitude the paper of Dr. Prince A. Morrow (published in the *Medical News* for June 4), in which he urged, and gave most convincing reasons for the necessity for, the formation of a

Society of Sanitary and Moral Prophylaxis. In the last number of this journal it is announced that the proposed society has now been formed. If it should do nothing more than cause the wide distribution of this article, and of the one on "Race Suicide from the Gynæcological Point of View," by Dr. E. H. Grandin (read before one of the Washington societies, and published in the same journal, July 9), that alone would be enough to justify its existence. But this will, of course, be only a beginning of its work.

In the *Revue de Paris* for June 15 will be found a paper on "Gluck: Une Révolution Dramatique," full of interest and instruction, by Romain Rolland, author of a history of the opera in Europe. The musical innovation of the Encyclopædists, of Diderot, D'Alembert, and Rousseau in particular, has been obscured by their larger social and political achievements; nor is it commonly remembered that this bond of friendship between the intellects just named was the very basis of the revolutionary career of the greatest of the three. Rousseau's many-sided genius, in fact, needs for its understanding to be studied and exhibited first of all—and last of all, for he was a musician by trade—from the musical side. So far as we know, this has never been done in any formal biography; and the approaching bicentenary of the birth of the author of "Le Devin du Village," the 'Dictionnaire de Musique,' and 'Les Consolations des Misères de ma Vie' might be distinguished by a new presentation of his life with music for the central core.

—Two-thirds of Volume XIII. of 'The Philippine Islands, 1493-1898' (Cleveland: The Arthur H. Clark Co.) is occupied, as was over half of Volume XII., with the first version ever published in English of Father Pedro Chirino's 'Relacion de las islas Filipinas' (Rome, 1604). This is one of the four or five sources (strictly speaking) on the history of missionary conquest in the Philippines—and incidentally of early Spanish-Philippine history and of prehistoric Filipino customs—which have long been obtainable in printed form and which are of real importance. Of course, the 1604 edition of Chirino is now very rare, though available to scholars in various libraries of Europe; a second edition in Spanish was issued at Manila in 1890. The editors of this series have had access to two copies of the original work, owned in the United States, one in the Harvard University Library and the other in the private library of Edward E. Ayer of Chicago. Their translation is the first, not only in English, but in any language. It appears to have been very well done—is, in fact, considerably above the standard hitherto reached in this Philippine historical series.

—Chirino is not of so much value to students of Philippine history as Morga, whose 'Sucesos' is just being reproduced also in this series. He has not the equipment nor experience, hence also not the breadth of view, of Morga; moreover, he is writing primarily of the work of his brother-Jesuits in Christianizing the Filipinos. Hence, such light as he sheds on the history of the times, considered apart from its missionary activities, is purely incidental. He throws more light upon the customs and manners of the Filipinos, particularly of those of certain of the Bisayan Islands, with whom he had come more in contact than with those in Luzon outside of Manila before he returned to Europe in 1602 and addressed this lengthy account of Jesuit activity in the Philippines to the general of that order, Claudio Aquaviva. This is perhaps the best of all the longer missionary relations from those islands; its repetitions, endless recountings of miracles attending the conversions, and naïve outbursts into pious comment are such as are common to all similar writings in the early missionary days, whether in Asia or in America. The reader is to be warned against placing undue reliance upon Chirino's assertions regarding the prehistoric customs of the Filipinos.

—In William Edward Purser's monograph, 'Palmerin of England,' published by Browne & Nolan, Dublin, the battle waged for almost a century and a quarter concerning the authorship of this famous romance of chivalry ends in decisive victory for the Portuguese Francisco de Moraes. This but restores to the once generally accepted claimant his due, for it was not until 1786 that the theory of a Spanish original began to be put forward. Of Moraes's two Spanish rivals, Miguel Ferrer has been the less formidable. He was a Toledan printer of scant culture, who spoiled whatever he touched in the Spanish translation of 'Palmeirim' which had somehow fallen to him. Nevertheless, he issued it as his own in 1547, together with a set of laudatory verses written by another. This other was a man of more talent, who slyly inserted in the four stanzas required of him his own name and a possible claim of authorship by means of an acrostic reading, "Luys Hurtado autor al lector da salud." Although the thirty-two acrostic lines seem now to have constituted Luis Hurtado's entire part in the romance, they have won him doughty champions, from Pedro Salvá y Mallen, who first discovered the acrostic, to Wolf, Liebrecht, and Graesse in Germany; Brunet and Baret in France; Spaniards like Valera, Barrera y Leirado, Arlbau, and Gayangos; and our own Ticknor, Ormsby, and Watts. It is in tilt, then, with such authorities that Mr. Purser essays to break his lance, and, imbued though he may be with the spirit of chivalry, he cannot spare even the ladies, Emilia Pardo Bazán and Carolina Michaëlis de Vasconcellos. The latter's 'Versuch über den Ritterroman Palmeirim de Inglaterra' in the *Zeitschrift für Romanische Philologie* (vol. vi., 1883) is in substantial agreement, however, with his own conclusions. Since the only other aid rendered him has come from uncritical enthusiasts like Mendes, Benjumea, or Southey, Mr. Purser's victory is the more creditable.

—A polemic concerning "the author of a work no one reads" inevitably opens a vista of boredom, but to the student of Peninsular literature this work offers much of real interest—a textual comparison of Portuguese and Spanish versions of the romance, revealing tell-tale errors and lacunæ in the latter; an examination of the episode of the 'Four French Ladies,' as reflecting Moraes's own experience at the French court, where his romance was completed and probably privately printed *circa* 1544; and an ingenious chapter explaining what Cervantes meant in 'Don Quixote' by the verdict upon 'Palmerin' pronounced by the *Cura*. There appear also corrections of Gayangos's familiar 'Discurso preliminar' in the "Biblioteca de Autores Españoles"; a bibliography of 'Palmerin,' its translations and continuations; and notes on affiliated romances of chivalry. But controversial writing anent letters is not of necessity literature; and this book, in its detailed scholarship, its exhibits of documentary evidence and cross-examination of witnesses, its numbered paragraphs, tabulated arguments, and regular summaries, lacks the literary flavor. In its lucidity and coherence, and as a piece of destructive and constructive argument, however, it might serve for a classroom model.

—The Royal Academy of Sciences in Amsterdam has sent forth in two volumes, with page of ample superficies, bearing the imprint of Johannes Muller, an elaborate work of learning by J. J. M. De Groot of Leyden. The author's previous essays on 'The Religious Systems of China,' 'The Code of the Mahayana of China,' 'The Popular Religions of China,' and 'The Chinese Political Unions in the Dutch Colonies,' are already well and favorably known to close students of the Far East. With extended Chinese quotations from the imperial edicts printed on the same page with the English text, and with a first-rate index, the materials are here at hand for a study of the question whether China is, like Russia and old Japan, a church nation, that persecutes dissenters from the religious establishment of the state. In point of scholarship this work may be safely said to outweigh all other writings on this particular subject, for Mr. De Groot sets forth his arguments with prodigious erudition, abundance of illustration, argument and proof. He entitles it 'Sectarianism and Religious Persecution in China: A Page in the History of Religions.' The term "sectarian" does not connote to the ear or mind of the speaker of English exactly what the author intends, which the old word "sectarism" might best express. His use of the term shows that it is rather what English state-church men mean by "dissent," for we have here an account of the Chinese dissenters and the societies which are, in the Chinese official eye, sects, whose meetings are "conventicles" rather than "convocations." Some criticisms have been made upon the work by scholars in China and Japan, both native and foreign, who would attribute the actions of the Chinese Government to a deeper animus against political rebellion *per se*, and less to interest in ritual, dogma, and philosophy, than Dr. De Groot seems to do, and sometimes perhaps with rather too much warmth and fervor for a scientific thesis. Yet this Dutch investigator has certainly explored an almost unknown region of the religious history of Asia, and has shown that substantially there has been no essential difference between human nature, whether in China or in Europe. "Here we find the school of Confucius in close alliance with the State, which has entirely identified itself with its principles, imbued with a fanatical animosity against everything religious and ethical which cannot be traced back to the classics." In a word, dogmatism, in China, as in the Protestant, Roman Catholic, or Russian Churches, is the mother of heresy, intolerance, and persecution. Subjectively, the author's judgments are interesting, because on first going among the Chinese,

without having inquired into the facts, he shared in the general opinion of China's liberality of view. He changed his convictions only after prolonged critical study of texts and history.

WALPOLE'S HISTORY OF ENGLAND 1856-1880.

The History of Twenty-five Years. By Sir Spencer Walpole, K.C.B. Vols. I. and II., 1856-1880. Longmans, Green & Co. 1904.

These volumes, the work of a writer who long ago established his reputation by his 'History of England, from the Conclusion of the Great War in 1815,' are an interesting illustration of the proposition that one good historical treatise need not interfere with another good treatise on the same subject. They cover most of the period which was covered by Mr. Herbert Paul, whose 'History of Modern England' was recently noticed in these columns. They are written from what is, roughly speaking, the same point of view—that of an English Liberal who is decided, through not extreme, in his Liberalism. They are, moreover, the work of one who, like Mr. Paul, approaches public affairs as a practical man rather than as a theorist, though Sir Spencer Walpole was an official, whereas Mr. Paul has been a journalist and a member of the House of Commons. But they are quite different in manner, and they supplement one another rather than collide. Mr. Paul adopts a strictly chronological order, and devotes himself chiefly to parliamentary politics. Sir Spencer masses his facts more broadly, according to their natural connection, and gives far more prominence than does his brother historian to the foreign relations of England. Mr. Paul is bright, dashing, slashing, epigrammatic. Sir Spencer is solid and reflective, yet certainly not less interesting, for his facts are carefully chosen and marshalled, and his quiet style is both luminous and impressive in its equable march.

Lucidity of thought as well as of expression is specially helpful in one who undertakes to trace the complicated movements of diplomatic negotiations, and to these movements a large part, and perhaps the most instructive and novel part, of Sir Spencer's book is devoted. It is, indeed, hardly more a history of England than a history of the process by which a united Italy and a united Germany were created between 1858 and 1871, and perhaps it is a sense of this fact that has suggested for the title the words 'History of Twenty-five Years' instead of 'History of England.' It is by no means a history of Europe in general, still less of the world at large, during the quarter of a century from 1856 to 1880, for the internal affairs of no country except England are dealt with. True, a chapter is given to the American Civil War and to the contemporary struggle of Juarez and Maximilian in Mexico; but these events come in, the former because it affected English politics, the latter because it helped to weaken the power of Louis Napoleon in France and thus became a factor in the evolution of the great European drama in which Louis Napoleon, Bismarck, and Cavour were the three leading figures. Of that drama, however, so far as it was played out on the general theatre of Europe and apart from the internal affairs of each of the European countries, these volumes are probably the best summary account to be found in the English language. We can hardly speak too highly of the skill with which the tangled threads of the long negotiations that went on, first between Louis Napoleon and Cavour, then between Louis Napoleon and Bismarck, as well as between the latter and the Italian Government, are handled and disengaged from one another.

The story is one of surpassing interest, not merely because the results were momentous, but in respect of the characters of the chief actors. No more remarkable statesmen have appeared in Europe since the days of Charles the Fifth than were Bismarck and Cavour, while the French Emperor, however inferior in capacity to the German and the Piedmontese who one after the other played with him and turned him round their fingers, is one of those singular personages in whom talent and weakness, good impulses and basely unscrupulous conduct, are so curiously mingled that it was possible, while his career was running, for him to be, with good reason, both admired and despised, and that even now the judgment of mankind has not finally determined the place he is to hold in history. Mr. Herbert Paul, for instance, to whose book we have referred, never mentions him without some term of contumely or hatred, while Sir Spencer takes a more discriminating and more charitable view. On the whole, we are disposed to agree with Sir Spencer, and rather to blame Louis Napoleon for his vacillation and his want of insight and foresight than to consign him to that lower pit of Tartarus in which Mr. Paul sees him lie fettered. After all, how much Fortune has to do with reputations! Many a man at college fails in one year to win prizes or fame among his comrades which his merits would have secured two years either before or afterwards, merely because chance makes him the contemporary of some exceptionally brilliant person. Louis Napoleon might have preserved till the end of his life the credit for force and wisdom which he enjoyed, even despite his Mexican blunder, as late as 1865, had Prussian diplomacy been in the hands of the mediocrities who guided it from 1820 till 1862. Unfortunately, he was himself not only dreamy and irresolute, but wanting in judgment of men. Had he been served in 1870 by a better diplomatist than the Duke of Grammont and a better War Minister than Marshal Le Bœuf, war would probably have been avoided, and in any case the disasters of France would have been less terrible. Sir Spencer, both here and in his admirable account of the outbreak of the war of 1866 between Prussia and Austria, examines and sets forth with eminent impartiality and precision the share of responsibility which belonged to each of the contending Powers; and he adds, when speaking of Bismarck's famous telegram which set the match to the gunpowder, a remark which might have been written (perhaps may have been written) with the thought of Mr. Chamberlain's and Mr. Kruger's share in bringing about the South African war of 1899: "The King of Prussia shared the unjust prejudice, so common in Europe during the latter half of the nineteenth century, that the man who declares and not the man who provokes war is responsible for the misery and waste which it involves."

Though the account of general European politics which these two volumes present will to most readers be the part most fresh and attractive, the domestic affairs of England are carefully and intelligently described and discussed. Sir Spencer has had access to a certain number of unpublished documents (including memoranda made by his father, who was Home Secretary in Lord Derby's Ministry of 1866); and to some extent he has been able to use his own recollections of the general feeling that prevailed in England at various critical moments. Thus he brings to light a good many facts which are new, or which were not fully understood by previous writers. It is another merit that he has been at the pains to give succinct résumés of the course of legislation on several topics of importance. The Divorce Act of 1857 was an important epoch in social as well as in legal history; and he very properly gives a preliminary sketch of the earlier law. So the Education Act of 1870 is made the occasion for a useful description of the previous efforts to establish elementary schools, though to our surprise the Endowed Schools Act of 1869, an important part of the educational reforms of that day, receives only a passing reference. Nor should the fulness with which financial questions, generally neglected by the historian who writes for a public desiring to acquire knowledge easily, are dealt with and made intelligible be overlooked. He shows, indeed, an unusual mastery of the economic side of history.

So far as we have tested our author, he attains in matters of consequence that accuracy which is, after all, the highest merit, if not the most winning charm, of an historical work. Little errors there are here and there; these no man can hope to escape. For instance, Lord Brougham is spoken of as being in 1860 an "ardent reformer," though his zeal for parliamentary reform had died out before that day; and "the Confederation of the Rhine" is mentioned (vol. i., p. 409) where the Germanic Confederation, a very different thing, must surely have been intended. Some omissions surprise the reader. In the account of the patriotic movements in Italy nothing is said of the work done by Mazzini, though he was, perhaps as much as Cavour, Victor Emmanuel, or Garibaldi, a factor in those movements. When, in describing Lord Palmerston's and Mr. Dasraeli's opposition to the making of the Suez Canal, Sir Spencer observes that "no other country derived so much benefit from it as the United Kingdom," it would have been proper to add that, although English vessels use the canal far more than do those of any other country, because English ocean-going shipping is as large as is that of all the rest of Europe put together, English trade has in one way suffered, because vast quantities of goods which were formerly sent from the Farther East to English ports, and thence distributed over Europe, now go straight to such great Mediterranean emporia as Marseilles, Genoa, Trieste, and Odessa.

The first chapter of the second volume is devoted to the War of Secession, and a word or two may be said upon the author's treatment of a subject especially interesting to American readers. He takes as his chief guide Mr. James Ford Rhodes's his-

tory, and in this he does well, for no more fair or vigorous or trustworthy book on the subject exists. He treats the anti-slavery contest with impartiality and judgment, bringing out in due relief such vital points as the Missouri Compromise, the working of the Fugitive Slave law, and the Dred Scott case. He does justice to the leaders on both sides, though in our opinion bestowing upon Jefferson Davis greater praise than his abilities merit. He has, however, been misinformed when, in speaking of the results of the Civil War as seen to-day, he remarks: "The negro is in some States already predominant, and the time may apparently come when he may control the policy of whole States, and assert the superiority which his numbers are giving him." Those who have followed the course of events in the South will not accept this prediction; but it is of course difficult for an English writer to keep abreast of the changing phases through which the negro problem passes. In describing English sentiment during the course of the war he does not exaggerate the amount of sympathy which the South received from what is called in England "society," *i. e.*, the wealthier classes, but he hardly gives due prominence to the fact that the masses of the people did not share that sympathy. That the bulk of the British nation recognized the Northern cause as the cause of human rights and human progress, is proved by the fact that no public meeting, open to all comers without a ticket, was (except possibly in Liverpool) ever held to express sympathy with the Confederates, whereas countless such meetings were held by the friends of the North.

These two volumes carry the story of English politics down to near the middle of Mr. Gladstone's first Administration. They leave him at the height of his power and fame. The Conservative reaction which gathered strength from 1872 onwards and which triumphed at the general election of 1874, had as yet scarcely begun to show itself. This reaction has been the most remarkable, and also, if the state of popular feeling in 1870 is regarded as it appeared at the time, the most unexpected, phenomenon of recent English history. From 1832 till 1874 the Whigs or Liberals had been usually in power, and had been conspicuously not only the popular party, but the party whose intellectual superiority was generally admitted. Since 1874 the Tory party has held office, sometimes with enormous parliamentary majorities, for twenty one and a half out of thirty years. It will be the task of Sir Spencer, in his next volumes, to explain the causes of this remarkable change; and the excellence of that part of the work which lies before us gives reason to believe that he will deal with this still obscure problem in a manner worthy of the historical power he has shown himself to possess.

THE SEAT OF WAR.

Manchu and Muscovite. By B. L. Putnam Weale. Macmillan Co. 1904.

The conditions in Mantchuria are so complicated that they well-nigh baffle description. The public will therefore welcome, even with all its faults, this volume by Mr. Weale, since the author really has an adequate knowledge of the country and of the main factors so potent in making the history, at the present time, not only of Mantchuria, but, we may say, of the entire East, and indeed of the world. The fault of the volume, if it be a fault, lies in the fact that it is mainly a collection of letters written for the periodical press of the Far East. It is therefore rather diffuse and colloquial in style, but it has the advantage of giving a very fresh view from the field itself, reproducing with great fidelity the scenes of the country just before the breaking out of the present war. At the same time the volume is properly supplemented by a brief and accurate historical survey, and by several chapters discussing with great skill the affairs of the Russo-Chinese Bank and the Chinese-Eastern Railway, and forecasting the course of the conflict which is now in progress. An appendix gives all necessary statistical material, and a map is put down in the index as at the end, but it is not to be found in the volume before us.

The author confessedly depends, for his main facts, upon Mr. Hosie's work on Mantchuria, which we reviewed last month, while he at considerable length exposes the ill-considered statements and misrepresentations of Mr. Wirt Gerrare's 'Greater Russia' and Mr. Alexander Ular's 'Un Empire Russo-Chinois,' which are responsible for a large share of the misunderstanding that now prevails concerning the causes of the present war and its probable issue. Mr. Weale is an Englishman, and is violently opposed to Russia and everything Russian. Of this he makes no concealment. Still, he is evidently honest and certainly well informed, and succeeds in giving a fairly well-balanced account of the real condition of things at the seat of war. Not satisfied with previous visits to Mantchuria, he undertook a systematic personal investigation of the country during the autumn of 1903, and devotes himself largely to telling what he actually saw at that time. His route of travel led him from Port Arthur to Dalny, Niu-Chwang, Hai-Cheng, Liaoyang, Mukden, Teling, Kaiwan, Kuanchentze, Harbin, Petuna, Tsitsihar, Kirin, and Ninguta. Evidently he had not seen the region bordering the Amur or the Argun.

The main impression made upon the author, both by his observation and by his study, is the failure of the Russians to accomplish what they have set out to do in Mantchuria. In his view, the appearance of prosperity along the line of the 1,600 miles of railroad which they have built in the three provinces is wholly due to the lavish expenditure of borrowed money in the construction and equipment of the road in the first place, and later in its use for military purposes. As a business venture, he pronounces it, under Russian management, a great failure. Immense sums have been spent upon costly station houses, where cheaper ones would have served every purpose. Little use has been made of the native population in filling the minor official positions, entailing the support of large numbers of high-priced Russian officials, whereas an English company, as is the case on the Tientsin-Shanhaikuan road, would have got along with a small number of foreign superintendents. The road has likewise failed to secure much of the immense freight in agricultural products which finds its way from the interior to the port of Niu-Chwang, because of the high rates which are charged. It would seem, however, that the Russians might learn wisdom, and remedy these errors in a short time. Two years under such exceptional conditions as have attended the military occupation of the country is too short a time to judge of the ultimate success of the road; for, according to Mr. Weale, there is no doubt that a well-managed company could make the road from Harbin to Niu-Chwang immensely profitable. Now, of course, everything is upset until the war is over. Our author, however, admits the great military value of the road, and easily confutes the prevalent idea both that the road is inadequate for its purposes, and that the army will be dependent for subsistence brought from beyond Lake Baikal. The road is well made, with superb iron bridges resting upon stone piers, which excite the admiration of foreign engineers, and is so amply provided with sidings that it is easy to keep the main line clear.

Mr. Weale is at considerable pains to correct the bundle of misrepresentations of Mr. Ular concerning what he habitually styles "the Blagovyeschensk outrage." But his own unfamiliarity with the situation leaves the task but half done. Mr. Ular represented (and his misrepresentations are repeated over and over again in the periodical press) that the only provocation which the Russians had at Blagovestchensk was that a small band of Hunghutzu, or Mantchurian brigands, crossed the Amur and committed some depredations of small importance, which was "pompously named the Chinese attack upon Russia," and that thereupon the Russians made this an excuse, long looked for, "to officially mobilize the Siberian army, which had really been on a war footing since the month of March." To this Mr. Weale vigorously replies:

> "As a matter of fact, although I am one of the most rigid opponents of the Russian advance south, I cannot let such a deliberate concoction pass. For it is a well-known fact that the Aigun forts, which are under the command of a Chinese military deputy lieutenant-governor, and lie a few miles below Blagovyeschensk, on the Chinese bank of the Amur, fired on Russian ships and practically stopped all navigation for a number of days, in obedience to the Chinese imperial decree which declared war against Russia" (p. 329)."

To show the full extent of Mr. Ular's misrepresentations, it should have been added that several thousand Chinese soldiers entrenched themselves upon the south side of the river, and bombarded Blagovestchensk for several days, while the Russians had nothing but an extemporized home guard to make any show of defence; the Russian troops having all been previously sent away to the seat of war about Peking. It was two weeks before reinforcements came down the river, and the so-called "Blagovyeschensk outrage" occurred during the frantic efforts of this home guard to prevent the capture of the city by an overwhelming opposing force, and the drowning of the Chinese was largely due to an accident which, under the circumstances, could hardly have been avoided. That the subsequent occupation of Mantchuria by Russian soldiers was accompanied by many scenes of violence which seem unnecessary, is repeatedly asserted by Mr. Weale. The details given, however, are so scanty that it is difficult to judge of the real character of the transactions; so that, as is evident

from his understatement both of the seriousness of the crisis at Blagovestchensk and of the efforts of the Chinese Government and of the robber bands to deprive the Russians of their treaty rights, it is a fair question whether the limited amount of severity in the exhibition of Russian power was not necessary for the pacification of the country.

The real obstacle to the successful occupation of Mantchuria by Russia, even if she should be victorious in the present war, is clearly brought out by Mr. Weale's observations. This lies not in the formal, political difficulties of administration so much as in the tremendous inertia presented by the Chinese masses pressing into the country. Already the Chinaman has almost entirely displaced the original Mantchu, so that, as our author estimates, nineteen-twentieths of the population is Chinese, while they are ready to come in in still more overwhelming numbers the moment the country is freely opened to them. Outside of the administrative and military officials, Harbin is practically a Chinese city, 40,000 Chinamen having already gathered there under the folds of Russian protection, to reap the rich harvests that are open to their enterprise in a new country. And the Chinaman is a past-master in every art of making a living. The Russian peasant is utterly unable to compete with him, and has not endeavored to do so in Mantchuria. The report circulated by Messrs. Gerrare and Ular, which has so aroused many of the critics of Russian policy, that there was in progress an extensive colonization of Mantchuria by Russian settlers, is pronounced by Mr. Weale pure fiction. There are, he avers, no Russians in Mantchuria but soldiers, railroad officials, and a few shopkeepers and sutlers, who are ineffectually trying to compete with the natives in supplying the wants of these official classes. The Chinese merchant and banker is more astute even than the Jew, and has been able to drive the paper ruble out of existence in Mantchuria, and to monopolize all the profitable lines of trade.

According to the author's observations, the Chinese learn Russian very much more readily than they do English. This is due, he believes, partly to the smoother and more sonorous sound of the Russian language, but chiefly to the fact that the Russians do not stand off at a distance from the natives, but fraternize with them much more readily than the English do with their subject races. This, however, instead of adding to the influence of the Russians, he believes to be a serious hindrance, while he denounces the Americans for their "foolish sentiment for the 'little brown brother,' which has been nauseating the dwellers in China treaty ports since the Stars and Stripes were hoisted over Manila" (p. 242). The Chinese, he avers, learn the Russian language merely to promote their own interests, and laugh in their sleeves at the insincerity of the patronizing efforts of the Russians to get their good will, and at the ill success of the Russians in learning the language and assuming the manners of the Chinese. But this is merely the author's opinion. Others who have witnessed the success with which Russians have won the good will of the tribes of Central Asia, and indeed that with which they have been able to live in contact with the Chinese for centuries along a border line thousands of miles in length, will hold to the view that the Russian method in Mantchuria might very likely be more successful with the native population than that of the English Government in Oriental countries has been.

Although this volume was printed before the breaking out of the present war, the success of the author in anticipating results is truly remarkable. This appears not so much in his conviction that war was inevitable and near at hand, as in his forecast of the progress of the campaign, which took in the landing of troops in Korea, the crossing of the Yalu, and the slow but sure progress of the Japanese army until it severed the connection between Port Arthur and the main base of the Russian army, and brought things to the present crisis. It will be interesting to note whether his further forecasts will be equally justified. From his personal inspection of the fortifications of Port Arthur he is convinced that it can be taken only after a prolonged siege. From his knowledge of the physical geography of southeastern Mantchuria he was confident that the Russian plan of campaign would be the gradual withdrawing of the army from Niu-Chwang into the interior, carrying on a defensive campaign until Russian reinforcements should be sufficient to enable them to make a stand with a fair show of success. He estimates that the Russian army, can easily be brought up, after a time, to number 500,000, which can readily be supported from the products of the rich country occupied and controlled by them. Even should temporary defeat attend the main Russian army, the situation of the contending forces is such that the war is likely to be prolonged for two or three years, when financial difficulties will probably force both countries to a compromise, with the advantages mainly upon the side of the Japanese.

But the author has evidently greatly overestimated the antipathy of the Chinese towards the Russians. His expectation was that the Russians would have great difficulty in keeping the Chinese residents of Mantchuria from siding with Japan the moment war should be declared. In this he was evidently mistaken. The Chinese show little patriotism, but are everywhere ready to side with the power in possession of the field, and to render service to any party by whom they are well paid. At any rate, they show no sign of having special love for the Japanese; so that Russia and Japan are likely to have a free field in which to carry on their ruinous warfare.

HOBSON'S INTERNATIONAL TRADE.

International Trade: An Application of Economic Theory. By John A. Hobson. Charles Scribner's Sons. 1904.

The controversy aroused by Mr. Chamberlain's proposals has been to a great extent a threshing over of old straw. In this book, however, Mr. Hobson has suggested some novel considerations. They are offered to the British public, but they are of universal interest. They deserve attention in this country, especially, for our tariff policy must before long become a political issue. Strictly speaking, Mr. Hobson presents no new theory, but he departs in one important particular from the treatment of international trade generally adopted by economists. He maintains that foreign trade is governed by the same laws that govern the rates of exchange between commodities in a single nation. To establish this is to simplify greatly a most complex subject, and the argument deserves to be stated at some length. It is substantially as follows:

The end of all industry is to put consumable goods in the hands of consumers. Prosperity is measured by the success of this process. Not the quantity of capital and labor employed in industry is the test of prosperity, but the amount of their product. Industrial progress depends on the economy of capital and labor. Commerce is to be regarded solely as a means of placing commodities where they can be consumed. If, now, we include among commodities all services which are bought and sold, the real income of a nation must consist of all the utilities, whether embodied in material forms or in human services, which it is able to command.

"A nation which devotes a larger proportion of its productive energy to increasing the speed and accuracy of the distribution of material goods, or to the better cultivation of the intellectual arts and the provision of professional, artistic, and recreative services, cannot reasonably be regarded as stationary or retrogressive in industrial prosperity."

Hence, while we may for some purposes use the word "industry" as meaning the production of material wealth for markets, we must bear in mind that non-material wealth is as much a part of the real income of a nation as food and raiment. In early stages of industrial development the provision of food, clothing, and shelter constitutes industry. There is no time to spare for anything else. Agriculture, simple manufacturing, and mining will be the universal occupations. As civilization advances, a larger proportion of energy will be devoted to the more complex industrial processes adapting raw materials or crude manufactures to the more special needs of various classes of consumers.

"This implies the growth of a qualitative economy of wealth; every further increase of wealth will be attended by a reduction of the increase of raw materials. Still more important will be the increasing proportion of industrial energy engaged in the transport and distributive industries, with the expansion of the area and the complexity of markets which belong to modern industrial civilization. Finally, a rapidly increasing proportion of energy passes into the production and distribution of non-material wealth, governmental and other public work, professional and personal services, the fine arts, recreation and amusement."

It follows that a continually smaller proportion of the real wealth of a nation is capable of forming the material of international trade. The volume and the value of this trade may grow, but it will not keep pace with the growth of the wealth of the nation. More and more energy will be employed in internal transportation and distribution and in non-material production; and, as regards material wealth, a larger proportion of workers are occupied in the final processes of adapting goods to the special tastes and habits of local groups of consumers. And, as the proportion of the real wealth of such countries as Germany, England, and the United States which is suitable for external trade is diminishing, this diminution will be greater when the more backward countries learn to manufacture for themselves. There will

be no diminution of external trade; it will increase, but not so fast as the internal industry applied in the satisfaction of wants which are constantly becoming more refined and more largely non-material in their forms.

In Great Britain it is demonstrated that the aggregate income of the nation is growing faster than the export trade. The poorest classes "are the largest consumers of imported goods, because the largest proportion of their money goes for food; the richest classes are, in proportion to their expenditure, the smallest consumers of imported* goods. Every elevation, then, of the general standard of comfort of the people diminishes the relative importance of external trade, and enhances the importance of internal trade." It is, therefore, a normal and healthy symptom when external trade slackens. After the main lines of advantageous exchange have been discovered, specialization of national industry and the trade intercourse which it involves should not be expected to proceed at a rapid rate. The industrial progress of the future will consist more and more in the elaboration of internal trade and industry, and in the diversion of an ever larger share of energy to the creation and distribution of intangible commodities.

We must confine our comment on this argument to a single point. Conceding all that is said, external transportation may grow more rapidly than internal transportation, for the reason that the geographical boundaries of a nation are not its industrial boundaries. The New England States would naturally obtain their coal from Canada, as well as many other goods. Some parts of Canada would obtain their coal from Pennsylvania; and Pennsylvania would get its fruit and sugar from the West Indies. London may be nearer, so far as cheap transportation is concerned, to Denmark or to France than it is to Ireland or to Scotland. Moreover, the habit of travel and even of expatriation has to be reckoned with in computing expenditure for services. These immaterial commodities may be sought in other countries rather than at home. And, finally, as goods become qualitatively superior, because of elegance of workmanship, the cost of transportation becomes relatively insignificant. These considerations do not impair the main argument which Mr. Hobson advances, but they are to be borne in mind when we attempt to apply it to any given case.

While the development of this argument is the most important feature of Mr. Hobson's book, his analysis of the effects of protective duties is admirable. Perhaps no writer surpasses him in the art of stating economic theory. His demonstrations are often beautiful specimens of logic; they may be read with pleasure simply because of their formal completeness. It is hardly too much to say that the doctrine of modern political economy has never been set forth with greater clearness or with more brevity than in this treatise. It is difficult to conceive any answer to the case that is made out.

We cannot help thinking, however, that Mr. Hobson is guilty of a fallacy in maintaining that "the condition of the industrial world has become one in which it always appears more difficult to sell than to buy." The producer, therefore, is more eager to sell than the purchaser to buy. "It is his well-grounded belief that in ordinary times the supply of the goods he offers exceeds, or may at any time exceed, the demand at current prices that prompts his anxiety to sell." This outrunning of demand by supply Mr. Hobson very justly calls a paradox. He attempts to explain it by "underconsumption," due to "maldistribution of wealth." If the money of the rich were taken from them and given to the needy, every one would have to spend his whole income, and the wheels of industry would revolve as steadily as the planet which we inhabit. As it is, there is "over-saving." The rich save because they do not know what to do with their money, and the irregularity thus introduced into business compels people of moderate wealth to secure themselves against anticipated collapses of income in the same manner. "This over-saving . . . implies superfluous forms of capital which, when put into productive operation with labor, cause over-production and the congestion of markets, which is the preliminary to underproduction or unemployment."

Conceding these assumptions, it is plain that a constant force is in operation tending to reduce the prices desired by sellers, and that they are aware of this force and can take it into account in estimating the expenses of production. They are like the farmer who said that he did not sell his potatoes for as much as he expected, but that he did not expect he should. The paradox, in fact, is of Mr. Hobson's own creation. There is no such "accepted tendency of supply to outrun demand"; the tendency is reciprocal. When the crop of cotton is small, the anxiety of the planter is not concerning his ability to get the present market price; he is afraid that he may sell too soon. The buyer, on the other hand, is anxious to buy at once for fear he may have to pay more. Two years ago, buyers had to beg the ironmakers for iron; they were willing to pay almost any price rather than not get their goods. A year later the conditions were reversed; and these alternating currents are a constant feature.

The point is of importance, for it causes Mr. Hobson to make a concession to the protectionists which, in spite of his limitations, they will find sufficient for their purposes. There is in every trade, according to Mr. Hobson, a certain amount of unemployed capital and labor. A duty on imports might call into use this idle force, and thus really be advantageous. Mr. Hobson argues vigorously that it would be impossible to tell just what the duty should be, or when it should be applied or removed. These difficulties have no terrors for protectionists. Grant the possibility of encouraging home industry by levying taxes on imports, and they will not be restrained from undertaking the task. Mr. Hobson is in the position of a temperance advocate who tells his hearers that liquor is beneficial when taken in proper quantities, but that they must abstain totally because they may err in determining how much is proper. In such cases men are apt to feel competent to decide for themselves.

*The text reads "exported," but "imported" seems required in the comparison.

Biographical Memorial of Gen. Daniel Butterfield. By Julia Lorillard Butterfield. New York: The Grafton Press. 1904.

Those who effect important results by means of trifles are usually good organizers. In the spring of 1862 no one knew, excepting through direct and local inquiry, the contents of the great army trains on the Peninsula, which might be carrying anything from medical stores to shrapnel, or from hard bread to horse-shoes. But those who remember that, will also remember that about midsummer some of the white covers bore long broad stripes of blue, red, or yellow, which meant that infantry, artillery, or cavalry ammunition, respectively, was carried within. It sometimes is very important to know, to know without delay, and to know at a distance which is an ammunition train and the kind of ammunition it bears. The young lieutenant, temporarily chief ordnance officer of that army, afterwards showed by a distinguished military and civil career that his simple device was a sign of organizing power. When Gen. Kearny wanted to identify his men, he required them to wear a red flannel diamond on their caps. No one got beyond that until Gen. Butterfield, as Hooker's chief of staff, equipped the army of the Potomac with corps badges of cloth, whose form and color showed unmistakably the particular division of the wearer and became insignia to be respected. He assigned similar designs to mark the headquarters of brigades, divisions and corps. He had previously developed a musical call for communication among the troops of his brigade at a distance or at night. More important, fairly early in his career he prepared a valuable handbook of Camp and Outpost Duty, which concentrated in convenient form numerous details of that kind of service and was very widely used by authority. This, again, was the utilization of particulars in generalization. Daniel Butterfield's father was John, and John Butterfield's natural genius made him a master of organization, as shown in the Overland Stage, the American Express, and the New York and Buffalo Telegraph Companies. The son's inheritance had the advantage of academic association and legal training, and took him into other fields than those of pure commerce, but the organizing faculty came into play in all of them.

When the advocates of secession threatened war in 1861, almost every loyal citizen was incredulous, so that to nearly all the attack upon Sumter was as a causeless blow in the face from a friend. Our present familiarity with arms and arms-bearers makes it difficult to realize the pardonable ignorance of the North at that time as to all means of defence and offence. There were exceptions. Personal observation in the extreme South had led the young colonel of the Twelfth New York State Militia for several years to foresee trouble, so that, devoting his leisure to military studies, he had brought himself and his regiment into fair theoretical preparation for the field. At the first call the command immediately volunteered, and went on a three-months' martial excursion that proved to be bloodless, but the spirit and the "smartness" of the Twelfth encouraged and stimulated those who most required such help. Col. Butterfield was soon made a brigadier-general of volunteers and saw much active service, rapidly developing into an excellent soldier of the second class, shining in bright contrast with more purely political generals of that early period. He had these preliminary qualifications: enough local influence

to have been elected colonel of a city militia regiment, which secured him a certain constituency; a real interest in minor military matters and an appreciation of their importance when correlated; a fortunate age—thirty in 1862; a better education than many, and the command of a fortune that rendered him financially independent of his commission and of the profession that he must temporarily abandon. Added were zeal for the Union cause and an instinctive military spirit, combined with special administrative ability. He commanded a brigade at Gaines's Mill and at Malvern Hill, a division at the Second Manassas, and as major-general a corps at Fredericksburg. One scarcely knows which to wonder at the most—such administration of the War Department as made it possible, or the unabashed self-confidence of the novice who seems to have had no hesitation in ordering in action such educated and veteran officers as Griffin, Sykes, and Humphreys, to say nothing of Buchanan, Warren, Weed and Whipple. Their own behavior under what must have been morally a most trying situation, is a magnificent commentary on the training of those men.

During Gen. Hooker's administration and until after Gettysburg, where he was wounded, General Butterfield was chief of staff of the army of the Potomac, and there his remarkable capacity for organization was admirably employed. He was young and fearless enough, not hampered with traditions, to inaugurate a new and efficient régime. Going west with Hooker, he was on his staff at Lookout Mountain, and acquired a division in April, 1864, again distinguishing himself at Resaca, after which summer he did not serve in the field. Having received an original vacancy in the increased permanent establishment of 1861, he became a colonel therein in 1863, and retained his commission, with duty at New York, after muster-out of the volunteer service in 1865, until he resigned in 1870. For the next thirty years he was conspicuous in business circles as the head of successful transportation and real-estate companies. But money-making had no monopoly of his energy. He frequently spoke in public, usually eloquently and always patriotically, in the broad sense of the word; he maintained for three years a course of lectures for his alma mater, Union, outside the ordinary curriculum; he was magnificently generous otherwise, as his monument to the Fifth Corps at Fredericksburg, his Washington for the Memorial Hall at West Point, and other public gifts illustrate; and he was lavishly hospitable. There is printed one example of outspoken moral courage where friendly counsel was administered with directness and tact to his old chief, the Ishmaelitish Hooker, in whom personal subordination was so difficult of attainment. Doubtless he showed frequent illustrations of this quality, or otherwise he could not have retained the kindly respect that he evidently enjoyed. Possibly General Butterfield might give the stranger too vivid an impression of what may be called the public side of private life; but, after all, that is a matter of taste, and perhaps the tale is merely a little too brilliantly told. His light was frequently set on a candlestick rather than under a bushel, but it was a bright American blaze.

A privately printed volume of many pages sets forth his career, occasionally with repetitions and not always too concisely. But is not a memorial volume, especially when privately printed, a eulogy *ex necessitate*—generally, as in this case, a tribute of love, and as such not amenable to the stricter canons? There is but one allegation to which we should seriously except. Among the reasons that impelled McClellan to change his base from the Pamunkey to the James is cited "the failure of General McDowell to reinforce, with his 40,000 men then at Fredericksburg" (p. 76), in such a way as to imply, although it is not directly asserted, that that was McDowell's own fault. This reëchoes the common belief in the army of the Potomac at that time, that McDowell held back through some disingenuous motive, and did not grasp the hand extended at Hanover Court House. The fact, which never should be forgotten by either the formal or the informal historian, was that Jackson's advance down the valley frightened Washington, and, against his military judgment and his earnest hope, McDowell, who had 30,000 (not 40,000) men, was directed to postpone coöperation with McClellan, and to move his forces toward the Shenandoah on what he foresaw would be a fruitless mission. That very accomplished officer, who was loyalty itself to his superiors and to the Union cause, had misfortunes enough to oppress him without having perpetuated to his discredit purely imaginary shortcomings.

The book is attractively issued by a press which must be annoyed to observe that its excellent reputation is marred by the transposition on page 374 of lines six and eight from the bottom.

The Story of London. By Henry B. Wheatley. Illustrated by W. H. Godfrey, K. Kimball, H. Railton, etc. (The Mediæval Towns Series.) London: J. M. Dent & Co.; New York: The Macmillan Co. Pp. xvi., 411.

We no longer believe, with the old chroniclers, that Britain was founded by "Brutus, the third by descent from the Trojan Æneas," nor that the word "Albion" was derived from a giant of the name, the son of Neptune. But of the origin of the people of the British Islands we really know not much more, perhaps, than did the inventors of these fanciful tales. The legend of the founding of London by Brut has gone the way of much else, and to-day there are those who venture to doubt whether London existed before the time of the Roman occupation. No patriotic Londoner will subscribe to this flat heresy. Mr. Wheatley rejects the theory, surely with sufficient reason; but on the present occasion he does not go very deeply into the question of the origin of London. He has set himself to tell us of the London of the Middle Ages, a period which, for the purposes of this book, extends from the Norman Conquest to the battle of Bosworth, in 1485. However, he does not adhere pedantically to these limits: in an introduction he has given a sketch of what is known or conjectured as to Saxon London, and, in a final chapter, he has touched lightly on the story of London from mediæval to modern times.

From the date when the Roman legions left Britain to her fate till the Conquest there is a long interval of six and a half centuries. For this period all we have is a few scattered mentions of London in the Saxon Chronicle and elsewhere—for a century and a half no reference to London is found in the Chronicle. So scanty are our sources of information! But it seems established that, towards the end of the ninth century, London was a flourishing city, the seat of considerable trade, and the residence of many foreign merchants. Cnut, described by Dr. Stubbs as one of the "conscious creators of England's greatness," died in 1035. A single generation brings us to the date of the Conquest, with which event begins the continuous history of London. The first Charter of the Conqueror, a document of some four lines, is the first record in this history.

Mr. Wheatley insists on the fact that, during the period of which he writes, London was a walled city, and shows how largely this fact influenced the conditions of life of its citizens. By day, the gates were watched, each by two serjeants, who were careful to see that no leper or fugitive bondman entered the city. At the tolling of the curfew bell the gates were shut; thereafter no one was suffered to go about the streets or ways. The serjeants of Billingsgate and Queenhithe had to see that all boats were moored on the city side of the Thames; none were permitted to cross the river at night. The exaggerated fear of invasion, which in our days has prevented the making of a Channel tunnel, is no new thing. Stow, telling of a report that the French King was meditating an invasion of England, laughs at the panic excited by the rumor: "They that in times past bragged they would blow all Frenchmen out of England, hearing now a vain rumour of the enemy's coming, they run to the walls, break down all the houses adjoining, destroy and lay them flat, and do all things in great fear, not one Frenchman yet having set foot on shipboard; what would they have done if the battle had been at hand, and the weapons over their head!"

Till long after the Conquest, the houses, closely packed together, were but low huts of wood, thatched with straw or reeds. It is no wonder that fires were frequent and destructive. What has been called the first English Building Act provided, in 1189, that party walls should be solidly built, but left untouched the question of roofing. In 1212 a terrible fire raged for ten days; part of London Bridge was destroyed, and it is said that 1,000 persons lost their lives in the fire. After this it was forbidden to roof houses otherwise than with tiles, shingle-boards, or lead. Later, tiles became to be generally used, as may be seen from the map of 1588 given as a frontispiece; in this all the houses are covered with red tiles.

An interesting question relates to the population of London. The poll-tax furnishes the means of calculating that in 1377 the population of the city was about 45,000. Trade seems to have been carried on mostly in the open street: hence the names Cheap and East Cheap. Shops were open to the weather, windows being rare. Trade regulations were strict, and the punishment for cheating severe. In some cases the punishment was such as entirely commends itself to modern judgment. Thus, in 1364, a certain John Penrose, convicting of selling unsound wine, was first compelled to drink a draught of it, then the rest of the stuff was poured on his head.

Having given his readers a picture of

mediæval London, Mr. Wheatley takes us round the town with Chaucer, Langland, the author of 'Piers Plowman,' Gower, Hoccleve. Then he takes us to the Bridge, in its day esteemed one of the wonders of Europe. As Howell renders a eulogy in Latin verse:

> "Let the whol Earth now her wonders count,
> This Bridg of Wonders is the Paramount."

The Bridge consisted of nineteen arches and a drawbridge. Under each arch the tide at certain times flowed like a cataract, the force of which was in some cases used to turn mills or to raise water for the service of the city. The bridge seriously impeded the navigation of the river. The fact is crudely expressed in old views which show boats upset and men *rari nantes in gurgite vasto*. The drawbridge was London's chief defence in popular uprisings, which always came from the southern counties, then the seat of manufactures. So late as 1554, Sir Thomas Wyat, although he had artillery with him, found the city impregnable on the side of the bridge. He was compelled to lead his forces to the bridge at Kingston before he could cross the Thames and make a serious assault on London. We are not sure that the neighborhood of London Bridge does not better preserve features of Old London than any other part of the city. From Billingsgate one may see the Dutch eel-ships, the successors of eel-ships mentioned in city records of 1412. Near the foot of the Bridge on the northwestern side there is to-day a tavern called the Old Swan. Mr. Wheatley tells us that a tavern with this sign has stood here since the reign of Edward II. Upper Thames Street is still a narrow mediæval lane: the stranger wonders how it can be made to suffice for the great businesses carried on here. The names of wharves and lanes are those found in the oldest maps.

From the Bridge, Mr. Wheatley takes us to the Tower, and tells us its twofold story as a palace and a prison. Other chapters tell of manners, of provision for meeting disease, of the government and governors of the city, of commerce and trade, the church and education.

It is impossible to praise too highly Mr. Wheatley's diligence. He quotes innumerable works giving the discoveries of a host of inquirers. References abound not only to well-known works like those of Mr. Riley, who transcribed and translated many of the city records, but to pamphlets, lectures, and scattered articles. Mr. Wheatley has worked within somewhat confined limits; we hope that some day he may expand this account of mediæval London. We should have liked to find a chapter on law and lawyers. One constant feature of popular risings was, as Mr. Wheatley shows (pp. 51, 55, 56), the fury of the people vented on the lawyers. This violence must have had a cause. If the administration of the law was as corrupt as, later, Latimer, in his sermons before Edward VI., declared it to be, we need hardly seek further. The book has many excellent illustrations, including several reproductions of old and scarce maps. One of the views, the interior of the Middle Temple Hall, is by mistake called Gray's Inn Hall. A fuller index should have been provided.

We advise every reader of this book who may visit London, to inspect, while his recollection of it is still fresh, the London antiquities of the Guildhall Museum. Here he will find, somewhat unworthily housed, a most interesting collection, illustrated by an admirable catalogue lately prepared by Mr. Charles Welch, the City Librarian. Here are flint implements, telling of a time compared with which the Roman occupation is but of yesterday; implements of the bronze and iron ages, Roman pavements, and all manner of household objects, glass, pottery, tools, and so on down to the jovial "Bellarmines" which once held good Rhenish wine.

The Hour-Glass, and Other Plays. Being Volume II. of Plays for an Irish Theatre. By W. B. Yeats. The Macmillan Co., 1904.

There are two forces working to-day for the regeneration of Ireland—working, that is, from within—quite apart from the external remedies devised at St. Stephen's. The Department of Agriculture and Technical Instruction for Ireland is an Irish organization that aims at improving the material conditions of the people, at a revival of agriculture and industry. To stop the leak at Queenstown, to replace a listless population whose energies are satisfied with the occupation of watching cattle fatten for the English markets, by a nation of practical farmers tilling the land instead of grazing it—that is the object of the Department. Its promoters are ready to call in experts of every nationality to further these ends, and their agents and instructors are usually Scotch or English, rather than Irish; they realize that national jealousies and resentments must wait until Ireland can hold her own. The only prosperous corner of Ireland is the least Irish. If Cork and Galway are to prosper, it will be by imitating the Scotch thrift and industry of Belfast.

The Gaelic League, on the other hand, attacks the problem from a different point of view. Mr. Yeats and his friends would like to cure Ireland of "West Britonism," to de-Anglicize her national life, to give her a place among the nations not by reason of any successful imitation of English virtues and methods, but by restoring Celticism, which is the antithesis of Anglo-Saxon ideals. Their imaginations are fired by the picture of a small and independent nation speaking its own language, living its own economic life, exclusive as Sparta and honored like Sparta. "What was it put you astray?" asks Bridget of Cathleen ni Hoolihan who stands for the spirit of Ireland in Mr. Yeats's play. "Too many strangers in the house" is the answer of the old woman, who is transformed into "a young girl with the walk of a queen." A nation of poets and dreamers such as the leaders of this Renaissance envisage is probably alien to the ambitions of every practical Irish politician who desires to regenerate Irish national life. But to interest the Irish people in Ireland, to turn their eyes from America, to rouse them from the lethargy that is fostered by their morbid religious life—that must be the aim of every Irish patriot. The Gaelic movement has undoubtedly reached the people and stimulated them to a common interest. Even though, in the future, it is likely to be swamped by more material and practical interests—the interests of an Ireland drawn into the main current—this increase of vitality will not have been wasted.

Mr. Yeats is one of the chief promoters of the Irish National Theatre Society, whose foundation is one of the most hopeful achievements of the movement. The three plays in the volume before us have been performed with great success in Dublin by the Society, and in London their performance has at least roused curiosity. The first play, "The Hour-Glass," was acted, it will be remembered, in New York last April at the Garrick. It is a sort of "morality" play of the type which "Everyman" has made familiar. A Wise Man, who symbolizes the lust of knowledge, has succeeded in expelling religious belief from a whole community. Only Teigue, the Fool, clings to his superstitions. To the Wise Man appears an Angel, who, standing in the doorway, announces that he must die within the hour and without hope of salvation unless he can find a single believer whom he has not perverted. His wife, his children, his pupils have been too well trained by himself. But the Fool, who, because he has never lost his visions, is wiser than the philosopher, saves his soul as the last grain of sand runs out of the glass. "Cathleen ni Hoolihan" is Young Ireland, who appears as an old woman, the traditional Shan Van Vocht, and persuades a young man on the eve of his wedding to leave his bride and join the French who are landing to fight against England. Michael puts aside the entreaties of his bride and his parents and goes away with the old woman, who, as she leaves the cabin, is transformed into a fair young girl, Ireland, throwing off her decrepitude and renewing her youth when the young men answer her appeal. In the last play, "A Pot of Broth," Mr. Yeats forsakes allegory and symbolism for pure comedy. It is the only one of the three that is essentially Irish, for Young Ireland might as well be Young Italy, and the Wise Man and the Fool are of no nationality. But the humor of "A Pot of Broth"—the beggar who trades on superstition and the miserly countrywoman who lets herself be wheedled out of a dinner by a present of a stone that makes "grand broth" or poteen if desired with the aid of a little boiling water; the husband, only half convinced; the priest, who will lose the dinner that was being prepared for him and is appropriated by the eloquent beggar—these are a faithful reflection from cabin life. It is curious to find Mr. Yeats at his best, on the dramatic side, in comedy. He is to be judged as a writer of plays by the shorter pieces such as the three in this volume. In a long play, such as "Where There is Nothing," which was a signal failure in London last June, when produced at the Court Theatre, he does not succeed in being either coherent or dramatic. But his short plays have so far been spirited and effective.

Queen Elizabeth and the Levant Company. A Diplomatic and Literary Episode of the Establishment of Our Trade with Turkey. By the Rev. H. G. Rosedale, M.A., D.D., F.R.S.L. Henry Frowde. 1904. Pp. xii., 92; 26 facsimile illustrations.

That Queen Elizabeth was of a frugal mind has been amply proved on divers counts, and so it is no special surprise to learn that she made the English trading companies support her ambassadors. Such at least was the case with the Levant Company at Constantinople, as Dr. H. G. Rosedale has developed it for us in this sumptuous folio. It is a tiny bit of mixed com-

merce and history that he treats, but the matter is illuminative and suggestive enough. The agent of the Levant Company was Sir Edward Barton, paid by them, but acting also as English ambassador. In itself this was a hard combination to handle, but Turkish complications made it especially hard in 1595. In 1594 the company had brought itself to the point of sending a large conciliatory present to Sultan Murad III. (Amurath in our annals); but on January 16, 1595, new style, he died, was succeeded by Muhammad III., and the present had been practically thrown away. Get the company to make another, Sir Edward Barton could not; yet, if none were made, he saw that English trade would be killed. His only hope was Elizabeth, and her penuriousness did not allow that hope to be large. However, he set to work, by cunning narratives of the situation at Constantinople and of the virtues of the most virtueless Muhammad, to move the Privy Council and the Queen to pay for another present. But for all this he needed time, and so he had to hold up by various devices the ordinary diplomatic communications on the new accession, that present and congratulation might not be too far apart.

The skein is a tangled one, and this book evidently gives only a few threads. Principal among them is a long narrative—a most evident *Tendenz-schrift*—telling of the death of Murad and the accession of Muhammad, and drawn up for Sir Edward Barton in Italian by a certain Jew, a dragoman and spy of antecedents. This was meant as a most potent lever to bring the Council to terms, yet it was not until the autumn of 1599 that the present, a mechanical organ and gilded carriage, reached the Sultan. The organ-builder, Master Thomas Dallam, has left in his diary a naïve account how he, in terror of his life, had to display it to the Sultan, and came out in the end with forty-five sequins, "not a little joyfull of my good suckses."

Dr. Rosedale has been careful to give facsimiles of many of the documents quoted, but his renderings are not always very exact. On chronology he is weak. New Style and Old Style and the Muhammadan reckoning have bothered him. Thus, on page 5, the date of a letter is given as the first of Rabi'a 1, A. H. 1002, and is rendered as A. D. 1594. The corresponding date was really November 25, 1593. Similarly, on page 59, the middle of Safar, 1004, is rendered A. D. 1596. It was rather the latter part of October, 1595. On page 20, in the translation of the long Italian document, Murad is said to have died January 6, 1595. The Italian gives more fully and accurately January 6, O. S., and January 16, N. S. But on page 23, still in the translation from the Italian, the date is given "in the night of January 6 [according to modern style]"; the Italian has rightly, "di notte alli di Gen. alla moderna." On page 57, in a letter from the "Viceroy of Constantinople" to Queen Elizabeth, is a very obscure passage. "Nel anno 1003 alli di luna di Gumasiul evel" can hardly mean anything but "in A.H. 1003 on the 16th of Jumada 1," *i. e.*, January 28, A. D. 1595. Dr. Rosedale renders this, "During the year 1003, on the 16th of the month of January"; and it is true that Murad died on the night of January 16, 1595, N. S., but the translation is quite impossible. Apparently the Italian translator of the Turkish original must have blundered.

The equipment of facsimiles is most complete, but it would have been better if we had been told whence the portraits were derived. Some are evidently from old prints, but the frontispiece, called a "rare engraving of Queen Elizabeth," and truly a most curious effigies, does not look like an engraving at all.

La Fayette dans la Révolution, 1775-1799. (Politiques d'autrefois.) Par Henri Doniol. Paris: Armand Colin. 1904.

This book differs very widely in manner of treatment from the notable study which the same author devoted some time ago to the evacuation of France by the Prussians. In his monograph entitled 'M. Thiers; le Comte de Saint-Vallier; le Général de Manteuffel,' M. Doniol discusses at great length and with minute scrutiny of detail the diplomatic relations of Paris and Berlin during the years 1871-1873. The series of essays which he styles "Politiques d'autrefois" is conceived in the spirit of criticism rather than of investigation, and will be valuable chiefly as representing a certain type of opinion.

La Fayette has undoubtedly suffered in the eyes of posterity from the nickname of Grandison-Cromwell which was fastened on him by Mirabeau. Few, probably, would go so far as to question the sincerity of his idealistic professions, especially during the period of his American adventures; but to sympathize with the National Convention while at the same time applauding La Fayette is an impossibility. Accordingly, the writers who defend the radical measures of 1792 and 1793 are bound to hold a brief against the commander of the National Guard. Timidity, vanity, lack of humor, and political incapacity have been charged against him by a large number of recent writers. That one who had enjoyed unbounded fame and real influence in 1791 should so suddenly lose his power and political standing in the spring of 1792, may be no more surprising than other vagaries of the revolutionary movement; but the circumstances under which the fall took place have given color to repeated charges of incompetence. M. Doniol, in other respects an unqualified admirer of La Fayette, admits that he was at fault when he began to treat with the enemy in 1792, but for this error he finds extenuation in the relations of the General and the Court:

"Il avait commis la faute par esprit de gouvernement dans l'ordre d'idées qui avait présidé à l'institution nouvelle; le gouvernement pratiqué avec sincérité de la part de la royauté et de celle des sujets, sans esprit d'artifice, conséquemment sans suscipions. Il l'avait commise n'admettant pas d'autre mode que de pratiquer cette institution pour remédier à ses insuffisances ou à ses imprévus et pour préserver des emportements."

For M. Doniol, La Fayette is a true hero of the constitutional age, an enlightened champion of the ideas which triumphed in 1789 only to be overwhelmed by the excesses of the Legislative and the Convention. It is quite possible to espouse La Fayette's cause and principles without having much enthusiasm for him as a political leader, but M. Doniol's appreciation of the man does not spring merely from belief in the justice of his views. It is the personality quite as much as the system which we are called on to revere. A passage from the Memoirs of General Thiébault strikes the keynote of this volume. At the fête of the Federation in 1790, when La Fayette was galloping through the Champ de Mars, a voice from the crowd exclaimed: "Le voyez-vous? Il galope dans les siècles à venir." M. Doniol presents him under the figure of the citizen-soldier riding at the head of the troops of freedom, undaunted by faction, and drawing perpetual inspiration from his pure belief in the principles of liberty. Thinking thus, he lays much stress on his letters from prison: "On en formerait une merveilleuse *Morale en action* pour l'enseignement civique en vogue actuellement. Elles consacrent l'admiration qu'inspira La Fayette à deux générations successives du dernier siècle." It is certainly in this body of correspondence that the La Fayette of the Revolution discloses himself to the best advantage, for here his lack of skill in practical politics cannot obtrude itself, while the nobility of his sentiments carries the more force from its association with his sufferings.

M. Doniol devotes a third of his space to La Fayette's part in the American Revolution, and a quarter of it to a chapter on the eve of the Consulate; but the central section of the study, in respect to both position and importance, is concerned with "The Years of Power and the Years of Gaol." If a man's political career is to be tested by the weakest link of the chain, the first half of 1792 is the critical point for any biographer of La Fayette; and even if we are not inclined to accept so severe a standard, this period is of vital interest. M. Doniol's treatment of it is marked by judgment and candor—qualities which are not absent from the other parts of his attractive essay.

The Pathway to Reality: Being the Gifford Lectures delivered in the University of St. Andrew's in the Session 1903-'04. By the Right Honorable R. B. Haldane. E. P. Dutton & Co. 1904.

Mr. Haldane's 'Pathway,' which has now reached its "second stage," may be regarded from various points of view. In noticing its first volume we regarded it mainly as significant of the intellectual hobbies of prominent British politicians. Its title suggests that it may be an excursion into Hegelian exegetics, a sort of scramble over the terminal moraine left by the retreat of a once imposing but now greatly shrunken glacier of the philosophic world, in conducting which Mr. Haldane acts as an expert "ladies' guide," stopping to emit sympathetic groans about the hardness and stoniness of the path (pp. 13, 18, 95, 271), dallying a little with flowers of poetry he picks up by the wayside, and, when he finally penetrates to the *séracs* and crevasses of the ice-fall, calling on his gratified followers to note the fearful abysses of thought on the brink of which they stand (p. 14). But though this view is suggested also by the easy eclecticism with which Mr. Haldane grasps at post-Hegelian doctrines when he comes to the *mauvais pas* of his route (*e. g.*, Professor Royce's idea of a *totum simul*), yet it would not do justice to his intention. Mr. Haldane has also aimed, more ambitiously, at producing a guide to ultimate reality. Or, rather, since he assures us,

with admirable gravity, that "it is to the history of philosophy [!] that we must turn if we would gain an abiding insight into ultimate reality," he has compiled a sort of guide-book to some philosophic antiquities. He recites the old familiar phrases with the most amiable enthusiasm, and much gush about Hegel, whom he even seems to credit with the portentous discovery that the universe is the "totality of existence" (p. 99)!

But, as he takes no account of criticism, it is not surprising that he should leave the old difficulties much as he found them. Thus, his "proof" that mind is the ultimate reality will hardly seem a successful vindication of idealism so long as it slurs over the fact that it makes relation to a "material" nature as necessary to mind as mind is to nature. Nor does it seem a valid procedure first to argue from the "finite" to the "infinite" mind, and then to conclude that the basis of the inference, the finite mind, has not a real existence (p. 101). Nor does he see that the analogy between the two breaks down, because they have not the same relation to reality, which the one creates and the other accepts. What entitles us, then, to call them both by the same name? Again, on any view of "infinite" mind, how can it have the purposes and ends so frequently ascribed to it (pp. 117, 130, 207)? Mr. Haldane gayly asserts (p. 120) that there is no real difficulty in the problem of evil. But when he comes to it, he merely repeats that it is due to the freedom to choose evil possessed (how and why?) by finite spirits (pp. 129-132). That is, he has recourse to a real indetermination in the universe, which seems incompatible with the absolute rationality Hegelism began by assuming. And how does it mend matters to suggest (p. 133) that anyhow neither evil nor nature exists for "God"? That no doubt destroys the problem *"for God."* But it renders it hopeless *for us.* For we can then no longer look to God for relief from an illusion which does not exist for God. Once more, it is hardly philosophic to reject solipsism because it seems absurd to "instinctive feeling" (pp. 99-100), and it remains obscure why the conception of mind as substance should produce solipsism (p. 60), or how by abandoning this category we are delivered from the perils (what?) of solipsism (p. 70).

Mr. Haldane is hardly more successful in defending Hegelian terminology than in reiterating Hegelian solutions. He repeatedly protests against the scepticism in which Mr. F. H. Bradley's idealism ends (pp. xiii., 73, 265). But he never refutes it, nor even really grapples with it. And it seems curiously naïve to propose that, for the purposes of Hegelian apologetics, *thought* shall be taken to include *feeling,* and shall not be restricted to mere thinking (pp. xiii., 41, 48, 73). For that there is such a thing as discursive thought is not, presumably, disputed; nor that it differs from immediate apprehension. It would seem, therefore, to defy an elementary rule of scientific terminology not to distinguish things which are clearly distinguishable, and for which distinct names exist. Still, Mr. Haldane's motive is clear. A stricter distinction would greatly impair the plausibility of the Hegelian rationalism. Again, Mr. Haldane is, of course, aware that "faculties" are no longer, psychologically, in repute. And this seems fatal to Hegel's play with the antithesis of "reason" and "understanding." But Mr. Haldane thinks that he can save the situation by admitting that they are not faculties but different *modes* of thinking about things (p. 62), and then proceeding to use the antithesis as before!

Now it is hardly credible that if a man of Mr. Haldane's ability had contemplated the Hegelian scheme in the cold-blooded way so often, and so wrongly, supposed to characterize philosophers, he would not have felt these difficulties. But it is clear that he does not so regard it. Hegelism is Mr. Haldane's *religion* even more than it is his philosophy, and what constitutes its value in his eyes is the satisfaction it affords to his religious, rather than to his scientific needs. It is, therefore, from this point of view that his book must finally be judged. Or, rather, it must not be judged so much as respectfully recorded. For the modes of religious synthesis are infinitely various, and often to the outward eye surpassing strange, nor need there be any very obvious connection between the verbal formulation of a creed and its spiritual value. Thus, it is a well-known fact that the monotonous reiteration of the sacred monosyllable "om," or the constant recitation of soul-compelling and mouth-filling cries like "Yah Hassan! Yah Husein!", is capable of throwing some minds into ecstasies of religious conviction. A similar potency is evidently possessed by mystic phrases like (p. 159) "Absolute Mind in itself; Absolute Mind in its hetereity or otherness, under the distinction which it has set up of itself from itself; and Absolute Mind in synthesis, a synthesis which is the real *prius* of the other two." To those who are not born with the Hegelian mind, this will ever remain foolishness, despite all interpreters. But in those who have the proper psychic disposition it may engender a sort of intellectual vertigo, which is the more exquisitely delightful for being communicable only to the elect. Modern psychologists, of course, have discovered that they can mimic and artificially induce these ecstasies by nitrous oxide and the like. But even psychologists could hardly explain the marvel that the religious emotions of the followers of the Guiana Indians' prophet "Jeremiah" should be stimulated by chanting the multiplication table in English, while those of the Scottish lawyer should react rather to the more dubious verities of the Hegelian categories in German. As, however, the intricacies of religious psychology come to be better known, we shall doubtless grow more tolerant and less inclined to limit the pathways by which the soul may seek its spiritual repose.

The Life and Times of Thomas Smith: 1745-1809. A Pennsylvania Member of the Continental Congress. By Burton Alva Konkle. With an Introduction by the Hon. Hampton L. Carson, LL.D. Philadelphia: Campion & Co. 1904. Pp. 303.

Mr. Konkle has given us a good biography of his subject in connection with a careful account of the political conditions of his time. Thomas Smith, surveyor, lawyer, State representative, and member of the Continental Congress, and judge, was what may be called a public man of the second order. But it is well that we should have careful studies of public men of the second order, because the student is usually less concerned with the larger tendencies of the time, and, consequently, is less likely to be influenced by the conventional interpretation of the period. This is particularly true of the Revolution, which has been viewed too exclusively as a movement for independence of England. More detailed studies of local interests and of local men will aid in correcting this error.

A considerable portion of Mr. Konkle's book (chapters v.-x.) deals with the political history of Pennsylvania during the Revolution and the decade following. The keynote to the party struggles during this period is to be found in the conflict between the extreme radicals and the moderate conservatives. The State Constitution of 1776 gave expression to the rather democratic views of the extreme radicals. The conservatives opposed the Constitution of 1776, and resisted radical control of the Government *per se* and not because they were opposed to the war. Yet the radicals maintained their position throughout the Revolution, because they had the immense advantage of posing as the only true "patriots." In withstanding them the conservatives, on the other hand, incurred the stigma of "loyalist." "The very critical situation of public affairs is of much advantage to the Assembly and their friends," Wilson writes to St. Clair. "While we oppose tyranny from a foreign power," he says in another connection, "we should think ourselves lost to every sense of duty and shame, were we tamely to acquiesce in a system of government which . . . will introduce the same results . . . among ourselves." Smith was one of the conservative leaders, and his opposition to the radical Constitution resulted in the loss of his offices. What impresses one in the study of Pennsylvania politics during this period is, indeed, the extent to which interest centred in the question of the organization of the State Government and the policy of the State administration; the war seems almost to have been of secondary importance.

There were bound up in the Revolution, in fact, two great questions, not necessarily connected with each other—the questions of the relation of the colonies to England, and the question of the extension of political privileges to the unfranchised in the colonies. In the colonial period the assemblies were in the hands of the property classes, but, in resisting the royal governors, they were forced to justify themselves by an appeal to natural right and popular welfare. They seemed to stand for democratic principles in government, and their constant insistence upon the rights of the colonists as against the governors fostered the democratic spirit and led the unfranchised classes to hope for political equality. The Revolutionary struggle, because it was conducted in part outside the assemblies, opened the door to the unfranchised, who for the first time became a force in practical politics, but were working, directly or indirectly, quite as much for political equality with the property class as they were for home rule in respect to England. The result was that the property class in the party that had steadily resisted the colonial governors, began, soon after 1765, to take a conservative attitude. They became

conscious of their inherent conservatism; and from 1765 until far into the Revolution the history of factions centres in no small measure in the opposition of this class to the growing influence of those who had previously had no share in political action. The indifference to the war that existed in many States, the bitter factional conflicts, the continued application of the term "loyalist" to many who gave their support to the war, the reaction which is exhibited in the State constitutions and which found its full expression in Federalism—these things cannot be perfectly understood while the Revolutionary period is regarded exclusively from the standpoint of home rule. The question of home rule was complicated by the question whether home rule, if allowed, was to be based on equality or restriction of political privilege.

In tracing the public life of Thomas Smith from 1776 to 1791, Mr. Konkle has done something to emphasize these facts. He has apparently been at great pains to examine the original sources, the most important of which, naturally, are the Smith papers. The public documents at Washington, Philadelphia, and Harrisburg have also been used extensively. In handling this material the author has exhibited good judgment, if not always, perhaps, the skill of the trained historian. His method, we are told, has been the simple one of introducing "the reader at once to the original sources." While one might infer from this that the book is a collection of extracts accompanied with connecting comments, such is far from being the case. A valuable feature is a number of maps worked out by the author from the records, representing such phases of Pennsylvania history as the county organization and the Indian purchases in 1768. In all there are forty-three illustrations, mostly very good ones. The story is interestingly told, in a style which, if it has no special excellence, has no marked defects, except a certain rambling diffuseness. Errors are infrequent. The author speaks of Thomas Smith's brother, William, having published, in 1757, a 'History of New York' (p. 14). So far as we know, there was only one 'History of New York' published by a William Smith, and he, certainly, was not the brother of Thomas. Mr. Konkle has also adopted the common misconception that the colonies were to be taxed to "pay off the great war debt" (p. 16). A more detailed and precise description of the sources used would have been helpful.

Air, Food, and Exercises: An Essay on the Predisposing Causes of Disease. By A. Rabagliati, M.A., M.D., etc. Third edition, greatly enlarged and almost entirely rewritten. New York: William Wood & Co.

In this essay for the laity the author maintains that the chief error in the physical life of man is overfeeding. If one were to assert baldly that he explains in this way the occurrence of barber's itch, cancer, pneumonia, and other diverse serious disorders, we fear that few would spend time or money upon the volume. Nevertheless, he believes "the disease of *sycosis menti* to consist not by any means in the presence of the parasite as in . . . the state of the body and tissues" (p. 492); as to cancer, the rapidly increasing malignant disease of temperate climates, that "the essence of the disease . . . is the hypertrophy [overgrowth]; the occurrence of parasites [pathological cells], the accident. . . . What sources can there be but the environment of the organism . . . and . . . what so likely to be the chief cause of change in the body as the food?" (pp. 397-8). "In many instances . . . persons attacked with pneumonia have had no previous illness at all in years. . . . He lived freely and indulged in the pleasures of the table. I cannot doubt that this was the reason why he was struck down by an attack of pneumonia" (p. 461). The interpretation of these unusual expressions seems to be that errors of diet in the wide sense, not the casual use of unfit food causing temporary indigestion, but habits of eating that persistently oppose the course of nature, lead to a general vital depression which lowers resistance to the agencies of disease. In other words, such errors collectively are important assignable causes. The author goes so far as to say: "I think that the chief predisposing cause of . . . measles, scarlatina, diphtheria, typhoid fever, influenza, and the rest [of the acute fevers] is improper feeding, and chiefly overfeeding." To claim that immunity to the contagious eruptive diseases may be attained by a theoretically perfect dietary seems the veriest nonsense, whereas it is doubtless true that persons fall victims to the infectious diseases at large, as consumption, influenza, pneumonia, and diphtheria, in proportion as their resistance, whatever may be its essence, is lowered.

Dr. Rabagliati seems to have had an extensive practice for a long time, and cites example after example of weak and thin people who have become strong and stout by diminishing the quantity of food, and particularly the frequency with which it is taken. Notwithstanding his Italian patronymic, the author writes primarily for an English environment, and it would be amusing were it not simply affecting to observe by his formal notes how completely life may centre about the table. Where the quantity of food, and particularly of carbonaceous food, was materially reduced, the essayist's patients appear to have done well, whether they had asthma or white swelling. We can accept the author's practice more readily than his doctrine, and faithfully follow the Book of Common Prayer in asking to be kept temperate in our meats and drinks, confident that, if our petition be granted, at least physical blessings will follow. Many may look upon the standards suggested as unreasonably low, but let them be compared with the rations upon which the Japanese army is campaigning, with the regimen of the Bedouin, with the sustenance of our own Indian runner or his cousin the Mexican courier, or with the food that sustains the Italian laboring on our public works. Those who merely eat to live will enjoy a life physically worth living.

We cannot follow our author in his doctrine that "the disease of misery," and also of comfortable life—cancer—primarily depends upon excess of food, even as excess is qualified in the text. But this vagary does not detract from the general value of the paper. The doctrine grows that the balance of unexpended nutriment is more than negatively harmful. That balance does not pass away mechanically and innocuously. It clogs the system, it interferes with the vital machinery, and it reacts. The morning headache from alcoholic excess is an acute symbol of what occurs more slowly when superfluous food is stored within the body, instead of in the larder. These consequences are gradual, but they are persistent. Nevertheless, they seem too slender a foundation for the doctrine "that on the whole the causes of disease, of all diseases, are practically the same" (p. 381), and to be avoided by self-restraint.

The text contains approximately 160,000 words, but it might be compressed, without loss and with more force, into one-sixth as many. The book is attractive except as to bulk. The index is indifferent.

Sir William Henry Flower. By Charles J. Cornish. Macmillan Co. 1904. 8vo, pp. xii., 274. Portraits.

William Henry Flower, third son of Edward Fordham and Celina Greaves Flower, was born at Stratford-on-Avon, November 30, 1831. Much of his father's early life had been passed in America, where he took a keen interest in sport and still more in the struggle for the suppression of the slave trade. After his marriage he settled at Stratford, being the founder of the brewery which is the principal industry of the town, and from which he amassed a competency. In 1871 he moved to London, where he was known for his philanthropy, especially in behalf of the suppression of cruelty to animals, and where he died in 1883.

The subject of this memoir was educated in various schools and at University College, which he entered in 1847, and where, in spite of interruptions due to delicate health, he won many honors; afterwards pursuing medical studies at the Middlesex Hospital, where in 1853 he was appointed junior house surgeon and curator of the Hospital Museum. From his youth he was devoted to natural history, a taste encouraged by his family and by his teachers at college, among whom were numbered such eminent men as George Busk, Campbell De Morgan, and Lord Lister.

In 1854 he joined the medical staff of the army, was attached to the Sixty-third Regiment of Foot, and proceeded to the seat of war in the Crimea. Those who would realize the changes which have taken place in the last half century in matters of hygiene and military equipment, may read Flower's letters from the field with profit. Indeed, the lack of everything like efficiency or comprehension of the needs of the occasion by the British authorities of the day seems to the present reader almost inconceivable, and even then presented a shocking contrast to the equipment of the French contingent of the allied army. Flower did all that could be done under the circumstances, but, after less than four months' service, his health gave way and he was invalided home, with honors. In 1857 he received his surgeon's diploma and returned to the hospital and to private practice.

On April 15, 1858, he married Georgiana, youngest daughter of Rear-Admiral Smyth, well known for his astronomical researches. This marriage proved ideal in its results; for more than forty years its happiness was unshadowed by death or serious misfortune within the limits of the family, to which Sir

William was ardently devoted. In 1861 he gave up practice to accept the post of Conservator of the Hunterian Museum of the Royal College of Surgeons. Here he spent twenty-two years, during which he revolutionized the classification and arrangement of the museum, and greatly enlarged it, while constantly contributing to the literature of comparative anatomy, and acquiring the warm friendship of such veterans as Owen, Huxley, Lyell, Hooker, and Darwin. The new Natural History Museum at South Kensington, largely owing to the untiring efforts of Richard Owen, was completed, and the collections transferred from Bloombury in 1881; but Owen's years and infirmities obliged him to retire two years later. By an almost unanimous public as well as official opinion, Flower was indicated as Owen's successor, and began his duties in March, 1884. Early in 1897 his own health, in turn, became precarious, and in June he felt obliged to resign his office; he lingered for two years, dying July 1, 1899, in the bosom of his family. For details of his life and the various honors heaped upon him, we must refer to the volume under review. Here we can attempt but a brief summary of what he was and what he accomplished.

Flower was a man of noble presence, striking manly beauty, and of a most kindly and unaffected nature. This is evident when we note that he succeeded in being at one and the same moment the friend of Huxley and Richard Owen, and that, being one of the early evolutionists, he yet preserved the affection of the Duke of Argyll without in the least receding from the position which seemed to him to be indicated by the facts. He was a devout and humble Christian, a self-sacrificing worker, a miracle of persistent, steady devotion to the profession he had at heart. With these gifts he succeeded where greater men had failed. He was, we may fairly say, the first man in Great Britain to elevate the keeping of a museum into one of the higher professions; was one of the first in the world to introduce modern ideas into the administration of museums, and the originator of many most important advances in the methods of museum administration. He was an excellent comparative anatomist, a specialist in the first rank of students of the Cetacea, a useful contributor to anthropology, a lover of poetry, of outdoor life, of children, and animals. Not a genius, he was lamented more than any scientist of his generation, in his own country, and by those of other lands who had had the privilege of his friendship and knew his worth in spite of his modesty. He was loved by his colleagues and honored by his Queen and those in authority.

It was well that a memoir should be written to keep him and his work in remembrance among those whose professional lines lie in other directions. The volume is well printed, supplied with several excellent portraits, a full index, and a full, but not very workmanlike, bibliography of some two hundred titles.

Weale, B. L. Putnam. Manchu and Muscovite. Macmillan.

"Such a setting forth of the institutions, customs, and beliefs of the people of India as gives the Hindus' own side . . . the spirit of the book is transparently informed with her exalted simplicity of purpose to tell the very truth and the inner truth. . . . The style is a little out of the ordinary usages of speech for plain statement. But this is only to give the deep, impressive revelations their proper atmosphere. . . . We only cite enough to excite a wholesome desire on the part of open-minded American students to see what is to be said by one who faithfully works herself into the very skin of the devout Oriental."
—From a column and a half review in the BOSTON TRANSCRIPT.

Study Your Children

THE CHILD

His Thinking, Feeling, and Doing

By AMY ELIZA TANNER, Ph.D., Professor of Philosophy in Wilson College, Chambersburg, Pennsylvania; formerly Associate in Philosophy in the University of Chicago. Cloth, 12mo, 430 pp., $1.25, postage prepaid.

A book for mothers and for teachers. It traces the development of the child from birth to adolescence, noting the connection between physical and mental growth, and between the various forms of mental process, and points out what conclusions as to the proper treatment of children can legitimately be drawn from these facts.

"The best book on child-study yet brought out, with results presented intelligently."—John Dewey, "School of Education," Chicago. "An unusually strong book, of plain and forcible treatment."—J. F. Millspaugh, President Winona State Normal School.

For further facts concerning this book, write for "Circular No. 10," or send money order for a copy of the book. Address

JOHN LANE : NEW YORK

(From the Journal of Commerce, N. Y.)

"Three noteworthy stories in American literature have to do with the world famous Profile in New Hampshire: Hawthorne's *The Great Stone Face*, Edward Roth's *Christus Judex*, and Mrs. Slosson's *The Heresy of Mehetabel Clark*. The three tales are unlike, but all strongly combine literary art and a moral lesson—all the more impressive because unforced. Mr. Roth's book has for some time been rather hard to find."

READY SEPTEMBER 7

Dexter's History of Education in the United States

By EDWIN GRANT DEXTER, Ph.D., Professor of Education in the University of Illinois.

Cloth, 8vo, $2.00 net (postage 16c.)

The most comprehensive study of the educational development of our country, elementary, secondary and special.

The first important account of the essential facts, as distinct from theories, of education in this country.

The factors of our social organization outside the regular schools, which have been potent for educational extension, are also discussed.

It will prove indispensable as a reference book to every student of education, and of unusual interest to the general reader.

The Nation.

NEW YORK, THURSDAY, AUGUST 25, 1904.

The Week.

The new electoral apportionment which makes a Democratic victory impossible without some Western votes, gives national interest to every new development in Wisconsin. The same point has now been raised regarding the eligibility of three Republican nominees for Presidential electors which was raised in New York earlier in the year respecting certain electors on the Democratic ticket. They are held to be ineligible under the Constitution because they are national-bank directors. As it happens, these three are among the eleven electors who chose to have their names in the La Follette column of the ballot. If they withdraw, several possibilities present themselves. The Stalwarts, who have now on their ticket only two of the electoral candidates, may take the opportunity at once of filling the places of the ineligibles. La Follette's faction, under the law, would then have the choice of leaving these three places vacant, or naming three new men, or taking chances with the men objected to. If they chose either of the last two courses, it would give the Democrats at least as good a chance of three electoral votes as they have now of electing their gubernatorial ticket.

The campaign which opened on Friday in Wisconsin is likely to prove one of the hottest the country over. Certainly Gov. La Follette's opening speech, charging wholesale bribery of his delegates in the State Convention of 1896, is not calculated to narrow the breach between the two factions or make easier the task of those national leaders who would like to patch up a compromise. He also made it perfectly clear that even if the Supreme Court decides he is irregular, he will remain a candidate. His "Stalwart" opponent is expected to withdraw if the decision is against him; but as most of the bitter anti-La Follette men will vote the Democratic State ticket, this may really be of secondary importance in determining the result. In a long continued fight like this, where the arguments and the issues are familiar to every voter, party regularity is not so much coveted as usual for its own sake.

Good Republicans must regard with mixed feelings the accessions of old-time Populists to their ticket. It is not easy to reconcile the conception of a Democracy still immersed in Bryanism and a Republican party standing for all that is conservative and solid, with the fact that some leading radicals seem to find Mr. Roosevelt nearer to their ideal than Judge Parker. Here is ex-Senator Pettigrew sitting on the fence, and ex-Senator Butler of North Carolina an outspoken Roosevelt partisan, while the Populist national committeeman from Texas declares that from his party's point of view the Republican ticket is the lesser evil. Votes are votes wherever they come from, and it does not always follow that because one politician of prominence takes a new position, all his former followers will do the same. Still, the flocking of birds of this particular feather would have been deemed by the Republicans an impressive augury had it only been in the other direction. The support of Pettigrew and Butler would have been taken as proof positive that the Democracy had not yet attained safety and sanity. What does their attitude mean now?

Both Republicans and Democrats were willing enough to put off the Smoot investigation until after election. Meanwhile, the situation in the States where the Mormon vote is heavy has become complicated. Senator Smoot is warned that if he persists in active participation in State politics to the point of dictating nominations and electing his candidates, it will certainly be taken as proof of Mormon domination in politics, and he himself, on probation in the Senate, will suffer the consequences. In other words, if Mormon interference is seen too clearly in a Republican victory in Utah and the neighboring States, the sentiment of the rest of the country, which has been in abeyance since the sensational disclosures of last winter, may demand the unseating of the Mormon Senator. The Utah Democrats have entertained the hope of persuading the Church, for once, to take no part in an election and let the individual members vote as they choose. As to the two parties, it is six of one and half a dozen of the other, but there are contingencies in which the votes of a few Rocky Mountain States might hold the balance in electing the next President.

Few Republicans are likely to be deceived by Governor-Chairman Odell's little joke about an "open convention in which the delegates will select the candidate for Governor." Were he speaking seriously, he would express his conviction that free conventions are the ruin of our present party system, and consequently of our Government. For example, what would have happened to the party of moral ideals in New York had not that eminent moralist, Thomas Collier Platt, assisted by such minor prophets as John Raines and Louis F. Payn, done his best to keep the conventions tight shut? What were the Sunday schools at the Fifth Avenue Hotel for except to prevent such a dire catastrophe as a free scramble for places? Mr. Odell himself is reported to hold strict views as to the necessity of "discipline" within the party, of leaving the settlement of vexed questions to "wiser heads." The foolish privates in the ranks at least know enough not to intrude upon their superiors their crude and undigested opinions as to the availability of Nevada N. Stranahan, Francis Wayland Higgins, and Timothy L. Woodruff—that is, all the privates except the Woodruff shouters, who have always been conspicuous for not knowing anything whatever. Mr. Odell's near and dear friend, the *Newburgh News*, Court Jester for the last four years, loudly declares that there is a strong popular demand for a third term of B. B. Odell, jr. If Mr. Odell listens to this flattering voice—as every Democrat is earnestly praying he may—he can be trusted to close the convention with a snap.

"I should be ashamed to mention McCarren's name in decent society," said Charles F. Murphy on Thursday. Without pretending to Mr. Murphy's intimate knowledge of the usages of decent society, we may safely assert that his judgment of Senator McCarren is correct; and, what is more, Senator McCarren would be justified in using the same words of Murphy. Neither is fit for decent political society. The fact that both are nominally Democrats and presumably supporters of Judge Parker does not alter either their characters or ideals, and does not lessen the necessity of describing them as they are. The chief of a faction of the Brooklyn Democrats and the Tammany boss are wholly destitute of real political principles; they are machine organizers pure and simple; and they are at present engaged in a particularly petty and disgusting brawl over patronage. Their loud wrangling attracts the attention of the country at large, just as a dog-fight draws a crowd on the street. Many people, both within and without New York State, labor under the delusion that because these two quarrelsome politicians are making such a hubbub they are the actual leaders of Democratic opinion, the champions upon whose efforts the success of the ticket in this State depends. Nothing is farther from the truth. They have no opinions except as to spoils; they never have rallied and never can rally a following among men who think; and the success or failure of Judge Parker will rest

upon causes that lie far deeper than the surface squabbles of ward politicians.

The political situation in Massachusetts has seldom been more interesting than at present. The State is in revolt against Lodge, and at the same time is facing the possibility of filling out Senator Hoar's unexpired term (1904-1907). In the event of his death, his successor will be elected on the same day that the Legislature ballots on Lodge's return to the Senate. Never before has a Senatorial election been held under such conditions in Massachusetts. For the moment the question of filling Senator Hoar's place has diverted attention somewhat from the disciplining of Lodge. Will a man of the Lodge type be selected? The junior Senator is admittedly the most adroit character that has figured in Massachusetts politics for many a year; though not a boss in name, he has long had the reputation of "carrying the State in his vest pocket." The question now is, Will his influence predominate in the choice of Senator Hoar's successor; and if so, will it be exerted for good? Time alone will answer, but there is ground for hope. If Senator Hoar passes away immediately, Gov. Bates will appoint a successor, who will hold over until the meeting of the Legislature. That he will choose a man of high standing is taken for granted; the names most frequently mentioned being those of ex-Gov. Crane, ex-Secretaries Long and Moody, and Gen. William F. Draper, ex-Ambassador to Italy. The belief is that ex-Gov. Crane can have the Senatorship if he desires, and the chances are more than even that the Legislature would ratify the Governor's action.

The arrival at this port of the 33,000-ton steamship *Minnesota* emphasizes the fact that there is nothing this country cannot do—if it is prepared to pay the price. The price in this case has been pretty heavy. The boat was built at New London, and cost 28 to 30 per cent. more than if she had been bought abroad. She is a fine product of a protective tariff, but was obviously not constructed to make money. Her mission is to ply the Pacific in connection with the Great Northern Railway. She will come into competition with foreign boats of vastly less cost, and if she should charge the rates necessary for a fair return on the investment she would unquestionably go whistling for cargoes. It is hoped that, as a feeder to the railroad, there may be an indirect profit in her; but even this is doubtful, for President James J. Hill of the Great Northern road told the Merchant Marine Commission in May that the *Minnesota* and her sister ship, the *Manchuria*, were an "experiment." Anybody, he said, who would agree to run them for a certain period could have them "on very liberal terms." A merchant marine of this character will certainly never bring this country the $450,000,000 a year which Great Britain derives from doing the carrying trade of the outside world.

Now that the billet pool has collapsed and wire products have been reduced, it seems only a question of time before other prices in the steel industry will be declared open and rate agreements of all sorts ignored. All this has come about through the cut announced by an independent producer and through the retaliatory measures adopted by the Trust to "protect its business." Everything now depends on the permanence of the rail pool and the ability of the mills to continue the $28-a-ton schedule, which the railroads declare to be excessive. While concessions in this branch have been hinted at, the compact has survived much opposition, and, since it affects the most important branch of the industry, every effort will be put forth to maintain it. The trade knows too well that pool prices in many instances were ridiculously high. While the interests precipitating the struggle are said to have been actuated by ulterior motives and a desire to unload one or two unprofitable plants on the Trust at fabulous figures, the situation was coming to a point where a break would have been inevitable and prices must have been adjusted to a greatly restricted demand.

How completely the old conditions have returned in the Building Trades is shown by the arrest of Philip Weinseimer on the charge of extortion. One would hardly suppose, from this, that the whole industry was purified less than a year ago. The arbitration agreement was directed chiefly against the walking delegate. Unions were liberally recognized, were given access at any time to employers; but it was solemnly stipulated that their representatives should not be business agents. This, of course, implied the obligation of employers to cease paying blackmail. Yet one sub-contractor, according to his own story, has been buying favors since December last. It is true that Essig, the offending plumber, is not directly a member of the Employers' Association, which to that extent escapes responsibility for his acts. But the incident is only another sign that the blame for the present demoralization in the building trades is divided equally between masters and men. As long as there are dishonest employers ready to pay blackmail, there will be walking delegates ready to take it. Evidently the one way to mend matters is to establish the open shop.

The citizens of Bridgeport are getting a taste of ward politics as applied to library administration, and wry faces are plentiful in the city. Dennis Mulvihill, the "stoker mayor," has been looking about to find out how to strengthen his organization. He saw that the superintendent of the public library and the librarian, Mr. and Mrs. Hills, who had been in the library service, one since 1891 and the other since 1879, two years before it became a city institution, did not control a ward or even a block of voters. The death of four members of the board of control and the expiration of the terms of two others gave the "stoker mayor" his opportunity to appoint a majority of the trustees. Among these he included, according to the Bridgeport *Standard*, an undertaker who had once been in the saloon business, a journeyman plumber, a real-estate and insurance agent, and a factory contractor. This majority of choice spirits in the new board, after refusing to reappoint Mr. and Mrs. Hills, elected as superintendent "a man of little education," as the *Library Journal* describes him, "best known to the Bridgeport public as the former manager of a place of amusement popularly known as 'Chippy Island.'" The mayor has explained the appointment in this way: "He[the new superintendent] has had hard luck and needs the salary for a while." Because of the appointment, one bequest of $125,000, which had been promised for the establishment of a branch library, has been lost. As the *Library Journal* observes, the facts point the moral.

Until the British note on recent seizures by Russia, declaring that food in transit in neutral ships is not contraband of war, is published, it would be premature to discuss the merits of the view. No high tribunal has, we believe, taken so advanced a view as that. Generally the English and American courts have held that provisions are contraband when a strong presumption of their military destination can be established. All decisions have discouraged the attempt to trace cargoes of this character beyond the port for which their invoices read. However, it may be said that any regulation which limits interference with neutral vessels on the high seas, and which devolves the duty of intercepting contraband traffic exclusively upon blockading squadrons, is in the direction of civilization. For this reason we are not sorry to see Mr. Hay making similar representations concerning contraband to St. Petersburg. Yet it should be remarked that if the right of search on the high seas is to be so strictly limited as the British note suggests, there must be a corresponding increase in the conception of territorial waters. The obsolete three-mile limit should be extended to a distance covering all reasonable operations of coast defence or blockade under modern conditions. Until the term high sea has been redefined, na-

tions which, like Russia, assert a sweeping right of search and confiscation, will have much on their side of the question. So the British note, representing probably a view of contraband desirable yet more liberal than the Continental Powers can afford to entertain, is one more argument for an international congress to deal authoritatively with the whole matter of neutrality at sea.

The Japanese Foreign Office, defending the capture at Chefoo, asserts the interesting principle that Chinese neutrality is "imperfect"—in other words, fictitious—since China has no means of living up to her duties as a neutral. This is frank, at least, and it corresponds very closely to the facts of the case, but it is dangerous doctrine, because, first, it assumes that neither Japan nor Russia need respect the neutrality of China, and, next, because the United States, with the European Powers, having declared that Chinese neutrality is perfect, must maintain the doctrine or stand discredited. We have, then, the following rather uneasy situation with respect to Chinese neutrality — Russia abusing it covertly; Japan disregarding it openly; the civilized Powers bound to maintain it. If the various assertions of Chinese integrity, inviolability, and responsibility are pure fictions, they are fictions of a useful and even necessary sort. The doctrine most persistently laid down by Mr. Hay is an ideal to which civilization hopes Chinese facts will gradually approximate. And here comes Japan, rudely dealing with Chinese facts as they are, and bowling over humane theories set up at considerable pains. Nobody could blame Japan if her stake in the matter were vital; as a matter of fact, Japan could well have afforded to settle by usual diplomatic methods the cases of Russian vessels now in Chinese ports. All her acts and representations bear the look, not of wise statesmanship, but of impatience, and are calculated to alienate the sympathy of the Occidental nations. The practical question, of course, is, What are the guarantors of international neutrality going to do if Japan proceeds to act upon her theory of the "imperfect neutrality" of China? The absurd rumor that an American vessel had already intervened shows at least that the fabricators at Shanghai have grasped the seriousness of the situation and one of its unpleasant possibilities.

The conference of consuls at Shanghai arrived at no decision on the *Askold* case, but should have convinced both Russia and China that the affair is of international importance. Sharp warning is served on Japan that a repetition of the exploit at Chefoo would be perilous, and upon Russia that she must not again abuse Chinese hospitality so long as she did in the case of the gunboat *Mandjur*. Of course great pressure is being brought to bear upon both China and Russia to disarm the *Askold*. Any other solution, in fact, would be fraught with embarrassments. For England or the United States to undertake the proper duty of China and escort the Russian vessels to the high seas would be to admit inopportunely the impotence of China and to give a false impression of concern for Russia. In the face of the activity of the Powers at Shanghai, Japan is very unlikely to do anything rash. If, however, the official views of Japan on Chinese neutrality correspond with her statements to the press, it is time for Mr. Hay to circulate another note defending not merely the "administrative entity" of China, but also her effective neutrality in the present war.

At last the Germans are able to report the substantial victory in their Southwest African colony for which Emperor and people have so long been eagerly waiting. Just when the best-informed German press had come to the conclusion that Gen. von Trotha's plan of campaign had failed in every particular, he is able to confute his critics by penetrating the mountain fastnesses of the Waterberg and inflicting a severe defeat upon the Hereros with the loss of only ninety-one officers and men. Apparently the backbone of the uprising is now broken. Even if some of Chief Samuel's tribesmen have escaped, they can be hunted down at leisure. Without their stock and without leaders in whom they can trust, their fate can be readily foretold. That it will take some time—perhaps a year—to stamp out the smouldering embers of the insurrection is quite likely. A much longer period will be required to restore the colony to the conditions existing before the break with the natives. Nevertheless the German Colonial Office must be in a happy mood for the first time in many months. Not only has it had nothing but bad news from Southwest Africa for half a year, but its officials in Samoa, New Guinea, and Cameroons have all been bitterly attacked, and, it would seem, with reason.

A member of the Bavarian Chamber of Representatives, one Dr. Heim, has made himself particularly disliked of late not only because of his manners and methods on the floor, but also because of an ability to make trouble for the Government. He recently rose in his seat to ask the Minister of War if he knew anything of a secret order favoring duelling, issued several years ago to the army, which was directly contrary to the anti-duelling decree of the Prince Regent. General von Asch at once rose to his feet, and, without moving an eyelid, announced that there never had been any such secret order. Thereupon Dr. Heim drew out of his pocket a copy of it, bearing General von Asch's own signature. Naturally, the sensation created was so great as to cause the War Minister to resign, but the Prince Regent declined to accept the resignation, in language which can be construed only as a deliberate attack upon the clever Dr. Heim. Of course, the Anti-Clericals and Liberals are up in arms over the retention, but to no purpose. The Prince Regent's slight popularity is not increased by this act, or by the double-faced position in which the Government now finds itself with reference to duelling.

When she loses the Christian protectorate in the East, France will break the last official tie with her mediæval glories. Traditionalists will find some consolation in the fact that no successor is likely to carry on the works of her Catholic monarchs. Austria, it is reported, has declined to accept this distinction at the hands of Pius X.; very sensibly, for she has no fleet or military establishment in Pagan lands to make the protectorate effective. Spain, for the same reason, could not undertake this traditional duty. In passing, it should be said that the proffer of the Eastern protectorate to Austria was a notable movement of conciliation on the part of the Papacy. It will readily be understood that the widening breach with France makes the Pope most solicitous to secure the friendship of the only great Power still enrolled among the faithful. The Christian protectorate itself had become rather a hollow form. Nominally, French consuls stood ready to protect Christians of whatever denomination in Pagan lands. Practically, France long ago lost her predominant position in the Levant, and Germany, disregarding the obsolescent protectorate, avenged the murder of her own missionaries in Shantung. It is a matter of congratulation that, persistent rumors to the contrary, there never has been any chance that the Protestant Kaiser would be made protector of all Roman Catholics *in partibus*. To have given this honorary position to a Lutheran potentate would have been a shade more illogical than to continue it in the hands of a Voltairean Premier of France. Finally, the readiness with which Pius X. has struck at the dearest bond between France and the Church shows clearly that he has not blundered into this quarrel, but has provoked it, and deliberately accepts the consequences. If the Church suffers beyond all expectation from dominant anti-clericalism, the responsibility will lie rather with the head of the Church than with its open enemies in the Palais Bourbon. Christians in the Orient will hardly know that a change has occurred. For a long time they have looked to their home governments for protection, and not to the Vatican or to the French protectorate.

ARE THERE REAL ISSUES?

"The practically assured stability of our colonial and of our tariff policy during the next term, no matter which man may be chosen, of itself creates a cause for the Judge's election. It justifies 'Imperialists' and Protectionists in voting for him. They can do so with a full sense of the safety of their favorite ideas. Those ideas will be safe beyond even the Judge's power to jar them. They can vote for him, and with a full sense, also, of the desirable results to be expected from a division of the Government between the two parties in a way to make neither predominant and both extra-careful or cautious."

We reprint at length these well-meaning words of the Brooklyn *Eagle* of August 15, because they represent a view which Republican advocates are industriously seeking to inculcate and certain worthy persons actually appear to believe. Whenever a prominent Independent or Democrat declares he will vote for Roosevelt, he usually explains his decision by premising that there are no principles at stake in this campaign, and that his choice is a purely personal one. Now if this were actually the case, if there were no better reason for supporting Judge Parker than that it is tiresome to play either red or black all the time, if Democrats had no better rallying cry than "Vote for Parker and general inaction," why, in simple honesty, we should be constrained to admit that his nomination was superfluous and his candidacy an impertinence.

But this is by no means the case; there are major issues in tariff taxation and in the attitude of the two candidates towards law; minor issues in Imperialism and in the Trusts. The attempt to show that the two parties stand on timid common ground as regards the tariff is based on mere juggling with the phrases of the platforms and of the candidates. Now a man is judged less by his professions than by the friends he attracts and the foes he repels; and parties are known less by their official utterances than by the voters they win over. The proof that the Democratic party means honestly by its tariff promises is that protectionists are moving heaven and earth to discredit Judge Parker. Where do we hear of chapters, or single individuals, of the Home Market Club accepting the *Eagle's* assurances that protectionists may be Democrats this year with perfect impunity? Or, contrariwise, where do you hear of a tariff-for-revenue man who on this ground feels that he may safely vote with the Republicans? Even the journals which in one column inform their readers that Judge Parker is a pitiful *fainéant* on all issues, in the next column warn the business world against the impending horrors of tariff-tinkering.

Furthermore, those who insist that Judge Parker's plea for Constitutionalism is precisely what Mr. Roosevelt would cheerfully accept as his official rule of conduct, must account, first, for the frank preference of the socialistically inclined for Mr. Roosevelt, and next for the pronounced dread of him among the believers in law, as well as for their enthusiastic reception of Judge Parker's appeal for a government of law. In other words, a salient personality like Mr. Roosevelt's proves a honey-pot for the entire reckless swarm; while, on the other hand, lawyers unite to support a conservative Democrat on that issue of respect for law which they are most competent to weigh. No army of cart-tail orators or legion of sophistical journalists can persuade the plain people that the ignorant enthusiasm of the Populists and the trained intelligence of the legists have both mistaken their man.

Pursuing this process beyond the clear-cut issues of the tariff and the candidates, one finds the same principles obtain as to the other points of party cleavage. It is not the Anti-Imperialists who are making a to-do about Mr. Parker's statements on the Philippines; it is the Imperialists who taunt him with accepting their own doctrines, and make a crime in him what they would have accounted a virtue in themselves. We shall believe those who say that Mr. Parker would attenuate the promise of "independence" unqualifiedly made in the Democratic platform when we see those who through good and ill-repute have fought for that promise accuse him of cowardice.

The Trusts, except for avowed Socialists, are hardly an issue this year. The problem is too complex and wants much time and investigation. President Roosevelt's sporadic activities have bewildered the popular mind; natural causes have considerably reduced the admitted evils of industrial consolidations. And yet it should be said here also that the Democratic platform has made the only practical suggestion for relief—increase of the powers of the Interstate Commerce Commission—and that Judge Parker has given a most useful reminder that an abused community has not begun to exhaust the remedial resources of the common law.

Finally, then, a protectionist may vote for Judge Parker only if he is honestly persuaded that the issue of Constitutionalism transcends that of protection; and an Imperialist may rightly support Judge Parker only if he believes the issue yields in urgency and importance to that of tariff reduction and of Constitutionalism. Those who invite either class to vote wholesale for the Democratic candidate offer the people a false pretence, and do Mr. Parker the discourtesy and the damage of presuming that his chief stronghold is his innocuousness. Those who deny that there are real differences between the parties simply forget the elementary principle of human intercourse, that men and institutions are best known by the friendships they attract and the enmities they arouse.

THE REPUBLICAN BIBLE.

The patriarch Job would never have uttered the cry, "Oh, that mine adversary had written a book," if he had ever anticipated being confronted with such a volume as the Republican Campaign Text-Book of this year. One could hardly expect that a *vade-mecum* of this character should prove a permanent addition to our polite literature; and this rakish-looking treatise, shaped—*absit omen!*—like a pocket-book, fathered only by the Republican Campaign Committee as a body, and carefully displaying the union label of the Job Trust on its title-page, might be safely thrown at once into the rubbish barrel if it were not that it is the officially authenticated spellbinder's guide, and reveals the Republican plan of campaign. It is safe to say that no other 550 consecutive pages have ever raised a more continuous pæan of praise to the Republican party.

The relative importance of the respective campaign questions may be judged from the order in which they are treated, and from the space devoted to them respectively. Practically all of the first ninety pages is given to the tariff. That is always the favorite battleground with the Republicans. The next fifty pages sing the praises of Prosperity, and are intended to reconcile the wage-earners to the régime of tariff monopoly. The teeming sea, and the fruitful field, the riches of the mine and the intelligence of the worker, are all ascribed to the Dingley abomination. Then follows a sequel of thirty pages devoted to the Trusts. Here the Republican spellbinder is warned to be on his guard. On pages 15 and 118 there are demonstrations that the Trusts are "utterly unable to control the markets," and in another place (p. 120) it is proved that whereas the competitive products of agriculture have constantly risen in price, the Trust products have continuously fallen; also, that the wages of Trust employees (p. 229) have generally risen. Forty more pages are devoted to material on wages and prices, Commissioner Wright's recent statistics being wrested from their true meaning, and made to keep step with the Prosperity bandwagon. There are frequent lapses in all this rhodomontade which will make the judicious smile. Thus *Sir* Arthur Balfour (p. 94) is dragged at the wheels of the protective chariot; and on page 45 "the Democratic plan" of Canadian reciprocity is described in tones of abhorrence as referring to "*articles of common production in the two countries*," whereas the genial Lodge has just been compelled to declare that he would not limit reciprocity with Canada to non-competitive products. We commend page 45 to Mr. Lodge for perusal.

At page 248 the record, or, to be more accurate, the records, of Theodore Roosevelt begin. We speak advisedly when we

use the plural, for the Outline of the Contents gives pages 241-248 to "the record of Theodore Roosevelt," and pages 248-258 to the "labor record of Theodore Roosevelt." Over these two biographical sketches it is clear that both Mr. Riis and some saner historian have jointly labored, and the effect is bizarre to an astonishing degree. Mr. Roosevelt is described in the beginning with a gorgeousness of rhetoric that leaves nothing to be desired. Besides exhibiting (p. 248) the "bolder constituents of manhood that one finds in the best of Plutarch's men and in the approved figures of all historic periods, . . . he has remained constant and true in the possession and exercise of an added set of virtues, etc., etc." He is (p. 249) "without question the highest authority in this country to-day upon the application of our laws and our system of government to the varied tasks of the chief executive." Alas, poor Cleveland! But the frost begins on page 251. Roosevelt's career as Assistant Secretary of the Navy is given in sixteen lines, with no mention of his proposal to Secretary Long to attack and sink the Spanish ships *en route* for Cuba before war had been declared. "His Service in the War with Spain" occupies exactly eight lines!

"Picture it, think of it,
Dissolute man!"

—eight lines for freeing Cuba! By page 252 we seem to be reading of Dr. Jekyll instead of Mr. Hyde, for, 'in place of his expected second term in the intense activities of the governorship of New York, he reconciled himself to the prospect of four years of quiet, self-repressed [*sic*], observant, and studious life in the dignified office of Vice-President." *Sic transit gloria mundi.*

Had the Campaign Text-Book ended here with the various speeches of Mr. Hay, Mr. Root, and others as appendixes, there would be little to which exception might seriously be taken. But, unfortunately as we think, a mean-spirited attack of a personal nature is made upon Judge Parker, beginning with page 493 and running to page 508. One must allow for a rough-and-tumble turmoil in an exciting campaign, and a face blow now and then with a lot of stuffed statistical clubs is to be expected, but the malignant attempt made in this last section to sneak behind an opponent and discharge a vitriol squirt-gun in his ear is despicable beyond description. What is termed the "St. Louis Esopus Episode" is recited in the same fashion as attempted by some of the baser partisan sheets a fortnight ago, with insinuation that the gold telegram was purposely delayed after a full realization of the absence of a gold plank in the platform, and until the nomination had been safely landed beyond all peradventure of recall. If this were the sole issue, the Democracy could go in triumph to the polls tomorrow.

To this decayed slander is added another—that Judge Parker himself, by personally assenting to the Trust plank in the Democratic platform of this State, bound himself to certain Trust magnates that they should not be disturbed in their position. It is alleged that the bargain thus consummated was represented by the declaration that "Corporations thus chartered by the State must be subject to just regulation by the State in the interest of the people." This is distorted to mean the abolishing of "national control of Trusts and all similar combinations." It means, of course, nothing of the kind. As well say that the injunction, "Children, obey your parents," implies that the children are to defy their schoolmaster and to shoot the policeman. If this attempt at character assassination does not provoke retaliation, we are no prophet. It is well to remember where the responsibility for the first blow rests.

THE VOTE OF THE PACIFIC COAST.

The formation of the Constitutional Club is likely to have a serious effect upon the Presidential vote, not only in New York, but throughout the East. President Roosevelt's evident determination to carry out personal policies, regardless of law or precedent, has been profoundly disquieting to men of conservative temper. They have seen in his course the substitution of the will of an individual for the law of the land. But the Democratic managers doubtless realize that, in less conservative regions, the arguments which turn members of the Constitutional Club against Mr. Roosevelt may actually win him supporters. In the newer communities people are often attracted by the plea that President Roosevelt "has not fussed about the letter of the law, but has gone ahead and done things."

This mental attitude is, of course, due to training and environment. In the more recently settled parts of the country adequate laws and machinery for enforcement have frequently been lacking. For want of an efficient police force, for want of exact statutes and courts to construe them, energetic men have often made their law off-hand and have acted as sheriff, judge, and jury. They have organized posses and have run undesirable characters out of town; they have quieted land titles or levied municipal assessments by rough and ready short-cuts. The end has seemed to justify the means. Pioneers not only have felt entire satisfaction over their own readiness in emergencies, but have admired similar dash and vigor in others. They have forgotten that the methods of the ranch, the mining-camp, and the newly laid-out town are not needed in the Presidential office; and thus it happens that when the talk is of President Roosevelt's disregard of law, some of them listen with amazement and mystification. They have thrown down the barrier of the law a dozen times, and no harm done.

These facts explain the enthusiasm of the West over Mr. Roosevelt. He has the very qualities which would be admirable in a cowboy, a miner, or a Western sheriff. He sleeps with his boots on; he has physical strength and superb audacity; and when he is after his man, he rides straight for him, leaping all the fences at full speed. The Democrats, therefore, must reckon upon few votes in the regions where a cross-country gallop is still one of the best means of locomotion. Political wiseacres are talking sagely of Colorado, Montana, and Nevada, and it is uncertain as yet what may be the outcome in these States; but these few scattering votes will be of no avail to the Democrats, unless other States join the procession.

California has sometimes been spoken of as doubtful, but the best-informed observers agree that it is surely Republican. McKinley's plurality in 1900 was nearly 40,000; and by many Californians Roosevelt's style is more admired than McKinley's. Of the four leading papers of San Francisco, the *Chronicle*, *Call*, and *Bulletin* are stoutly Republican, while Hearst's *Examiner*, by talking about Parker as the friend of Belmont and Wall Street, is giving its Socialistic readers arguments against voting the Democratic ticket. Moreover, the policy of expansion has markedly stimulated trade in California. San Francisco has been the shipping and often the purchasing point for immense quantities of supplies, and returning soldiers have spent millions of dollars in the city. The Republican party is naturally regarded in California as the Providence from whom all these bounties have flowed.

Oregon is quite as surely Republican. It gave McKinley more than 13,000 plurality in 1900, and it has gone Republican in one election since. Most of the causes that operate in California are also effective here. Republican tradition, the personal popularity of President Roosevelt, and general complacency over expansion and trade with the Orient combine to secure and perhaps to strengthen the Republicans.

In Washington the conditions are somewhat different. The Democrats stand a chance of electing their candidate for Governor, but even the most sanguine have little or no hope of the national ticket. In the rural districts of Washington the feeling against the railroads is strong; for years the farmers have wanted a State Railway Commission. In this contest the Democrats have been their champions, while the Republicans have been lukewarm, if not actually in opposition. The State gave Bryan a plurality of more than 12,000 in 1896, but turned to McKinley again in 1900 with about the same plurality. In this very year 1900, however, it chose a Demo-

cratic Governor, John R. Rogers, by about 2,000 plurality, when the railways were made the State issue. This year the Democrats have nominated George Turner of Spokane, formerly United States Senator, while the Republican convention, palpably through railway influence, refused a nomination to Lieut.-Gov. Henry McBride, who had succeeded to the Governor's chair, and who had tried to spike the Democratic guns by leading the fight against the railways himself. The Democrats thus have a chance for the State ticket; but unless some new factors are brought into the struggle, they can hardly make headway for the national ticket.

The Democratic managers must therefore turn back to the Middle West. At present the two points of attack most discussed are Indiana and Wisconsin. In the latter, the Republican factional fight is the most serious problem to consider. In Indiana there is a large independent vote to which conservative Democrats have more than once made a successful appeal. In this part of the country, then, rather than on the Pacific Coast, the Democrats will rally recruits.

A YEAR OF THE GENERAL STAFF.

The General Staff of the Army, which began work just a year ago, has naturally had to devote the greater part of its energies since its establishment to completing its organization and settling the limits of the undefined field of activity which was assigned to it. Sufficient time, however, has elapsed to demonstrate some things clearly. The high standard set by the first selections for the Staff has been maintained in subsequent appointments due to promotions or resignations. The officers have gone about their work seriously and earnestly. None of the evils foreseen by the opponents of the Staff, notably by Gen. Miles, have as yet raised their heads. No one, for instance, has found that dangerous or hitherto unknown powers have been bestowed either upon the Chief of Staff or the Secretary of War because of the creation of the Staff.

So far as the Adjutant-General's Department is concerned, it has shrunk to a subordinate position, precisely as was foretold. It was this Department, presided over by Gen. Corbin, which had gradually acquired a few of the powers and duties of a general staff, simply because somebody had to do the work. This was quite evident in 1898, when Gen. Corbin found himself called upon to deal with matters properly belonging to a chief of staff or to a commanding general with power. Gen. Corbin was one of the first to see that, with the creation of the General Staff, his own Department became of secondary importance. His transfer to the line followed, although he is still carried on the rolls as "adjutant-general with the rank of major-general." Shortly thereafter his Department was combined with the Record and Pension Office under the command of Brig.-Gen. F. C. Ainsworth of the latter bureau, and renamed the Military Secretary's Department. The work of its officers now more nearly approximates the merely clerical function originally intended by Congress than at any previous time for at least sixty years.

Some of the duties formerly performed by the adjutants-general and now in the hands of the General Staff have been those relating to the army schools, to-day more numerous and more effective than ever before. The Staff has worked hard over the courses at the various institutions with a view to systematizing them and making them all parts of a well-rounded whole, from the post schools for enlisted men to the War College at Washington, whose fine building is not yet complete. In this it has succeeded so far as success may be predicated before the new schools have shown their value or their defects in practice. In addition, the part of the Staff on duty in Washington has to its credit the revision of the order for the examination of officers for promotion, and a new edition of the cumbersome but necessary army regulations. The preparation of field-service regulations and of a new manual of the Quartermaster's Department is well under way, while the periodic modernization of the infantry drill regulations is now in the hands of the printer. A great deal of time has been given to the militia, and the relations of that body to the army have been made much closer than heretofore. If there is still need for the average regular officer to widen his view of the worth and the sphere of usefulness of the State troops, it may at least be said that the Staff is conscientiously striving to bring about better relations between the two bodies than have existed in the past.

The General Staff has also done a valuable work in rearranging the various garrisons and army posts in accordance with a comprehensive plan. That is, it has sought to station troops where they will be strategically most valuable, and, so far as possible, to put each branch of the service in posts best adapted to its training. Hand in hand with this duty, which would seem to have been filched from the Quartermaster's Department, there has gone on the collection of military information as to conditions at home and abroad, which is the primary function of a general staff. Last, but not least, earnest efforts have been made to bring the obsolete business methods of the War Department up to date so far as the laws permit.

Creditable as are these achievements of Gen. Chaffee's assistants, the most important question is, of course, What has been the influence of the General Staff upon the service as a whole? So far as we have been able to observe, it has been a wholesome one. The members of the staff have the respect and sympathy of their fellow-officers. Such mistakes as have been made have been accepted as being largely due to unfavorable political influences at Washington, or to the pioneer nature of the work undertaken. For instance, the duties of General Staff officers at the division and department headquarters are not yet clearly defined. We know of some officers thus stationed who have practically had nothing whatever to do, while one talented officer gave up the General Staff work at Manila because he found a greater opportunity in the Philippine Constabulary.

Perhaps the most serious criticism which the General Staff has incurred—and justly—has been called forth by its efforts to influence legislation. If the General Staff is to retain its prestige and is to continue to be regarded as a help, and not a hurt, to the army, it must leave legislative matters absolutely alone. Recommendations to the Secretary and suggestions for reforms are always in order, but the preparation and passage of bills should be left to other and more disinterested hands, unless the Staff wishes to be considered as meddlesome a body as the Navy General Board. There are quite enough internal reforms needed to keep it busy for years to come. How to hold regimental commanders responsible for the conduct and the military efficiency of their officers and men; how to utilize the majors and lieutenant-colonels who are now useless fifth-wheels in our organization; how to make examining boards examine, survey boards survey, and retirement boards retire; how to get rid of the worthless but inoffensive officers who pass from one grade to another unhindered—these are a few of the vital questions, well within the field of the General Staff, which press for solution.

UNPUNISHED COMMERCIAL CRIME.

In the August number of the *Atlantic Monthly*, Mr. G. W. Alger grapples with a most conspicuous, if not a most important, subject. Fraud, he declares, has increased to an alarming extent. The world is full of it. The Sunday edition of almost any great metropolitan newspaper is crowded with advertisements of fraudulent schemes. There are the announcements of opportunities for the "small investor" to enrich himself quickly in gold mines or copper mines, or in patented inventions. Numberless sagacious and benevolent men intimate their readiness to disclose important intelligence concerning the movements of the stock market. "Business opportunities" of the most alluring character are set forth. Infallible cures of incurable diseases are offered. But the newspaper only reflects what actually goes on in

the business world. The process of bettering their own condition seems to a great many persons to mean getting the better of others. Nearly everything that one buys is adulterated; nearly everything that has won the favor of the public by its merits is fraudulently imitated. The number of failures is in the hundred thousands; and it is only necessary to examine an ordinary proceeding in bankruptcy to make it seem impossible for an honest dealer to succeed in business.

Nothing is more natural than to infer, as Mr. Alger does, that the criminal law should correct these conditions. That law, he says, was formulated to meet the requirements of an agricultural community. It was meant to protect the citizen from violence rather than fraud. But the peculiarly dangerous crimes of our day "affect not only the individual, but in a more immediate and special sense the moral welfare of the community itself. These crimes may be described roughly as crimes of fraud perpetrated either upon merchants or upon the general public. Fraud in obtaining credit by falsehood; fraud in concealing and conveying property to avoid the just demands of creditors; fraud in stealing trademarks"; in bribing servants; in rebates; in promoting, managing, and wrecking corporations, etc., etc.

Yet those who are familiar with the operation of the criminal law, in the present as well as in the past, will hesitate to accept Mr. Alger's inference. No doubt fraud has increased; but there is no evidence to show that it has increased in proportion to business. Every one has read Macaulay's description of what went on at the time of the South Sea bubble; and there was not so much value in the South Sea Company as in our Amalgamated Copper Company, or even in the Shipbuilding Company. Whoever has the curiosity to look through the files of newspapers published a generation or two generations ago will find abundant evidence that our forbears were trying to cheat one another as vigorously and as successfully, if not as skilfully, as their descendants. The scale seems pitifully small; but it is the petty frauds that cause the keenest suffering.

Nor, if we admit that fraud increases even more rapidly than business grows, does it follow that the criminal law can afford a remedy. Mr. Alger speaks of crimes that nowadays affect not only the individual, but the community. There are no new crimes of this kind. There is no crime that does not affect the individual, and there can be no clear reasoning about crime when this is ignored. It is essential to the concept of crime that an individual should be injured; that his person should suffer pain, or his property be taken away from him against his will. Now in a great many of Mr. Alger's instances the sufferers part with their property voluntarily. They know perfectly well that they are trying to get rich in an illegitimate way. They mean to speculate. They mean to gamble. When they lose, they will confess that they ought to have known better than to hand over their money to men whom they do not know, on the faith of advertisements written by nobody knows who. They will sometimes even confess that they were "served right," although they generally, and naturally, throw the blame on the promoter, or the newspaper, or the criminal law, or the institutions of society. Nothing is more instructive than to read in the autobiography of the late Henry George how that apostle of justice was led to discover the iniquity of landed property through the destitution to which a persistent course of gambling in mining stocks had reduced him.

No doubt it may be contended that Government should protect fools against the consequences of their folly; but we cannot say that such protection would be on the whole beneficial. Experience keeps a dear school, said Poor Richard, but fools will learn in no other. To speak plainly, the adult man or woman who undertakes to gamble—and buying an unknown quantity is gambling—deserves to lose. The only legitimate title to wealth rests on service rendered, and no service is rendered in "unloading" what is worthless on other people, for those who buy speculative stocks do not buy to hold, but to sell. They hope to sell them for more than they paid; but it is a wholesome dose of medicine when they have to sell them for less. People who have money to invest can find plenty of safe investments. There is an abundance of bonds and stocks that are wholly untainted with fraud; and if any one is so foolish as to believe statements that he can safely earn 10 or 20 per cent. with his money, no amount of criminal law will help him. He needs sense and conscience; without these he will not keep his money long in any conceivable human society.

Of course, we are not contending that men who make fraudulent representations should not be punished; on the contrary, we see great advantages in the English practice which allows an injured person to institute a criminal proceeding. Whitaker Wright, it will be remembered, would have escaped but for this practice, for the functionary corresponding with our "District Attorney" had declined to prosecute him. But when we consider the positively appalling state of our criminal jurisprudence, we shrink from adding to the list of crimes. Were such frauds as Mr. Alger specifies treated as heinous crimes by the law, the administration of justice would break down. Such acts are as many as the sands of the sea. All the jails in the country would not hold a tenth of the offenders. Juries would not convict them; judges would not sentence them. It is idle to call any act a crime which does not arouse very general and very intense reprobation. Otherwise you simply encumber the statute book with useless words. What needs to be improved is the morals of the people. Dishonesty is shamefully prevalent; the amount of cheating and swindling that goes on is outrageous. It ought to be punished, and punishment is provided by statute to a considerable extent. But until there is genuine righteous indignation at such crimes—which can be felt only by those who are incapable of committing or profiting by them—the law has but little effect.

BOUNDARY READJUSTMENTS IN SOUTH AMERICA.

We are in receipt of a copy of the official English translation of the "boundary settlement" between Brazil and Bolivia, containing, besides minor documents relating to the subject, the treaty for the "Exchange of Territories and Other Compensations," signed at Petropolis, November 17, 1903. This treaty was intended to settle the notorious "Acre question," that had kept the two countries in a ferment since 1899, and came very near causing war. The boundary line between the two countries now gives to Brazil the country north of latitude 10° 20′ as far west as the course of the Rapiran; thence it runs southwestward to the Aquiry, to about longitude 69° and south of the eleventh parallel, and finally to the Peruvian frontier in the west. Brazil acquires by this treaty considerable territory south of the parallel of 10° 20′. In compensation, Bolivia receives comparatively little territory, and mostly in the south, along the Paraguay River, but an indemnity in money of two million pounds sterling, to be invested in the construction of railroads, of which she is so much in need.

Bolivia was unquestionably right in claiming and attempting to hold, until 1903, the country north of latitude 10° 20′. She was legitimate possessor of it by anterior treaties. But there were circumstances connected with the peopling of Acre that rendered its possession not even advisable. This settlement resulted mostly from famines after 1867 which repeatedly devastated the Brazilian State of Ceára. The inhabitants of that State, driven from it by calamities against which they were helpless, preferred to trust a wilderness. *They* founded the india-rubber industry in Acre. Only in 1899 did Bolivia practically assert her sovereignty, which was not disputed. But at that very time rumors were circulated and documents published at Pará well calculated to alarm not so much the inhabitants of Acre as the Brazilians themselves. The Government may have regarded these documents (given out as official and impli-

cating the United States) as apocryphal, but not so the public; to a certain extent at least apprehensions arose that the Bolivian holding of Acre might, through some treaty with an extra-South American power, become, in course of time, a menace to the integrity of Brazil. The establishment of Bolivian custom houses, while a perfectly legitimate act, became obnoxious through the manner in which they were administered. Owing to distance and difficulties of communication, Bolivia could do nothing for her citizens of Brazilian origin but collect export duties. This unfortunate condition was certainly made the most of by the Brazilian State of Amazonas, where the taxes collected by the Bolivians were coveted. The Brazilian Government stood aloof, but the people of Acre took up arms, demanding independence. This uprising was suffocated by Bolivia, and garrisons were established, at two points at least. The "Acre question" appeared settled.

But the contract entered into by Bolivia with the Bolivian Syndicate resurrected the troubles. Some of the clauses of this contract could but be regarded by Brazil with well-grounded apprehensions. Relinquishment of essential rights of sovereignty, on the part of Bolivia, in favor of a company foreign to South America, was akin to introducing in the heart of that continent, as Baron do Rio Branco observes, "the African and Asiatic system of chartered companies." Brazil protested at once, but her protests were of no avail. The Bolivian Government also received well-intentioned warnings, which it utterly disregarded. Then the Brazilians of Acre rose again, beset the Bolivian posts, captured the garrisons after some bloodshed, and returned the survivors to their own country. Gen. Pando, President of Bolivia, went to Acre at the head of a military expedition to subdue the insurrection. He reached as far north as the parallel of 10° 20′, where he was notified that a step beyond would be regarded by Brazil as a *casus belli*. In the meantime, Brazil had bought out the Syndicate, and there was in reality no advantage in Bolivia's retaining territory extremely far off, difficult of access, and containing a population that would, even if conquered, have been a source of permanent trouble and outlay which Bolivian finances were not able to support.

The result of this (for Bolivia) extremely perplexing situation, which would have become much worse in case of war with Brazil, was the treaty of which the Brazilian Legation has favored us with a copy. This treaty settles, at least for the present, boundary disputes between Brazil and Bolivia, but leaves open differences of a similar nature between Brazil and Peru, which indirectly also affect Bolivia, or will affect her in course of time. There is another ticklish boundary matter pending between Peru and Bolivia regarding territories lying southwest of Acre. What will be the outcome of this and the Chilian question it is impossible to foresee. With Chile, Bolivia (like Peru) has no treaty—only a truce that has now lasted so long that the Chilians may soon invoke a prescriptive right regarding territories occupied by them since the "War of the Pacific."

POBLET.—II.

MONTPELLIER, June 29, 1904.

From the platform of the railway station at Espluga the eye sweeps over acres of marvellous tillage until arrested at the foot of the hills, four kilometres away, by the golden-brown mass of buildings and enclosure wall. The whole countryside in the faultless June weather is ablaze with color and sunlight. That vehicle of torture, the Valencian *tartana*, waits for the unwary even so far north as this, and, springless, jolts the very ribs out of his frame over a road rough as the dry bed of a mountain torrent; but the mere suggestion that the traveller had rather walk provokes a clamor of derision, and for shame's sake we succumb. The unwilling mule varies the journey by stopping to kick flies from sensitive spots, upon which the *mayoral* considerately flicks them with a pliant rod—more kicking.

At first glance, the Monastery of Poblet presents from the outside hardly anything of an imposing or striking character. One realizes that buildings of this sort in Spain were frequently designed for interior, not exterior, effects, as though the conception had been to influence only such as entered upon a life entirely consecrated to worship. No doubt the monumental extent attracted the eye; still, there seems to have been little idea of touching the emotions through the help of an architectural mass. Per contra, the moment we pass the inner gates every step brings us face to face with new splendors; from every window or opening the outward view is glorious, whether on court or cloister, on mountain or fertile plain. What can escape no one is the exceptional skill with which all these buildings, sometimes erected over others already existing, were reduced to a most perfect harmony in virtually grouping themselves, without formal regularity, about the great central cloister. One gets definite knowledge of their numbers from the list in Salas, who states that the whole consisted of two distinct parts, the Clausura Exterior, with twenty-six separate constructions or departments, and the Clausura Interior, with thirty-four. To the former belonged workshops, the hostelry, a few chapels, and all the appurtenances connected with so completely organized a social life. As Mr. Mallock might say, "the servants were not to be seen walking about the pleasure grounds," or for that matter in the holy places. It is with the inner circle that we have to do, the palace occupied by the four hundred monks and their hosts of novices; with the religious club life, in other words, into which primitive monasticism had so naturally grown. Let me here express the hope that many other tourists will enjoy the privilege of listening to the reconstitution of that splendid existence from Doña Magdalena, the amiable Spanish woman who never hurries a traveller or forces useless information on him; and yet Poblet is tourist-ridden every week in the year.

Passing under the vaulted portico with its mediæval fortress-towers, we are at once introduced to the matchless Claustro Mayor, so abounding in architectural variety that a study of its details might occupy one for weeks. Each of its four sides is conceived and executed according to a different scheme of arches and decoration in no way incongruous with its neighbors, the whole so perfectly blended that I doubt whether a casual glance would perceive the variety without assistance from guide-book or cicerone. It is worth noting that the opera of "Robert le Diable" still preserves, in many European theatres, the stage-setting originally given it in Barcelona from the Cloister of Poblet. Little damage has on the whole been done here; it is when we pass into the church that the ruin first appears. A great bare nave, with an immense sweep of just perceptibly pointed arches, stretches before us in desolation; royal tombs, organ, pictures, high altar, all vanished, or battered into hopeless mutilation by the succession of destroyers whose work I have yet to tell. Here was the spot consecrated to all earthly respect by the presence of remains that once held the souls of Aragonese heroes, remains now dispersed as the veriest sweepings of the common street. The *retablo mayor*, an immense piece of Renaissance carving in marble, the construction of which nearly ruined the abbey until relief came from private hands, is battered and broken, up to lance-reach; but in the wreck of it all you can still distinguish a delicacy of cut and polish showing what kind of artists the abbots of the time had had the judgment to employ. I must say that, compared with this and the royal tombs, the rest of the destruction is of lesser moment in my eyes. There are surely books enough to study in the world, apart from the former library of Poblet; where shall we find such a church as this was? In the neighboring apartments—Library, Sala Capitular, with the tomb-slabs of the abbots, the two Sacristies, Old and New—a far less ornate structure presented fewer points of effective impact for the blows of a mad, drunken mob.

Thus much for learning and spirituality. But the monks of Poblet, not unlike Rabelais's imaginary Thélémites, had an eye to the flesh as well. By far the greatest curiosity of the place is the perfect arrangement (very slightly damaged) of all the apartments devoted to the great god Gaster, and his near relation, *La Dive Bouteille*. In the Refectory, a high-vaulted room, the stone reading-desk offers from the far end a chance of testing with a passage from Murray or Baedeker how far the builders had consulted the carrying powers of the human voice; the acoustic conditions are perfect. No less so is the kitchen (far more imposing than that at Alcobaça), in a corner of which the keeper's small fire of charcoal looks like a mere speck. Within easy reach we find the butcher's department and the fish-room, with their respective runlets for the blood of slaughtered

animals, and their tanks of constantly renewed fresh water in which the creatures could disport themselves until their psychological moment came. Most striking of all, perhaps, are the oil and wine cellars, not abounding in such perishable ware as bottles, but containing monstrous stone tuns, like puncheons, some seven feet deep and five feet across, that were never allowed (so I understand) to sink below a certain level, however great the consumption of supplies. All around the wine-cellar runs a small trough of cut stone which, by ingenious calculation, was permanently inclined so as to feed in succession every vat. I have visited (and, fortunately, sampled the contents of) more than one commercial *bodega* in that land of luscious wines, and I do not remember to have ever seen a system of distribution more perfect in all its details. But the monastery vats have long been empty.

Connected with the building of the monastery, an interesting point is noted by Alegret in a chapter entitled "Signos Lapidarios." It seems that marks, masonic or other, have been found in great abundance here, as well as in the cathedrals of Barcelona and Tarragona; many of them indicating that a large proportion of the stonecutters must have been brought from the North—possibly from as far as Normandy. It would be fatuous on my part to do more than merely mention them. What is specially interesting is the partial defacement or alteration of them, here and there, possibly by local workmen belonging to other corporations and consequently jealous of foreign intrusion. Other hieroglyphics are referred to astrology. But insistence on this would constitute a digression. Besides, the Cyclopean walls of Tarragona, far earlier than the Roman remains in which the district abound, still show signs of analogous markings.

Enough has been said, without dwelling on the immense dormitory of the novices, the vacant treasury and archives for manuscripts, or the dreary royal apartments, to give the reader a general impression of the scale on which this community continued to live until the time came when its enemies considered that the day of usefulness had ended and the reckoning was to come. What that day signified we can now see from the upper windows that command masses of shattered walls, gaping windows, and a general wreckage through which not even the local guide can find a trodden way. The solidity of the central mass offered too much resistance to the destroyers to be dashed into mere heaps of stone; but almost all the outlying buildings of the Clausura Interior appear as though they had undergone a siege. Possibly, in all the history of Poblet, there is nothing more interesting—there is certainly nothing more vividly dramatic—than this terminal moment of its religious existence.

Exactly how and why this body of monks had gradually worked up, without design, the hostility of its neighbors is still matter of dispute; Spanish historians are so often violently biassed by extreme party spirit as to overlook the common experience that human motives are usually a blend. It would be idle to deny that the unchecked exercise of such feudal power as the abbots possessed must have begun to appear, even in Spain, an intolerable anachronism at the opening of the nineteenth century. Let us think but a moment of the significance of absolute wood and water rights in such a country as this, where for centuries the denudation of the mountains had given the highest value to such privileges; and, indeed, the records are perfectly explicit on this point in declaring that between the monastery and the peasants collision had been frequent, resulting often enough in the murder of foresters and sometimes in the disappearance of a *campesino* caught in the act of fishing or wood cutting. There seems to have been likewise a good deal of high-handedness in abstracting or removing peasants who were slow in paying rent. These insignificant captives were not consigned, however, to the ghastly prisons where such Latin inscriptions as *Terribilis est locus iste!* were recently made out by Toda y Güell. Doubtless distinctions were made in the dungeons as well as in the Hospederia. But there is gossip still afloat about the country for the attentive to hear. It says that the high-living monks had given other grounds for popular hatred in general laxity of conduct, and that the first outbreak of violence from the village of Vimbodi in 1822 was in reality an expression of thoroughly aroused moral indignation. If we add to this the reactionary attitude of the Spanish clergy in general, we need seek no further motive.

At all events, the attack was made; the monks, it is said, stole out through a postern gate in the dark, having sent the chief treasures and a quantity of provisions to Espluga; while the Vimbodi peasantry dashed in, and, after some confusion, fired the abbot's palace and the library, from which the flames spread to several of the adjoining apartments, damaging a quantity of perishable material. The best accounts declare that on this occasion the church was not touched. For two years the place was abandoned, people coming and going after taking what they pleased; but there was a forcible disgorging when political changes made it possible for the monks to return in 1825. There was at this time no *Bande Noire*, and all the sensational accounts representing the slaughter of monks in defence of their altar have been simply transferred from what did happen in the Napoleonic wars, or was invented by reactionary journalists; the peasants were apparently quite satisfied with this simple outbreak, which seems to have resulted in a considerable mitigation of the monks' methods during the few remaining years of their tenure. I myself feel disposed to accept the plain local testimony, which any traveller may yet find here if he chats with an aged peasant who still remembers the tales told by his father.

When we come to 1835 a different set of men, animated by other feelings, come into play. It was at this time that promiscuous slaying of monks by the liberals of Reus so terrified the returned inmates of Poblet that they again fled to Espluga, leaving only one of their number and a handful of laborers in the place. The removal of valuables on this occasion was pretty thorough, for time had allowed for the hiring of mules and conveyances, but no one seems to have thought of library or archives, though we hear that several of the carts were scripturally laden with wine and oil. Here comes the culmination scene in the tragic destruction of Poblet. Turn the richest monastery in the world into improvised barracks for undisciplined volunteers, whose profession of liberalism involves disobedience to their superiors, and the result is a foregone conclusion. The scenes that occurred when this mob of so-called patriots invaded the deserted echoing halls may be found described in a number of Spanish authorities, from contemporary reports down to the somewhat spasmodic Catalan of Toda y Güell or the more solemn denunciations of Don Victor Balaguer in stately literary Castilian. In simpler English phrase, the details are impressive enough. It was against the church and its royal tombs that the defenders of liberty turned their chief attacks, because of the political attitude which the community had very naturally adopted amid the wild chaos of struggle. Some have gone even so far as to insist that the smashing of the matchless *retablo* was ordered and directed by a liberal general. We can easily picture to ourselves the increasing frenzy of destruction after the first dash into the quiet sanctuary, when the first heads of statues had been knocked off and kicked about the pavement. I should suppose that, much in the same way, the Roundhead troopers grew rather fond of breaking stained windows.

The royal tombs were then broken open; the mummified corpses were first placed against the church wall, then dragged about by the neck and flogged with cord or battered with musket-butts. Whatever was of value of course disappeared; the lead of the coffins was pulled off for running bullets, even the metal of the great organ-pipes being applied to the same purpose; while the royal shrouds served as soldiers' blankets, or were disposed of to peasant women who turned them into children's clouts. All this was work; next came play. It is perfectly authenticated that on this night the volunteer mob, by this time no doubt a mass of yelling demoniacs, placed the gigantic corpse of Don Jaime I. of Aragon ("El Conquistador") as a sentinel at the great portal, with folded arms resting on a musket; with what remained of skulls and bones there then ensued the most wayward game of ninepins ever invented out of a madhouse. Were it not for the silliness of it all, some of the most accurate narratives might be deemed almost Dantesque. The game over, the remains were left lying about, and were not gathered together for some time, when the only readily identifiable body was that of Don Jaime I., from its size quite unmistakable. As Dryden says:

> "When rattling bones together fly
> From the four corners of the sky,"

it might be wished that the player of the game should obtain retributive justice in a manner better imagined than literally set forth.

All this is ugly enough; the sordid part is yet to come in the third destruction, deliberate, calculated, and yet perhaps more inexpressibly foolish than either of the other two. The attacks of peasants and volunteers are quite insufficient to account for the scene of wreckage that meets the eye in the vast mass of buildings surrounding the great central fane. Treasure-hunting began—a singular passion that seems to date in Spain from the days of early colonial possessions, the mines of Potosi and the Acapulco ship. The stories that you can hear all about the country are comically naïve. The monastery was once more de-

serted after the expulsion of the orders took place, and rumors grew of fabulous treasures forgotten by the monks in their haste, so that every person within convenient reach who possessed pick or shovel came (chiefly on Sundays and holidays) to dig about the place. Usually the treasure-seekers had a bit of mouldy parchment which stated that the hidden store was lying under the flags in the Abbot's room, in the sacristy, in the graveyard, anywhere; while the key of the fabulous chest would be discovered inside the hollow marble head of a sainted statue, in any one of the fifty or sixty chapels not yet broken into dust. The trick hardly ever fails in Spain, and I am even given to understand that it answers its purpose frequently enough, with slight modifications, in America; for it is surely needless to explain that the revealing scrip invariably comes from some Spanish jail, bought from a prisoner for a good round sum. However, a large chest was actually discovered in the inner library in 1841, and whetted eagerness to something very nearly like rage; and, again, some ten or eleven years ago the accidental finding of a small pot of coin induced a company of gentlemen (among them men of title) to obtain permission from the Government for investigagation on a more systematic scale, which dislosed nothing more than a number of interesting underground rooms and cellars all covered up with the rubbish of earlier diggers, and added very considerably indeed to the elaborateness of our conception of this almost unique example of such a monastery.

Until the next revolution, ruined Poblet is safe. The declaring it a "national monument" keeps the diggers off, and there is really nothing left even for a tourist to steal. It is a poor consolation for the loss of all the beautiful things it contained to read in Balaguer that "several times the sons of the country have gathered in the monastery, and under the venerable arches of the Aula Capitular rang the first enthusiastic speeches of patriots and the first blessed sounds of independence." The real sons of liberty, instead of making speeches, might well have wept in silence. No; the one reflection that the student may dwell on here with profit is, that devastated, silent Poblet is probably more impressive—it is certainly richer in historical suggestion—than when its abbots trod to mass in mitred pomp and were the hosts of kings.

P. T. L.

THE CHEVALIER D'ÉON.

PARIS, August 7, 1904.

The Chevalier d'Éon has long been one of the most enigmatical figures in French history. He has lately been made the subject of an interesting volume, based on inedited documents, by MM. Octave Homberg and Fernand Jousselin. The authors tell us at once that D'Éon, who long gave himself out as a woman, was in reality a man.

"A succession of adventures, after a brilliant career as soldier and diplomat, led him to a metamorphosis which his delicate appearance and his astonishing ingenuousness caused to be accepted, with a facility that is the true mystery of his life, by the King and his Ministers, as well as by the companions of his youth. Having thus become, by his own free will, the heroine of his century, D'Éon found himself the prisoner of a part which he played till death with a stupefying perfection."

His first biographer was Gaillardet, a novelist who became famous in his turn by his collaboration with Alexandre Dumas the elder. The Duke de Broglie, in his 'Secret du Roi,' had to deal with D'Éon as one of the most active and courageous agents of the secret diplomacy of Louis XV. MM. Homberg and Jousselin were so fortunate as to acquire not long ago the papers and correspondence of D'Éon, which had been confiscated by one of his numerous creditors and kept for more than a century in the drawer of an English bookseller. They have used these, as well as the diplomatic documents preserved in the archives of our Foreign Office, and certain documents belonging to the city of Tonnerre, where D'Éon was born on the 5th of October, 1728. His father was Louis D'Éon de Beaumont, a director of the King's domains. At the age of twelve he was sent to Paris, and pursued brilliant studies at the Collège Mazarin. He became doctor in civil law and doctor in canon law, and secretary to M. Bertier de Sauvigny, a friend of his family, intendant of the generality of Paris.

The Prince de Conti became one of his patrons, recommended him to Louis XV., and obtained permission for him to accompany the Chevalier Douglas to Russia and to second him in a secret mission. He thus became a member of the mysterious cabinet which was under the King's supervision and consisted of the Prince de Conti, the Count de Broglie, and Tercier, first clerk of the Foreign Office. We have only lately become acquainted with this mysterious government — this government against the Government; it was a sort of counterpoise to the indolence and timidity of the King. This secret diplomacy, which aimed to correct the mistakes of the official diplomacy, often resulted only in paralyzing the efforts of the French agents; it never attained any important object, and was, on the whole, a perpetual riddle. The King himself, and he once confessed it, was often lost in the intricacies of his double diplomacy; he once wrote to Tercier that "il s'embrouillait un peu."

The most tangible object of Louis XV. was to assure the crown of Poland to the Prince de Conti, but it was never realized. The mission of Mackenzie Douglas was connected with this object. He had followed the cause of the Stuarts and offered his services to France. He was sent to Russia in order to fathom and counteract the plans of England. A legend will have it that the Chevalier d'Éon presented his niece, Mlle. Lia de Beaumont, to Count Vorontzoff, Vice-Chancellor of the Empire, and that Vorontzoff presented her to the Empress Elizabeth. This legend was not accepted by the Duke de Broglie, but the question of Douglas's employment as a diplomatic agent still remains obscure, as well as the question of the part which D'Éon played in his affairs. D'Éon certainly had several very private interviews with the Empress. It is possible that, in order the better to escape attention, he had on some occasion the idea of disguising himself as a woman. This would explain the legend which was long current. The delicate features and the stature of D'Éon made it easy for him to be taken for a woman.

The services which D'Éon rendered in Russia were such that on his departure he received the most complimentary thanks from Douglas, as well as presents from the Empress Elizabeth. D'Éon was charged to bring in person to Versailles the details of the negotiations which had secured the accession of the Empress to the Franco-Austrian alliance, and Russia's rupture with England and Prussia. After a difficult and at times dangerous journey, D'Éon arrived in Paris, preceding by only a few hours the Prince of Kaunitz, who brought the same news from Vienna. Louis XV. was so well satisfied with the messenger that he gave D'Éon a gratification out of his private purse, a snuff-box with pearls, and a brevet of lieutenant of dragoons. D'Éon had broken a leg during his journey back to France; the King sent him his own surgeon, and during his convalescence D'Éon wrote a memoir on his mission and on the policy of Russia. In his inedited papers we see that the secret intention of the Court of Russia was, on the death of Augustus III., to fill Poland with its troops so as to be absolute mistress of the election of the future King, and to take possession of a part of Poland "so as to accomplish the favorite plan of Peter the Great, who desired to bring his frontier nearer to Germany that he might play a part in it."

D'Éon afterwards rejoined in Russia the Marquis de l'Hôpital and returned to France, bearer of the treaty of 1758. He had grown tired of Russia. He entered the army and became aide-de-camp to Marshal de Broglie, and distinguished himself during the Seven Years' War, but again left the army and reëntered the diplomatic service in order to accompany the Duke of Nivernais to London. The Duke's object was to conclude a peace with England. He was a favorite of Madame de Pompadour, who called him familiarly "mon cher petit époux," and had been chosen as the best ambassador, and D'Éon was attached to him as the cleverest and best informed of secretaries. The negotiations, which ended in the peace of 1763, were very difficult. After the treaty was concluded, D'Éon carried to Paris the ratifications of the treaty, and on this occasion received as a reward the cross of Saint Louis.

The Count de Guerchy was appointed successor to the Duke de Nivernais, and for a time D'Éon, who had received the rank of minister plenipotentiary, represented the embassy *ad interim*. He had a quarrel with the Count de Guerchy, the details of which have lost all interest, and which ended in his leaving the regular diplomatic service. He continued, however, to be a secret agent of the King and to correspond with the Count de Broglie. His love of intrigue induced him to take an active part in English politics. He had made the acquaintance of the celebrated Wilkes. "Will you have a sedition here," he wrote to Broglie, "at the return of Parliament, at the next elections? There will be so much needed for Wilkes, so much for others. . . . Wilkes costs us very dear, but the English have the Corsican Paoli, whom they have received and whom they feed on our account. It is a bomb which they keep all ready to throw among us at the first opportunity. Let us keep bomb for bomb." Princess Dashkoff was at the time exiled in London. She was the niece of Vorontzoff, who had so powerfully helped Catherine II. to ascend the

throne. (Herzen wrote her memoirs.) She told everybody that D'Éon entered the imperial palace at St. Petersburg in woman's clothes, and succeeded in being admitted to the circle of the Empress's maids of honor. D'Éon's sex became a subject of curiosity in London, and bets were freely made on the subject. This story of the Princess Dashkoff crossed the Channel, and it soon became current that the Chevalier d'Éon was a woman. Many caricatures and songs were made on the subject. There is a curious letter from Miss Wilkes, daughter of the famous politician, addressed to D'Éon, in which she asks him if he is a man or a woman: "The chevalier would be very kind if he spoke the truth about it to Miss Wilkes. He would be still more amiable if he came to-day to dine with her and her papa."

D'Éon contrived, while he was in England, to render some secret services to the King and to Madame du Barry; he was charged to prevent the publication of certain pamphlets. But bad times were coming for him; the King had become tired of his own famous "secret"; the Ministers had discovered it; the Count de Broglie was sent into exile. Then came the death of Louis XV.; his successor, Louis XVI., put an end to the secret bureau, but by the influence of the Count de Broglie D'Éon obtained a pension. He was deeply in debt, and his creditors became so troublesome that he found it convenient for his safety to dress as a woman. He succeeded in obtaining a secret mission to England, but went there as a Chevalière d'Éon. I cannot follow him through all his intrigues and in his incessant quarrels with Beaumarchais. He returned to France by permission of Count de Vergennes, but after a while he was obliged to leave off his woman's dress, and was sent to the prison of Dijon. He was presently set free, but was exiled to Tonnerre. We find him leading a quiet life till he returned in 1785 to London, to settle his numerous affairs and to pay his creditors. He tried to sell his papers and his manuscripts, without much success. He heard in England the first news of the French Revolution; he came back as "the citoyenne Geneviève d'Éon," and professed the most Jacobin doctrines. He was in very straitened circumstances, and gave fencing lessons for a living. There is not much to say about his last years; he died in London May 21, 1810.

On the whole, D'Éon, with the instincts of an adventurer and a certain amount of cleverness, would be quite forgotten but for the legend attached to him, the part he played in Russia in his youth, and his connection with the "Secret du Roi," which is one of the most curious incidents in the life of Louis XV.

Correspondence.

GERMAN-AMERICAN UNDERSTANDING.

To the Editor of The Nation:

Sir: Mr. W. A. Stille's letter, in your issue of August 18, calling attention to Professor Münsterberg's new book, 'Die Amerikaner,' speaks of the ignorance in Germany of things American. While the Harvard professor is, as Mr. Stille says, highly competent for his task of interpreting things American for the benefit of the Germans, their ignorance, before his book appeared, could not have been as dense as Mr. Stille supposes. Two books, at least, worth mentioning, were published last year in Germany, pursuing the same object, Goldberger's 'Das Land der unbegrenzten Möglichkeiten,' economic studies, and Polenz's 'Das Land der Zukunft,' social studies; both, within a few months, republished four times, testifying to the German mind's readiness to be enlightened and to cultivate mutual esteem. They deserve a place very near Professor Münsterberg's work, and are, probably, as interesting to the American reader as to the German. There is nothing more instructive than to see ourselves as others see us.

Mr. Stille's desire for a counterpart to 'Die Amerikaner' about Germany and the Germans should, indeed, be gratified, and such a man as Professor Gregory of Leipzig, being in a position perfectly analogous with Münsterberg's—a native American holding a professorship in a German university—might undertake the task most profitably.

Respectfully, Ernst E. Lemcke.

New York, August 19, 1904.

Notes.

At the recent Petrarch Congress at Arezzo, Monsignor Salvadori announced that the Vatican Library was about to begin publication of a facsimile of such of the manuscripts in its possession as were either written or annotated by Petrarch. The Proceedings of the Congress itself will be published.

The Oxford Clarendon Press is undertaking an "Oxford Modern French Series," edited by Léon Delbos, M.A., with an eye to "students who have advanced some little way in their knowledge of the French language," and do not need elementary annotation. Hence the notes will deal mainly with points of literary or historical interest. Next month the first eight volumes will appear, reckoning Lamartine, Balzac, Hugo, Sandeau, Châteaubriand, A. Karr, Gozlan, and Tocqueville (extracts from his journeys).

Messrs. Putnam's fall publications will include 'The Story of the United States,' by Prof. Edward Earl Sparks, and 'Breaking the Wilderness,' or the conquest of the Far West, by Frederick S. Dellenbaugh.

A biography of Thomas Nast, by Albert Bigelow Paine, is in the press of Macmillan Co.

The articles on municipal misgovernment and the attempt to prevent it, which appeared last year in *McClure's Magazine*, have been republished in book form by their author, Mr. Lincoln Steffens, under the title of 'The Shame of Cities' (McClure, Phillips & Co.). The stories are told with much plainness and even coarseness of speech, and are as interesting as stories of crimes and their detection seem always to be. The record of corruption is dismal enough, and we do not find much encouragement in the account of the proceedings by which exasperated citizens have dethroned their oppressive rulers. Fighting the devil with fire is dangerous work, and is apt, even if temporarily successful, to have dangerous consequences. Mr. Steffens correctly observes that the root of the evil is to be found in the general disposition to make use of the institution of government for individual advantage. He does not suggest any method of making government less available for such purposes, and even seems to think that municipal ownership may be a remedy for municipal corruption. Until the number of offices is diminished, the compensation of officeholders reduced to correspond with the real value of their services, and the principle of serving the public without pecuniary compensation much more widely extended, venality will continue to be our curse.

Mr. J. G. Rosengarten's 'American History from German Archives, with reference to the German Soldiers in the Revolution and Franklin's Visit to Germany' (Lancaster, Pa.) is a reprint of this writer's articles in various periodicals at various dates, now made in the interest of the Pennsylvania German Society. The collection necessarily involved much repetition; and the effort to make bibliography readable can hardly be said to have been successful. On the other hand, the absence of formal classified lists of original documents published or accessible or known to exist, greatly detracts from the value of the survey. This disorder, partly atoned for in an index, is foreshadowed in the table of contents, where we might have expected to find each chapter labelled with the place and date of its original appearance. The volume is prettily embellished, and contains numerous portraits of German officers, facsimiles, a map, etc. The chapter on "German Soldiers in the French Service" reminds us that at Yorktown "German soldiers held the trenches on both sides when the surrender was finally made. German regiments under the French and American flags received the surrender of German regiments, Anspach and Hessian, serving under the British flag."

If charm were a mere accomplishment and could be taught, most of us would take lessons. But the charmer is born, not educated, and the intelligent do not need the advice to resolve, like Sydney Smith, "to be natural, and let the world find me out." In her 'Charm and Courtesy in Conversation' (Dodd, Mead & Co.) Miss Frances B. Callaway devotes some two hundred pages to the art of polite intercourse. Her assumption that unselfishness is the essence of charm is an agreeable fiction which the facts of any one's experience will contradict. It is a negative quality, and your born charmer is usually made up of positive qualities and asserts himself vigorously. Courtesy, too, as all Miss Callaway's anecdotes prove, is mainly negative, and her little textbook is nothing more than a collection of hints how to avoid rudeness. We fear that the charm of Madame Récamier, even in her old age, hardly depended on "her thoughtfulness for others" (p. 197). Hard as it is to be thoughtful for others, to charm them is, no doubt, harder still, and no such manual as this can impart the power to please and shine, or disclose a single one of the secrets of that art.

For American travellers the most important item in Anne C. Wilson's 'Hints for the First Years of Residence in India' (Oxford: Clarendon Press; New York: H. Frowde) is the statement in regard to the

size of boxes (trunks) which may be carried in the cabin (not over fourteen inches in height, two feet in width, and three feet in length). This little manual is designed for the use of officers and civilians in the British service; and for those who wish to know what personal, household, and camp equipment is needful in India, no better list of articles—the booklet is scarcely more than a list of articles and hints—is obtainable.

In 'St. Helena,' by E. L. Jackson (London: Ward, Lock & Co.), will be found the main facts and incidents in the history of the island from the time, 1513, of its first human inhabitant, a Portuguese nobleman exiled there for desertion, to the departure of the Boer prisoners in 1902. The natural features are described, and a guide-book account is given of Jamestown and its immediate neighborhood, together with lists of Government officials and local institutions. As the historical part consists largely of documents, extracts from official records and personal narratives, and as the author's notes, often of very trivial matters, made during a painstaking research into the voluminous material at hand, are all thrown together without regard to literary style, the book can interest very few not immediately connected with the island. Still, notwithstanding its failure to attract the general reader, examination will bring to light some noteworthy facts. A striking illustration, for instance, will be found of the growth of humanity in the past two centuries by comparing the cruel punishments once legally inflicted on slaves with the tribute to the hospitality of the islanders from the negroes who afterwards found a refuge from the slave-ships; and, we may add, a similar testimony given by the Boers on their departure. "The kindness shown to the prisoners of war one and all by the people of the island," they said, "with very few exceptions, is a fact which will be long remembered and cherished by them as a bright speck in the gloomy days of captivity." Considerable space is of course devoted to Napoleon, and to his love for children. The photographs, especially those of the scenery, are attractive, and help one to understand in a measure the affection for the "old rock" which causes many to say, "St. Helena has only one entrance and no exit."

The third edition of the second volume of Dr. W. Cunningham's elaborate work, 'The Growth of English Industry and Commerce in Modern Times,' appears in two parts (Cambridge, Eng., University Press; New York: Macmillan). The greater portion of the volume, the author states, has been more than once rewritten; and he declares it impossible to explain how immensely the book has gained from the coöperation of Miss Lilian Tomm. Two objects have been kept in view in this investigation—to set forth the connection between the political and the economic history of England, and to describe and account for the actual course of the material progress of the country. The latter object appears to us to be inadequately attained; possibly it could not be attained without more rigid adherence to scientific methods. The fact that an observer at a former period declared a certain state of facts to exist often affords no evidence of its existence; we need only read current representations to understand this. Nothing is easier than to overlook causes, unless it be to assign results to wrong causes. The chief value of the work lies in its record of the attempts of English rulers to direct the industry of their subjects. It is significant that, in a postscript, the author gives a cautious approval of Mr. Chamberlain's proposals.

Prof. John Bates Clark has recently delivered a course of lectures in Cooper Union which are now published by Macmillan under the title 'The Problem of Monopoly.' The purpose of these lectures is "to apply to important problems economic principles which have recently become known." We do not find these novel principles clearly stated, unless in the suggestion that great corporations may be wisely controlled by means of the initiative and referendum, and in the declaration that the lecturer is "in favor of doing the impossible." He proposes legislation to correct the selfishness of human nature as exhibited by the managers of monopolies, and apparently thinks that if the laws he approves were enacted, they could be made to work by our political machinery. But the task of fixing prices by statute is beyond the power of government, and merely to suggest it opens an appalling vista of corruption.

Professor Villa's 'Contemporary Psychology,' translated by the Italian attaché at Paris, M. Manacorda, under the editorial supervision of Professor Muirhead, might easily have been rendered a decidedly useful work of reference. It is pleasantly written, and, on the whole, nicely translated, and contains abundant information. Its standpoint also (that of Wundt) and its judgment seem sound, and it lays proper emphasis on the modern voluntarist as against the traditional intellectualist interpretations of mental processes. But these excellent qualities are unfortunately marred by serious defects. There is too much prolixity and repetition, and the proofreading has been so scandalously imperfect that every date and every proper name must be regarded with suspicion. When, *e. g.*, the life of Wolff is protracted to one hundred and five years (p. 12), it is natural to ascribe this to a misprint, but even this theory breaks down when *Hermann* von Helmholtz is disguised as *William* (p. 106). The index also, which in a work of this kind should be particularly complete, is quite inadequate.

We have received from the Mississippi Department of Archives and History a copy of the first 'Official and Statistical Register' of that State, an octavo volume of 700 pages, copiously illustrated. Great labor has been well expended on this compilation, and it is a valuable manual in reference to the history and actual government of Mississippi—charter and personnel. The State's Senators and Representatives in Congress, and own Executive and Legislature, are biographically sketched, and the corresponding series of photographic likenesses is well deserving of study. Governor Vardaman, of ill-repute as the high priest of racial reaction, was born in 1861—a depressing anomaly, especially in view of the table headed "Mississippi Leader in Great Reforms." She invented, more's the pity, the elective judiciary, and was the first State "to solve the problem of white supremacy in the South by lawful means." This, as appears from the (present) Constitution of 1890, was effected by an impartial grant of suffrage to every male inhabitant (sane, taxpaying, and non-criminal), §241; with a supplementary qualification (the negro in the woodpile) as to reading and expounding the Constitution, §244. Columbus's egg was nothing to this "Mississippi idea." The chronicle of events from De Soto could not help being tinged with Reconstruction feeling. In another particular it might have been expected to be more frank. The issue of five millions of State stock in 1839 is selectively not followed by record of its repudiation two years later. The State has been liberal to women, and claims the first institution of higher learning for them (1819; but the female seminary at Byfield, said to have been the first in Massachusetts, was founded in 1806). The Register is to be renewed every four years, and its beginning is highly praiseworthy.

An excellent beginning has been made by the Department of Anthropology of the University of California in its publications relating to American Archæology and Ethnology, with Pliny Earle Goddard's 'Life and Culture of the Hupa,' a tribe once curiously secluded, and occupying a valley of the Trinity River, in the northwestern corner of California. Mr. Goddard lived among these people for three years, and his well-written account of them is minute and authoritative. The illustrations are mostly of dress and utensils. There is the usual sad story of the demoralizing effects of contact with the whites.

Our rivers, whose value as waterways is now so greatly lessened by the construction of railroads, are expensive facilities at the best. The Report of the Chief of Engineers, U. S. Army, for 1903, recounts the work done in removing the famous "raft" from the Red River of Louisiana. It was ninety-two miles long when work on it began in 1828. A channel through it was completed in 1857, at a cost of over $1,000,000. No work was then done for fifteen years, and the results of a large part of the earlier work were thus lost. In 1872 the river was again closed for thirty-two miles by the "raft," a great accumulation of snags, stumps, and leaning trees; the wrecks of more than 200 steamboats lay in the channel between the river mouth and the head of navigation. From 1872 to 1903, more than $1,600,000 has been spent on this river; the channel is now clear, and at the head of the "raft" the river bed has been worn down fifteen feet, thus diminishing floods and allowing the reclamation of much productive land where there was formerly a network of lakes and bayous. The annual average value of freight on the river is now $5,132,360.

From the same source we learn that the unruly Mississippi is giving much trouble by trying to desert Vicksburg. Before 1876 that city, well situated on the bluffs near the mouth of the Yazoo, had the finest harbor on the river, with not less than twenty-five feet of water in any part. A cut-off of the bend that led the river by the city bluff occurred on April 27, 1876, and the abandoned channel, or ox-bow lake, "Lake Centennial," was so much shoaled by the deposition of silt where the new channel crossed its ends, as practically to destroy the harbor. A great amount of money has since then been spent upon it, partly in dredging a deep channel, partly in revetting Delta Point, on the west bank, so as to prevent

still further withdrawal of the river from the wharves; nearly $400,000 has been expended on the latter object. But the average annual value of commerce in Vicksburg harbor and the Yazoo River is $8,753,650. It was in expensive but apparently indispensable work of this sort that $18,000,000 was spent last year on "Rivers and Harbors."

The main result of the German Antarctic expedition, described by its leader, Dr. E. von Drygalski, in the *Geographical Journal* for August, during its twenty-eight months' work, fourteen in the polar ice, was the discovery of a new land which has been named Kaiser Wilhelm II. Land. Though this determines the nature and extent of the continent for more than ten degrees of longitude, it does not solve the question whether the continent is continuous or a collection of large islands intersected by narrow straits and inlets. Dr. Drygalski is to give a lecture at the coming meeting of the International Geographical Congress at Washington. A "Journey in Angola," by Capt. Cuninghame, relates to an almost unknown part of West Africa, "densely populated, some of the kraals containing 2,000 to 3,000 inhabitants." Several of those visited "were peopled entirely by blacksmiths working the abundant ironstone. It is a notable fact that apprentices are sent from great distances to these 'smithy kraals' to be taught the art of working that metal." Many of the natives are employed in rubber collecting, and a merchant gave this significant testimony to the value of British methods of dealing with them. He said that among a crowd of rubber-carrying natives "were four men from the Zambesi, who refused to take the customary present of *aguardiente*, which is served out preparatory to trading. They said they came from British country, where 'strong water' was interdicted, and were quite ready to trade without it." He was informed of the existence of the ruins of a fortress-like building of unmortared granite blocks near his route, but did not visit them.

The Corsican is the subject of the article of widest interest in the *Annales de Géographie* for July, and certainly a striking picture is drawn of a most peculiar people. Living in a land of sea-girt mountains, the sea has no part in his life. He is neither sailor nor fisherman, but simply a shepherd, showing the distinctive characteristics of the pastoral life in his dislike of all manual labor and desire for isolation. Few of the natives live on the sea-coast; and they have always regarded with hostility the strangers who sought their shores, from the ancient Greeks, Phœnicians, and Carthaginians to the Pisans and Genoese of modern times. The Romans alone seem to have succeeded in colonizing the island and developing its great natural resources. For though "the Corsicans have *l'âme française*, France exercises but little influence over them," writes the author, a French official. This love of isolation was shown in their relations to each other. Their walled villages, with houses two or three stories high, perched on almost inaccessible cliffs, were veritable citadels in which the people lived a life separate from those of the neighboring village. There was no concentration, no national life; even as late as 1800 the little community of Asco "formed a distinct republic, administered by elected elders." The social and political life rests upon the family, and the Corsicans' primitive form of justice is the vendetta. "A gun," they say, "is worth more than a judge." Next to their flocks their most precious possession is the chestnut, and the wealth of a family is reckoned by the number of these trees it possesses. The manual labor of cutting wood, building, cultivating the ground, is done almost wholly by some 20,000 Italians who come annually to the island for six months. In one way only does the young progressive Corsican show any longing for contact with the outside world. His one absorbing aim is to become a functionary of the French Government, first of all in the army, for "chacun croit avoir l'étoffe d'un petit Napoléon"; but if not there, in any position where one can command and wear a uniform.

One of the most significant results of the awakened interest in education in England is the establishment of a faculty of commerce and administration at Manchester University. Its aim is to give a systematic training in the higher commercial subjects, methods of government and administration, and in economic and social investigation. Among the languages in which instruction is offered are Chinese, including writing and pronunciation, and Arabic, including spoken dialects. Associated with the professional teachers are men engaged in business; banking will be taught, for instance, by men practically conversant with the business of a bank. The course for the degree of bachelor will include, besides general studies, two modern languages as well as one or two special subjects, while for that of master, bachelors of three years' standing who have carried on advanced studies and presented an acceptable thesis, will be eligible. The felt need of a broadening of university education is also shown at Oxford by the establishment of a diploma in economics. The scheme of examination combines a general knowledge of the principles of economics and of the recent commercial and industrial history of the United Kingdom, with a more detailed acquaintance with special subjects, to be selected from a wide range of choice, in theoretical, historical, and applied economics. The lectures and instruction, beginning next October, will be open not only to members of the University, but to others intending to pursue a business career or to enter the public service, as well as to foreigners and women students. This is very likely to attract the Rhodes scholars, of whom a large number are expected at Oxford in the new academic year.

Still another indication of this educational awakening is the Workingmen's College in London, the foundation stone of whose new buildings was laid by the Prince of Wales on July 16. This institution was founded by Frederic Denison Maurice, Thomas Hughes, and others in 1854, the idea from the start being that educated men should give to the workingman something of that which they had learned at the university; and zealous teachers have never been wanting. The average number of students for the past six years has exceeded 600, but with the new accommodations, which will include electrical and chemical laboratories, a large increase is expected.

A remarkable feature of industrial education in Germany, emphasized by Deputy-Consul Meyer, in his reports on this subject, is that in the workmen's schools of the lowest grade the three great subjects of instruction are German, arithmetic, and drawing. By German is meant, not the language, but the constitution of the Empire and the organization of the various states and principalities, the laws regulating trades, labor, commercial courts, savings banks, taxation, and religious teaching. Arithmetical instruction is not confined to the multiplication table, but includes bookkeeping, loans, interest, and a study of the statutes regulating checks, drafts, and bills of exchange. In connection with many of these schools "student homes" have been established where young men may come, especially on Sunday afternoons, for lectures, games, songs, declamation, amateur theatricals, etc. In the curriculum of the schools for builders and engineers there is what is termed the "Samaritan course," covering instruction in the care of the body, treatment of wounds, and first aid to the wounded—a praiseworthy feature which should be introduced in every technical school in this country.

An Index to the Daily Consular Reports for 1903 has just been issued by the Department of Commerce and Labor. The six to seven thousand entries, many of them being cross-references, are arranged alphabetically according to countries, subjects, and officers. It forms a valuable reference book to sources of information on a great variety of subjects of practical present-day importance.

A curious discussion has been carried on lately in the columns of the *Beilage* of the Munich *Allgemeine Zeitung* on the merits and demerits of the Austrian universities as compared with those of Germany for the development of original scholarship. The occasion for the debate was furnished by Professor Czerny of Heidelberg, who, in a *Festrede* published in the *Deutsche Medizinische Wochenschrift*, declared in favor of the Austrian institutions, basing his conclusion chiefly on the ground that, in the non-theological faculties of the German universities, there were thirty-three Austrian full professors, while in the Austrian there are only twenty-three Germans. Inasmuch as professors rather accept calls from Austria to Germany than from Germany to Austria, the Austrians appear to cross the borders for their university men only when they cannot find suitable candidates at home. To this an interesting reply is published in No. 92 of the *Beilage*, by a protagonist of the German schools, who draws attention to the fact that there are 985 non-theological full professors in the German universities, and only 300 in the Austrian; that, accordingly, only 3.35 per cent. of German professorships are filled by Austrians, but 7.67 per cent. of Austrian professorships by the Germans. A better basis for comparison the writer finds in the German universities of Switzerland, where there are forty-three German full professors but only three Austrian. The discussion has called forth so much feeling that the editor declares the debate closed as far as the columns of the *Beilage* are concerned, but he himself takes his stand against Czerny.

There has lately been placed in St. Paul's Church, Wickford, R. I., a tablet which reads thus: "Sacred to the memory of a native of Narragansett, GILBERT STUART, son of Gilbert and Elizabeth Anthony

Stuart, born at the old snuff-mill, North Kingston, December 3, 1755; baptized at St. Paul's Church, Palm Sunday, April 11, 1756; died, after a life full of honors, at Boston, July 27, 1828. The painter of George and Martha Washington, of Adams, Jefferson, Madison, and Monroe, of George III. of England and of his son, afterwards George IV., his incomparable portraits have given him a chief place in the history of American art. Erected by public subscription A. D. 1904." The list of subscribers contains many well-known Boston and Rhode Island names. Stuart's Presidential series might have included John Quincy Adams.

—The seventh volume of 'Meyer's Konversations-Lexikon' (Leipzig: Bibliographisches Institut; New York: Lemcke & Buechner) passes from Franzensbad to Glashaus, a tract not remarkable for great personal names but having a fair amount of economic rubrics (glass, foundries, weaving, etc.), scientific (geology, insects injurious to vegetation, poisonous plants along with garden flowers), historical-geographical (Germania and Rome's northern provinces in the middle of the second century A. D.), etc. The section on Mountains is freely illustrated. The Mammoth Geyser of Yellowstone Park is pictured in color. There are maps of French India, of Germania as just mentioned, of Geneva and Genoa. One is struck by four captions of Gentleman, Gentleman-driver, Gentleman-like, Gentleman-rider. The woman question is allowed four and a half pages, but the American aspect is very imperfectly grasped and presented; and here as in other places one feels the need of special American collaboration for what relates to the United States in this standard work. We cut no figure in the bibliography of the woman's-rights agitation. A particularly German feature is the article *Gesinde* or Servants, with its list of statutory regulations in various parts of the Empire. Those for Brandenburg, Pomerania, Posen, etc., go back to Stein and Hardenburg (1810). Equally German is the showing of governmental interference with the sale of patent medicines (*Geheimmittel*), and here we deal with actuality, for the provisions of the Bundesrath's decree of May 23, 1903, taking effect January 1, 1904, are set forth—how these medicines may be dealt in wholesale; how the retailer may sell only on written prescription; how the wrappers may not contain puffs or preposterous claims of panacea, and the like. The "American Coughing Cure" falls under these restrictions, as do "A——'s Cathartic Pills" and "Sarsaparilla," "W——'s Safe Remedies," "Mother S——'s Pills" and "Syrup," "Vin M——i," "Liqueur du Docteur L——," "Sirup Pagliano"—a column and a half of them, of many origins, European and foreign.

—Every one who knows anything about Stubbs is familiar with his love of reading proof-sheets, and it will be remembered that, in the preface to a volume of his Oxford lectures, he playfully accounted for their publication by alluding to the strength of this mania. However, he was not led by his love of correcting proofs to publish all his utterances, though doubtless we should be glad to possess every address which he delivered after he passed the age of twenty-five. Learning, clearheadedness, sagacity, were qualities which marked his work from first to last, and there is good reason, *prima facie*, to welcome such of his posthumous works as may see the light from time to time through the care of his disciples. We make the foregoing observations because Mr. Arthur Hassall has published a volume entitled 'Lectures on European History' (Longmans) which contains a series of more than thirty addresses delivered by Stubbs when he was Regius Professor. The subjects of these discourses may occasion a certain amount of surprise, for Stubbs is usually thought of either as an editor of mediæval chronicles or as a writer on the constitutional history of England. The breadth of his acquirements was probably unsuspected during his lifetime by the reading public at large, and for a younger generation the fame of one great work has been an obstacle to the recognition of its author's universal learning in things historical. These lectures deal neither with the Middle Ages nor with English constitutional history, but with the development of Continental Europe during the period from Charles V. to the Peace of Westphalia. Divided into three courses, they treat respectively of "The Emperor Charles V.," "The Political History of Europe from the Resignation of Charles V." (to 1618), and "The Political History of Europe during the Thirty Years' War."

—Mr. Hassall, whose experience as the editor of an excellent coöperative history of Europe entitles him to speak with some authority, places a very high value upon Stubbs's studies in a field which was not especially his own. "Though numerous publications bearing on the period of which these Lectures treat have appeared in England and abroad, it may well be doubted whether any so well-reasoned an account of the years from 1519 to 1648 has yet been written." Praise, and generous praise at that, they certainly deserve, for, although free from the trappings of erudition, they disclose wide reading and, what is equally essential, the results of deep reflection on questions like the Reformation and the rivalry between the chief Powers of Europe in an age when religion and politics were interwoven as they have never been since the Peace of Westphalia. For ourselves we have been chiefly interested in the account here given of Charles V., and we imagine that the majority of readers will consider it to be the most attractive part of the volume. It is significant to see that Stubbs, with his usual calmness of judgment, criticises unfavorably Motley's strictures about Charles's lack of chivalry, and anticipates in essential respects the weighty verdict of Mr. Armstrong. We subjoin his last words: "We part with him, then, with some little liking, and some considerable respect, and a great deal of pity; and we cannot spare him from very deep blame; we cannot shut our eyes to very great guilt. But we cannot doubt his greatness, his force and tenacity of mind, his great ability in war and government, his earnest faith in the religion he had been educated in; we cannot but think that he might have been a better man if he had not been so great a prince, with so much power for good and evil."

—Mr. Roberdeau Buchanan, who did the eclipse work of the American Ephemeris through more than a saros and a quarter, has published an octavo book of 247 pages and eleven plates (29 figures), explaining the computations in the utmost detail ('The Mathematical Theory of Eclipses,' Philadelphia: Lippincott). Mr. Buchanan is a master in the craft of computation, in the grade that belongs to *Nautical Almanac* work, though not, presumably, in the more delicate operations of the geodetical computer. The beginner who desires to initiate himself into the computing craft cannot do better than to go through the computations of an eclipse under the guidance of Mr. Buchanan. That of a total solar eclipse so as to determine the limits of totality is by no means the simplest thing in the world, and some pretentious treatises contain very mistaken statements about these phenomena. In Mr. Buchanan's treatise all is made so extra plain that we meet with such remarks as this: "There is a principle in the theory of differences that I have never seen in any of the ordinary works on interpolation, and that is, the symbol Δ is distributive." This means that if the Joneses have both more boys and more girls than the Browns, then the excess of the Jones children over the Brown children is the sum of the excess of the boys and the excess of the girls. The paragraph devoted to the exposition of this original idea concludes: "This principle I have found of very great use in certain methods of computation for shortening the work." We need not say that the works on interpolation which do not mention this presuppose a familiarity with the simplest elements of finite differences. Mr. Buchanan refers his reader in all cases to Chauvenet for the analytical developments, so that the first three of the nine lines of the title of his book very accurately describe just what the book *omits*. We will only add that, were we to go into technical details, we should have sundry strictures to make. Nevertheless, the work is excellent on the whole.

—In spite of the rooted antagonism of Celtic and Anglo-Saxon ideals, it is in England that the Irish National Theatre Society has found its chief support. The theatre that will presently be its headquarters in Dublin is the gift of an English lady, Miss Horniman, who has undertaken to spend about $10,000 on alterations and equipment and to take the responsibility of a ninety-nine-year lease at an outlay of about $1,000 yearly. The theatre, which will seat only five hundred spectators, belongs to the Mechanics' Institute in Abbey Street. The city morgue, which adjoins the building and has lately been abandoned by the Corporation, will be taken over for dressing-rooms, the whole expense being met by Miss Horniman, who will make a free gift of the theatre to the Theatre Society. As the income of the Society is only $250, the question of rents has always been the chief difficulty; the actors receive no payment, and are often recruited from the working classes, especially when the plays are in Irish. When Miss Horniman applied this month for a license or patent, an amusing discussion took place among the barristers who appeared for her and those who were present to protect the interests of the existing theatres in Dublin. Mr. Yeats was called to defend the aims of the Society, and was attacked by the opposition for producing plays with a political tendency such as his own "Cathleen ni Hoolihan." He retorted that he was simply an artist, and as such had no opin-

ions to advocate on the stage. The opposing counsel was obstinately Philistine, and refused to admit that the achievements of M. Antoine and the Théâtre Libre furnished a hopeful analogy for the Irish Theatre. London audiences, they said, had received with a "cry of horror" plays that had been produced by M. Antoine. Sir Horace Plunkett, who supported Miss Horniman, maintained that a patent should be granted on the ground that the Irish plays tended to keep the people in the country by giving them a fresh interest; any movement that would stop the leak at Queenstown would be welcomed by the Department of which he is President. His arguments were patriotic and practical, and told more than the artistic aloofness and claims for the romantic urged by Mr. Yeats and only half understood by his hearers. What really impressed the Court, however, was the fact that the Theatre could not in any case be made to pay, since there is to be no bar and no orchestra. Miss Horniman, as a non-resident, was not legally qualified to obtain the patent; Lady Gregory, the author of 'Poets and Dreamers,' met the difficulty by offering herself as the patentee. The opposing managers framed certain restrictions as to the character of the plays to be performed in the new theatre. They must be by Irish writers on Irish subjects, and when standard plays are given they must be not less than fifty years old. The patent was finally granted for six years, and the Irish National Theatre now has a home of its own in which to carry on its mission of popularizing the romantic drama.

MUENSTERBERG'S AMERICANS.

Die Amerikaner. Von Hugo Münsterberg. Two volumes, pp. xii., 494, 336. Berlin: E. S. Mittler & Sohn; New York: Lemcke & Buechner. 1904.

Professor Münsterberg's book is intended for Germans, and was written with the avowed purpose of enlightening the German public and dissipating prejudices which are due to misconceptions and misinformation. The author relates that ten years ago, when he was a professor at the University of Freiburg and still under thirty years of age, he received a call to conduct the Psychological Laboratory at Harvard. He accepted the call with the intention of resuming his position at home after the expiration of his three years' leave of absence. He set out, he says, with all the prejudices of the average German, and all the special prejudices of the German university professor, who looks down with patronizing condescension on the scientific culture of the New World. But he found everything so different from what he had expected, and was so powerfully attracted, that he concluded to remain. His principal motive for departing from his original intention was a desire to take a share in the work of promoting a better understanding between Americans and Germans by making them better acquainted each with the real character of the other.

From these statements and from other expressions in the preface it appears that the author considered that in writing his book he was carrying out a mission—a self-imposed one—in assuming which he was undoubtedly animated by a high ideal. He has indeed produced an imposing work, filled with information of all kinds, and abounding not only in statistical and historical facts and data, but also in philosophical reflections and shrewd comments which are the fruit of much study and personal observation. It is of necessity largely expository; hence considerable portions of it consist of information fairly familiar to educated Americans. Most of this is in the main accurate; whatever small errors have crept in are so few in proportion to the vast mass of material presented that they may well be passed over in silence. For the rest, the question presents itself, In what spirit and from what point of view does the author treat his subject, and how much value should properly attach to his conclusions and judgments? One naturally approaches with great expectations the production of a man of varied culture and recognized intellectual powers; one who, by his official position and long residence at our leading university, has enjoyed opportunities which seldom fall to the lot of a foreign observer of our institutions and national characteristics, and who is animated by a lively desire to see clearly and to report truthfully. The entire physiognomy of the book is such as might be expected. It is the methodical and systematic work of a German professor of philosophy, both in form and in substance. It is a sustained and elaborate thesis in support of certain metaphysical theories concerning the American people, their past development and their future destiny. As already intimated, the argument rests on a broad foundation of facts, but the impression made on the reader is that the facts are marshalled with a view to supporting preconceived theories, rather than that the conclusions flow inductively from the facts.

Comparisons naturally suggest themselves between the present work and that of Mr. Bryce. Broadly speaking, the two treatises illustrate respectively the German and the English method and cast of mind. Professor Münsterberg's metaphysical bent and his innate inclination to generalize and theorize meet us at the very threshold. In the opening words of his introduction, which, like the rest of the work, is written in a style bristling with epigram and *esprit*, he says that the mistake made by Germans in judging America is in comparing the United States with some single European state which has a homogeneous culture in all its parts, whereas the proper comparison would be with all Europe, since there is a wider difference between the ripe culture of the Eastern States and the primitiveness of some portions of the West than between the civilization of Germany and that of Bulgaria or Servia. Nevertheless, the American man everywhere, from the Atlantic to the Pacific, is one and the same. The discrepancies of culture are wider than those on German soil, but the discrepancies between men are smaller. The inhabitants of the various German States have different aims, ideals, and motives, while the eighty millions under the American flag are, in their aspirations and their essential being, a single race, all animated by the same desires, impelled by the same forces, and impeded by the same defects; their variations of culture being merely variegated garments, all of which, however, cover always one and the same creature, the American.

It remains to be seen how the author elaborates his theory—how he works out in detail what he considers the particular qualities which set the American man apart from other men. These particular qualities are four in number, and to each of them is devoted one of the four parts into which the book is divided. The first part, treating of politics, illustrates the working of the spirit of self-government; part second deals with the industrial development, which emanates from the spirit of self-help; part third describes the intellectual life, and dwells on the spirit of self-perfection; part fourth is given over to society and the working of the spirit of self-assertion. It may be noted, in passing, that our author is rather fond of these fanciful and epigrammatic conceptions and distinctions. Thus, to show that Germany and America are peculiarly fitted to work together for the best interests of civilization, he takes up in turn the relations in which other European countries stand to the United States, and sums up the case by saying that America finds its social antipodes in England's aristocracy, its intellectual antipodes in the literature of France, and its political antipodes in Russian autocracy, while the German nation is the only one with which it is possible to establish a real sympathy in the social, the intellectual, and the political realms; Germany becoming Americanized and democratic, while America becomes Europeanized and aristocratic. This is a typical instance of the way in which the author's love of theory and of pointed expression leads him into making statements which, to speak moderately, are questionable, and are, moreover, without much support in his text.

Having constructed an imaginary American and endowed him with distinctive qualities which mark him as a being set apart from the rest of mankind, Professor Münsterberg proceeds to show how these qualities work out their legitimate results in all the relations of the national life. As already stated, the first part of the work, embracing more than a third of it, treats of the political life of the nation, and is intended to illustrate the American spirit of self-government, the desire of each man to determine for himself how and by whom he shall be governed. Together with much historical matter and much discussion of political problems of the most recent years, there is a description of the working of the political parties, in which the author sometimes seems to ignore well-known facts, which, however, he recognizes in other parts of his book. Thus, he says that the voter not only elects Presidents, governors, mayors, legislators, and all sorts of officials, but even determines who shall be candidates for the various offices. Probably having in mind German methods, he says that there are no central committees or authorities who decide these things beforehand without bothering themselves about the wishes of the masses. One naturally reads this passage with surprise, as it seems hardly credible that a man of Professor Münsterberg's intelligence could have lived here for ten years without ever hearing of men like Platt, Quay, or Gorman. On a later page, however, he says that at a Presidential election millions vote for each candidate without being conscious that there was a time, long before the meeting of the national conventions, when it was in the power of eight or ten leaders

to determine who should be the party candidate. Contradictions of this kind are not infrequent, and may be assumed to arise from the necessity which the author imposes upon himself of defending a thesis instead of merely setting forth facts. Having started out with the theory that the American man is bound to settle for himself who is to be his President or governor or mayor, and will allow nobody to dictate to him or to lead him, he could not possibly avow to his German audience that in too many cases the voter has absolutely nothing to say about the selection of candidates, and is restricted to the poor privilege of choosing between two men, neither of whom would be the choice of any considerable portion of the people if the people had any choice.

He has another fanciful theory which leads him into making strange statements. He believes that the two parties which divide the country between them have had a logical continuity and consistency from the start, and represent respectively the centripetal and the centrifugal tendencies of the people; namely, that the Democratic party stands for the State-rights doctrines of Jefferson, while the Republican party maintains the Federalist or centralizing principles of Hamilton. With his usual conscientious method, he works this out in detail, and displays his dialectic skill in an attempt to prove that the respective attitudes of the two parties on the questions of slavery, of the tariff, of the free coinage of silver, etc., can be logically deduced from their position on the question of centralized government. Any one who knows how narrowly the Republican party escaped the fate of becoming the advocate of free silver can look on such paradoxes as the mere vagaries of a philosopher. Perhaps the climax of this peculiar view is reached when the author gravely enunciates as his conclusion that, like all centralists, the Republicans are at bottom Opportunists and Realists in politics, while the Democrats, like all centrifugal politicians, are Idealists and Dreamers. Nobody will deny the novelty of this discovery.

The second part of the book, occupied with the industrial development as an emanation from the spirit of self-help, or the spirit which leads a man to shape his own destiny for himself, again presents the elaboration of a thesis. Its aim is to demonstrate the theory that Americans regard work not as a means to an end, but as an end in itself. An American works, not because he has to earn his living, or because he desires to accumulate riches, but because he loves work for its own sake. The charm that wealth has for him is not in its possession so much as in its acquisition. He hunts the dollar in about the same spirit in which the English go fox-hunting. He loves the profit, but he also loves the game. A European merchant or manufacturer looks forward to the time when he can retire from business and live on his income; an American money-getter no more thinks of retiring than does a scientific man or an artist who is still in the full vigor of his powers. For these and similar reasons the author thinks that it is radically wrong to accuse Americans of materialism. They are really idealists, for idealism does not depend on the acts which a man performs, but on the spirit in which he performs them. If a man performs a deed because he believes in its value, it is of no consequence whether his idealism is demonstrated in corporeal or in spiritual matters, whether he writes poems or paints pictures, or builds bridges or lays railroad tracks.

No less peculiar and original than this thesis are some of the arguments by which it is sought to enforce it. One of them is that Americans do not value wealth when it is not the fruit of a man's own exertions. As an instance of this the author says that Americans are not gamblers or speculators, whatever may be the appearance or the general opinion on that subject. He ingeniously explains that men who speculate in stocks do it, not in a gambling spirit, but as a matter of business; in other words, they do not trust to luck when they buy stocks or when they sell them short, but they study the market, ask their friends, act on "tips," and are guided by the judgment thus formed. Even betting and poker-playing can be viewed in this manner. Another illustration of the disinterested character of American enterprise is found in the habit which Americans have of building railroads in unsettled portions of the country, whereas in Europe railroads are built only where the population has already settled.

The third part, describing the intellectual life, and dwelling on the American spirit of self-perfection, is mainly inspired by the author's conviction that America is destined to surprise the European nations by achievements in the field of science, literature, and art which will rival her successes in the industrial field.

"In the middle of the seventeenth century," he says, "all of the civilized nations had produced great philosophers: France had Descartes and Malebranche; Italy, Bruno and Campanella; England, Bacon and Hobbes; the Netherlands, Spinoza and Grotius; but Germany alone had nothing to offer, so that the scoffers took it for granted that the Germans had no talent for philosophy. The time may be nearer than the scoffers imagine when America will have her Leibnitz and Lessing, her Kant, Fichte and Hegel."

Of great interest is the chapter on the universities, in which Professor Münsterberg has a subject on which he is preeminently qualified to speak, being equipped with what might be called esoteric knowledge, and the comparisons he makes between American and German universities being based on an unusual familiarity with the inner workings of institutions of learning on both sides of the ocean. He considers that, in comparing the intellectual development of our country with that of Germany, it is necessary to remember that the periods occupied by the various stages of progress are much longer in the latter case than in the former.

"The primitive times of the Teutons, from the days of Tacitus to the Christianization under Charlemagne about the year 800, would thus correspond to the century and a half from the discovery of America to the Puritanization of 1630; the next period, covering seven hundred years, and ending with the emancipation of Germany from Rome, covers in America another century and a half, ending with the emancipation of the colonies from England; the Reformation was followed by a period of three hundred years, embracing the Thirty Years' War, the literary revival of the eighteenth century, the downfall of Napoleon, the war of German liberation; and here again the Americans reproduce a similar movement in ninety years—years of war in the beginning of the nineteenth century, a literary revival in the middle, followed by the war of secession, and finally by peace."

Without following our author further, it may suffice to say that he finally comes to the point that, in matters of the higher education and original research, there has been a greater movement in America during the past ten years than in Germany during the past fifty.

In apparent contradiction of this train of thought, he says, later on, that, in judging American productions in the highest regions, Germans are inclined to adopt a false standard: having in mind the greatest names in philosophy, they point to Kant and Schopenhauer, Fichte and Hegel, and ask, What have the Americans to set against these names? But as America's scientific and philosophic productiveness is a matter of the past twenty or thirty years, the proper comparison is with what Germany has done during the same period, and we shall find that great men are as rare there as they are here. Professor Münsterberg cites a great number of Americans eminent for their services to science and philosophy, and selects for especial commendation a few of his Harvard colleagues. Royce's work, 'The World and the Individual,' he says, "is perhaps the most important systematic conception of the world which our time has produced." William James he pronounces, next to Wundt, the most important psychologist of the present day.

There are other comparisons with Germany. The Germans are sparing of time and labor in the schools, but wasteful of both at the universities; the Americans waste much time in the schools, but make the fullest use of it at the universities. As regards the rapidity of service in public libraries, our author quotes the saying of Brooks Adams that in the Paris National Library it takes an hour to get a book, in the British Museum half an hour, and in the Congressional Library at Washington five minutes; and then adds that in Germany it usually takes half a day.

In his judgments on literature he follows the lead of most foreign critics in assigning a high place to Poe and Whitman. The latter he puts before all others, and finds in him some resemblance to Nietzsche. Speaking of the arts, he says that, in the art of painting, as in many other realms, the United States has gone through three stages—from provincialism to cosmopolitanism, and then to nationalism, and is just now in the transition from the second stage to the third. In praising the work of Sargent and of Whistler, he says that they are, in the main, portrait painters, while the true American artistic expression is found in landscape; furthermore, Sargent and Whistler speak the language of Europe, but America is beginning to speak a language of her own.

The fourth part of the work, given over to social phenomena, in which is exhibited the working of the spirit of self-assertion, develops two of the author's favorite theories: the supremacy of the American woman, and the growth of American aristocracy. His views about women are familiar to American readers of his 'American Traits.' He considers the American woman to be the consummate flower of American civilization. Nevertheless, he recognizes that her position of supremacy

entails certain drawbacks to the common weal. While the half-educated American man will refrain from passing judgment on matters outside of his sphere, every quarter-educated American woman is ready to give her opinion on every subject under the sun. In no other civilized country do quackery, patent medicines, and Christian Science bear such sway; the phalanx of quarter-educated women fights for them.

In his views on American social relations, on equality, on aristocratic tendencies, the author indulges his tastes for fanciful and paradoxical assumptions, which are, however, permissible in dealing with a subject which every man looks at from the point of view of his personal experience and impressions, and on which one opinion is as good as another. He has many acute observations. Speaking of the prejudice against the negro race, he says that it is not racial, but social. The prejudice is really stronger in the North than in the South. The Southern people are accustomed to see negroes about them, and have no objection to them except that they will not admit their social equality. No Southerner would enter the dining-room of a hotel if he saw a negress sitting at one of the tables; but if she has a little white child with her whose nurse she appears to be, she is at once recognized as a household servant, and her presence ceases to be objectionable.

There are many other topics which Professor Münsterberg views in an original way that may prove suggestive to his American readers. He is of the opinion that the Monroe Doctrine has outlived its usefulness, and will ultimately be abandoned, provided no European Power is rash enough to attack it. His reasons have much force. Briefly summed up, they are, first, that the supposed contrast between the free institutions of the American continent and the absolutism of Europe is a figment. The governments of the western European nations are far superior to those of the so-called South American republics. Secondly, as a defence against European aggression, the Monroe Doctrine has no value. The United States has become so powerful that it is absurd to suppose that the acquisition by a European Power of a small tract of land in South America can be attended with peril. We have a boundary line extending for three thousand miles from ocean to ocean with our traditional enemy, and it has never involved us in hostilities. What danger can arise if Italy or Holland should plant a colony in some South American State? Thirdly, it would be greatly to our interest if English or German colonists introduced civilization into some of the South American States and created a new outlet for our commerce.

Judging the book as a whole, the salient feature of it—one which meets the reader on every page—is its unfailing optimism. Everything is seen to be for the best in the best of all possible republics. Even institutions which some Americans regard as accidental excrescences and which others consider to be evils to be abolished, are praised as necessary outgrowths of the American character. The author finds it quite proper and necessary that national politics should be concerned with the government of cities, that a member of Congress should be a resident of the district he represents, that members of the Cabinet should have no seat in Congress, etc. Political corruption and civil-service abuses he views with an indulgent eye, as transient evils which have been much exaggerated. The sensational newspapers have in him a defender who finds their offensive features palliated by commendable qualities which have escaped the scrutiny of less charitable observers. Wherever other men see dark and threatening clouds, he sees only the silver lining. Whether the question be of the aggressiveness of the Trusts or of the pretensions of the labor unions, he is equally hopeful of a pacific solution. In short, whatever is, is right; if it were not right, how could it possibly exist in so favored a land? As they say in the "Mikado," "You are right, and we are right, and everything is as right as right can be."

Of course, it is easy to see that this optimism, in so far as it is not the result of the atmosphere in which the author lives, arises in a measure from his desire to combat the prejudices of his German readers and to present his subject in a favorable light. Although undoubtedly desirous of giving an impartial account, he is nevertheless unconsciously an advocate. It is the business of an advocate to present his own side and to let the opposing advocate present the other. As an exposition of everything that can be said in favor of the American people and as a storehouse of valuable information, Professor Münsterberg's work is assuredly a remarkable and valuable performance—a monument of industry and of good will.

HOGARTH'S ARABIA.

The Penetration of Arabia: A Record of the Development of Western Knowledge concerning the Arabian Peninsula. By David George Hogarth, M.A., F.R.G.S., F.S.A. New York: Frederick A. Stokes Co. 1904. Pp. xiv, 360; 54 illustrations and maps.

There goes a peculiar ease of mind to the reading of the story of the exploration of Arabia, for, until now, it has been of exploration simply. Since Alexander in his last days planned a coastal march round the peninsula to Egypt—a march which almost certainly would have baffled even his genius—and Ælius Gallus carried out his gigantic failure, European conquest or exploitation has had nothing to do with the home of the Arab race. Egypt has made raids into the interior; Turkey holds garrisons round the coast; England has imposed the *pax Britannica* on the Persian Gulf, and drawn the teeth of the pirates of Bahrein, Oman, and Hadramaut; but here there need be no shrinking from such a record of disgrace as forms almost universally the closing chapters of the contact between the civilization of Europe and a stationary race. Solitary travellers have come and gone through Arabia's wastes, over her mountains, in her cities; merchants have traded with her coasts; scholars have given their days and nights to unravelling her history, her geography, her life in large and little; from her has gone forth the most abiding change and influence since the Christian era, but Arabia remains untouched, unaffected, nourishing her peoples in the old ways, a multitudinous but tremendous unity known through fourteen centuries and spread over a million and a quarter square miles.

Nor is it likely that the future holds anything different. The Arab race is neither "nigger" nor "native," in the intolerant Anglo-Saxon phrases, though much negro blood has poured into it. It will never be subject, and it will follow its own paths and retain its own identity as unchangingly as have the Jews. Nor is there anything in the land itself to allure. The tales of gold in Midian and of gems and spices in Yemen have failed. The wealth of Arabia was never its own; it acted as agent for the farther and the gorgeous East, holding that not in fee, but passing on alien merchandise. And so the case will always stand. The Turkish Government will continue its railway down the pilgrim road to Mecca. England will run another from Egypt across the desert to the head of the Persian Gulf. These will be but through-routes and strategic lines. Arabia geographic they will do little more than touch, and Arabia national may use them, but certainly will not be used by them. They will not affect land or people more than the Roman or Byzantine *viæ stratæ* of the pre-Muslim time, which gave a word to Arabic and a theological concept to Islam, but touched in no whit the Arab people.

In truth, then, the exploration of Arabia is almost as purely of simple scientific interest as the struggle to reach the poles. Only at one point, it may fairly be said, does anything else enter. Arabia is not only the home of the Arab race; it holds also, but easily accessible and near the coast, the two sacred cities of Islam. Over these there may well be struggles in the future, and it is a large chance that England will have to add them to her burdens; but the district where they lie, al-Hijaz, is historically easy of separation from the rest of the country, and a European garrison there might mean for the Arabs little more than does that at Aden. For Islam, it is true, the effect would be portentous, but Arabia and Islam are two absolutely separate things. It is easily conceivable that an event which would send a quiver through all the rest of the Muslim world would hardly move at all the tribesmen of the desert.

But, however such visions may shape themselves into reality, the reading of Mr. Hogarth's book bears with it no memories or fears of the wrongs that fall on inferior races. Deadly, often, has it been for the explorer, but the people are as they were found. It is a record of study and research in geography and sociology—nothing more. To a geographer, therefore, it has happily fallen. The only pity is that Mr. Hogarth is no Arabist, and all untranslated sources were closed to him. Those, too, so far translated are of very minor value—mere traditional sketches, without first-hand knowledge—and one, even, of these seems to have escaped him: the German translation by Wüstenfeld of the introduction by al-Bakri to his geographical lexicon. The haunted well of Barahout, also, and the legended city of Irem have evidently for him no special meaning. Nor does he notice the curious narrative which Sprenger translates in his 'Leben Mohammeds,' describing an actual eruption in one of the *harrat*, and using the exact words, suggestive for the Biblical story, that it was "as a pillar of cloud by day and of fire by night." D. H. Müller's 'Bürgen und Schlösser Südarabiens' seems also to have

been unknown to him; it would have opened much of the treasure still hidden in the Arabic text of al-Hamdani. The records of European travellers, on the other hand, are treated most exhaustively. The only serious omission is of Wallin's complete journal and letters (Helsingfors, 1864-1866, 4 vols.); their Swedish garb, it is true, renders them inaccessible to most. Robertson Smith, too, got as far, at least, as Taïf, and described his travels in a series of letters to the Edinburgh *Scotsman;* these, however, were not given permanent form. On the puzzling figure of Ali Bey some further light might have been found in Budgett Meakin's books on Morocco. It is a slight detail that S. M. Zwemer was not a missionary to the Jews (p. 195), but one of the pioneer missionaries to the Arabs themselves.

To come to Mr. Hogarth's general treatment, it is simple and satisfactory. The broad geographical features of the land are made abundantly plain with a certain amount of iteration, being developed gradually as the explorers penetrate and cross them. There is no attempt at a systematic portrayal of the whole; no geography of Arabia is here written. The nearest approach to that is where the regions still unexplored are limited and their problems defined. For the rest, we follow the travellers and see with their eyes, appreciating, it is true, more exactly than they could the day's work of each. This process is divided—not very necessarily—into two parts; first, the pioneers; second, from the middle of last century, their successors. After some brief account of Arabia as known to the ancients, rightly appreciative of the knowledge of Ptolemy, we have Varthema and the Portuguese, ending with Arabia in the map of D'Anville (1755). This is the end of the period of tradition, fragmentary chance reports, and darkness. A very few years (1762) saw Niebuhr in Yemen, and the modern exploration begun. Then the names come fast—Ali Bey, Seetzen, Pinati—if he be worthy of mention in this company—and, finally, under the guard of Muhammad Ali's campaign against the Wahhabites, Burckhardt, equal in fame with Niebuhr.

With the Egyptian march into Nejd the country was now fairly opened, and a multitude of little narratives of exploration, of purpose and without, followed, but the next name of moment is that of Wallin, the Finn, who crossed and recrossed the centre, and rendered possible the map and description of Ritter, which are still authoritative, though compiled more than fifty years ago. So fruitful was Wallin's work, and so little advance have his followers made. Yet the roll of their names is long; this barren land has had the strangest and most potent attraction for all types of wanderers. Burton, Palgrave, Sadlier, Euting, Huber, Halévy, Glaser, the Blunts, Nolde, Guarmani, Doughty, Von Wrede, Von Maltzan, Snouck Hurgronje, Stern, Harris, Hirsch, Pelly—such are some of the adventurers, and to each his place is very fairly assigned in these pages. The value of Burton's 'Pilgrimage' is perhaps somewhat minimized. His route was not untravelled, but the picture he has given is unmatched for clearness and life. The treatment of the enigmatic Palgrave is excellent. The slightness of his real results is shown. He was distinctly imaginative, but he was not the "d——d liar" of Robertson Smith, nor did he deserve "das denkbar vernichtendste Urtheil" of Socin. The relations of Euting and Huber and their results for the Teima stone are made plain; perhaps Euting's geniality is hardly fairly brought out. Halévy and Glaser have the full justice done to them which they have not always received. The social insight of the Blunts, too, amateurish as their work often is, is honored, and the value of their geographical observations developed. Nolde's interest lay in horses and camels and in the politics of Nejd, and to geography he paid little attention. Guarmani's phenomenal journeys have justice here probably for the first time in English; the rarity of his Italian record has obscured his merit. Doughty's fame was fixed from the publication of his great work—truly the greatest on nomad Arabia; but the appreciation here is exact and ample. The credibility of Von Wrede is rightly upheld, though no one has again seen his quicksands; but no account is taken of the more than doubt on the story of Keane. Pelly's narration has had too little attention, and the description here of its businesslike definiteness is good. As an army officer and consul turned geographer, he compares favorably, in his daring ride, with Sadlier, first crosser of the continent as the latter was. Finally, Snouck Hurgronje did little for geography, but much for the normal town life in Mecca.

In all this the geographical interest is naturally supreme. The plan of the book and Mr. Hogarth's lack of Arabic learning have debarred him from any considerable wanderings. When he does go afield, little slips are apt to occur. The "ihram" is not one garment, but two (p. 92). Niebuhr's statement (p. 72) of the attitude of the Wahhabites to the doctrine of the nature of the Qur'an is most unhappy; the Danish engineer was a prince among explorers, but no theologian. Burckhardt's success in the rôle of a learned Muslim was not as great as Mr. Hogarth suggests. Lane has told us how his Cairo friends would never give him even the title of "shaykh"; his habit of whistling—always unlucky as the speech of the Jinn—effectually prevented that. Soon after his death, too, there grew up a legend that the shaykhs of the Azhar had discovered that he was a secret "Rafidite"—a very extreme form of Shi'ite heretic. They examined him and found the names of the first three Khalifas written in contempt on the soles of his feet. That, of course, was enough, and he was put to death. Plainly, his standing in orthodox Cairo could not have been remarkable.

In illustration, an abundance of reproductions (photographic evidently and often very dim) of maps, plans, portraits, and views is given. The maps are all of high interest, ranging from Sprenger's reconstruction of that of Ptolemy down, and the portraits are often very striking. One of Burton in his younger days shows how he was called "Father of moustachios." Wallin, from a picture in the possession of the University of Helsingfors, where he died as professor of Arabic, is a figure of character and impressiveness; Niebuhr, shrewd, open-eyed, pigtailed, needs only a china-bowled pipe and a flowered dressing-gown to be a *Grossvater* in a Jean Paul romance; Lady Anne Blunt, from Molony's painting, is painfully libelled. Two new maps are added, one geographical and the other of land-surface features. Both are somewhat small and necessarily incomplete. It would be a grateful labor if Mr. Hogarth would collaborate with an Arabist and give us a thorough map of Arabia. The latest Stieler map to which he refers is by no means a success, and the adventure is yet open. Only, in any such attempt, the unexplored parts should be carefully indicated. As it is, we have painfully to trace explorers' routes and make a guess at their range of information on either side. The map of Arabia must still be defaced by many white blotches, though probably now no great secrets are hidden behind them. And there is hardly any map on which the problems of geology and geography so closely join. The nakedness of the land lies bare throughout; there is little of decent coverture to its anatomy. To explain, even to recognize and describe, its "nafud," its "harrat," is "falj" pits, its wadis and water system generally, subterranean and visible, is a task for the student of geology, not for the mere triangulator and contour-sketcher. So even Wallin did not recognize the lava of a "harra," though he remarked innocently enough that it had "very much the appearance of cinders." For this task Mr. Hogarth is evidently amply fitted, and we trust he will permit it to be urged upon him. He needs only a collaborator who is familiar with Hamdani, Bakri, Yaqut, and the rest—a somewhat hard requirement, it must be admitted.

Forms of English Poetry. By Charles F. Johnson. American Book Co. 1904.

The title of this book is deceptive, for the word "form" as a technical term in treatises on poetry usually refers to the rhythmical of metrical form considered as sound merely, the author himself so using the word in the heading of his eighth chapter, "The French Forms." Yet in six of the eight divisions under which poems are here classified, the classification is on the basis, not of form, but of subject or treatment. Mr. Johnson recognizes this inconsistency on page 355, when he says of romance and epic, "It is only in a broad sense that they can be called poetic forms, since they are not at all distinguished by verbal embodiment."

The book is addressed not to those seeking to learn how to write verse, nor to those wishing to give instruction in prosody, but to young minds supposed to know little or nothing about poetry, yet to be capable of being interested in it. The first chapter, on rhythmic units, gives a concise treatment rather better than most such abstracts, containing few misleading statements and much pithy information. It should help any inquiring mind and is an attractive presentation of its subject. The historical method employed in the eight chapters succeeding is not so flagrantly overdone as in several recent books on poetics, yet it can but repel students. It involves many repetitions—a few necessary, some advisable, and others wearisome—and it leads to altogether too much emphasis on the earlier and too little on the more recent poets. The book would be bettered by two omissions. The analysis of "In Memoriam" (pp. 212-222) is likely to repel the tyro it might inform, and can hardly inform the poetry-lover it will not repel. Still more ill-judg-

ed are the trivial and uninstructive citations of Russian folk-tales and the wry-necked comments on them which fill pages 338-348 inclusive. These songs have little relation to any sort of epic, none to epic in English, and they obscure rather than illumine the treatment of that kind of poetic composition.

On page 12 we read: "Judging from the analogy of music, it seems highly probable that the time-beat of the accented syllables in a line of English poetry is exact. That is, that if in a normal reading we strike twenty accents in a minute, each would be one-twentieth of a minute apart—all would be equally spaced." This statement we regard as misleading. Greatly overworked is the analogy of music as an explainer of the phenomena of English verse. Still to be settled by some yet uninvented process of the physiological or psychological laboratory, the facts elude demonstration. The demonstration is quite likely to be that the time intervals of English verse accents are only approximately equal.

The chapter on the French forms is fairly good, yet neither in text nor in examples does it give any clue to the origin of the triolet in dramatic dialogue, nor to the proper significance of its repetitions. In what is said of the sestina there is much false doctrine. Kipling's "Sestina of the Tramp Royal" is in the strict Provençal form as invented and exemplified by Arnaut Daniel, for the Provençal sestina was unrhymed. The example quoted on pages 320, 321, as following the Provençal standard with strictness, is after the later and more artificial French rhymed model.

Like almost all writers on English versification, Mr. Johnson is completely bewildered when in the presence of a pæonic or semipæonic lilt. He quotes on pages 31, 32 some verse in such a rhythm, and shows by his comments that he fails to detect the verities of its movement. In many histories of music, mention is made of a mediæval religious musician who gravely appended to his exposition of musical notes an asseveration of his abiding faith that the breve was the shortest possible note, and an execration of self-styled composers who held that such an unthinkably short note as a semibreve could exist. In spite of him and hosts of other such reactionaries, the world's musicians have gone on conceiving, composing, and performing music with notes continually shorter and with novel kinds of time devised to suit the shortening notes; and the end is not yet. As music developed along the line of shorter notes and more to the bar (its other lines of development do not enter into the analogy), so the variety of the rhythms of English poetry is steadily increasing by the composition of verse in metres whose characteristics are shorter absolute and relative time to the syllable, more syllables to the foot, more unaccented or lightly accented syllables in proportion to those fully accented. Besides rhythms with one or two unaccented syllables to each foot accent, a great deal of verse has three light syllables to each heavy syllable in a considerable proportion of its feet. These rhythms are analogous to the pæonic metres of the Greeks and Romans, and there are not wanting signs that lilts of four or even five light syllables to each ictus may be composed in English. How much longer, we wonder, will the writers on versification misunderstand or ignore what the writers of verse are very generally doing?

The large amount of space allotted to quotations gave an opportunity for illumining exposition of many poets' peculiarities, and for cogent illustration of the author's contentions. But poor use has been made of it. Except in the chapter on the ode, few quotations, even among the sonnets, might not have been easily bettered by a more sympathetic knowledge of the poet's work, and a more judicious selection. This is especially true of Swinburne; and it would have been exceedingly easy to cull finer examples of most of the French forms. Also, in most instances, instead of those here printed, better sonnets, both as specimen sonnets and as exemplifications of their authors' sonnet-writing, could often have been hit upon by superior taste in gathering them. The samples of ballads given are enough to scare most neophytes permanently away from the reading of our fine old ballads. Particularly out of taste is the printing of most of Buchanan's "Judas Iscariot."

In spite of criticism made and capable of being further made, this book is admirable in spirit and generally commendable in execution. The preface is worth reading, especially the first paragraph on page 4. The observations on factors in the quality of verse-form are often well thought out and very well expressed, showing Mr. Johnson's comprehension of niceties of verse-structure and his neatness of expression. Even better than what he says of verse, his remarks on poetic worth and what makes for it, display his command of a telling phrase for a real idea. We trust that Mr. Johnson will try again and produce a larger and more comprehensive treatise. Much may be hoped of a man who can construct a definition of a poet as good as that adumbrated in the following quotation from page 26:

"The poet is endowed with the power of instinctively selecting those [syllables] which are melodious, and this power is an intimate quality of his nature. This skill is inborn and rare; there lies deep in the man a sympathy with melodious sound combinations, and his words assume them readily. To other men who have not the power of creating them, they give almost as much pleasure as they do to him. If this power is united with intellectual ability and keen perception of the emotional suggestiveness of things, we have a poet of the higher order."

Many more formal and ambitious attempts at defining what is a poet are less successful than this, and we know of few as sane and none more satisfactory.

Greater America. By Archibald R. Colquhoun. With maps. Harper & Brothers. 1904.

The "main idea of this book," the author tells us in his preface, is "Greater America [*i. e.*, the expanded United States] as a world Power," "the American peoples," and "the American ideal in the cosmogony of the world"—a rather large subject even if we suppose that Mr. Colquhoun uses the term cosmogony in some restricted sense not familiar to us. The survey embraces, of course, the Philippine question, the Cuban question, that of Canada, of "Pan-Americanism," and of the Monroe Doctrine; and the attempt is made to present "American evolution as a whole." If any one is entitled to deal with this matter, it is Mr. Colquhoun, for, "nearly twenty years ago, the writer of these lines predicted the shifting of the centre of gravity of world affairs from the Atlantic to the Pacific Ocean." Any one who knows twenty years in advance what is going to happen to the world's centre of gravity is entitled to a respectful hearing in any branch of evolution as to which he chooses to lift up his voice, and we have accordingly examined this volume with some care to find out if possible what the future has in store for us.

We have been unsuccessful. Whether the fault be in us or in our author, we can discover little save tame commonplace description and criticism, mixed with a good deal of friendly warning; but no revelation of the future at all. Where is the centre of gravity of world affairs to be twenty years hence? Are we to become a great colonizing power? How large a navy do we need? Must we have Canada, and how soon? Does the Monroe Doctrine mean whatever we like to have it mean, or not? When we gaze into the future, these are some of the questions which confront us, and which we hoped Mr. Colquhoun would solve; but he does nothing of the kind.

What he has to say is worth reading, but will not prove of much comfort for expansionists. His main thesis is that what we ought to do with the Philippines is what Great Britain has done with India—establish justice, make good roads, govern through a trained civil service, make life and property secure and the country prosperous; meantime allowing the natives "every privilege consonant with their own welfare." Now why should not we adopt a similar policy in the Philippines? Partly because we feel bound to try to give them "liberty," *i. e.*, the power of governing themselves, and believe that, self-government and democratic institutions once attained, all the other blessings will follow. This, our author implies, is all very well in theory, but will not work in practice. We should keep self-government for ourselves, as Englishmen do, and give the Filipinos the government suited to them. Not having done this, "we are bound to be somewhat disappointed with results so far as we can trace them." Mr. Colquhoun's whole chapter on the Philippines is a sermon on this text. Instead of providing the country with a sound political machine and a trained governing class and good courts, we have been trying to "assimilate" the Filipinos, *i. e.*, make them into imitation Americans. The reason we do this, of course, is that it is the only way we have ever tried before, or know anything about. We have "assimilated" Texas and California; why not the Philippines? Because Texas and California have been peopled by ourselves, and the Philippines never can be. But we cannot escape from our own ideal. It haunts us wherever we go, and compels us in the Philippines to pretend to behave as if we were in Massachusetts.

The consequence is that the Philippine venture satisfies nobody. It fails to satisfy us, because we are conscious that we are masquerading as imperialists; it fails to satisfy the Filipinos, because they do not understand what we are trying to do with them; it fails to satisfy genuine imperialists like Mr. Colquhoun, for reasons

which he states quite plainly. Only Anti-Imperialists can derive much comfort from his book, which may be taken, perhaps, as an indication of the tendency of the tide of "imperial thought" to subside into rational channels. Of course there is the usual hopeful suggestion that we are a great people, and shall be sure to find a way out of every difficulty; but we knew this long before imperialism was heard of.

Seager's INTRODUCTION TO ECONOMICS

By HENRY R. SEAGER, Professor in Columbia University. 560 pp. 8vo. $2.00 net.

The principles of Economics in vital relation to the facts and problems of contemporary business life. A distinctive feature is the introductory sketch of the rise and progress of modern industry in England and the United States, which is designed to suggest the historical perspective so necessary to the judicial treatment of present-day problems. Among the topics discussed in the body of the book the important one of distribution receives particular attention. Four chapters are devoted to different phases of the monopoly problem, more commonly known as "Trusts."

F. H. Dixon, Professor in Dartmouth College:—Professor Seager has written what is *probably the best text-book on the Elements of Economics that has yet appeared.*

W. M. Daniels, Professor in Princeton University:—He has produced something more than the usual manual for use as a text, and *I do not know of a more readable presentation of the theory of Economics with a saner outlook on the practical problems of industry.* I especially like the philosophical tone and balance which is so often in evidence.

U. G. Weatherly, Professor in the University of Indiana:—I am highly pleased with its arrangement and treatment. It strikes me as the soundest, sanest text now available for college use.

E. L. Bogart, Professor in Oberlin College:—It is thoroughly scholarly—more so even than its modest title would indicate—and *contains the latest thought upon all parts of the subject.*

CHINESE MADE EASY

By **WALTER BROOKS BROUNER**, A.B., M.D., of Columbia University, in the City of New York, and **FUNG YUET MOW**, Chinese Missionary in the City of New York.

WITH AN INTRODUCTION BY

HERBERT A. GILES, M.D., LL.D. (ABERD.), Professor of Chinese in the University of Cambridge, England, and late H.B.M. Consul at Ningpo, China. Author of "Chinese English Dictionary," "China and the Chinese," etc.

PROFESSOR GILES, in his "CHINA AND THE CHINESE" (Macmillan, 1902), says: "I have often been asked if Chinese is, or is not, a difficult language to learn. To this question it is quite impossible to give a categorical answer, for the simple reason that Chinese consists of two languages, one colloquial and the other written, which for all practical purposes are about as distinct as they could well be. Colloquial Chinese is a comparatively easy matter. It is, in fact, more easily acquired in the early stages than colloquial French or German. *A student will begin to speak from the very first, for the simple reason that there is no other way. There are no Declensions or Conjugations to be learned, and consequently no Paradigms or Irregular Verbs. In a day or two the student should be able to say a few simple things, after three months he should be able to deal with his ordinary requirements, and after six months he should be able to chatter away more or less accurately on a variety of interesting subjects. A great deal depends on the method by which he is taught.*"

Of "CHINESE MADE EASY" Prof. Giles in his introduction says: "The study of Chinese is attracting just now a larger share of attention than at any previous period throughout the history of foreign relations with the Middle Kingdom, and it seems likely that this interest will steadily continue to develop. . . . Meanwhile there is slowly growing up a special class of students who would be ready and pleased to obtain an insight into the written vehicle of the Chinese language and by and by to penetrate the vast literature that lies beyond. For these students DR. WALTER BROOKS BROUNER and FUNG YUET MOW have taken great pains to provide a work under the fascinating title of 'Chinese Made Easy,' by means of which may be exemplified the famous Chinese saying, 'That a scholar can make himself acquainted with all things without ever leaving the four walls of his study'; in other words, the intention is that any one with an interest in linguistic studies, for the sake of a hobby or what not, may gain, with the assistance of this book, a knowledge of the genius of the Chinese language, colloquial and written. . . . *But far more important than the above is the feeling of the student that he can take up this book and positively progress from day to day without further assistance of any kind.* In fine, any student who shall succeed in transferring into his own head the contents of 'Chinese Made Easy' will find himself well advanced on the road toward a good acquaintance with the Chinese Language."

CHINESE MADE EASY IS A BOOK THAT SHOULD BE IN EVERY LIBRARY WITHIN REACH OF THOSE INTERESTED IN THE TEACHING OF LANGUAGE EXPRESSION AND GRAMMAR, AS IT CONTAINS, IN ADDITION TO MANY OTHER INTERESTING FEATURES, A REPRODUCTION (ARRANGED IN INTERLINEAR FORM) OF THE FAMOUS "THREE LETTER CLASSIC" OR CHINESE PRIMER—A PRIMER THAT HAS BEEN IN DAILY USE IN THE SCHOOLS OF CHINA FOR NEARLY 800 YEARS.

TO BE PUBLISHED SHORTLY—A NEW VOLUME IN

The **VARIORUM EDITION** *of* **SHAKESPEARE**

Edited by HORACE HOWARD FURNESS, Ph.D., LL.D., L.H.D.

LOVE'S LABOUR'S LOST

"These monumental volumes are the admiration of every true student of Shakespeare," says Dr. WILLIAM ALDIS WRIGHT.

The *London Athenæum* states, "This, the most exhaustive work on Shakespeare's plays, comes from America."

Dr. J. W. ROLFE declares of a recent volume, "This, too, like its predecessors, is . . . the entire literature of the subject compressed into a single volume, and the more valuable for the editor's personal contributions thereto."

The thirteen volumes which have already appeared are:

MACBETH Revised Edition by HORACE HOWARD FURNESS, JR.
ROMEO AND JULIET
OTHELLO
KING LEAR
A MIDSUMMER NIGHT'S DREAM
AS YOU LIKE IT
THE WINTER'S TALE
THE TEMPEST
HAMLET (two volumes)
MUCH ADO ABOUT NOTHING
THE MERCHANT OF VENICE
TWELFTH NIGHT

Royal octavo, gilt top, uncut edges. $4.00, net, per volume. Half morocco, gilt top, $5.00, net, per volume. Postage, 30 cents extra, per volume.

NOW COMPLETE **CHAMBERS'S CYCLOPAEDIA of ENGLISH LITERATURE**

THE NEW EDITION treats of 1216 writers not mentioned in any other work of a similar character in the English language. It contains 852 more pages than any work of its kind. We will be glad to send to any one interested a full descriptive circular.

"The completest expositions and commentaries upon the entire body of English literature which have ever been presented."
—*New York Times.*

Complete in three Imperial Octavo volumes. Stoutly bound. $15.00 net per set. ¾ levant $25.50 net. Carriage extra.

A Hand book for Architects, Structural Engineers, Builders, Contractors, and Draughtsmen, and a valuable book of references for everything relating to the Construction and Equipment of Buildings. By FRANK E. KIDDER, C.E., Ph.D., F.A.I.A., Consulting Architect and Structural Engineer. Fourteenth rewritten and enlarged edition. Number of pages increased from 1,028 to 1,675, and figures from 600 to 1,000. Price advanced from $4.00 to $5.00. 16mo. morocco.

The Suppression of Tuberculosis

Together with Observations concerning Phthisiogenesis in Man and Animals, and Suggestions concerning the Hygiene of Cow Stables and the Production of Milk for Infant Feeding, with Special Reference to Tuberculosis. By Professor E. VON BEHRING, University of Marburg. Authorized Translation by CHARLES BOLDUAN, M.D.
12mo, vi+85 pages. Cloth, $1.00.

The Industrial and Artistic Technology of Paint and Varnish

By ALVAH HORTON SABIN, M.S., Chemist for Edward Smith & Co., New York; Member of the American Chemical Society, the American Society of Mechanical Engineers, the American Society for Testing Materials. 8vo, vi+372 pages, illustrated. Cloth, $3.00.

Statistical Methods with Special Reference to Biological Variation

By C. B. DAVENPORT, Head of Department of Experimental Biology and Director of Station for Experimental Evolution of the Carnegie Institution. Second, Revised and Enlarged Edition. 16mo, viii+223 pages. Morocco, $1.50.

Food Inspection and Analysis

For the Use of Public Analysts, Health Officers, Sanitary Chemists, and Food Economists. By ALBERT E. LEACH, S.B., Analyst of the Massachusetts State Board of Health. Large 8vo, xiv+787 pages, 120 figures, 40 full-page half-tone plates. Cloth, $7.50.

Elementary Manual for the Chemical Laboratory

By LOUIS WARNER RIGGS, PH.D., Instructor in Chemistry in Cornell University. 8vo, vi+138 pages. Cloth, $1.25.

Rational Geometry

A Text-book for the Science of Space. Based on Hilbert's Foundations. By GEORGE BRUCE HALSTED, A.B. and A.M., Princeton; Ph.D., Johns Hopkins. 12mo, viii+285 pages, 247 figures. Cloth, $1.75.

A Treatise on Concrete, Plain and Reinforced

Materials, Construction and Design of Concrete and Reinforced Concrete, with Chapters by R. Feret, William B. Fuller, and Spencer B. Newberry. By FREDERICK W. TAYLOR, M.E., and SANFORD E. THOMPSON, Assoc. Member Am. Soc. C. E. 8vo, many illustrations, 400 to 500 pages. Ready October 15th.

Ready Reference Tables

Volume I. Conversion Factors of every Unit or Measure in use. With their Accurate and their Approximate Values, their Logarithms, Relations, Digit Conversion Tables, Explanations of Calculations, etc., etc. Based on the Accurate Legal Standard Values of the United States. Conveniently Arranged for Engineers, Physicists, Students, Merchants, etc. By CARL HERING, M.E. 16mo, xviii+196 pages. Morocco, $2.50.

Manual of the Chemical Analysis of Rocks

By HENRY S. WASHINGTON, Ph.D. 8vo, viii+183 pages. Cloth, $2.00.

A Compendium of Chemistry, including General, Inorganic, and Organic Chemistry

By Dr. CARL ARNOLD, Professor of Chemistry in the Royal Veterinary School of Hanover. Authorized Translation from the Eleventh Enlarged and Revised German Edition. By JOHN A. MANDEL, Sc.D., Professor of Chemistry, Physics, and Physiological Chemistry in the University and Bellevue Hospital Medical College. Small 8vo, xii+627 pages. Cloth, $3.50.

A Laboratory Manual of Organic Chemistry for Beginners.

By Dr. A. F. HOLLEMAN, Professor Ordinarius in the University of Groningen, Netherlands, and Fellow of the Royal Academy of Sciences, Amsterdam. An Appendix to the Author's Text-book of Organic Chemistry. Translated from the Dutch by A. JAMIESON WALKER, Ph.D. (Heidelberg). B.A., Head of the Department of Chemistry, Technical College, Derby, England. With the Co-operation of the Author. 12mo, xiv+78 pages, Cloth, $1.00 *net*.

The Theory of the Lead Accumulator (Storage Battery)

By Dr. FRIEDRICH DOLEZALEK. Translated from the German with the Sanction of the Author by CARL L. VON ENDE, Ph.D. (Goettingen), Instructor in Chemistry, State University of Iowa. 12mo, xi+241 pages, 30 figures. Cloth, $2.50.

Elements of Mechanical Drawing

Their Application and a Course in Mechanical Drawing for Engineering Students. By ALPHA PIERCE JAMISON, M.E., Assistant Professor of Mechanical Drawing in Purdue University. 8vo, xii+226 pages, including 57 full-page plates and 82 figures in the text. Cloth, $2.50.

Calculations Used in Cane-Sugar Factories

A Practical System of Chemical Control for Louisiana Sugar-houses and other Cane-producing Countries. By IRVING H. MORSE, B.S. 16mo, viii+74 pp. Morocco, $1.50.

The Occurrence of Aluminium in Vegetable Products, Animal Products, Natural Waters, and Miscellaneous Materials

A Contribution to the Bibliography of the Subject. By C. F. LANGWORTHY, Ph.D., and PETER T. AUSTEN, Ph.D. 8vo, v+168 pages. Cloth, $2.00 *net*.

Laboratory Exercises in Physical Chemistry

By FREDERICK H. GETMAN, Ph.D., Fellow by Courtesy of The Johns Hopkins University, Carnegie Research Assistant. 12mo, viii+241 pages, 100 figures. Cloth, $2.00 *net*.

Elements of General Drafting for Mechanical Engineers

By C. E. COOLIDGE and H. L. FREEMAN. Cornell University. Oblong 4to, cloth. *September*.

Hydraulic Tables

By ALLEN HAZEN, C.E., and GARDNER S. WILLIAMS. In preparation.

Conversations on Chemistry, Part I.

By W. OSTWALD. Authorized translation from the German by ELIZABETH CATHERINE RAMSAY. 12mo, cloth. *November*.

Smoke Suppression and Furnace Construction

By ALBERT A. CARY, M.E. *January*.

Handbook on Sanitation

By GEO. M. PRICE. 2d edition, revised. *October*.

The Elements: Verified and Unverified

By CHARLES BASKERVILLE, Ph.D., Professor of Chemistry in the College of the City of New York. 8vo, cloth.

Techno-chemical Analysis

By Doctor G. LUNGE, Professor at the Eidgenössische Schule, Zurich. Authorized translation from the German by Alfred I. Cohn.
12mo, cloth, $1.00.

Machine-shop Tools and Methods

By W. S. LEONARD, Michigan Agricultural College. (*In preparation*).

Textile Fibres: Their Physical, Microscopical and Chemical Properties

By J. MERRITT MATTHEWS, Ph.D., Head of Chemical and Dyeing Department, Philadelphia Textile School. 8vo, cloth. *September*.

Descriptive Geometry

For the Use of Students in Engineering. By J. AMBROSE MOYER, Harvard University. 8vo, cloth. *December*.

Application of Some General Reactions to Investigations in Organic Chemistry

By Doctor LASSAR-COHN, Professor at the University of Königsberg. Authorized translation by J. Bishop Tingle, Kent Laboratory, University of Chicago. 12mo, cloth, $1.00. *October*.

Continued on Next Page.

JOHN WILEY & SONS'

SCIENTIFIC PUBLICATIONS

Burgess, National Bureau of Standards, Washington, D. C. 2d revised edition, reset, and brought up to date. 12mo, cloth, $3.00. *October.*

Forge-Practice (Elementary)

By John Lord Bacon, Instructor in Forge-work, Lewis Institute, Chicago; Junior Member, American Society of Mechanical Engineers. 12mo, viii+257 pages, 272 figures. Cloth, $1.50.

An Introduction to Modern Geometry and Its Applications:

Analytic and Synthetic Treatment. By Arnold Emch, Ph.D., Professor of Graphics and Mathematics in the University of Colorado. 8vo, cloth. *In preparation.*

Modern Refrigerating Machinery

By Professor Doctor Hans Lorenz of the University of Gœttingen. Authorized translation from the German by Thomas H. Pope, University of Birmingham, England, with chapters on American Practice by Francis W. Dean and Charles T. Main, Members of the American Society of Mechanical Engineers. 8vo, cloth. *In preparation.*

Sugar Manufacture

By H. Claassen. Authorized translation by William T. Hall, Massachusetts Institute of Technology. 8vo, cloth. *In preparation.*

Ordinary Foundations

Including the Cofferdam Process for Piers, with Numerous Practical Examples from Actual Works. By Charles Evan Fowler, C. E. 8vo, cloth. (*Shortly.*)

Notes on Assaying and Metallurgical Laboratory Experiments

By Richard W. Lodge, Associate Professor of Mining and Metallurgy. Massachusetts Institute of Technology. 8vo, cloth. *September.*

43 AND 45 EAST 19TH STREET, NEW YORK CITY.

William Lloyd Garrison, 1805-1879.

The Story of his Life, told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (originally published by the Century Company) has been reduced in price from $12.00 to $8.00, a remarkably low sum for what is unquestionably one of the handsomest products of the American press.

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

NOW READY.

12mo. Half Leather, 233 pp. Illustrated. Price, $1.25 Net.

ELEMENTS OF PLANE GEOMETRY

BY

CHARLES N. SCHMALL and SAMUEL M. SHACK

The distinctive features of this work are:

1.—The brevity, simplicity and clearness of the demonstrations. Old and time-worn proofs have been replaced by new and more elegant solutions.

2.—Exercises are given directly with most of the propositions. These help to fix in mind the knowledge gained, and to stimulate the interest of the student by affording him a means of applying his knowledge. The exercises are abundant and carefully graded.

3.—A thorough discussion is given on the methods of attacking original exercises, illustrated by examples.

4.—The work has been so framed as to discourage the detrimental habit, on the part of pupils, of memorizing demonstrations.

5.—References and details of demonstrations are gradually omitted. This promotes independence and also exercises the memory of the student.

6.—The fundamental theorem of Limits is clearly explained.

7.—A careful treatment has been given to the subject of Maxima and Minima.

No pains have been spared in producing a Geometry which will be of the highest utility to the beginner.

GINN & COMPANY'S RECENT SCIENTIFIC PUBLICATIONS

JUST PUBLISHED

Bergen's Elements of Botany

REVISED EDITION

The new edition of Bergen's "Elements of Botany" is designed to furnish a half-year course in the subject for students in secondary schools. It covers all the ground which ordinary classes can traverse in the time indicated, and endeavors to present only those topics which are essential to an elementary course in the science.

It differs from the earlier editions of the "**Elements**" mainly in the greater stress laid on the topics of œcology and cryptogamic botany, in the somewhat abbreviated directions for histological work on seed plants, and in the greatly improved quality of the illustrations. Minor changes will be found on almost every page.

Teachers will be particularly interested in learning that a "**Laboratory Notebook**" has been prepared by the author, which may be used either with his "Foundations of Botany" or with the "Elements." It will minimize the amount of routine dictation and other clerical work for both teacher and pupil, without doing any of the latter's thinking for him.

READY IN SEPTEMBER

Elements of the Differential and Integral Calculus

WITH APPLICATIONS

By WILLIAM ANTHONY GRANVILLE, Instructor in Mathematics in the Sheffield Scientific School, Yale University.

This Calculus will be the first volume in a series of standard text-books in mathematics, which is to be published by Ginn & Company under the general editorship of Percey F. Smith, Professor of Mathematics in the Sheffield Scientific School, Yale University.

Granville's Calculus is designed for the use of students in colleges and engineering schools. Although its scope includes all that is usually given in the more extended first courses in the Calculus, yet the book is so arranged, topically and typographically, that any teacher can easily cut down the matter to meet the requirements of the shorter courses sometimes given.

LONGMANS, GREEN, & CO., 93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 1, 1904.

The Week.

By his letter to Mr. John G. Milburn, Judge Parker has given precision to his attitude on the question of Philippine independence. Says the Democratic candidate: "You are entirely right in assuming that, as I employed the phrase 'self-government,' it was intended to be identical with independence, political and territorial." And he adds: "But to take away all possible opportunity for conjecture, it shall be made clear in the letter of acceptance that I am in hearty accord with that plank in the Democratic platform which advocates treating the Filipinos precisely as we did the Cubans. . . ." Mr. Parker has thus dared to use the word "independence," against which indiscretion Secretary Taft and President Roosevelt have so solemnly warned the country. We venture to assert not only that the Philippine heavens will not fall in consequence, but that Mr. Parker's utterance, by opening for the Filipinos the door of hope so mercilessly closed by President McKinley in 1899, will do more to establish friendly relations between them and Americans than any single action of Mr. McKinley and his successor.

One of the most paradoxical theories regarding the outcome of the campaign which we have yet seen is ventilated by no less an authority than the Hartford *Courant*. It is, in brief, that the stronger the candidate put up by the Opposition, the better Roosevelt's chances will be. The steps of the reasoning are these: The better the Democratic candidate, the less will business be unsettled. The less business is unsettled, the less inclined will the people be for a change. It works out as beautifully as the old problem of Achilles and the hare, but we fear it is not the theory on which Mr. Roosevelt's managers are proceeding. A somewhat close examination of Republican speeches, editorials, and cartoons, fails to reveal an instance in which the Democracy is portrayed as on a parity with the Grand Old Party. Partisan pens and pencils must be sacrificing votes by the thousand in their desperate efforts to convince the country that the Democrats are not to be trusted. According to the *Courant's* theory, the surest way to make Roosevelt votes is to praise Parker. This may be good metaphysics, but it is not good politics. The Republican dismay at having to confront a Democracy with neither free-silver horns nor a Populistic tail to seize hold of, recalls Mark Twain's story of the champion bulldog whose only tactics in a fight were to shut his teeth on his enemy's hind leg. This dog overcame all rivals for years, but met defeat finally at the teeth of a dog whose hind legs had been cut off by a circular saw.

A pretty sharp ear is needed to detect a "keynote" in Thursday night's Democratic ratification meeting in Brooklyn. The occasion and the speakers were such as to furnish opportunity for "one clear note" regarding the tariff. But vibrant the utterances were not. All winter long the efforts of the Democratic leaders in Congress were bent on narrowing the issue of the coming election down to the tariff. Their success was such that one Republican leader after another frankly admitted, prior to the Chicago Convention, that the issue was in truth to be what Mr. John Sharp Williams had been striving so hard to make it. The two platforms were drawn in recognition of the fact that a sharp distinction existed between the aims of the two parties regarding the tariff. The Republican plank contained these categorical statements: "Protection, which guards and develops our industries, is a cardinal policy of the Republican party"; "we insist upon the maintenance of the principles of protection." The Democratic platform was even more vigorous. It declared that "the Democratic party has been and will continue to be the consistent opponent of that class of tariff legislation by which certain interests have been permitted, through Congressional favor, to draw a heavy tribute from the American people." And it added: "We denounce protection as a robbery of the many to enrich the few, and we favor a tariff limited to the needs of the Government, economically administered." But listen to Edward M. Shepard, who presided at Brooklyn. He said that the Democratic nominees stand for a sincere and persistent effort to reform the tariff, and especially to abolish or reduce those duties the plain effect of which is "not to extend or diversify American industry." How striking the contrast to the St. Louis declaration!

The movement to nominate ex-Senator Vilas as Governor of Wisconsin is one of the first signs we have had that the Democrats of the State are awake to the extraordinary opportunity which the situation in that State gives them. It shows at least that they are looking for a man of a type to command independent support. To nominate George W. Peck of "Bad Boy" fame, whose two elections as Governor were due to an issue long since dead, would be a serious mistake. As for the ex-Postmaster-General, he has unquestionably been, in the course of his public career, extremely unpopular in his own State, but his courageous stand against his party in 1896 may have won recognition in a State that rejected Bryanism by overwhelming majorities, while his eight years of retirement from active politics may have softened old-time animosities. At all events, the merest expediency demands the nomination by the Democrats of a high-class candidate who can attract conservative men of both parties. The Radicals will be with La Follette, while the corporate interests and hide-bound adherents of the older order will be against him in any case. The balance of power will undoubtedly lie with those voters who are not frightened by either of the conflicting cries of "octopus" and "demagogue."

We commend to all our readers, without distinction of party or sex, the long catalogue of virtues with which Secretary Taft on Friday garnished his Montpelier eulogy of President Roosevelt. The President lacks pride of opinion, is amenable to reason, anxious to reach just conclusions, quick of apprehension, changes his opinions readily if the facts demand, believes in doing things, loves physical exercise, considers that brain and muscle were given for use; is an American, a patriot; loves his wife and children; sympathizes with labor and capital alike; hates shams; is anxious to avoid war. Of such is the Presidential kingdom of heaven. Mr. Taft's attitude towards Filipino independence, generous as his words are in many respects, is that of a man who regards independence as an evil. Dwelling upon the duty of educating the Filipinos for self-government —a task requiring a century or more, he has said on other occasions—he adds:

> "Then, if they desire independence, let them have it. But if we bring them in behind the tariff wall, if they see that association with the United States is beneficial to them, as I verily believe it will be, it is quite unlikely that they will desire full independence. It is quite likely they will prefer that association which exists between England and Australia or between England and Canada."

That is, Mr. Taft has no hope that the Philippines will become States of the Union, and he evidently thinks a completely independent status should be avoided. Here we have the real point of party cleavage in the matter. The Republicans regard the possession of these islands as a piece of good luck; they keep the future an open question, because, moved by false national pride and hope of commercial profit, they decide to shape our insular policy towards the permanent retention of the archipelago. The Democrats, on the con-

trary, regard our presence in the Philippines as a misfortune, and, believing that their independence is for their good and ours, would promise them independence, and shape the colonial government to hasten that end.

The fight which the Massachusetts Democrats are making for tariff reform is a real fight, not a sham. Like the Jews of old, each man is building over against his own house. The party orators are eschewing the platitudes that have so long done service, and are appealing to the self-interest of the people they address. They are, in fact, following in the steps of the Republican "friends of protection." But no tariff "stand-patter" ever made a more powerful appeal to local self-interest in behalf of a Chinese trade wall than was made on Saturday at Cambridge for freer trade with the outside world. One of the speakers at a big rally asked Cambridge what had become of its large glass-manufacturing industry. "Your glass-works," he said, "have met the same fate that overtook the glass-works in Sandwich and South Boston, and today the glass industry has practically ceased to exist in the State of Massachusetts." And what, he added, has become of the Gilmore rolling-mill, the Bay State Metal Works, the Standard Brass Company, the Damon Safe Company? Where, too, are the twenty-four furniture factories that did business in Cambridge less than twenty years ago? What drove Geldowsky, the Badgers, the Doe-Hunnewell concern, Rourke & Kennedy, Graves & Phelps, and others out of existence? One answer can be given to all these questions—these great industries have passed away for want of cheap raw materials. The tariff on coal, iron, lumber, and other articles is to blame. Facts like these are stubborn things in the face of Republican arguments regarding the blessings of protection.

Newfoundland is so chagrined over our action on the Hay-Bond treaty that she is talking of retaliation. Premier Bond is unable to conceal the fact that the island has nothing to expect from this country, and that consequently it would be only a reasonable change of attitude for the Newfoundlanders to put themselves on their defence. The action that is hinted is a withdrawal of the bait privileges from American fishermen. This, it is asserted, would be highly disastrous to the New England fisheries. All the squid, caplin, and herring used for bait are caught, it is claimed, in Newfoundland waters, and only there. "Just why this is true," exclaims the correspondent of an American paper, "has puzzled many a learned body of scientific inquirers." There is one person, however, whom it has not puzzled—Senator Henry Cabot Lodge. That stout opponent of the Hay-Bond treaty disposed of the bait question in short order in his recent Canadian reciprocity speech. American fishermen, he declared, "do not care whether Newfoundland refuses them bait or not, for with modern refrigerating arrangements they can supply themselves perfectly well from Eastport or Gloucester." The Senator failed to tell us where Eastport and Gloucester are to get the bait to put into the refrigerators; he perhaps figures that we can produce anything in this country if we only tax it high enough.

The effect of the new Canadian duty on steel rails will be studied with keen interest in the United States. In 1903 the Dominion enacted a duty of $7 a ton, which was to go into effect "when satisfactory evidence was furnished to the Government that rails of the best quality were being made in Canada in sufficient quantity to supply the ordinary demand." The measure now goes into force because, as is alleged, a rail mill is at last in successful operation at Sault Ste. Marie. The new duty is subject to the British preferential, and will not apply to rails actually contracted for abroad at this date. It will not, in short, shut out the rails which our mills have recently been selling to Canadian roads at about $19 a ton. But will it prevent further "dumping" by American mills? Rails are nominally $28 in this country, but large purchasers are believed to be paying about $25, or $6 more than has been charged across the line. Adding the new $7 duty to $19, the result is $26. But this is not all. Mr. Fielding's new "anti-dumping" regulation provides that all goods imported at special concessions shall be taxed at their full value in the original market, and in addition shall pay a duty equal to the difference between the "dumping" price and that charged to consumers in the producing country. This special tax cannot, however, amount to more than half the ordinary customs duty, and in the case of certain commodities it is restricted to 15 per cent. of the latter. It looks on the face as if American rails must hereafter, on the basis of a "dumping" price of $19, cost in Canada considerably more than the price paid by roads this side of the line.

The annual report of the Commissioner of Pensions is melancholy reading. "It is indeed sorrowful to contemplate," as Commissioner Ware says, "that the number of deaths among the soldier-pensioners for the year was 31,728," and the effect is heightened by the statement that 47,000 are expected to die in the next twelve months. But there are other things in the report to occasion melancholy feelings; such, for instance, as the fact that, though the number of pensioners declined from 996,545 to 994,762, the amount paid increased from $137,759,653 to $141,093,571. That is, with 1,783 fewer names on his books, Commissioner Ware paid out $3,333,935 more in money. Let us hope that an increase of more than 15,000 deaths in the present fiscal year will not have an effect upon future pension disbursements proportionate in any measure to that resulting from the decrease in the list of names last year. The report has, of course, something to say about the arbitrary increase in the size of pensions on account of advancing age. Evidently Executive Order No. 78 did not have time before the close of the last fiscal year really to display its beneficent character. Under it 47,109 claims were filed by June 30, and in the last three months of the year 18,627 claims were allowed. Of these, 8,761 were $2 increases, "and the time was so short between filing and adjudication" that the payments due prior to July 1 amounted to less than $90,000. In other words, it was impossible in the time at its disposal for the pension department to use up more than so much of the $1,500,000 voted by Congress to carry out Order No. 78, and the balance had to go back again into the Treasury. Plainly, the order will have to do better than this, or it will be regarded with contempt by the Grand Army of the Republic. In fact, that organization, at its Boston meeting a fortnight ago, urged the keeping up of the good fight for service-pension legislation just as if Order No. 78 had never been issued. Is it convinced that, after all, legislative law is better than executive law?

The establishment of food laboratories in connection with the custom houses here and at other ports is decidedly for the interest of importers. It is possible to enforce the food laws just as strictly by sending samples to Washington and keeping every shipment waiting at the port until the analysis is made; but with an adequate force of chemists on the spot, delays and vexations of this kind can be avoided. It is now a little more than a year since the law relating to foreign food products went into effect, and in that time, through general knowledge of the requirements on the part of shippers, the percentage of inadmissible food and drink from abroad has been decreased from 22 to 15. The law is rather a curious one, and not altogether just, as, for instance, in the provision which may shut out German sausage from our ports because Germany excludes ours; but the good it has done and will do must be great. Its faults are those which could hardly be avoided in a measure that was made partly retaliatory to suit the American manufacturer, and partly hygienic to protect the home consumer. It is a good illustration of the motives that determine legislation, that the dif-

ficulty which our products had in entering foreign markets promptly engendered a national food law covering products from abroad, which years of agitation have not secured with reference to the home market.

Insufficient attention has been given by the press to the conclusion of the Government board named to investigate the subject of the control of wireless telegraphy in this country. The composition of the board was such that a recommendation for Government control was expected. Nor was the expectation disappointed. All supervision and control is vested in the hands of the War, Navy, and Agricultural Departments. In certain cases, it is admitted that private stations are desirable, but these are to be licensed and carefully supervised. The report states further that the maintenance of a complete coastwise system of wireless telegraphy is necessary for the economical management of our fleets in time of peace and their efficient manœuvring in time of war. Here, then, is the first step towards the Government control of telegraphs. If private capital is to be excluded from this field, we see no logical reason why the Government should not similarly manage the telegraphs and telephones—on the plea that the economical and efficient management of our army requires it.

As for the notion that the Government can manage any such business enterprise economically, it is of course preposterous. As the *Electrical World and Engineer* says: "We can imagine the word 'economical' being interpolated by a political member of the board with a sly wink at his fellows." The pretence, too, that control of wireless telegraphy is needed in time of peace will not bear examination. Private stations would doubtless contract to handle all naval and military messages at a low rate and give them precedence over all other business. In time of war the stations would naturally pass at once into Federal hands, precisely as the telegraph and cable lines are subject to military supervision after the outbreak of hostilities. All this is so obvious that the technical journal quoted is quite justified in hoping that "the insistence of the Government board on the practical elimination of all civilian elements from its wireless plans does not imply that in this country a Continental military spirit, suspicious of civilian classes, is in process of development." Certainly, there is ground here for a careful inquiry by Congress when that body meets again, particularly in view of the rumored approval of the board's decision by the Washington authorities.

This time it is a bishop, Warren A. Candler, who, in last week's *Independent*, brings good news of the Cuban republic. His recent visit to the island was his seventh. "The order," he finds, "is good, and life and property are as secure as anywhere. The Administration of President Tomas Estrada Palma is commended on all sides." While not a brilliant man, Mr. Palma has had applied to him two adjectives not associated with his friend in the White House—wise and prudent. The veto power he has used admirably, killing a measure—to cite one example—which exempted members of Congress from the ordinary processes of law. The Congressman in whose favor this bill was passed had murdered a man in Santiago. Now he is in prison serving a four years' term, and Bishop Candler asks whether the administration of justice would have been as swift in our own country. President Palma's veto of the lottery bill, the Bishop properly contrasts with Gen. Wood's granting a "ten-year concession to that shameless institution of gambling, the Jai Alai," which "would not be tolerated in any city of the United States for one hour. Nor would it be tolerated by the Cuban Congress and President Palma if they could help themselves. But when they indicated a purpose to undo the nefarious concession, the Platt amendment has been shaken in their faces, and they have been told it is an act of the 'intervening Government' which is covered and protected by that famous amendment." The Bishop favors a Congressional investigation.

That what amounts to a Papal benediction upon the United States should be conferred thorugh the press agencies is thoroughly characteristic of new-style international relations. As for the conference between Pius X. and Cardinal Satolli, who has just returned from his American mission, it is significant not only for what it says of this country, but also for what it allows to be inferred about France. When his Holiness speaks of those who cause him grief, when he commends with enthusiasm the liberty accorded the Church in the United States, it is very evident that he is thinking of the quarrel between the Church and the French Republic. If he entertained any immediate hope of a reconciliation, he would hardly venture upon such rather odious international comparisons. So it may fairly be inferred from the tone of his comment on the American situation that he has deliberately incurred the contest with the French Government and is prepared to press the issue to a conclusion.

The Czar's manifesto, on the christening of the new heir to the throne, remits arrears to the state for the purchase of land and other direct imposts. This is probably making a virtue of necessity. The communes are taxed to reimburse the Government for the lands turned over to them after the emancipation of the serfs, but they are always enormously behind in their payments. Indeed, by the great ukase of 1903 the peasantry was forgiven about $72,000,000 of uncollectible taxes. The new remission should interest Russia's creditors, as the natural inference is that the measure will later on be employed as a justification for a new state loan. The abolition of corporal punishment may be, and probably is, a genuine act of grace, but, coming at this time, it is likely to be construed by many as an attempt to keep the masses, and especially the soldiery, in good humor. But the most striking feature of the Czar's manifesto is its kindliness to the Finns in the creation of a charity fund and the remission of fines for past evasions of military duty. With her hands tied in the East, Russia is, for the time being, under high pressure to dispossess her European subjects of their ill will. But possibly she is concerned about manning her navy. Her ships require Finnish sailors, and naturally she is averse to sending a lot of disaffected men to fight Admiral Togo. Even the Jew is worthy of notice; his fines for evading military service are also erased from the books. These beneficences are compatible with one phase of Emperor Nicholas's character, and have encountered no insuperable obstacle in his advisers.

Kuropatkin's strategic retreat to Liaoyang was evidently forced by Kuroki's advance upon Anping. The capture of that town by his enemy brings the right wing of the Japanese in direct contact with the Russians, and Kuroki may take his choice of several ways of reaching the river plain while Oku pounds the Russian rear from the south. There is no news at all from the most interesting territory, the Liao plain, west of the Russian main body. One would naturally expect the Japanese to repeat with their left the brilliant flanking movements with which the right has forced Kuropatkin sixty miles back from Kaiping. At last, by retreating to Liaoyang, he has got beyond Kuroki's enveloping attack. As soon as the rains permit, similar tactics can be conducted by the Japanese much more easily upon the other wing, from which direction there is yet no news. All that may safely be said is that the Japanese are now in a position to force the long-predicted general engagement, that great pressure will be brought to bear on Kuropatkin to stand firm at Liaoyang, and that a defeat at that point would likely be an irretrievable disaster for the Russians. The severity of the fighting along the Russian centre and left, as we go to press, indicates that the Japanese do not intend to stay their hand.

HILL'S RETIREMENT.

"Nothing in his life became him like the leaving it." The announcement on Monday morning that David Bennett Hill is to retire from politics, that in case of Democratic success in November he will not accept office, either Federal or State, is good news. For twenty years and more Mr. Hill has owed this step to his conscience and his country, and at last he has seen fit to take it. We do not mean to say that Mr. Hill has never been guilty of a worthy act, but that, except for occasional lapses into political virtue, he has throughout his career been a malign influence. He has, with justice, been called the stormy petrel of the Democratic party.

At this time it is unnecessary to detail the achievements by which he won the appellation. His subserviency to Tweed when he was an Assemblyman, his league with the basest elements in his own party when he was Governor, his opposition to high license, his veto of bills for ballot reform, his treachery to the national ticket in 1888, his theft of the Legislature, his "snap" convention of 1892, when he tried to force himself on his party as candidate for President—all these matters and his thousand minor transgressions have been discussed at length and *ad nauseam*. The fact that, in spite of blunders and defeats, he has to this day retained a following is proof that he possesses great, though perverted, talents. Edward Murphy, jr., of Troy knows whereof he speaks when he declares Hill one of the greatest organizers the Democrats in this State have ever had. Hill has possessed an extraordinarily minute knowledge of both political machines in every election district; he has known how many votes each petty leader could command in every precinct; as a master of deals and manipulations he has had no rival among the New York Democrats of his generation. And yet, with all this remarkable ability, he has never been able to grasp the point of view of the more independent and disinterested Democrats, has never seemed able to understand why men should set principle above either self or party. He has had two ruling passions: personal ambition and the welfare of his party. He has sacrificed everything but his personal ambition for what he has regarded as party welfare, and to his ambition he has sacrificed even that.

For instances in proof of this assertion one has not far to seek. Hill's desperate attempts to secure the Presidential nomination are still vivid in the memories of all who are old enough to recall his intrigues preceding the elections of 1888 and 1892. Moreover, many of the best informed Democratic politicians are convinced that he had not abandoned hope as late as 1902, when he nominated Coler for Governor. The Democrats of the State and the delegates to the convention were indubitably for Parker; and, as the event proved, Parker could easily have carried New York against Odell. But Hill was for Coler, because Hill wanted a man whom he could surely control, and whom he could brush out of the way in case he saw a chance to seize for himself the coveted nomination for the Presidency. The ruse proved unavailing; and Hill finally reached the conclusion that he was too much hated and distrusted within and without his party to be a Presidential possibility. When he no longer could look for anything for himself, he did what he could for his party in working for the nomination of Judge Parker. He would conjure with Parker's name in order to rally the scattered and broken factions and present at St. Louis a candidate worthy of the best traditions of the Democracy. In this movement, as in that of 1902, when Hill deliberately crowded Parker out in favor of Coler, Hill has apparently had no more consideration for Parker than a mere piece in a game of chess—in 1902 a pawn; in 1904 a king. And there is no evidence that Parker has felt under special obligations to Mr. Hill; indeed, it must not be forgotten that it was to Sheehan and not to Hill that Parker sent his famous "gold telegram." Judge Parker must have realized that Hill's support was merely a confession of Hill's despair of snatching the prize for himself.

Mr. Hill's announcement, however, is proof of the futility of gossip about Hill's place in the Cabinet. Mr. Hill understands, as he now virtually acknowledges, that Judge Parker has a mind of his own, and will, in case of election, choose his own advisers. Mr. Hill has been Governor and United States Senator, and he is aware that he can expect nothing further in the way of honors. If he has kept himself informed as to the progress of the campaign throughout the country, he has seen that not only in New York State, but from Maine to California, the strongest argument against Parker has been the prominence of David Bennett Hill. Hill has been the bogeyman lurking in the background. "Judge Parker is a man of unimpeachable character," so runs the Republican editorial; "we grant him intelligence, independence, and force; but he cannot escape appointing Hill Secretary of State." Or, "Parker is all very well, and if voters were sure he would be his own man, the situation would be far different, but he cannot be anything but the creature of Hill, who made him." This elaborate card-house built up by Republican editors and spellbinders is destroyed by a breath of wind from Wolfert's Roost. Mr. Hill knows he will not be "in it," and he gives his party what help he can by a frank admission that he withdraws all pretensions to office and a voice in a potential Parker administration.

The case of Hill is like that of others of his kind. Judge Parker will receive Tammany votes, just as President Roosevelt will receive Quay machine votes in Pennsylvania. But Judge Parker will not on that account fill either the Cabinet or other offices with rag-tag and bob-tail. Indeed, Parker as President would be under the strongest inducements, as Cleveland was, to maintain a higher level than that of the preceding Administration. He would know that the return of the Democratic party to power would be a temporary success, followed by humiliating defeat, unless in economy, efficiency, and honesty he could make a striking record. He will, if elected, be confronted by a magnificent opportunity. He will not throw it away by confiding the political fortunes of himself or his party to men like Hill.

PENSIONS: ROOSEVELT'S WAY OR JACKSON'S?

Republican editors are given to parrying grave insinuations that the President's mind is essentially lawless with the statement that Mr. Roosevelt's person has never been before the courts nor yet in jail. So much may be admitted without conceding that Mr. Roosevelt's temper, so impatient of every restraint, is friendly either to law or to decent custom. In the pursuit of a suddenly perceived higher good, he has shaved the laws closely and smashed the precedents to smithereens. This is not the attitude of a mind that respects either, and in many respects Mr. Roosevelt's position before the country is not unlike the exemplars of audacious finance. That they are not before the courts by no means alters the general conviction that they should be. The inherent ruthlessness of Mr. Roosevelt's will appears most glaringly in the notorious pension order which, by a stroke of the pen, added thousands of new pensioners to the rolls, and millions to the annual pension budget.

We take up this fairly familiar matter anew because it has escaped notice that President Jackson, when confronted by the same situation with regard to Revolutionary pensioners (though desirous of putting them all on the beneficiary list), resolutely put aside the theory that an executive order may usurp the power of Congress. But before rebuking Mr. Roosevelt out of the mouth of Andrew Jackson, it may be well to note how the President's use of the executive power offended, if not the law, at least all principles of sound morals and consistent administration. The following considerations should have restrained him: He was bound to give due faith and credence to the act of a previous Administration, unless, and this was never alleged, the original interpretation of the

law was unjust or defective; even more solemnly was he bound not to open the sluices of the Treasury under an interpretation of the law which those who made it had never dreamed of. The invalid pension law was one of the sort that requires an executive order to become effective. Mr. Cleveland's Administration found the original ruling which required individual examinations for disability cumbrous and costly. That is, Mr. Cleveland's Pension Commissioner virtually had to reinterpret the law, as authorized by Congress. He did so; nobody has openly questioned the justice of his decision. In the case of a law which without an executive order is void, the first interpretation, unless a palpably improper one, should be regarded as virtually the law itself. Any other policy would produce infinite confusion. Congress would be at times in the position of passing a law which by mere successive changes of the Presidential mind might become a charge upon the Treasury for one, two, six, or ten million dollars. Evidently if each Administration should systematically go behind the executive orders of its predecessor, we should live rather by anarchy than by statute. As it is, Congress should be very chary of passing laws which may be perverted or even indefinitely extended in their application, and the courts should tell us whether original and organic interpretations of Federal law are or are not so many skittles to be bowled over in furtherance of the partisan game. Now the fact that Mr. Roosevelt, alleging no imperative ground of public policy, has been oblivious to such principles of continuity as obtain, not only in civilized States, but in clubs and well-organized business enterprises, argues infallibly a lawless cast of mind.

Andrew Jackson, in the winter of 1829, was, as regards pensions, precisely in the sympathetic condition of Theodore Roosevelt in the spring of 1904, with the difference, which may or may not be significant, that Jackson's renomination was not impending. Jackson wished to put on the pension list all Revolutionary veterans with a colorable show of disability incurred in service. His predecessor, John Quincy Adams, who elsewhere complains bitterly of pension abuses, had in his annual message of 1825 pleaded for more liberal treatment of indigent veterans. Later, yielding perhaps to the temptation that there were very few unpensioned survivors, and that to be generous would not be financially ruinous, Adams, by executive order, relaxed the provisions requiring evidence of disability, and admitted to the list many pensioners who had been rejected under previous application of the general law of 1818. On coming into office and looking into pension matters with a view to helping the "old soldier," Jackson learned of Adams's order. What he thought of it is best told in an extract from his first annual message. In words that the most Jacksonian of recent Presidents would have done well to consider, first of all Jackson tells Congress that the general pension act "is defective in not embracing within its provisions all those who were, during the last war, disabled from supporting themselves by manual labor." But he adds (it was a day of small things financially): "Such an amendment would add but little to the amount of pensions, and is called for by the sympathies of the people as well as by considerations of sound policy." And then to the gist of the matter:

"It will be perceived that a large addition to the list of pensioners has been occasioned by *an order of the late Administration, departing materially from the rules which had previously prevailed. Considering it an act of legislation, I suspended its operation* as soon as I was informed that it had commenced."

A candid critic of this episode will cheerfully concede that Jackson's dislike of John Quincy Adams may have somewhat influenced this exemplary display of respect for law; but the same critic, surveying the whole situation impartially, will also concede that Parker Constitution Clubs have an evident reason for existence when it is possible to cite, in comparison with Theodore Roosevelt, Andrew Jackson as a model of a President who respected himself and the law.

ETHICS FOR THE TIMES.

It would be an interesting study to compare the Russian humanitarians, the Tolstoys and Kropotkins, with the Stoics. And the parallel would be a fair one, for both work towards perfecting the individual, and both advocate a certain conscious simplicity of life. The chief difference, we imagine, between these protestants of the Cæsars and those of the Czars would be that, with an equally definite sense of the ends of life, the ancients had a far clearer idea of means. Epictetus and Marcus Aurelius lay down a manner of life for the individual; the Russian idealists set before nations apocalyptic visions of a transfigured state to which, however, they build not even a cloud bridge. Such reflections come inevitably to every reader of Prince Kropotkin's notable article, "The Ethical Needs of the Present Day," which is published in the current *Nineteenth Century*, for, while his reasoning appeals to the rationalist observer of society, it is devoid of practical counsel for the social reformer.

Upon the practicability of swift and radical amelioration of society, however, Prince Kropotkin insists at the outset:

"For the first time in the history of civilization, mankind has reached a point where the means of satisfying its needs are in excess of the needs themselves. To impose, therefore, as has hitherto been done, the curse of misery and degradation upon vast divisions of mankind, in order to secure well-being for the few, is needed no more; well-being can be secured for all, without overwork for any. We are thus placed in a position entirely to remodel the very bases and contents of our civilization —provided the civilized nations find in their midst the constructive capacities and the powers of creation required for utilizing the conquests of the human intellect in the interest of all.

But, he continues, moral ideas have lagged hopelessly behind science and invention. Our ethics is adjusted not to the possibilities of the new, but to the limitations of the old economic order. And this new ethics must be no less progressive than science itself, and as free from reactionary elements:

"A new, realistic moral science is the need of the day—a science as free of superstition, religious dogmatism, and metaphysical mythology as modern cosmogony and philosophy already are, and permeated at the same time with those higher feelings and brighter hopes which a thorough knowledge of man and his history can breathe into men's breasts."

Such a desideratum, a morality calculated, yet not cold, Prince Kropotkin does not despair of attaining, and he scouts with a most scornful civility the Brunetières who proclaim the bankruptcy of science, and the sentimentalists who seek moral certitude in traditional faiths the very basis of which they profoundly disbelieve. One must admire the courage that would choose social despair rather than accept an irrational cure for the evils of society; one must commend the optimism that not only seeks a vigorously scientific ethics, but believes it can be imposed upon the thoughtless majority.

And this point of application remains virtually untouched even after "mutual aid," the cardinal principle of Prince Kropotkin's system, has been thoroughly expounded. Many people will remember the delightful essays in which Prince Kropotkin, elaborating a hint of Darwin's, showed that what we call the moral instincts, and claim solely for human kind, are found far down in the scale of animal creation. For the good of the group, the beasts even will sacrifice convenience and often life. Discipline is enforced and justice administered among many classes of birds. The higher one goes in every class the more complete is the identification of the individual with the interests of his group, so that bees and ants, for example, are not unreasonably held up to collective man for his guidance. In fine:

"It appears that not only Nature does *not* give us a lesson of a-moralism which needs to be corrected by some extra-natural influence, but we are bound to recognize that the very ideas of bad and good, and man's abstractions concerning 'the supreme good' and 'the lowest evil,' have been borrowed from Nature. . . . They contain the fundamental principles of equity and mutual sympathy, which apply to all sentient beings, just as mechanical truths derived from observation on the surface of the earth apply to matter everywhere in the stellar spaces."

So the great Russian idealist takes issue with all egotistical theories of morals, and finds in the habits of our animal friends the origin and the confirmation of a revised social utilitarian-

ism. In other words, he attempts to give scientific warrant for all the altruisms which science has denied or turned over reluctantly to religion. Social progress, in his belief, lies simply in the increasing acceptance of "mutual aid" as a guiding motive. Thereupon, of course, arises the very practical problem, How is the principle to be spread broadcast? Here Prince Kropotkin candidly admits the difficulty of establishing a scale by which the individual may estimate his reasonable personal surrender to the common welfare, and turns over eloquently but vaguely the work of propaganda to "poets," who are to produce in the throng "those very ecstacies which were formerly considered as belonging exclusively to the province of religion." It need hardly to be said that our supposed rational basis of ethics would fare ill in such transmission. Granted that the basis of morals is evolutionary, it is hard to see how the personal color that such a "poet" must inevitably give to the pure doctrine would be in any way more rational than the supernatural warrant claimed by the prophets and messiahs of old. Nor is it clear to us that the mass which obeys but languidly the great ethical leaders of the past, will soon consider the ways of the ant and be wise.

And yet we believe that Prince Kropotkin's lofty mode of thought is valuable for the ideal it holds up and for the rebuke it administers to recreant or discouraged children of a scientific age. It is a fair challenge to the new industrialism to require it to justify its existence by showing that it has increased the general well-being; while it is an added stimulus to rationalism to realize that the dearest instincts of human nature may receive scientific validity without sacrificing their human efficacy. So if the prophets of Prince Kropotkin's kind never quite show us the way out of the wilderness, their passage at least makes the air more fragrant while we wait for the revealing of the way.

MODERN LITERARY TITLES.

The symmetry of an architectural column depends no less upon the capital that surmounts it than upon the shaft itself. And in very similar fashion a literary masterpiece demands an appropriate style of title-page, preface, and chapter-heading to set off fully the intrinsic excellence of the contents. This apparently is not understood to-day by the ordinary craftsman in letters, although in the humbler sphere of journalism it is a truism. No well-conducted daily would throw "scare headlines" upon the account of a missionary convention or a world's peace conference; and yet no enterprising sheet would fail to use the proper types to flag the reader's attention at the news of a battle or a conflagration.

How vastly the gentle art of bookmaking has decayed will appear if the typographico-literary finish now prevalent is contrasted with that in vogue two or three centuries ago. The generous amplitude of the descriptive title of the Georgian or Elizabethan volume puts to blush the parsimony of the book of to-day. The artistic balance which the successive lines observe upon the plethoric title-leaf suggests the lettering which we reserve for lapidary inscriptions. And if, as so often happens, the frontispiece opposite is adorned with a cut, it is not a wishy-washy half-tone or a characteristic photogravure, but a veritable intaglio to be graven in the visual memory for all time. Oft in the stilly night these old frontispieces will haunt one—the bodiced shepherdess in the trim parterre, or else an allegorical lion "such as billowy Daunias never nurtured," and with a countenance for all the world like to a Japanese lap-dog.

In point of matter, too, the doubtful reader need be kept in suspense as to the character of the older volume only long enough to digest the contents of the first page. Where these characteristics of old English books are so common, it is almost invidious to select any one of them as a sampler, but convenience of reference suggests the title-page of the Bedford tinker's tale:

THE
PILGRIM'S PROGRESS
FROM
THIS WORLD TO THAT WHICH IS TO COME
delivered under the similitude of a
DREAM
wherein is discovered
1. THE MANNER OF HIS SETTING OUT;
2. HIS DANGEROUS JOURNEY; AND
3. SAFE ARRIVAL AT THE DESIR'D COUNTRY.
BY JOHN BUNYAN
I have used Similitudes, Hos. xii., 10.
LONDON.
Printed for J. Bunyan in Fleet Street.
1678.

It is from such noble copiousness of prefatory salutation that the pinched and meagre title-page of our degenerate days is sprung. The decadence did not come all at once, for fifty years ago a sub-title was in common use, to show that the author meant seriously to keep good faith with the trustful reader. But the sub-title was gradually relegated to the limbo of oblivion, and now the typical title is often intended to give but a hairbreadth clue to the voluminous labyrinth within, and sometimes—*infandum!*—to baffle all conjecture as to the subject-matter of the book itself. The book-buyer, we contend, has a right to feel aggrieved at the author who will be guilty of such littleness. However modern usage may exempt the writer of books from giving his brain's progeny a long-winded name, there is no forgiveness for such as cudgel their wits to invent titles which serve as bald symbols of bewilderment. It should be actionable at law to issue books called by such interrogatories as 'Whither?' 'Can You Forgive Her?' or 'Who Pays Your Taxes?' In one particular only has the modern title-page shown any symptom of growth, and that is in the line devoted to the adulation of the author. All the space on the title-page that he can spare from the mystification of the reader, he devotes to the recital of his own degrees and honors. And so it comes about that we have these abhorrent problematical labels upon wretched romances, and can learn from the initial page only that it is not the author's first offence, or, in the case of an enigmatical essay, that the perpetrator affectedly styles himself the "Sometime Fellow of Hocus-Pocus College, Oxbridge." Clearly, in the change from the old title-page to the new, what we have lost in light we have gained only in wind.

What we have shown as to the decadence of the title-page is true in a general way of the preface and the chapter-headings. That the early preface was occasionally a bit prolix we must, we fear, admit. But in it the writer stood upon his feet like a man, or occasionally struck out from the shoulder like a boxer. There was no shilly-shally. When occasionally he flattered his patron, he ate toads by the hatful and made no bones of it. The modern practice is obsolescent. Either it is shamelessly omitted without the reader's leave asked or granted, or it appears in shamefaced, truncated form, curt as a Quaker headstone, and yet always long enough to exhibit the abandoned egotism of the author, who never has wit enough to make it worth reading nor modesty sufficient to forego this shabby opportunity of self-advertisement.

It is not necessary to point out the manifest superiority of the older and ampler style of dressing a literary feast. It is clear as day that to those sampling an unknown volume the most generous credentials were afforded. The unsophisticated reader either was convinced that the topic and treatment were such as to enlist his interest, or had ample warning if perchance the viands were not to his taste. Nowhere was this more evident than in the older style of chapter headings. Thus, Rabelais, for example, informs us that Chapter xxiii. is about "How Pantagruel departed from Paris, hearing the news that the Dipsodes had invaded the land of the Amaurots: and the cause wherefore the leagues are so short in France." From Sir Thomas Malory down to Fielding, authors were every whit as explicit as to the character of the next stage of the story or discourse. There was no attempt at securing readers or

their money under false pretences, or at compelling them to buy a pig in a poke. But what can the would-be reader of to-day tell of a volume whose title is a conundrum, whose preface, if there be one, is a bit of self-laudation, and whose chapter-headings consist of an arithmetical progression of numerals? The normal attitude of the intending reader to an unknown treatise is that of Simple Simon to the pieman—"Let me taste your ware"; and nothing short of our modern sterility of invention or our miserly niggardliness of material can account for the fact that when he asks for bread we give him a stone.

LIGHTS AND SHADOWS AT THE ST. LOUIS EXPOSITION.

ST. LOUIS, August 23, 1904.

Half of the life of the St. Louis Fair has passed, and, short as it has been, the traces of age are already observable on its ephemeral tenements. The stucco is here and there falling off, the steps of stairways are cracking, and thus the illusion of permanency and solidity which impressed us at Chicago is dispelled. The work may not have been as well done, or the repairs which must be constantly repeated on such frail structures may be, from economical reasons, omitted; but, be the reason what it may, a depressing air of neglect is already pervading the group of buildings. This the management should dissipate if, as it professes to expect, the attendance during the autumn months is to reverse the financial disappointment heretofore experienced.

It is impossible to avoid a comparison with Chicago, yet it is unfair. Chicago was a creation, and all subsequent exhibitions, even Paris in 1900, are but imitations. None, even if better in some details, can excite the admiration and wonderment which the first sight of the Court of Honor produced. There is, however, at St. Louis a lack of that architectural harmony which was so impressive at Chicago; and though there is a Great Basin, and though there are lagoons between some of the principal buildings, we miss that blending of landscape gardening with the architecture which gave such a unique charm to the White City on the Lake.

Still, though it falls below the standard of Chicago, the exhibition is worthy of more attention than it has received from either the press or the people of the East. The principal reason for this neglect is probably that both are heartily tired of expositions. If these are to be milestones marking the progress of human industry, they should be held at longer intervals. They have, moreover, grown wearisome. Size, not quality, seems to be the subject of self-congratulation on the part of the management, though they frighten people rather than attract them by advertising that the show is twice as big as Chicago. Nothing is refused in the scramble for space, and therefore the fairs are degenerating into what the name means—collections of great shops, for the sale of exhibits no better, often worse, than can be seen in our streets. As the purchasers of exceptionally fine specimens of workmanship are few, the exhibitor must, if he be a merchant, satisfy the tastes and the pockets of the many, and thus what is really worthy of exhibition and of note is lost in such a heap of rubbish that the critical expert feels disinclined to waste his time in looking for it, and therefore will not try. As keen discrimination should be exercised by competent judges, in every department, in admitting exhibits as is shown in selecting pictures for an annual exhibition. The Japanese exhibit in the Varied Arts Building covers a large space. Table after table is crowded with common ceramic ware (it is a shame to apply such a term to it) and poor modern bronzes, and yet there are a few cases with ravishing specimens of embroidery, pottery, cloisonné, and lacquer work. A few dealers gain by selling the trash, but the public estimate of Japanese technical skill suffers; and those to whom these exhibitions should be of greatest utility, namely, our intelligent artisans, overlook the good examples in the heap of worthless stuff. The same is true of the exhibits of other countries.

Each successive World's Fair marks the growing prominence of some branch of culture or industry. At Philadelphia, one building, the Machinery Hall, covered all classes of engines and the machinery to which they communicated motion. In the interval between 1876 and 1893 Electricity had won a building to herself, and our Railroads and Mines had attained such national expansion as to require for their illustrative exhibits separate domiciles. No such new departments of national industry have either been created or been developed since the Chicago World's Fair, but it is significant of the awakening of the national mind to the importance of social organization that at St. Louis a large building, in a most prominent position on the Grand Basin, is devoted to Education and Social Economy. Articles of domestic and scientific use are distributed, on a principle not easy to understand, in three separate buildings, as products of Liberal Arts, Manufactures, and Varied Industries. But it is fair to say that the department on whose organization and equipment most pains have been taken, and in which the greatest success has been attained, is that of Transportation. The development of the locomotive, from the earliest to the latest examples of both the pinion and the reciprocating type, is there illustrated by the most complete collection of either original machines or models ever gathered together. As every traveller is interested in the remarkably sensitive and yet powerful engine which hurries him to his destination, the layman most ignorant of mechanics will look with profound interest and astonishment at the machines that represent the steps by which the locomotive has attained in one hundred years its present perfection of mechanism and great size and power. The enormously large high-speed engine from Germany, the "Hanover," is a monstrosity, but an interesting departure from every recognized type. The samples of old coaches, modelled after stage coaches, side by side with the train of cars of the Empire State Express, are as indicative of our growing love of comfort and luxury as are the earlier small and clumsy engines, when compared with the "Gov. Francis" of the Baltimore & Ohio, or the huge decapod freight engines of the Atchison, Topeka & Santa Fé, of our better knowledge of mechanics and control of the use of steam. But it is significant of the influence of the railroad everywhere in unifying the world, its people, and its resources, that there should be a beautiful model of the equipment of the Egyptian railroad system, and a time-table and map of the South African railroad system, which, as it has already reached the Victoria Falls on the Zambesi, confirms the anticipation made by Cecil Rhodes that, before many years are over, a through steam route by lake and land will connect Cape Town with Cairo This consummation will be reached, unless we make haste, before the Pan-American Railroad has connected Sydney, Cape Breton, with Port Montt, Chili, though Africa was still the Dark Continent when our international railroad scheme was first broached.

In the Mining and Metallurgical Building, our exhibits and those of Canada and Mexico leave little room for any other, unless we except Japan, the model of whose copper-smelting works and coal mines, and whose collection of minerals and metallurgical products, won by the latest and most approved methods, remind us that, in the arts of peace as well as the science and practice of war, this, the youngest of the world's recreated national forces, has determined to take and to hold her own.

Electricity, that most obtrusive of all the discoveries which science is extracting from the secrets of nature, now and again reminds us of the limitations of our knowledge. When darkness sets in, the illumination of the whole group of buildings, from the glow of a hardly appreciable glimmer to the full effulgence of day, is not as well managed or gradually effected as it was in Buffalo, where the lighting company had the mighty Niagara to help them. Nevertheless, when the St. Louis electrician succeeds, he produces an effect worth going far to witness. Nature, however, when generating currents with her own celestial and terrestrial apparatus, sometimes interferes with our puny efforts, and that happened one evening at St. Louis. We had eaten our lunch at an excellent German restaurant, but, having paid $1.25 for a single slice of cold beef, decided to try Mrs. Rorer for dinner. There we found an unexceptionable bill of fare at unexceptionable prices. As we finished our dinner, we saw the clouds gathering thickly, and the wind was rising in dangerous gusts. The nearest place of entertainment was the Festival Hall, which occupies the same architectural position as the Administration Building did at Chicago. We therefore decided to attend a concert to be given there.

As we approached the entrance, the storm burst furiously, and crowds entered under the same impulse of self-protection as ourselves. Fortunately, very few were aware that a tornado had burst that afternoon over North St. Louis, killing and maiming and destroying property with its impetuous tail at the very time we in the grounds were flattering ourselves, from a glimpse of sunshine, that the evening would be fine, and that the promised out-of-door functions would be held—that Pain's fireworks would be set off in the Stadium, and the war of the Transvaal fought over again by Britons and Boers (the latter commanded by Cronje and Viljoen themselves), and that the illumination of the buildings and gardens and lagoons would be made with artificial electricity. Had the large audi-

ence known that the wind had been playing such havoc near by us, perhaps it would not have retained its presence of mind so admirably when the sound of breaking glass, and the carpenters hurrying with boards to stop the breaks, warned us that the storm was raging round us with destructive violence, and might easily level the frail lath-and-plaster structure in which we had found refuge. A few left their seats, but none in terror; and as the bandmen began to collect on the platform, they reseated themselves. But, before the music commenced, the lights suddenly went out. They fluttered once or twice, then made no further effort to help us. Through the upper windows, however, there entered some light from the rows of incandescent lamps which outlined the cornice of the Terrace of States, whose colonnade, with the Festival Hall as its central feature, forms the background of the Cascade and the Grand Basin. When these were suddenly extinguished, we were hardly reassured by the ruddy glow which followed, for it was terribly suggestive of a conflagration. It was, however, only the electrician playing with our fears, and turning the current from the clear to the crimson bulbs. Before he could repeat the transformation something else happened, and we were left in total darkness. It lasted for only short intervals between the lightning flashes which, amidst the unbroken roar of thunder, brought the body of the hall, with the musicians standing mute upon the stage, into ghostly illumination.

The tension was growing dangerous; some one lighted a match, and he was ordered peremptorily to extinguish it. Then another called upon the bandmaster to play something—anything. But not a note responded. Any sound to drown the roar of the thunder and distract attention from the lightning would have relieved the strain and prevented the panic which the merest trifle, such as a woman fainting, would have created. Suddenly a clear female voice near me struck up "America." With one accord, the whole audience joined. There was some hesitation about the words when the second and third verses were reached, but we all sang on. Then we sang "The Star-Spangled Banner," "Old Folks at Home," and "Dixie." The effect was wonderfully calming. Then we saw, in the blaze of the lightning, some one come to the front of the stage in evening dress, and we understood him to say that all hope of lighting the hall had been abandoned and that we had better depart. Thereupon, the huge audience filed out into the darkness calmly and leisurely, willing enough to face the tempest outside rather than run the risk of being swept to destruction by a torrent of human terror and passion inside. The storm had disorganized the electrical system of the Exposition proper, for not a lamp in the grounds or on the outside of the buildings was alight. We could see only the unearthly glow of the Cooper-Hewitt cylinders through the windows of the Electrical Building, but the "Pike" was revelling in a blaze of brilliancy, all the brighter by contrast. The elements had respected its electrical apparatus, or more care had been taken to provide against accidents.

THE STRANGE STORY OF THE CHANTREY BEQUEST.

LONDON, August, 1904.

The English seldom show on the stage so complete a farce as the recent inquiry into the administration of the Chantrey Bequest, conducted by a select committee of the House of Lords. It would be delightfully funny were it not so serious, both in the effect it is bound to have on the art of the country and as an example of the way the Englishman, so incorruptible in his judgment of other people's affairs, is ready to lower his standard when it comes to the management of his own.

What the Chantrey Bequest is, I fancy by this time most people know. It was briefly explained in a note in the *Nation* not long since. But, to make the present situation quite plain, I had better state the main facts here in as few words as possible. The money left in trust by Sir Francis Chantrey, sculptor and Royal Academician, after the payment of certain annuities, was for the purchase of works of art. Some of the business details of his will may seem a little complicated, for he appointed, virtually, two sets of trustees—the trustees who were to see to the administration of the will, and the trustees who were to see to the spending of the money, once, after the death of Chantrey's widow, it came into their hands. But what he wanted is as clear as daylight—or would be to any one save an Academician who accepts the Academy as his standard of art. The will says, simply and directly, that the object is the encouragement of British fine-art, and, that, to attain it, the money is to be devoted to "the purchase of works of fine-art of *the highest merit* in painting and sculpture that can be obtained"; the only condition being that the artists should have "resided in Great Britain during the executing and completing of such works." Therefore, foreign artists, provided they live or have lived in the country, are eligible, nor is there any clause to prevent the purchase of work by artists no longer living. To make sure that work of the highest merit should be secured, Chantrey added a provision that the income might be allowed to accumulate for a period not exceeding five years, if necessary; and he further stipulated that the prices given should be liberal, but that no "sympathy for the artist or his family" was to influence the selection. There was still one other condition—that the works bought should be shown for a month at least at the Royal Academy or some other important exhibition. Having made the terms of his bequest so explicit, I do not doubt that Chantrey felt he could die comfortably, sure of the splendor and munificence of his gift to his country. But then Chantrey had not reckoned with the stupidity or ignorance—one does not like to call it by a harder name—of the trustees with whom the selection and purchase lay. These trustees were the President, Treasurer, and Council of the Royal Academy of Arts, an institution to which Chantrey evidently believed it an honor to belong. Three hundred pounds a year were to go to the President, fifty to the Secretary; Chantrey, as evidently expecting that his trustees would take some little trouble in carrying out these conditions. So much for the bequest.

And now, how has it been administered? I think that, too, by this time, is fairly well known. The Chantrey collection hangs in the Tate Gallery; and in Baedeker, no doubt, is duly starred and described in detail—it is long since I have opened my London Baedeker. But a sadder sight there could not be. The trustees, having had between two and three thousand pounds a year to spend in collecting examples of the highest merit—having spent almost seventy thousand pounds in not quite thirty years—have succeeded in forming a collection of paintings and sculptures that represents nothing but the Academy, and not even the Academy at its best. A few good pictures have crept in—it would be hard to say just how or why, for the collection as a whole is a pitiful display of vulgar commonplace and abject mediocrity. The fact that the will does not exclude the work of artists no longer living has been taken advantage of only in the case of a painting by a very second-rate, almost forgotten Academian, Hilton by name. For the work of most of the men who give whatever distinction can be claimed for the second half of the last century, you look in vain. There are huge canvases by Millais, in his last and feeblest days, Herkomer, Vicat Cole, Dicksee. But there is nothing by Madox Brown, Whistler, Rossetti, Holman Hunt, Alfred Stevens, Burne-Jones, Legros, Fantin-Latour, Alfred Gilbert, Cecil Lawson—to mention the most conspicuous omissions. Moreover, the occasional artists of note who, by some oversight, have been included, are with a few exceptions (Sargent the most prominent) represented by anything but their finest work, while some of the pictures are by men whose names are not known anywhere else, even in England. Chantrey wanted work of the highest artistic merit; his trustees have provided work of the least possible artistic importance. And the reason is simple: they have used the fund as a sort of Academy prize—for the encouragement of Academic art. Pictures and sculptures, with rare exceptions, have been bought from the Academy at the annual exhibition; a large number are the work of Academicians and Associates, or men who have since been elected to the Academy; to Academicians the biggest prizes have been awarded. Indeed, the one condition the trustees have scrupulously observed is that relating to liberality in price. They have been so liberal that it has sometimes seemed as if Chantrey's one object had been to help Academicians in difficulties by paying the highest sum for pictures that most people of intelligence would not think of accepting as a gift. Surely had anything but art been involved, had the country been any other than England, one would say there could not be a clearer case of the maladministration of a trust, the misappropriation of funds.

Even in England it did dawn upon the few who cared for art that something was wrong. It did not seem altogether reasonable that even an Academician should have left a large fortune to form a collection that was a disgrace to the nation and a laughing-stock to all the world besides. At periodic intervals, criticism of the Chantrey was heard in various quarters. Occasionally, the artist, or critic, appalled by the quality of the collection, solemnly housed by the Government in a national gallery as representative of all that is finest in

modern British art, took the trouble to read Chantrey's will, and then to point out how entirely its conditions were disregarded or misinterpreted by the trustees. But the criticism was received mostly with the silence with which, in England, the criticism of British institutions usually is received. However, about eighteen months ago, it was revived, and gradually reached a point where silence was no longer possible—or discreet.

Just before the Academy of 1903 opened, an article on the subject appeared in the *Saturday Review*. Papers like the *Daily Chronicle*, which had already, though some years previously, endeavored to expose the Chantrey, returned to the charge. The result was that more notice than usual was given to the selection of works for purchase by the trustees, and when it was found that these, in every way, conformed to the Chantrey standard as accepted by the Academy, the outcry became more general. And what made it obvious that, this time, criticism could not pass quite unheeded, as it had before, was that all the most conservative and "correct" papers joined in —the *Times*, the *Spectator*, the *Telegraph*, the *Athenæum*. The scandal of the Chantrey was in every mouth. It became almost the fashion to denounce it. Through all the excitement the Academy maintained its safe policy of "sitting tight." As a body, it said, it did nothing. As individuals, most of the Academicians and Associates found it wiser to have heard nothing of the discussion with which the papers reeked, when asked what they thought of it, and to refuse to be interviewed. Those who were unwise enough to speak exhibited a degree of petulance, or naïveté, or ignorance, simply inconceivable. Sir Lawrence Alma-Tadema lost his temper, and could do nothing but abuse "those foolish persons," the Academy's critics. Mr. Boughton wanted to know how they could buy a Whistler if they hadn't been told the price—it never seeming to occur to him that the President, paid £300 from the Fund, might spare a penny for a postage stamp and write to Whistler, or a shilling for a hansom and go to see him in his studio. Others maintained, in defiance of the will—which they said was read to the Council every year before the purchases were made —that pictures and sculptures must be bought from the Royal Academy. Others regretted that, as the pictures and sculptures could not be ordered, it was impossible to secure any from the most distinguished artists, who always worked on commission. And so on, and so on—until such a lot of nonsense had been talked, until the few who did open their mouths had given themselves and the Academy so completely away, that this year, when £1,000 was paid for a not very good example of a not very distinguished Associate from whom another picture at a slightly higher price was bought only seven years ago, and when the rest of the money was squandered with the same disregard of Chantrey's desires, the crisis came. The scandal could not be allowed to go on without some sort of inquiry. So far, so good.

But now the second act of the farce was reached, and it is in the second act that the fun always quickens. Something had to be done—but what? At moments of this kind the House of Lords becomes useful. Lord Lytton, young, no doubt ambitious, saw his opportunity, and was induced to take the matter up. He proposed to raise the question in the House of Lords, and he announced his intention in reviews and newspaper articles. The critics, save one or two whose confidence in the noble Lords was not so unqualified, were jubilant. They attended the debate in the House; Sir Edward Poynter, President of the Academy, also was present. Lord Lytton had got up his facts fairly well, and indeed it would have been difficult for him not to, almost every paper in London having got them up already at great length and with full detail. Several Lords who shared in the debate agreed with him that the Chantrey Collection was a disgrace. Others, including Lord Davey, one of the financial trustees of the bequest, were, apparently, posted by the Academicians, and thought that, whatever the collection was, it could be nothing else because of the conditions of the will, which, the unprejudiced looker-on was tempted to think, Lord Davey had never bothered to read. However, despite opposition, the Lords came to the conclusion that all was not well with the Chantrey, and recommended that an inquiry should be made to find out why.

An inquiry is an excellent way of providing occupation for members of the upper House, and a select committee was at once appointed. And now comes the most extraordinary part of the whole story. Two of the six Lords chosen were Lord Windsor and Lord Carlisle, one of whom has always professed an interest in art, while the second paints—"among other accomplishments." Both, therefore, are apt to be associated with art matters and art movements in England, where a Lord is so dearly loved that to secure a titled patron for any institution or any scheme is held to be equivalent to success. And so it happens that both are Trustees of the National Gallery. Now it must be remembered that the Tate Gallery is a part of the National Gallery, under the same direction, and that the Trustees are in consequence responsible for its management also—responsible, that is to say, for the fact of the Chantrey Collection being lodged there. Every child, you might think, must have seen that, as a logical result, for them to sit in judgment was necessarily to sit in judgment on themselves, as well as upon the two other peers, the Marquis of Lansdowne, who had joined in the discussion in the House and had not been too friendly in his estimate of the Chantrey, and Earl Brownlow, who, with them, are Trustees of the National Gallery. But the critics who had started the agitation could not see this—always with the exception of one or two of the more clear-sighted; they could, or did, not see that really, in a way, it would have been a parallel case, though different interests were at stake, if Lord Dufferin had been asked to judge the Whitaker Wright case. The American is supposed to be dazzled by nobility; the Englishman is simply blinded by it, and the critics and the public accepted the whole absurd situation with unquestioning deference and enthusiasm. They were not even shaken when it turned out that one of the noble Lords on the Select Committee was a Trustee of the Chantrey bequest without knowing it, or without remembering it until reminded by Sir Edward Poynter—at least, so says a well-authenticated story now going the rounds of London.

Under these circumstances, the inquiry could be nothing but a farce. To condemn the Chantrey unreservedly would have been for the Lords to condemn themselves. However, they took it in the right spirit of farce, and were ponderously solemn throughout. The examination lasted for several days. Academicians, beginning with the President, were called, among others Mr. Sargent, placed in the unpleasant position of reconciling his opinion of the Chantrey as artist with his approval as Academician, and compromising by venturing to hint that, perhaps, there might be an improvement if one man, instead of ten, selected the pictures and sculptures. Critics were called, one after the other. The President of the Scottish Academy, representatives of different societies of artists, a director of a German Gallery, were called; and all this outside evidence was as severe in denunciation as the evidence of the Academy had been amiable in appreciation. Nothing could have been more decorous. You might have imagined every one in dead earnest. A few days were allowed to elapse after the close of the inquiry—the noble Lords, presumably, deep in thought and careful consideration, while the public waited, awestruck by such condescension. And now, at last, we have the report—delivered with the same solemnity with which the examination was conducted.

I do not believe that in any other country in the world, except England, it could have been accepted by everybody with such respectful gravity. It is really amazing. For, reduced to a few words, this is what the report amounts to: The Chantrey Collection is shockingly bad and does not consist of the work of the highest merit which Chantrey left his money to buy; the Academy is responsible for the present state of things —that is, for the entire disregard of Chantrey's wishes, the continuous dual administration of his Bequest; therefore, by all means, let the Academy perpetuate the scandal and continue to maladminister the Bequest, to misappropriate the Fund! It is unbelievable, but it is so. And the hands of the Academicians are strengthened, the power and influence of the Academy reassured. For no doubt the noble Lords felt that something was expected of them—some little mouse of a suggestion, however puny and miserable, out of the mountain of inquiry. And, with an admirable air of sagacity, they suggest that the number of trustees be reduced from the original ten —the President and Council—to three, the President, a full-fledged Academician, and an Associate elected by the Associates. When there were ten trustees, the risk of dissensions was run. That was the reason, no doubt, why those forlornly few good pictures have crept into the Chantrey Collection. But with three the whole business can be got through with one-third the risk, and, better still, in one-third the time, and Academicians need not waste themselves and their leisure hours over questions of mere national importance. Certain clauses and propositions have been added by the Lords of the Select Committee, but they amount to just nothing so long as the control of the fund rests with the Academy. And that it remain with the Academy—only modified by the change which, I have explained, must be for the

worse—is the suggestion that the noble Lords submit should be carried out, either by Act of Parliament or by the Charity Commissioners, who, for some curious reason, have authority in matters of this kind. But, anyway, whether the suggestion is carried out or not, there is no chance of the Chantrey Bequest being inquired into again for years to come, and the triumph of the Royal Academy of Arts is complete.

Correspondence.

THE CONTINUITY OF PARTIES.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to join issue with your reviewer of Münsterberg's 'Die Amerikaner' on one point which seems to be of special interest? He characterizes as a "fanciful theory" the view that the two political parties of this country have had a logical continuity and consistency from the beginning, in their embodiment of two opposing tendencies. It seems to me that, if the author has reached this conclusion from his own observations, it is a case of remarkably successful analytic inquiry into a neglected question. It has often been pointed out, as a curious feature of our political parties, that it is rather exceptional to find them joining a direct issue on public questions, and that they simply comprise two sets of men, each of which seems to adapt its views to the supposed policy of the public, rather than to have any policy of its own. It has long seemed to me that this is a superficial view, and that, notwithstanding this seeming lack of distinctive policies, there has been, from the beginning, a clear division of two separate tendencies, substantially as described by the author.

No one will deny that men are born with certain innate tendencies which are influential in determining their affiliations, their sympathies, their associations, and their views on public questions. In their modes of reasoning and thinking, men are said to be born either Aristotelians or Platonists. There are also born conservatives and radicals. In our own and most other countries men are born individualists and collectivists. It does not follow that any one man is conscious of belonging to either class; it does not even follow that he always advocates the policy towards which he tends with logical consistency; yet the tendency is there, and is a powerful agent in determining his sympathies and guiding his judgment.

It seems to me perfectly clear that our politics have divided on this tendency from the beginning, with the possible exception of part of the middle period. In the difference between the Federalists and the Democrats of the first period, what was more fundamental than the individualistic view of State rights and the fear of oppression by the majority on the one hand, and the appreciation of the value of united effort and subordination of the individual to the mass, on the other? Moreover, these are precisely the two opposite ideas which have long divided the two schools of economists, and distinguish those who, like Herbert Spencer, support individual initiative, from those who advocate governmental management of business affairs. I have not seen the work under review, but suppose it to maintain what I believe to be the correct view—that the quasi-support of slavery by the Democratic party was not due to any special sympathy with slavery, but only to the feeling that the general Government should not interfere with the internal policy of any one State. This same line of division has continued from the time of the civil war to the present. The side one takes on the tariff question depends mainly upon whether the appreciation of the advantages of individual liberty or of those of union and subordination of individual interests to a supposed general good are uppermost in his mind. All this seems to me so clear that I do not see how it can be made stronger by argument.

On one point the author, if correctly quoted, may be admitted at fault. The lines I have mentioned have never divided parties on the currency question, nor is there any reason to determine which side of this question an individualist should take. It is hardly necessary to say that, during and immediately after the time of Jackson, the tendency of the Democratic party was strongly toward "hard money," and paper currency in general was looked upon with disfavor. The subsequent change of sides between the two parties had nothing to do with the tendencies of either toward their respective traditional lines of policy. But to say this of all the questions on which they have divided, is to ignore the result of one of the most characteristic features of human nature.

WASHINGTON, D. C., August 27, 1904.

THE TITIAN "ARIOSTO."

TO THE EDITOR OF THE NATION:

SIR: It is possible that those of your readers who care for pictures have already heard of the last acquisition of the National Gallery here—the so-called portrait of Ariosto by Titian which until lately hung in the Darnley Collection. This collection is known to Americans perhaps best because it was the source of Mrs. Gardner's superb picture of "Europa," also by Titian. The "Ariosto" (a half-length) was bought by the National Gallery, helped by a certain number of friends—among them, it is said, Mr. Morgan—who subscribed £5,000 apiece; the total price paid to the dealer, Sir George Donaldson, who had purchased the Titian together with a not first-rate Van Dyke, being £30,000. Even in these days when the prices paid for works of fine or supposed fine art have been raised to perfectly crazy heights by the ill-directed buying of untrained millionaires, such a price as £30,000 for such a picture is startling. Mrs. Gardner paid, it is believed, only £20,000 for her "Europa," a picture of immeasurably finer quality than the "Ariosto." That the officials of the gallery should expend public funds and ask for more from friends for a picture of this kind, shows a strange lack of seriousness, both in their treatment of the public and in their study of the history of painting.

The picture represents a dark-haired man in middle life; he is turned to the right, his arm leaning on a conventional balustrade which bears Titian's signature; his face is seen in three-quarters; the background is dark. Why it should be entitled "Ariosto" is hard to comprehend, for it certainly does not represent the poet. If the woodcut of the poet given in the 1535 and 1537 editions of his play the "Cassaria" be compared with the Titian it will be seen at once that the latter differs in every way possible from the former; the shape of the head and of the nose, the character of the eye and of the face are all different. Nor is it impossible that the woodcut is from a drawing by Titian. The painting represents a person of coarse temperament, and leaves much to be desired as a work of fine quality. The face is flat and lacking in modelling, and the beard is much repainted. The sleeve of the dress is very fine, but £30,000 is a lot of money to pay for a painted sleeve. When photographs have made students familiar with the work, I think they will agree that it is one of the most expensive pictures in the Gallery.

It is to be hoped that the stir and excitement caused by the purchase will not excite some well-meaning, but artistically untrained, American millionaire into paying another £30,000 for the Van Dyke. Before he does, he had better look over the third volume of Waagen's book on the 'Art Treasures in England,' particularly pages 419f and 454f. If, on the other hand, this sensational purchase bring about some form of resistance to the little games of the picture-dealers, no one will regret the cost to the Gallery.

RICHARD NORTON.

LONDON, August 17, 1904.

Notes.

A. C. McClurg & Co., Chicago, subserve the centennial interest in the Lewis and Clark expedition by reprinting Gass's Journal, edited by Dr. James K. Hosmer, and by a 'Short History of Oregon,' the work of Sidonia B. Johnson. They announce, further, a reprint of Lahontan's 'New Voyages to North America,' a 'History of Negro Servitude in Illinois and of the Slavery Agitation in that State,' by Prof. N. Dwight Harris of Lawrence University; and 'Florence in the Poetry of the Brownings,' selected and edited by Anna B. McMahan.

From Doubleday, Page & Co. we shall have Renan's 'Letters from the Holy Land' to M. Berthelot; 'Stories of Inventions,' by Russell Doubleday; 'Indoor and Outdoor Games,' by Mrs. Burton Kingsland; and 'A Belle of the Fifties,' by Mrs. Clay of Alabama.

Macmillan Co.'s fall list embraces the fifth volume of James Ford Rhodes's 'History of the United States from the Compromise of 1850,' completing the narrative of the civil war and describing the struggle between President Johnson and Congress over Reconstruction; 'Reminiscences of Peace and War,' by Mrs. Roger A. Pryor; 'The Declaration of Independence,' an interpretation and an analysis, by Herbert Friedenwald; the first volume of Prof. Edward Channing's 'History of the United States,' coming down to 1660; a new, revised and enlarged edition of Mr. Bryce's 'Holy Roman Empire'; 'The Napoleonic Empire,' by R. M. Johnston; 'Roman Society from Nero to Marcus Aurelius,' by Samuel Dill; 'London in the Time of the Tudors,' by Sir Walter Besant; 'An Irishman's Story,' Justin McCarthy's autobiography; 'Memorials of Ed-

ward Burne-Jones,' in two volumes; an enlarged edition of Dr. Hale's 'Memories of a Hundred Years'; 'The Road in Tuscany,' by Maurice Hewlett; 'Italy,' a popular account of the country, from the German of Prof. W. Deecke; 'Highways and Byways of the South,' by Clifton Johnson; 'How to Collect Old Furniture,' by Frederick Litchfield; 'How to Identify Portrait Miniatures,' by George Williamson; 'The History of Portrait Miniatures,' by George C. Williamson; 'The Life and Works of James and William Ward,' by Julia Frankau; 'Miriam, or, The Sin of David,' by Stephen Phillips; 'Poems and Plays,' by W. B. Yeats; 'A Lexicon to the Poetical Works of John Milton,' by Laura N. Lockwood, Ph.D., of Wellesley College; 'The Early Writings of Montaigne,' by Miss Grace Norton; 'The Principles and Progress of English Poetry,' by Prof. Charles Mills Gayley; 'Lectures and Essays,' by the late Canon Ainger; 'Japan: An Attempt at Interpretation,' by Lafcadio Hearn; 'The Women of America,' by Elizabeth McCracken; 'Weather Influences,' by Prof. Edwin Grant Dexter; 'The Bear Family,' by Prof. C. Hart Merriam; 'Beethoven and his Forerunners,' by Daniel Gregory Mason; 'Economic Essays,' by the late C. F. Dunbar; 'The Industrial History of the United States,' by Prof. Katharine Coman; and a 'History of Education in the United States,' by Prof. E. G. Dexter.

From Houghton, Mifflin & Co.'s announcements we select the 'Autobiography, Memories, and Experiences of Moncure Daniel Conway,' in two volumes; 'Letters of John Ruskin to Charles Eliot Norton,' edited by the recipient; 'Routine and Ideals,' by Le Baron R. Briggs; 'Journalism and Literature, and Other Essays,' by H. W. Boynton; 'The Amateur Spirit,' essays by Bliss Perry; 'Compromises,' essays by Agnes Repplier; 'Bits of Gossip,' by Rebecca Harding Davis; 'The Queen's Progress, and Other Elizabethan Sketches,' by Prof. Felix E. Schelling; 'Far and Near,' outdoor papers, by John Borroughs; 'Nature's Invitation,' by Bradford Torrey; 'The Ways of Wasps,' by George W. and Elizabeth D. Peckham; 'A Manual of the Trees of North America,' by Prof. Charles Sprague Sargent; 'Facts and Figures: The Basis of Economic Science,' by Edward Atkinson; 'Women in the Fine Arts,' by Clara Erskine Clement; 'The Playmate Hours,' by Mary Thacher Higginson; 'Lyrics of Joy,' by Frank Dempster Sherman; 'Science and Immortality,' by Dr. William Osler (the Ingersoll Lecture for 1904); 'The Christian Ministry,' by Lyman Abbott; 'The Evolution of the United States Constitution, and History of the Monroe Doctrine,' by John A. Kasson; the second and concluding volume of Dr. Waldstein's 'Argive Heræum'; 'The De Monarchia of Dante,' translated, with introduction and notes, by Aurelia Henry; 'Boccaccio's Life of Dante,' translated by Philip Henry Wicksteed; Virgil's 'Georgics,' translated by John William Mackail; and 'Certaine Sonnets,' by Sir Philip Sidney, in a limited edition (like the two immediately preceding titles).

'Yosemite Legends,' narrated by Miss Bertha H. Smith, with thirteen full-page illustrations and much decoration, will be published by Paul Elder & Co., San Francisco.

A popular 'History of the United States and its People,' by Elroy M. Avery, Ph.D., LL.D., in twelve volumes, with abundant illustrations, is being undertaken by the Burrows Bros. Company, Cleveland.

The State Historical Society of Wisconsin has just completed its series of indexes to its records from 1849 to 1901, inclusive. Under Mr. R. G. Thwaites's supervision, Mrs. Mary Elizabeth Haines has completed an Index to the Proceedings, 1874-1901—that is, beginning with the first separately printed Proceedings. A large amount of interesting matter is thus laid open to students, and the good work is to be maintained by quinquennial supplements. The Index fills 399 pages in open type and line of page width.

Mrs. Jeannette Robinson Murphy's 'Southern Thoughts for Northern Thinkers, and African Music in America' (New York, 361 West 55th St.: The Bandanna Publishing Co.) is compounded of her brief talks as a lecturer and essays in periodicals, and a collection of negro songs (with the music) which are new to us, with some of her own in emulation. Her lectures aim to reconcile North and South on the subject of the colored population, and whatever may be their success in this particular they are very enlightening as to the Southern state of mind. "It is a reasonable belief with us Southerners," says Mrs. Murphy, on page 6, "that it was an overruling Providence which took the savage negro from centuries of horrible slavery, cannibalism, and idolatry, and placed him under the training of the chivalrous Southern people, to the benefit of both races." At page 10: "Had the South been let alone and trusted, it would have required but a few more years for the unnatural system of human bondage to have died of itself a natural death, for it was no longer profitable except in two or three States where the larger plantations could be successfully worked." At page 8: "This remarkable man [Booker Washington] is the result of prenatal slavery training, and an earnest of what God intends for all the negro race who use freedom aright." The musical talks, precluding samples of the songs, contain much information on the negro mode of singing; and we must think the latter half of the book fresher and more valuable (but not more significant) than the first.

A doctor's thesis presented to the Paris Faculty of Letters by John Martin Telleen (M. A. Yale) on 'Milton dans la Littérature Française' (Paris: Hachette) is one more sign of the new set of American post-graduate study towards France. The essay will save labor to those who follow. Apart from general considerations, Voltaire and Chateaubriand demand the greatest space as admirers and translators. There is a bibliography, often lacking in precise indications apart from the aid furnished by the text.

A handy little 'Anabasis' appears as the third in the series of Xenophon's Complete Works edited for the "Scriptorum Classicorum Bibliotheca Oxoniensis" (H. Frowde), by E. C. Marchant of Lincoln College. The Latin preface discusses the several codices, and each page carries its own variant readings at the foot. The orthography is that of the Paris Codex C, in the main.

The *Gerarchia Cattolica*, the official papal year-book, has made its appearance for 1904. Rather singularly, the number of popes has been reduced from 263, as given in former editions, to 258. The change is based on the researches of Catholic savants (notably of the Abbé Duchesne) who have for years been pleading to have the names of mythical popes stricken out. In one case Duchesne's list has not been adopted by the editors, on the ground that he was "guided only by historical criticism, although canonical and theological criteria should also have a decisive voice in the matter."

The question whether schools of technology should be separate institutions or a technological faculty should be added to the universities, is discussed at some length by Prof. C. Kammerer of the Technological Institute of Charlottenburg, in the *Beilage* of the Munich *Allgemeine Zeitung*, No. 126. This has become a burning question for the educational world of Germany in consequence of the marvellous development of the schools in the last two or three decades, since Germany has become an industrial state with dreams of a conquest of the world of business and industry. The Government has put the technological institutes on the same footing with the universities, and has given them the right to grant degrees. The immediate occasion of the discussion is the fact that both Prussia and Bavaria contemplate the establishment of new institutions of higher education. Professor Kammerer is decidedly of the opinion that technical and university studies should be kept apart, because the fundamental ideals are irreconcilable, the technical branches being directed by practical interests, and the humanities by intellectual and pedagogical considerations. The article, which is an address delivered to a society of engineers, tries to meet the reasons urged for a consolidation with the universities; but the author does not think that this separation must last for ever—conditions may yet change in favor of a *universitas literarum et artium*. At present the technological branches only suffer by such an association.

In reading the budget for 1904 of Ta Han, or the Empire of Korea, published in the *Korea Review* for June, one has feelings awakened other than those of economic interest. Of the total revenue of $14,214,573, the largest item is from taxes on land, $9,703,591. Taxes on house, salt, fish, poll, and "miscellaneous" make up $1,720,295. The final item, not real revenue, but "arrears from 1903," is $2,790,687. In looking over the disbursements, we observe that the imperial privy purse calls for $1,013,359, and the imperial sacrifices $186,641. The ceremonial bureau, out of a total appropriation of $21,508, uses up $19,156 on salaries and office expenses, the remainder being for repairs, travelling, and miscellaneous. The mining bureau shows that out of $10,453 expended, all, except $744 under the head of "miscellaneous," went for salaries and office items. While $300,000 is allowed for the construction of a new palace, $10,000 is doled out for "country repairs," which, we imagine, means improvement of the roads. It was put down in Dr. H. Allen's recent Chronological Index as an event of national importance that Dr. McGill, an American missionary, in May, 1891, actually drove a horse and carriage from Gensan to Seul! The chief item of expenditure is $5,180,614 for the War Department. In 1895, when the Department of Ceremonies was reduced to a bureau, the Department of Education was put in its place, but, in the report on na-

tional education for 1904, there is little to show that any Government aid is given to schools outside of the capital. In Seul direct help is given to the Confucian, normal, middle, medical, industrial, and primary schools. There are also language schools for the teaching of Chinese, Japanese, Russian, English, French, and German, the total amount of salaries paid to foreign teachers being $44,220. For current expenses the English school receives more than any other; French, Russian, German, Japanese, and Chinese following in order, and the total expenses of the Seul schools being $135,-074.

A fresh guarantee for the preservation of peace in Europe and the closer knitting of the ties which unite nations is to be found in the recent consent of the Spanish Government to the construction of a Trans-Pyrenean railway. The negotiations to this end, which have been in progress nearly twenty years, have at length succeeded, mainly through the untiring efforts of M. Delcassé, the able French Minister of Foreign Affairs. The projected line will cross the mountains about fifty miles from the Mediterranean, and bring Toulouse and Barcelona into direct communication. Not only will it aid greatly the economic development of Spain, but it will draw France and Algeria closer together. By the new road the traveller will be able to go from Paris direct to Cartagena, whence it is but a few hours' sail to Oran. Later a line will be constructed on the Atlantic side, from Oloron to Zuera, by which there will be a considerable saving of time between Paris and Madrid.

Mr. F. Gutekunst, Philadelphia, celebrates President Eliot's seventieth year, elapsed in March last, with two of his generous imperial photographic portraits. The one, three-quarters, looking to the right, the less familiar view, is the more genial; the other, a profile, to the left, will be preferred for power. There are profiles and profiles of the same face, and a hair's breadth makes a difference little appreciated by sitters or artists; Mr. Gutekunst seems to us to have seized the happy moment, and secured the best angle for the features and for the mass of the head. Harvard men and educators generally will prize this opportunity to possess a speaking effigy of Harvard's presiding genius.

—The editor of the *Century* has chosen to make up a "round-the-world" number for September. Hackneyed routes are hard to avoid in such an undertaking, but the measure of success is fair. Mrs. Agnes Smith Lewis has something entirely new to present, in that she is the first woman to have entered the Coptic monasteries of Egypt and Nitria, whither she made her way in the effort to discover ancient manuscripts of importance. She has no such success to record, however, as her earlier discovery of the famous Syriac text of the Gospels, on Mount Sinai. Ernst von Hesse-Wartegg has also succeeded in passing ramparts hitherto inviolate to the travelling magazine writer. The popularity of his wife, the well-known Minnie Hauk, obtained for him from the Dutch authorities letters of introduction which opened to himself and his wife the doors of the palace compound of Surakarta, the remnant of native empire maintained by the Dutch in the Island of Java. Other articles touch the world at various out-of-the-way points, ranging from Arctic Alaska to the regions penetrated by the British Antarctic expedition of 1899. In the latter case the writer is Mr. Borchgrevink himself, the commander of the expedition. Prof. H. F. Osborn's paper on a Wyoming fossil graveyard of the largest animals known to have existed on earth, with many of their humbler contemporaries, will be sure to arrest attention. The portrait of the "Woman in Black," by Hilaire Germain Degas, recently secured for Fenway Court by Mrs. Gardner, is by her permission reproduced from a half-tone plate by H. Davidson. The editor very naturally takes occasion to speak with vigor of the foolish fanaticism which, in the name of protection, has compelled Mrs. Gardner to pay $200,000 for the privilege of bringing her collection into the country. The Cole wood-engraving for this month reproduces Velasquez's "Don Baltasar Carlos."

—*Scribner's*, like the *Century*, gathers from many fields for its initial autumn number. Lewis Gaston Leary gets the leading position for a description of Emesa and Hamath (now Homs and Hama) as they existed two years ago, before the railway from Beirut had entered with its disintegrating and modernizing influences. The illustrations are by Jules Guérin, from photographs. Frederic Irland gives a breezy sketch from Wyoming, in which sheep-shearing, bank-looting, stock-"lifting," and other amusements of the unconventional frontiersman compete with about equal success for the reader's interest. But the frontiersman, as a subject of descriptive journalism, we have always with us. Walter Harris, of the Royal Geographical Society, goes farther from the trodden path in his sketch of the wild Berbers of Morocco, who have been comparatively neglected in the literature of travel in favor of the more accessible Arabic and Moorish elements of the Moroccan population. Capt. Mahan's papers of the war of 1812 are resumed, the main feature of the present paper being the operations of Perry on Lake Erie, in 1813. The controversies growing out of the battle of Lake Erie Capt. Mahan does not regard as capable, now, of satisfactory solution, chiefly because President Monroe did not see fit to allow action on the charges formulated by Perry against Elliott in 1818. Previous attempts to settle the matters at issue by affidavits, and by a court of inquiry, had been ex-parte and fatally incomplete. Russell Sturgis writes of the pediment of the New York Stock Exchange, calling attention to the peculiar fitness of the sculptors, Ward and Bartlett, to cooperate in such a work.

—Judge Advocate-General Davis discusses the subject of international law in a contribution to the September *Harper's*, giving a brief sketch of its origin, and the influences under which it has been developed, and offering some comment on its proper scope and its future. Perhaps the weakest point in the article is the readiness of the writer to admit the inapplicability of international law in all cases involving national antipathies, national aspirations, national controversies growing out of competition for foreign markets, and national scheming "to do something which is in itself a violation of international law." In the latter case, however, it is to be said that he contemplates disputes in which each of the contending nations is scheming against a third. In such cases the third party has not the power to get its case before a court of arbitration, and the schemers, of course, have not the disposition. At present we have only the "man with the big stick" to rely upon in such cases, and the trouble here is that the big stick is about as apt to knock a few "ripe pears" for its wielder as to enforce the rights of the owner of the tree. John Greenville McNeel fills a gap in the knowledge of most readers of American history by giving a detailed account of the experiences of American seamen taken captive and carried to England during the War of 1812. Their sufferings from insufficient provision for bodily wants, and the American neglect of their situation, may be imagined from the fact that they were at one time on the verge of applying *en masse* for enlistment in the British navy. The editor goes into a more detailed explanation of what he meant in the August number by "the direct appeal" as the distinguishing feature of the best in our contemporary literature, as compared with the more artificial forms of the past. Incidentally he declares that "certain dogmas of the realistic school, fixing arbitrary limits to the possibilities of our human nature along the low lines of a pessimistic theory, must give place to a more hopeful idealism."

—Prof. William E. Dodd of Randolph-Macon College, Va., obligingly sends us the following transcript of a letter of Washington's in the possession of the Washington Literary Society of that institution. It is not included in Ford's edition of Washington's Writings. New Post was near Fredericksburg.

MOUNT VERNON, 27 Oct. 1799.

DEAR SIR:

Your letter of the 30th Ult. came duly to hand, but as it appeared from the tenor of it, that I might soon expect another from you, with my Deed in the hands of Mr. Jno. Brooke (one of the administrators of Jas. Mercer Esq^{r} deceased) I intended to have postponed the acknowledgment thereof until then; but as Mr. Brooke seems to have forgot *his* promise, I shall no longer delay thanking you for the trouble you have been at, on my account, in this business.———My best wishes in w^{ch} Mrs. Washington and the family at this place unite, are offered for yourself, Mr. Spotswood and all at New Post.

With very best esteem and regard
I am—Dear Sir
Your obed^{t} H^{ble} Servt.
G^{o} WASHINGTON

P. S.
Did Mr. Duval proceed
to Kentucky according
to expectation?

GEN. SPOTSWOOD.—

—The prolific Viscount de Vogüé's latest collection of twenty-three articles, 'Sous l'Horizon: Hommes et Choses d'hier' (Paris: Armand Colin), opens with a tribute to the late Duc d'Aumale, reviews the life of Pasteur, discourses on Bismarck and music (apropos of Keudell's reminiscences), on Taine and on Joseph Chamberlain, and ends with remarks on the Russo-Japanese war. Among the unenumerated papers is one, written in 1902, after the November elections, on Theodore Roosevelt, which one cannot help suspecting of

irony. Its character-reading is based upon 'The Strenuous Life,' in which the Viscount hears "the accent of a Hohenzollern." Nowhere in it, he says, will you find stress laid upon the intrinsic virtue of the words Republic, Democracy, Liberty, Humanity. The progress of the United States Mr. Roosevelt does not attribute to glittering generalities (*formules abstraites*), but to the qualities of the men who suitably apply the generalities, and who are not so stupid as to wish to impose on other people, their rivals, the tool they approve for themselves. Mr. Roosevelt has no Cæsarian aspirations. "He would only be a Washington, but an imperialist Washington." Our masses seek a history; even, "c'est une patrie qu'il nous faut." Roosevelt is the man to satisfy our two-fold longing, "to get together and to extraterritorialize." "He knows that a Constitution is a frame adjustable to the measure of men, and that the most rigid lends itself to whatever a brave heart can or will draw from it." True, but save us from our friends.

—The question when, whence, and by what route the present Aryan population settled in Scandinavia and particularly in Norway has for nearly a thousand years been a mooted one. Snorri Sturluson and other Icelandic historians, from the thirteenth century down, sought to solve it in their own way by means of a pragmatic interpretation of the old myths, describing how Odin and the other "Asia-men" had come from Asia at the time when the "chieftains of the Romans were roaming about the world," first to Russia, thence to Germany and Denmark, and finally to Sweden; whence his successors came to Norway. Active discussion arose, about the middle of the last century, when the "Norwegian historical school," under the leadership of P. A. Munch, formed a peculiar theory of Norway's settlement by an immigration along the Russian Baltic provinces and the northern shores of the Gulf of Bothnia. It might have been expected that the growing study of prehistoric archæology would advance our knowledge in this matter, but, so far, no definite light has been derived from this quarter. Recently, Dr. Andr. M. Hansen of Christiania, under the sponsorship of men like Sophus Bugge, Brögger, Nansen, etc., produced a fascinating book, 'Landnaam i Norge' (Settlement of Norway), in which he advances entirely new theories. He starts from a discussion of the relative age of the names of Norwegian farms, on the basis of the posthumous work of Oluf Rygh, and endeavors to show that the earliest settlement of an Aryan population in Norway (and to some extent in Sweden) is represented by farms in different parts of the country whose names have the words "vin" and "heim" as the second component part. This settlement corresponds to the bronze age. The second stage is represented by farm names ending in "stadir," corresponding to the early iron age, and a third stage by names ending in "rud" and "setr," corresponding to the "younger iron" (or "viking") age. In Denmark, on the other hand, our author thinks that the first Aryan settlement corresponds to the neolithic period. In the kitchen-middens and other remains of the palæolithic period in Denmark, as well as in the Norwegian and "Arctic" stone implements, he finds evidence of a pre-Aryan population which, both in Denmark and in Norway, existed before and, to a certain extent, simultaneously with, the first Aryan inhabitants. This pre-Aryan population was a tribe of huntsmen and fishers, while the Aryans from the first were agriculturists, whose existence was dependent upon certain geological and botanical conditions. It is this pre-Aryan population which by the Aryans is characterized by the name of "Finns," and it differs anthropologically as well as ethnically from the "Lapps," who are immigrants of a much later date. These original Finns have mixed with and become a part of the Scandinavian (Aryan) population. The author seeks support for his theory in a thorough and most interesting study of the flora, fauna, and geology, as well as the archæology, of Scandinavia and of Norway in particular.

AN ARTIST-PATRIOT.

Giovanni Costa: His Life, Work, and Times. By Olivia Rossetti Agresti. Illustrated. London: Grant Richards. 1904.

Giovanni Costa, painter and patriot, whom Rome honored last spring by a public funeral, was one of the most distinguished artists of our time. His studies of the Roman Campagna have been judged by eminent French and English painters worthy to take their place among the masterpieces of Italian art, for the poetic feeling of their conception as well as for their exquisite quality of workmanship. Few of those, even among his intimate friends, who knew the artist in later years had any exact idea of the important part he played as a soldier and conspirator in the cause of United Italy. Olivia Agresti has in the book of his life given a very lucid account of the political events in which he was prominent; his own adventures she transcribed from his lips. Many interesting episodes are here for the first time told of Mazzini, Garibaldi, Cairoli, and other patriots less known to fame, but who none the less gave their life to the cause with that splendid self-sacrifice and enthusiasm which characterized the epoch.

Giovanni Costa was born in Rome on the 15th of October, 1826, the fourteenth child of wealthy industrials; his father, Gioacchino Costa, being the owner of a large wool-spinning industry in the Trastévere, where he lived with all the dignity of a *capo popolo*, enjoying at the same time the most cordial relations with his work-people. His memory is beloved to this day by the older inhabitants of the district. It was in his father's house that Costa spent the first twelve years of his life, with the change in summer to the family villa outside Porta Portese, surrounded by a vineyard. His education, according to prevailing custom, was entrusted, from the age of six, to a priest, Don Pasquale by name, who, being an idealist and a republican, inspired his pupil with fervid enthusiasm for the heroes of ancient history, although he was unable to overcome the skeptical tendencies which the child showed already, by refusing to accept the idea that the Eternal Father was an old man with a beard, living up in the clouds, according to the conventional conception of the Deity. Plutarch's Lives, Livy's History, and stories from the Bible formed the basis of Costa's early studies, and incited his idealistic temperament to self-sacrifice and deeds of valor; but, like most children brought up in the Catholic faith, he had certain orthodox duties to perform, among others to serve the mass in Santa Maria in Orto, when he used, in order to get off earlier, to hurry the officiating priest through the prayers by ringing violently the little bell which announces the elevation of the host. His favorite diversion was to get permission of the sacristan to be in the belfry, where, by swinging on the ropes, he helped ring out the chimes.

Costa evinced a great disposition for art from an early age. Before entering college, at the age of twelve, he had already shown some of his drawings to Camuccini, a painter of repute, who encouraged him to look about him, to study nature, and to paint directly from life—advice strangely opposed to the practice of that artist, who was a follower of the neo-classic school founded by David, the French painter. It was during the five years at Montefiascone, while Costa was at a college kept by priests, that his great love of nature manifested itself and became part of his being, developed probably by the beauty of the surrounding country. Montefiascone is situated on the summit of a mountain before which stretches a fertile valley in whose midst glitters the broad expanse of the Lake of Bolsena with its islands; the valley is surrounded by little hills crowned by mediæval fortresses, forming gray masses of stone against the sky; the Tyrrhene Sea appears as a blue line on the horizon, while the little River Marta meanders through the plain, like a silver ribbon; the towns of Toscanella and Corneto are points of interest in the view. The study of Virgil and Theocritus in these congenial surroundings gave a special direction to Costa's impressions of landscape; here it was that he began to make direct studies from nature with pen and pencil. These early efforts were much appreciated by his fellow-pupils, who acquired them for small sums which he spent in food to supplement the college diet, far from satisfying on fast days the healthy appetite of the young student.

It was at the age of seventeen, when at the Bandinelli College in Rome (also kept by priests), where Costa spent two years, that he was first allowed to study drawing under Durantini, his vocation as an artist being every evident, although his elder brothers, and especially Gioacchino, then at the head of the family, much objected to Giovanni choosing a career so ill considered at that time as that of an artist, when a regular official employment could have been obtained for him. On leaving the Bandinelli College at the age of nineteen, Costa began his art studies in real earnest, at first in Camuccini's studio, where he soon convinced himself that academic artificiality was not what he was seeking for; he tried the official academy a few months later, and worked there under Coghetti, a Bergamasc master celebrated for religious pictures; also under Baron Podesti of the Romantic school, and Agricola; but these painters did not satisfy this ardent seeker after truth, who went straight to nature, recognizing that only from her by patient study and loving research could he acquire the knowledge he so much longed for.

He was engaged upon his first painting of a wood of hazel-nut trees when the needs of his country incited him to lay aside the

brush for the sword. Although his family belonged to the clerical party and were opposed by all their traditions to revolutionary ideas, he never hesitated an instant, and was among the first to show his sympathy in the march of public events. On the 17th of April, 1847, he made his début in active politics, when, with a small number of Trasteverini, he broke open the gates of the Ghetto, which had been always closed on the Jews after the hour of Ave Maria. The gates were never set up again, and thus the social emancipation of the Jews in Rome became an accomplished fact.

Costa's soldierly part in the subsequent struggles in the cause of independence is extremely well told, with sufficient detail to make the situations comprehensible and interesting. It was in 1849, when the National Assembly proclaimed from the Capitol the fall of the temporal power of the Pope and the creation of the Roman Republic, that Costa first met Mazzini, whose ardent follower he had been and for whom he always preserved the most profound respect, even when he had given him up as a leader, having convinced himself that Mazzini's purely abstract ideas were in advance of his age, and that his religious conceptions were too lacking in form to appeal widely to a southern people. Mazzini evidently felt this himself, as the following story relating to the Papal blessing at Easter time, when he was Triumvir, denotes. We quote our author:

"In order to keep the populace calm and sustain its morale, Mazzini was particularly desirous that none of the outward ceremonies of the Church should be omitted, and, with this end in view, he was most anxious to have the benediction given as usual to the crowd from the balcony of St. Peter's on Easter Day. But the difficulty was, Who was to give it? The Pope, on flying to Gaeta, had left no substitute to fill his place, and how find a priest to expose himself to the danger of ultimate reprisals by performing this important ceremony? It was then that Costa came to the rescue: he assured Mazzini he could find his man, and soon settled everthing satisfactorily with Don Felice Spola, who agreed to give the benediction in consideration of a sum of thirty scudi (perhaps suggested to him by Judas's thirty pieces of silver); and so on April 11, 1849, during the brief truce which the French conceded to the young Republic, the vast Piazza of St. Peter's assumed its accustomed aspect of great festal days.

"The devout Roman crowd, amongst them the many peasants in the bright and picturesque costumes, crowded the huge square, in which were drawn up in squadrons the republican troops; and amidst salvoes of the artillery and the solemn booming of the great bells, the apostolic benediction was given from the balcony over the central doorway of the mighty cathedral. Costa was standing beside Mazzini, who, with the other two Triumvirs, Aurelio Saffi and Armelini, was standing watching the ceremony under the loggia of the Swiss Guards. Mazzini stood speechless, impressed by the great spectacle offered by the huge kneeling crowd, and, turning to Costa, he exclaimed: 'It is useless; this religion *lives* and will yet live for long years to come on account of the greatness and beauty of its form.' To conclude the anecdote, I may state that, after the restoration of Pio IX., poor Don Felice Spola was seized by the officers of the Holy Inquisition and disappeared for ever from human ken."

When Garibaldi entered Rome with his legionaries in April of that same year, he accepted the Costas' house at San Francesco à Rissa as his headquarters for a few days, and, recognizing the capacity of Giovanni, placed him on his staff. Costa fought with the brigade the general led against Gen. Oudinot and the French forces, outside Porta San Pancrazio, where success crowned the efforts of the Italian troops and a truce of a month followed, during which time the municipality provisioned Rome for the expected siege and prepared the fortifications.

The fall of the short-lived Republic and the entry of the French troops into Rome destroyed for the time all hope of successful patriotic action, and Giovanni Costa, having fulfilled his duties as a citizen, returned to the study of his art. For ten years he lived almost entirely in the Campagna, chiefly at Ariccia, where he came in contact with many foreign artists of distinction—Cornelius and Overbeck, then in the height of their fame; Piloty, Kraus, Massimo d'Azeglio, Français, Corot, Böcklin, and George Mason, who became his close friend. It was at this time that Costa met the man who had the greatest influence over his artistic development, Charles Coleman, known among his friends as the father of the Campagna Romana school, an Englishman of great artistic ability and originality, who recognized the futility of the art then in vogue, and set to work on his own lines, going straight to nature and studying her aspects with patience and sincere observation. It is interesting to note that Costa derived his impulse in art from an English source, and in his turn had, through his English pupils and followers, a very direct influence on English art.

Costa produced many pictures during the ten years he passed between the Alban Hills, the Sabine range, and the sea; the most noteworthy being "Women Loading Wood on Boats at Porto d'Anzio," and "Ad Fontem Arricinam." The former attracted much attention when exhibited in Rome in 1856 and afterwards in Paris, but was too different from the popular Neapolitan style of art to be understood. It was an epoch-making picture, for, inspired by the Romantic school, it was a revolt against the defects of their system. In this work Costa first revealed himself to be a great artist, equipped with the technical knowledge and sure draughtsmanship without which poetic inspiration and gift of harmonious color so often fail in complete expression. Since the artist's death last year the picture has been acquired by the state to represent him in the Gallery of Modern Art in Rome. He had always refused to part with it, hoping it might ultimately find a place in some national collection. Another of his most representative works, "A Day of Sirocco Weather on the Roman Coast," now belonging to the Rev. Stopford Brooke, is of this period. It represents a desolate and sultry seashore near Ostia, across which a half-nude fisherman laden with a basket is hurrying along, to get his fish speedily out of the hot air. The subject is simple in the extreme, but, in the treatment of stunted trees, a hill, a sandy foreground with sunburnt reeds and grasses, and the line of blue sea crested with foam, Titian comes to one's mind, because of the beauty and fulness of color and breadth of handling. Another fine work of Costa's is that of "Women Stealing Faggots on the Shore near Ardea, with a Libeccio Blowing," which is now at Howard Castle, in Lord Carlisle's collection. This picture, long afterwards completed, was the result of a twenty days' sketching tour with George Mason near Ardea, a seaport of antiquity, now a mere hamlet. The friends painted during the daylight and passed the nights in the open country.

It was in 1853 that Costa first met Frederick Leighton, in the month of May, at the artist's annual picnic at Cervara, in the Roman Campagna, where they had donkey races. Leighton was painting his first great picture, "The Procession of Cimabue," at the time of Costa's first visit to his studio. The intimate friendship which began from that period lasted till the end of their lives. Leighton was the purchaser of the first picture Costa sold, of men lying in a boat at sunset, and it was also his first work exhibited in England, at the Royal Academy in 1857, from which time his pictures were seen yearly at Burlington House, the Grosvenor Gallery, and, later, at the New Gallery, and found their way thence into the collections of English art patrons.

The campaign of 1859 called Costa again to arms. Much as he detested the soldier's life, he believed that an artist should live in his age and do his duty to his country, but we have not space to follow the adventurous career which Olivia Agusti has so well told. Suffice it to say that when, in 1870, Rome was taken by the Italian troops under General Cadorna, after the storming of Porta Pia, Costa was one of the first to enter the city, and, fighting his way to the Capitol, assumed with Vincenzo Rossi the full responsibility of the situation. "He may be said," according to our author, "to have ruled Rome during three days." After the unification and independence of Italy was established, Costa gave his whole attention to reform in the tendency of Italian art, which at that moment was under the influence of Fortuny and his followers, along with the Neapolitan school, of which Domenico Morelli and Palizzi were at the head. His energies and enthusiasm were employed in fighting for high ideals in art against shallow artificiality and commercialism. He wrote art criticisms of great pungency and sincerity, which naturally procured him the life enmity of the person criticised, for he had the gift of epigram, and the arrows of his wit often wounded deeply. He also formed small exhibitions in Rome to cultivate the public taste, in which he would hang together the works that had sincerity of impulse to contrast them with the flashy, meretricious studio pictures then in fashion. During his long life he never neglected an opportunity of coming to the aid of his fellow-artists; he was always ready to teach all those who came to him for artistic direction.

Signora Angeli has done excellently a service to art in gathering together the facts of such an interesting and noble life. The illustrations leave much to be desired, the photogravures being rather black, while those in process are especially inadequate as representations of finished pictures.

A STUDY OF DISRAELI.

Disraeli: A Study in Personality and Ideas. By Walter Sichel. With three illustrations. London: Methuen & Co. 1904.

Beaconsfield. By Walter Sichel. With twelve illustrations. London: Methuen & Co.; New York: E. P. Dutton & Co. 1904.

Of these two volumes, the shorter one is

an essay; the longer what the author modestly calls a "slight biography" of the *mind* of the subject—"some account, however imperfect, of the ideas that governed him throughout." The time for an adequate biography will not come, it is said, until access is given to the papers confided to the late Lord Rowton, to his correspondence with many eminent men, his letters to the late Queen, his notes of policy, etc., etc. Of course, Mr. Sichel is not satisfied with any one of the several lives that have already appeared. From Brandes to Froude, they "lack the materials for a complete picture." However this may be, Mr. Sichel's sketch and biography give us a fresh and original treatment of a career which will always be full of interest, no matter what the verdict of history on it as a whole may be.

His main object is to make Lord Beaconsfield out a consistent statesman, a man who, having in his youth conceived certain ideas of State polity, spent his life in endeavoring to enforce them, and in the end died happy in seeing them triumphant. Of these ideas, the germ is often to be found in his novels, and we may discover in 'Sybil' some of his views on the labor question, and in 'Contarini Fleming' or 'Coningsby' the principles of statecraft which he enforced at Berlin. We are far from denying unity to Disraeli's career, though we prefer to find it in his character and circumstances and intellectual bent, rather than in any systematized view of government. Had he been what Mr. Sichel supposes him to have been, he would have to be classed at once as an opportunist and a doctrinaire—two rôles which are, both in action and in theory, usually incompatible.

To examine Mr. Sichel's theory of Disraeli in detail would be a waste of time, because it is based on a method the employment of which enables us to prove almost anything. Disraeli ended by being placed at the head of the nation, as the representative of an imperialism based upon a wide extension of the suffrage on the one hand, and magnification of the executive on the other. Now as we know that Disraeli was an imperialist, and also a courtier who had to maintain his power through the agency of a popular body, it is perfectly fair to say that the end crowned the work, and that there is an underlying unity of aim which unites the beginning with the brilliant close of his career. But to undertake to show that the various steps in the process were all thought out as part of a systematic whole, is monstrous. For instance, in 1853, Disraeli was profoundly opposed to "that suffrage of unalloyed democracy which represents the invading agencies of legislative change." Yet if any one helped to democratize Parliament a few years later it was Disraeli. This being the case, it was left for Mr. Sichel to discover the principle of harmony which reconciles his two apparently opposite attitudes. If we understand him, the democratic principle to which Disraeli now appealed was in some mysterious way wholly different from that which he formerly disavowed. What is the mystery? We can discover none, except that the extension of suffrage as arranged by Disraeli was to strengthen the Conservatives, while as arranged by his opponents it would have strengthened the Liberals.

"Disraeli prevented the raid of alien and disruptive democracy from making England a home. Out of the common he extracted the choice. He revived the democracy long inherent in the English Constitution; he naturalized the democratic idea on the soil of tradition and order; and thereby he cemented the solidarity of the State and the welfare of the nation."

Mr. Sichel analyzes the part played by Disraeli with reference to democracy, to labor, to free trade, to the monarchy, to the Church, to the colonies, to foreign politics, and makes what would be for a candidate for office an admirable "campaign biography." To be perfectly fair, however, it is often very much easier for the biographer of Lord Beaconsfield to make out a theoretic harmony in his career than it is to demonstrate the systematic consistency of a stickler for consistency like Gladstone or Peel. Both those statesmen, devotees of lofty ideals in politics, got a bad name among their own followers on the score of the very virtue which they professed, while Disraeli could boast of a constantly increasing solidity of support. He began life with bitter denunciation of the Whigs as an oligarchical party. At the close many of them had deserted Gladstone to follow him. Which had changed?

One fact stands out in these pages that should not be overlooked—that Disraeli combined qualities rarely united in the same person, and whose union gave him extraordinary strength. He was not only an accomplished courtier of the old school, but an eloquent parliamentarian and party leader. In one capacity he got the favor of his sovereign, in the other he was able to keep in favor by means of that very rising tide of democracy and social reform, if not socialism, which seemed about to swamp the Crown, the House of Lords, and the Church. The old statecraft by which the world was managed before his day was the statecraft of courtiers; he had all their maxims by heart, and was in the direct line of descent. But he knew equally well how to court the people, to make them feel that their cause was bound up with Cæsar's, while in Parliament he was by common consent an excellent specimen of a House of Commons leader. Add to this that he was a great wit, and gifted to an extraordinary degree with the art of reading his times and feeling what was coming in the political atmosphere, and you are conscious of being in the presence of an astounding assemblage of qualities. He was consistent in this, that he employed his unrivalled talents in showing the Conservatives how they might make use of the tendencies to which they were constitutionally opposed to consolidate and perpetuate their power. It is a well known fact in the national history of government that the lure of Imperialism is a good bribe for a democracy, while the *imperium* fostered tends to rivet the hold of those in power upon the whole machinery of government. Disraeli, with his half-mocking *Imperium et Libertas*, divined how this lure could be made attractive to Englishmen. He paved the way for the great reaction which has lasted now for the better part of a generation.

Disraeli was great neither as administrator, legislator, nor diplomatist. But he was a born manager of men, and a master of a very peculiar and intricate kind of statecraft. There is nobody with whom he can be profitably compared, except by way of contrast. He stands out from the group in which Peel, Gladstone, Palmerston, Russell, and Derby are marked figures, like a person belonging to another world. And he was in many respects far more like a Continental politician than an Englishman. Bismarck, brought up in the very heart of the old régime, but knowing, like him, how to accommodate himself to the new, felt drawn to Disraeli, as he felt an inborn repugnance to Gladstone. Machiavelli might have recognized in him a worthy pupil. He was a great master of "the greatest of all games," and skilled in every branch of the *ars politica*. For reason, humanity, reform, science, equality, any of the ideals which have played such a wonderful part in the development of the world during the past hundred years, he cared little or nothing, except as they might serve his turn. He devoted himself in a democratic age to the rehabilitation of Conservatism, and, wonderful to relate, succeeded where every one else failed. That his work was a species of imposture is no doubt true; we cannot think of him as a genuine statesman, but as the chief actor and consummate manager of a remarkable political drama, we can never cease to admire him. It is a great tribute to the variety of his genius that, in reading or writing about him, it is difficult to make an end. We never exhaust him or his contrasts. One trait allied with or supplementing those we have mentioned was that singular urbanity which never deserted him, and which enabled him to remain at peace with all the world in the midst of conflict. In foreign affairs he always showed this un-English quality to great advantage; he made no blunders, for instance, during our civil war, such as brought trouble to Gladstone and Lord John Russell. Of his character and mind Mr. Sichel gives a very good picture; as a contribution to systematic political biography, these volumes must not be taken as conclusive.

NORTHLAND SPORT.

Sport and Travel in the Northland of Canada. By David T. Hanbury. The Macmillan Co. 1904.

Unlike Mr. Warburton Pike and others who have gone forth to hunt the musk-ox, Mr. Hanbury is careful to avoid calling the northland of Canada "barren ground." "No land," he says, "can be called 'barren' which bears wild flowers in profusion, numerous heaths, luxuriant grass in places up to the knee, and a variety of moss and lichens. It is barren only in the sense that it is destitute of trees; hence the name 'De-chinu-le' (no trees), which is the Indian name for it." That fertile prairie abounds between Chesterfield Inlet and Great Bear Lake, no one will imagine who has read this book, but Mr. Hanbury shows how it is possible for a man of vigorous constitution to maintain life, health, and spirits within the fringe of the Arctic Circle, even though he wanders about for a long period, taking his food where he finds it. The answer to the conundrum is simple. If you want to be comfortable and happy in a latitude of 65 or 70 degrees, go and live with the Huskies. So far as the ethnological element in this book is concerned, Mr. Hanbury seizes every opportunity to exalt the Eskimo at the expense of the Indians.

Of the two journeys which are here de-

scribed, the first occupied the summer of 1899, and took Mr. Hanbury from Fort Churchill, on the west shore of Hudson's Bay, to Fort Resolution, on Great Slave Lake. The second, and more important, began at Fort Resolution in July, 1901, and ended at the same point in September, 1902. The route followed in the meantime took Mr. Hanbury eastward by the main Ark-i-lĭnik River (formerly called the Thelewdezzeth) to Depot Island, in the northwestern part of Hudson's Bay, thence to the Arctic Sea, which he skirted as far as the west end of Coronation Gulf, and back to Great Slave Lake by the Coppermine River, Dease River, Great Bear Lake, and the Mackenzie River. In geographical language this second journey covered the region between latitude 62-68° and west longitude 90-125°. It also involved a winter sojourn with the Eskimo on Baker Lake, just above Chesterfield Inlet, and a long course of wandering with them during the summer months. For parts of his route Mr. Hanbury is the first explorer, and most of the country travelled is too remote to be occupied in any way by the agents of the Hudson's Bay Company.

Probably the most serviceable result of this trip is to demonstrate the true character of the Ark-i-lĭnik, which is one of the finest streams in northern Canada, and an easy passage from Great Slave Lake to Hudson's Bay. In the complete absence of information, Mr. Hanbury expected difficulties, and was much surprised to find the route "absurdly easy." "The Ark-i-lĭnik," he says, "is a fine, large river about 300 yards wide, having an even steady current of from four to five miles an hour. For the entire distance over which we followed the main river, there is not a sign of any rough water which could possibly be called a rapid, and the river is navigable for a steamer of considerable draught nearly the whole way." This passage is not unlikely to catch the eye of sportsmen who are on the lookout for fresh fields, especially when reinforced by Mr. Hanbury's allusions to the abundance of musk-oxen in the vicinity.

"On the main Ark-i-lĭnik River there is a stretch of country about eighty miles in length into which no human being enters. The Eskimo do not hunt so far west, and Yellow Knives and Dog Ribs from Slave Lake do not go so far east. . . . Thus there still remains one spot in this great barren northland which is sacred to the musk-ox. Here the animals remain in their primeval state, exhibiting no fear, only curiosity. I approached several herds within thirty yards, photographed them at my leisure, moving them round as I wished, and then retired, leaving them still stupidly staring at me as if in wonder. When deer were not procurable, a musk-ox was killed. Fish were plentiful all along the Ark-i-lĭnik; in fact, I never saw such a grand river for fish."

On the strength of these words we imagine that the Ark-i-lĭnik region will not long remain "a country into which no human being enters."

Another geographical contribution of much interest springs out of Mr. Hanbury's trouble in getting from Bloody Falls on the Coppermine River into the northeastern corner of Great Bear Lake. Here the obstacles and inconveniences which he had apprehended on the Ark-i-lĭnik were met with in large numbers, and had it not been for the loyal assistance of Eskimo, the frequency of portages would have forced him to abandon all his scientific collections. From time to time the economic possibilities of the northland are made a subject of brief reference, but Mr. Hanbury frankly states that he went for sport and travel, not for elaborate geographical or scientific work. When on the skirts of the Arctic Sea, he was at some pains to see whether any large deposits of pure copper could be found. The reports of the Eskimo regarding the abundance of this metal were gorgeous in the extreme. For example, one of the Husky guides told Mr. Hanbury that near Fowler Bay a block of copper weighing more than a ton was lying on the shore. "If we had gone to this place, I felt quite convinced that Hun would have said it was at some other place that copper was really plentiful, so I did not think it worth while to alter our course." Native copper, however, was found in many places, and seemed to exist in considerable quantities. Mr. Hanbury differs from Mr. Tyrrell of the Canadian Geological Survey regarding the amount of timber along the course of the Ark-i-lĭnik River, although he considers that if any discovery of precious metals were ever made in the vicinity this belt of spruce would possess economic value.

While Mr. Hanbury's geographical discoveries are of enough moment to attract notice, the *pièce de résistance* of his book is undoubtedly his account of Eskimo habits. Not since the days of Captain Coats, a hundred and fifty years ago, have the Huskies found a friend so sympathetic. Mr. Hanbury feels at home the moment he gets into their society, and under their guidance will trust himself anywhere in the north. Their good nature he contrasts with the sulkiness of the Indians. Their willingness, loyalty, and cleanliness he rates high when measured by the same standard. He can live with complete serenity in their snow huts, which he defends against charges of over-heating and bad ventilation. He has found them honest in their dealings with whites, though they have a little game of pilfering from each other. Their notions of sexual morality are not those of Europeans, and the struggle for existence prevents them from showing filial piety toward the aged. Otherwise, Mr. Hanbury gives them an extremely good character.

"The Huskies are like happy and contented children, always laughing and merry, good-natured and hospitable. Everything that they possess, food, clothes, footgear, and services, are at the disposal of the white strangers." "To counterbalance an occasional display of sulks, the Husky has many good, even noble qualities. The good Husky knows no fear and never gets excited, either on land or on water, in attacking a polar bear with spear or ancient musket, or in standing out to sea in a whaleboat in a gale of wind." "We then packed up, loaded the canoes and bade farewell to our faithful Huskies, Amer and Pitz. We parted with much regret on my part, and with, I may hope, a little on theirs. They had been in my service for a year, and had behaved like the manly fellows they were."

These are a few of the many passages in which Mr. Hanbury testifies to the good qualities of the Eskimo.

No modern book descriptive of an unexplored region is complete without a collection of photographs. On his first and shorter expedition Mr. Hanbury had the misfortune to lose his camera and plates in a canoe accident, just as the party was within reach of its destination. The next time, however, he met with better success, and his narrative is accompanied by a fine series of illustrations which often bring out the physical features of the country traversed more graphically than any words. In telling his story Mr. Hanbury refrains from using flowers of language, and relies chiefly upon the daily jottings of his journal. Partly because he writes well and partly because he has a capital subject, his book is one which can be laid down only with reluctance. It conveys the zest of healthy life amid the illimitable wastes of the North, and enables us to realize why people who seem forced by no necessity are willing to stay for months at a time where the temperature ranges from 5 to 50 degrees below zero.

A single word should be said concerning the appendixes. Though scientific investigation lay outside his original purpose, Mr. Hanbury collected many species of minerals, flora, and butterflies. These have been determined by experts, and separate lists of them are given for the benefit of students. The author adds running notes of his own on the main features of geological formation. In addition to the scientific jottings, lists of articles for trade, of food supplies, and of medical equipment are furnished. Mr. Hanbury carried good thermometers with him, and devotes ten pages to detailed meteorological observations which embrace the maximum and minimum readings for each day. Finally, he gives a long and most interesting glossary of Eskimo words as taken down from the dictation of the Hudson Bay Company's interpreter at Churchill.

Nyasaland under the Foreign Office. By H. L. Duff of the British Central Africa Administration. With illustrations and map. The Macmillan Co. 1903. 8vo, pp. xvi., 422.

Nyasaland, or the British Central Africa Protectorate as it is officially termed, is Dr. Livingstone's legacy to his countrymen. In his last journey through it he found the land was being devastated by the Arab slave-hunters, and the only effectual means of checking their raids seemed to him to be the establishment of a mission on Lake Nyasa. His appeals for aid for the natives were unheeded until his death aroused a deep interest in this part of Africa. Then the two great Scotch churches founded missions here, and the African Lakes Company was formed to coöperate with them and to develop the resources of the country. The success of these missionaries and traders was so great that the Arabs, recognizing in them their deadliest foes, sought to destroy them, and it was in their defence that the British Government intervened and constituted the Protectorate.

In 1898 Mr. Duff began a five years' service as one of the fifty Englishmen who form the administrative body. At his lonely station his recreations were apparently two—hunting, and noting down at night the impressions and information gained from the experiences of the day. This book consists of these notes put into coherent shape, and, being written amid the scenes and people treated of, has unusual freshness and life. It begins with a short description of the country and the events which led to its occupation, and of the

districts in the Shiré Highlands and on the lake over which the author had charge. Chapters on the fauna and flora, from the point of view of an intelligent lover of nature, not a scientist, succeed, with interesting details of the big game and the best methods of hunting it. More voluminous and valuable is a study of the people, their tribal organization, physical, moral and mental qualities, their religion, rites, customs and industries. The book closes with a too-brief summary of the Protectorate policy and the duties of the English official. The first of these is to understand the native and to win his confidence, and a better illustration of the faithfulness of these empire-builders to their task than these chapters afford it would be difficult to find. Mr. Duff's description of the native is photographically minute. Yet, although apparently there is hardly a trait or custom upon which he has not touched, he confesses that the portrait is not complete; that, simple though the native may seem to be, this observer does not understand him fully.

"I have lived among the people of Central Africa for five years, and have mixed with them more intimately, perhaps, than most white men, since it has been my profession to administer the affairs of some forty thousand of them, to hear their complaints, redress their grievances, and punish their offences. Yet to-day I feel less positive as to their ultimate capabilities, less ready to pronounce a decided judgment upon them, than I did when I had been only six months in the country."

It is doubtful, in fact, whether any European, whatever his experience of the natives, arrives at a full comprehension of the workings of their minds and hearts. No one can read these pages, however, without feeling that there is much of promise in the Bantu, notwithstanding his nearness to the brute. He is generous, hospitable, brave, and "wonderfully patient of toil" in case of need, not wantonly cruel, with strong affection for his young children, and cheerful. "I doubt whether any other people in the world talk so much or laugh so much. Their laughter is particularly healthy, natural, and unrestrained—a most exhilarating sound." His loyalty to his tribe is so fine that a relatively trivial offence by one member against another is liable to be punished by death, while the same act committed against another tribesman would be held to be praiseworthy and its perpetrator a hero. "They have among them *nothing in the nature of a criminal class*, as we understand the term; no 'submerged tenth,' no body of habitual or professional evildoers, such as prey upon the rich and polished societies of the Occident." It is not surprising, then, that the change from the savage government, upheld by a policy of terror, to the white man's rule causes a temporary deterioration. The putting down of intertribal warfare takes from the savage almost the only incentive for the cultivation of his higher faculties—the ability for attack and defence. The tribal organizations are dissolved; the large villages are abandoned, and the people are scattered by families over the land. Although crimes of the first magnitude are almost unknown, yet, under the leniency of civilized law, minor offences such as theft and adultery increase. But Mr. Duff finds in this inevitable sinking to a lower level for a time no reason for a withdrawal from the country, as some advocates of "native rights" demand. "Africa for the Africans is all very well," he writes, "but to leave Central Africa to the Central Africans to-morrow would be to leave it to the slave-raider and the freebooter, to plunge it, on the instant, into the confusion and bloodshed from which it has been rescued."

Of his precise duties as an official he says but little. The Protectorate policy is to govern the people, so far as possible, through their chiefs. The white man's task is simply to repress crime and to administer justice. A fundamental principle in dealing with the native is to be patient, "for to lose patience with him is to lose everything. The long hours spent in sitting on a camp-stool listening to his diffuse arguments are not wasted. There is no surer way of winning his confidence than to give him a fair hearing. Cut his stupid story short, send him away puzzled and rebuffed, and he will trouble you no more certainly, but neither will he ever come again to tell you little things that you may very much wish to know—what the villagers are saying about such and such a matter; where the thieves are hiding who stole your loads; whether the path you used to travel by is practicable or not; in what dambo [open glade] the elands are feeding, and where the elephants have gone."

Mr. Duff has decided views in regard to the labor problem. He is confident that to take the Central African negro to work in the mines of the Transvaal, as has been proposed, would result in his deterioration. Besides, the demands of his own rich land for development are far greater than the present population can supply.

We regret the failure to give facts showing the progress made since the establishment of the Protectorate. In an appendix are printed the game regulations, in which we note that of elephants (male only) and rhinoceroses only two can be killed by a single hunter, and the largest number of any one animal allowable is thirty. There are two elephant preserves. These restrictions do not apply in their entirety to natives who "appear to be dependent on the flesh of wild animals for their subsistence."

North Carolina: A Study in English Colonial Government. By Charles Lee Raper, Ph.D., Associate Professor of Economics and Associate Professor of History in the University of North Carolina. 1904. Pp. xiii., 260.

No one, perhaps, has appreciated more fully the necessity of a careful study of the colonial period from the point of view of English administration, and no one has done more to illuminate the general subject of colonial history, than Prof. H. L. Osgood of Columbia University. While awaiting the publication of the comprehensive work which he has promised for the near future, we note with great interest the very good special studies now appearing, of which Dr. Raper's book is one, that have been inspired by and bear the impress of his teaching.

Dr. Raper's book is not a history of North Carolina, but (as its sub-title indicates) strictly a systematic study of the administration of North Carolina, mainly during the royal period. The proprietary period, 1663-1729, is dismissed in a short introductory chapter. While, from the point of view of administration, the proprietary period merits no more extended treatment, it is unfortunate that this chapter is not as well done as the succeeding ones. The author has not presented very clearly either the aims of the proprietors, the actual governmental organization, or the conditions that led to the surrender of the charter. Almost the whole of the book is devoted to the crown period, however, and here the result is satisfactory. The treatment is systematic, not chronological. In separate chapters Dr. Raper considers the Governor, the Council, the Assembly, the territorial system, the fiscal system, the judicial system, the system of defence, conflicts between the Executive and the Assembly, and the downfall of the royal Government. In dealing with the chief departments of the system, Dr. Raper first states the organization and functions of each as revealed in the documents, and then summarizes briefly the way it worked in practice. So, likewise, in the chapter on the land system, the system of defence, etc.; all especially valuable because this phase of colonial history is the one that has been most consistently neglected.

What stands out clearly in this study is the fact that the colonial organization as a whole was made up of two mutually hostile parts, representing respectively the English Government and the colony. Ultimately, of course, all officials derived their authority from the English Government, but practically the Governor and Council were appointed by the Crown directly, represented the interests of the Crown, and stood for monarchical principles, while the Assembly was appointed by the colony, represented the colonists, and stood for the democratic principles that thrive in a frontier community. The Governor, therefore, looked at the colony from the point of view of imperial policy, and the Assembly at the empire from that of colonial needs. This inevitable opposition of interests and principles is revealed throughout the study, but Dr. Raper devotes a separate chapter to the special questions on which the Governor and the Assembly clashed. The final chapter, on the downfall of the royal Government, was perhaps necessary, but it is scarcely more than a conventional treatment of the events leading up to the Revolution.

What Dr. Raper has done has been in the main well done. Two criticisms, however, suggest themselves. In limiting himself too carefully to the public documents, the author has left a stronger impression of the theoretical side of the administration than of the practical. There is a certain documentary flavor. In the second place, it might be suggested that some things have been omitted that should have been included, or, at any rate, that should have been more fully treated. Ecclesiastical organization was perhaps not of great importance in North Carolina, but it merits more than a mention. Party organization and methods should certainly have been considered in connection with the Assembly. The laws of trade, and the machinery by which they were sought to be enforced, had a more important bearing on colonial administration than the author leads us to suppose. The steady tendency was to increase the number of officials appointed directly by the Crown in proportion as the Governor was found inefficient to maintain the interests of the home Government against the Assembly. A more careful study

of the proprietary period would have convinced Dr. Raper of the importance of this tendency.

A bibliography of the sources, limited to public documents in print and in MS., is appended. The index is fair.

The American City: A Problem in Democracy. By Delos F. Wilcox. Macmillan Co. 1904.

This essay has scarcely more to do with the actual conduct of municipal government than the late Mr. Bellamy's 'Looking Backward' had to do with existing society. The difficulties and limitations pointed out in so masterly a way by Major Darwin in his 'Municipal Trade' are here almost entirely ignored. It is admitted again and again that, with human nature as it has exhibited itself in our city governments, we need expect little improvement in their condition. Moreover, there is much in city life that does not tend to improve human nature. To the success of democracy, three things are said to be essential: The great body of the people must be intelligent and have social capacity; they must have a strong interest in local institutions; and they must be able to give much time and thought to their political interests. But the addition of hordes of ignorant immigrants, the destruction of local ties through the increased mobility of men, and the exigencies of the industrial struggle have been adverse influences. And all these adverse influences culminate in cities.

It might seem, therefore, that before multiplying offices and enlarging their functions, the necessary reform of human nature should be effected. On the contrary, Mr. Wilcox assumes that civic virtue would be increased by increasing the demands upon it, just as our Imperialists maintained that we ought to conquer the Filipinos in order to purify our own political life. The necessary development of civic virtue is to be effected by government. The spectacle of government as it is actually administered is not edifying, but the public schools are to furnish the corrective. The kindergarten, manual training, playgrounds, vacation schools, and baths—these are to produce that broad-minded altruism without which democracy must collapse. Assistance is to come also from municipal parades and theatrical entertainments, which, "under municipal auspices, are a legitimate and almost necessary means for the protection of morals and the training of citizenship." The willingness to subordinate personal and private interest to public welfare, which is the essence of civic spirit, is conditioned on *panem* as well as *circenses*. "The single tax upon land values is the most promising of all the planks in the programme of civic reform, except the change in human nature proposed by the evangelists of the gospel of love."

Cautious men will prefer that these evangelists should have their perfect work before the single tax is adopted, even if such preference suggest distrust of the virtue of the people. This distrust appears to be regarded by Mr. Wilcox as something in the nature of treason. He forbids us to say that the programme of the collectivists cannot be carried out, for that would be to abandon the theory of democracy. That theory, as here stated, will appear to many as something that had better be abandoned as a preliminary to any rational reform of our government. People who have not been faithful over a few things do not deserve to be made rulers over many things.

Much of this book, we should add, is occupied with the recital of various measures of municipal reform and with the methods of dealing with the problems of public utilities, revenues, debts, etc. Many facts of interest are brought out, but their arrangement is not such as to make it easy to get a comprehensive view of municipal government as it is.

Geologic Processes and Their Results.

Being Vol. I. of "GEOLOGY."

By Prof. THOMAS C. CHAMBERLIN and Prof. ROLLIN D. SALISBURY

Heads of the Departments of Geology and Geography, University of Chicago, Members of the United States Geological Survey, Editors of the Journal of Geology.

With numerous illustrations, including 24 colored maps and three tables. 654 pp. 8vo, $4.00 *net*.

Vol. II., "EARTH HISTORY." (*In preparation.*)

CHAS. D. WALCOTT, *Director of U. S. Geological Survey:* "I am impressed with the admirable plan of the work and with the thorough manner in which geological principles and processes and their results have been presented. The text is written in an entertaining style and is supplemented by admirable illustrations, so that the student cannot fail to obtain a clear idea of nature and the work of geological agencies, of the present status of the science, and of the spirit which actuates the working geologist."

T. A. JAGGAR, Jr., *Harvard University:* "An excellent statement of modern American geology, with abundant new illustrative material based upon the most recent work of government and other surveys."

HENRY S. WILLIAMS, *Yale University:* "It is the best treatise on this part of the subject which we have seen in America."

R. S. WOODWARD, *Columbia University:* "It is admirable for its science, admirable for its literary perfection, and admirable for its unequalled illustrations."

ISRAEL C. RUSSELL, *University of Michigan:* "I deem it an epoch-making book and one that will vastly extend the study of geology."

The Common School Problem

COMMON SENSE DIDACTICS

By HENRY SABIN, Superintendent of Public Instruction for the State of Iowa, Chairman of Committee of Twelve on Rural Schools. Cloth, 12mo, 343 pp., $1.00. Postage prepaid.

A notable contribution to practical pedagogy, in which our common school affairs are discussed from a common-sense standpoint.

"Henry Sabin's 'Common Sense Didactics' is one of the really great books that has been written by an American educator."—A. E. Winship, Boston.

"The counsel of a veteran educator whose experience has taken in every phase of school work."—Orville T. Bright, Chicago.

"Every page is indicative of sound scholarship and sound judgment."—N. C. Schaeffer.

—*New York Times.*

Complete in three Imperial Octavo volumes. Stoutly bound. $15.00 net per set. ¾ levant $25.50 net. Carriage extra.

Publishers J. B. LIPPINCOTT COMPANY Philadelphia

TWO IMPORTANT TEXT-BOOKS

Tanner's Elementary Algebra.....$1.00

By **J. H. TANNER**, Ph.D., Assistant Professor of Mathematics in Cornell University.

The latest addition to the Modern Mathematical Series, prepared under the general editorship of Professor Waite, of Cornell University. The transition from arithmetic to algebra has been made as easy and natural as possible, and the author has aimed to arouse and sustain the student's interest in the work, and to teach him to think clearly and reason correctly. Wherever an essentially new step is taken—such, for instance as the use of letters to represent numbers—its naturalness and advantages are presented with it, and it is thereafter a useful tool in the student's hands.

Hoadley's Practical Measurements in Magnetism and Electricity...75 cts.

By **GEORGE A. HOADLEY**, A.M., C.E., Professor of Physics, Swarthmore College.

This book supplies a satisfactory introduction to a course in electrical engineering, and makes the student familiar with the fundamental measurements in electricity as applied to the requirements of modern life. It contains also a preliminary study of the phenomena of magnetism. The method of the book is to make use of a series of nearly one hundred experiments, arranged in logical sequence and each accompanied by suggestive directions and by a simple discussion of the principles involved.

AMERICAN BOOK COMPANY

New York Cincinnati Chicago Boston Atlanta Dallas San Francisco

(From the Journal of Commerce, N. Y.)

"Three noteworthy stories in American literature have to do with the world famous Profile in New Hampshire: Hawthorne's *The Great Stone Face*, Edward Roth's *Christus Judex*, and Mrs. Slosson's *The Heresy of Mehetabel Clark*. The three tales are unlike, but all strongly combine literary art and a moral lesson—all the more impressive because unforced. Mr. Roth's book has for some time been rather hard to find."

EDWARD ROTH,
Mailed for $1.00. 1135 Pine Street, Philada.

READY THIS SATURDAY

The Theory of Business Enterprise

By THORSTEIN B. VEBLEN, Ph.D.

Assistant Professor of Political Economy in the University of Chicago

Cr. 8vo, $1.50 net (Postage 14 cents)

AN inquiry into the nature, causes, and economic value of business enterprise, marked by a wide knowledge and observation, and a clear, attractive style. The author's point of view is that given by the business man's work—the aims, motives and means that condition current business traffic. His chapter headings show the scope of the inquiry.

Introductory—The Machine Process—Business Enterprise—Business Principles—The Use of Loan Credit—Business Capital—The Theory of Modern Welfare—Business Principles in Law and Politics—The Cultural Incidence of the Machine Process—The Natural Decay of Business Enterprise.

Professor Veblen's presentation of the subject will have interest and value for practical business men, as well as for the student of economic problems and theories.

The Gospel and the Church

By ABBE ALFRED LOISY

12mo, $1.00 net (Postage 10 cents)

THIS work, which created a sensation throughout the Catholic world when it first appeared in France, is a positive statement of Christian doctrine by one of the most able and accomplished leaders in the movement for greater freedom of thought and action in the French Catholic Church. "It has in an eminent degree," says the Quarterly Review, "what Newman's famous 'Essay on Development' had not—the judicial temper. Free from sophistry and special pleading, the Catholicism that inspires it is hereditary and religious, not political."

It is divided into six sections:—The Sources of the Gospel, The Kingdom of Heaven, The Son of God, The Church, Christian Dogma and Catholic Worship. The book is a very valuable contribution to the religious thought of the time, and incidentally will give students the point of view of the progressive party in the Roman Catholic Church.

The Ethical Teaching of Jesus

By CHARLES A. BRIGGS, D.D.

12mo, $1.50 net (Postage 12 cents)

THIS work is the result of inductive study of the teaching of Jesus. There are homiletical studies of the ethics of Jesus, and efforts to set forth the teachings of Jesus on particular subjects, but no one has thus far attempted what this volume has accomplished. The author reached his results by the most careful induction. He finds that the fundamental principle of the ethics of Jesus is voluntary love, a love which transcends the category of law in the liberty of divine sonship. In this principle Roman Catholic ethics and Protestant ethics may be reconciled.

NEW FICTION

LIBRARY RESEARCH

Topics of all kinds and in any language looked up in large libraries for scholars, writers and others who have not at hand the books needed in preparing theses, lectures, addresses, club papers, books or articles for publication, or in any piece of investigation. Highest university and library references. Miss M. H BUCKINGHAM, No. 13 West Cedar Street, Boston, Mass.

EDWIN LAWRENCE GODKIN.—Japan proof of Portrait, engraved on wood in the highest style of the art, sent, charges paid, on receipt of five dollars ($5) by GUSTAV KRUELL, 14 N. Maple Avenue, East Orange, N. J.

AN EDUCATIONAL DIRECTORY.

I.—*The Nation* stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in *The Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

NEW MACMILLAN PUBLICATIONS

PUBLISHED THIS WEEK

By **EDWIN GRANT DEXTER,** Professor of Education in the University of Illinois.

A History of Education in the United States

With seven Maps. Cloth, 8vo, 619 pages, $2.00 net (postage 16c.)

An important work, the first to supply the greatly needed reference book of facts concerning the development of the people's schools, the schools for special or higher education, and the factors in our social organization, apart from the regular machinery of the schools, which make for educational extension.

By **GEORGE F. HEFFELBOWER,** Professor of Greek Literature in Carroll College.

An English version of **Croiset's An Abridged History of Greek Literature**

By MM. ALFRED CROISET, Dean of the Faculty of Letters of the University of Paris, and MAURICE CROISET, Professor of Greek Literature in the State College of France. Authorized translation from the Second French Edition, by GEORGE F. HEFFELBOWER, A.M., Professor of Greek Literature in Carroll College. *Cloth, 12mo.*

For the general reader, Croiset's "History of Greek Literature" is by all means the best. It gives a clearer idea than any other of the development of one movement of thought out of another. The subjects of Greek literature and Greek art are gaining much favor to-day among college students, even among those who pay no attention to the language; partly, no doubt, because English literature is full of allusions to the life and literature of Greece. Mr. Heffelbower's translation of the work of MM. Croiset is notable for its excellent English, its fresh translations of extracts, its vividness of exposition, its fulness and completeness, and the introductions to the several chapters, which have the charm of a manner of presentation characteristically French.

RECENT ISSUES

By **EDWIN GRANT DEXTER,** Professor of Education in the University of Illinois.

Weather Influences

An Empirical Study of the Mental and Physiological Effects of Definite Meteorological Conditions. Introduction by CLEVELAND ABBE, LL.D. *Cloth, 8vo, $2.00 net (postage 15c.)*

This book is an essay into a new field of scientific research. It is in no sense a study in climatology, but a scientific treatment of the question of human conduct as influenced by the ever-changing meteorological conditions to which the term weather is applied. It is based upon the records of more than 600,000 abnormalities in human conduct considered with reference to the meteorological conditions under which each occurred. The results are shown by means of more than fifty plates. Several chapters of the volume are devoted to the question of weather influences as expressed in literature. The work was primarily undertaken by Professor Dexter as a study in child psychology, and as such it should prove of particular interest to the teacher; but it covers other classes of persons also, and it should not be without value to the physician, the psychiatrist, the criminologist, and the general student of social problems.

JOHN BATES CLARK'S **The Problem of Monopoly**

A STUDY OF A GRAVE DANGER AND OF THE NATURAL MODE OF AVERTING IT. *Columbia University Lectures* delivered in Cooper Union, New York, 1904. *Columbia University Press. Cloth, $1.25 net (postage 7c.)*

STEPHEN GWYNN'S **The Masters of English Literature**

By **STEPHEN GWYNN,** author of "Tennyson: A Critical Study," "The Life of Thomas Moore," etc.

xiii+ 423 pp. 12mo, cloth, $1.00 net (postage 10c.)

A survey of English literature which concerns itself only with authors of whom some knowledge is deemed essential, and presents such information in a manner to awaken the interest of the general reader.

The Nation.

NEW YORK, THURSDAY, SEPTEMBER 8, 1904.

The Week.

Governor Odell's appointment of Judge Cullen, a Democrat, to be Chief Judge of the Court of Appeals in succession to Judge Parker foreshadows the action of the Republican Convention in nominating Judge Cullen and Judge Werner for the two vacancies in the court. There is, we are aware, considerable opposition among Democrats to the plan proposed by the Republicans. Hill has never forgiven Judge Cullen's decision against him when Hill tried to steal the Legislature; and Democratic workers cannot forget that Judge Werner has been something of a politician, and that he ran against Judge John Clinton Gray in 1902. But, granting all that may be urged against Judge Werner, the ticket proposed by the Republicans offers the most practicable plan for removing the judiciary from politics. The Republicans refused to support Judge Gray two years ago, they were badly beaten, and they have learned their lesson. If the Democrats refuse to nominate Judge Cullen and Judge Werner, they will be taught another lesson of exactly the same kind; and they will put at hazard both the national and the State tickets.

The Wisconsin Democrats had such an opportunity as does not occur twice in a politician's lifetime to make a successful campaign on lines of their own with a high-class candidate. In a situation offering so many possibilities, it would be folly to assert that by nominating George W. Peck for Governor they have thrown away their chance, yet much may be said in favor of this contention. To begin with, the Democrats propose to attract the votes of Republicans who bolted on the third-term issue by nominating a candidate who has already served two terms himself. They voted down squarely at the same time planks for the direct primary and the railroad commission, the issues from which La Follette draws the most earnest and soundest element of his following. The "fair-minded Democrats," to use his own phrase, to whom the Governor has so successfully appealed in the past, will see small reason for returning to their old affiliations. Instead of going into the fight on principles of its own, it looks uncommonly as if the Wisconsin Democracy had merely allied itself with one of the sides in the Republican quarrel.

Senator Lodge must realize that if he had spent less time last winter in helping the President "do things," and more in trying to understand what the people of Massachusetts were thinking about, his lot to-day would be a good deal happier. Concerning markets—except, possibly, the Gloucester fish market—he appears to have known little and cared less. But the people of Massachusetts have the storekeeper's instinct; the bulk of them are vastly more interested in driving a good trade than in the right of Panama to secede from Colombia or of the President to construe pension laws. What they desire more than anything else is a chance to barter with Canada. But when certain of them went to the Republican State Convention last spring and declared what they wanted, Lodge laid down the law to them with ill-concealed contempt, and told them there was no place for their views in the party platform. He forgot that in the past the people of Massachusetts had insisted on doing their own thinking. They promptly showed him that, after all, they were the real masters of the situation, by getting more than half the Republican voters of the State to line up for Canadian reciprocity. Some weeks ago Lodge saw his mistake and tried to remedy it. He has made all kinds of contradictory speeches, with the intent to square himself with the party. The leaders of the Republican reciprocity movement are determined, however, to have the thing down in black and white. Delegates to the State Convention in October are asked to vote for a resolution favoring the policy so ignominiously rejected, under Lodge's direction, in the spring. It will tax his ingenuity to escape from the dilemma gracefully. The voters are against him, and he knows it. He cannot offer them a Chicago platform type of reciprocity—"without injury to *any* American industry"—for his malicious opponents expressly ask the delegation to the State Convention to recognize reciprocity, though realizing "that no treaty can be made which may not affect injuriously *some* interest." Such details break in rudely on the quiet of a great statesman intent on widening the bounds of civilization.

The July trade statement is not, we fear, a very strong argument for the Chicago platform. Even in the face of adverse weather conditions the "party of prosperity" ought to have been able to keep agricultural exports from falling off $12,104,321. The Democrats affirm that it was Providence which vouchsafed us the great prosperity of recent years; the Republicans say it was the Dingley tariff. If it was the latter, it has recently been acting very capriciously with our farm products. But be that as it may, one act of charity will cover a multitude of sins, and the party of protection has been very good to American mills. Why, look! our exports of manufactures increased $5,244,658 for July, and for the first seven months of the fiscal year there was a gain of nearly $41,000,000, the total movement being $285,495,728. But does even this showing denote that protection is a blessing? If a large part of these exports represent dumping, that denotes prosperity for neither domestic manufacturer nor for domestic consumer; it indicates that we are furnishing foreigners cheap products to be used in competition against us later on. If only a small part is "dumping," the clear significance is that our manufacturers can stand on their own legs and need no prop—nay, that they would lead a far more vigorous life if freed from tariff crutches.

A striking change has recently taken place in our cotton cloth exports. In April those to China had practically reached the point of annihilation, amounting to only a little over 1,000,000 yards, against about 34,600,000 in the same month of 1903. Since then there has been a better tendency, and by June the exports had mounted to 9,024,100 yards, against 10,351,623 yards the previous year. July, however, made the situation look quite like old times. Shipments amounted to 17,244,010 yards, against only 9,751,868 yards last year. It is worth noting that our total exports of cotton cloths for July showed practically no change from 1903. It follows, therefore, that there must have been some good-sized losses to offset the gain in China. Trade with South America fell off sharply, and this is true also of the Asiatic trade outside of China. Exports to "other Asia and Oceanica"—practically all of Asia except China, Japan, and British India—for example, declined from 3,684,428 yards to 96,265 yards; those to British India from 937,802 yards to 97,500 yards. British Africa was also a very poor customer. On the other hand, Cuba took nearly eight times as much as last year—namely, 1,675,690 yards, against 219,970 yards. Briefly, there has seldom been a month of more conflicting features in connection with our exports of cotton goods.

The steel situation is equally conflicting. The starting up of various mills in one quarter or another has been chronicled as a hopeful sign, and yet it is not always easy to reconcile this with the admitted facts in the case. Other things being equal, it is not surprising that a larger activity should follow a drastic cut in prices. But other things seem to be far from equal in the case

of some of the steel plants. They appear to have had much the same experience as the cotton mills; as prices for their products have dropped, consumers have held off from purchasing in hopes of obtaining even larger concessions. It is somewhat puzzling, for instance, to know just why one large plant with 1,200 men should have resumed operations in the face of previous admissions that its heavy cut in prices had done very little towards stimulating orders. The fact that the beam and plate pools failed to reduce quotations on Thursday is exciting comment, as the Steel Trust is reported to be distinctly in favor of a cut —a surprising fact in itself—and as it is believed that prices are bound to come down anyway before long. The rail situation gives rise to a number of interesting questions. Will the nominal quotation of $28 a ton be reduced in the actual selling price? Can actual prices be easily cut, in view of the guarantees against reductions given on large sales earlier in the year? Another query is: To what extent will the new Canadian tariff regulations check the export of American rails?

At first sight, the sudden burst of virtue exhibited in the resolutions of the Building Trades Alliance at its mass meeting on Wednesday of last week indicated a healthier tone in the organization. The Alliance was formed by a number of walking delegates for the purpose of wrecking the arbitration plan of July, 1903. On the first day of the present lockout, the Alliance, in vexation, passed resolutions which said in conclusion:

"Resolved, That the unions affiliated with this Alliance declare that the general arbitration plan is no longer in operation, and has no binding force upon said unions."

On August 31 the resolution began:

"Resolved, That the Building Trades Alliance, in mass meeting assembled, do declare themselves unalterably in favor of the great principle of arbitration as the means of settling disputes between employers and employees."

Unfortunately, this lofty declaration was intended only as introductory to the dictum that "the right of the trades organizations to defend themselves against non-union men and non-union material shall never be questioned or be a subject-matter of arbitration." Herein lies the shibboleth of all unionism—that the right of man to labor shall be regulated solely by the unions. The seriousness of the war in the building trades depends wholly on the strength of this mischief-making alliance in standing up to its position. Signs of its disintegration have already been received with welcome, and a general strike-weariness on the part of the individual unions portends a quick end.

Brig.-Gen. W. H. Carter, commanding a department in the Philippines, in his annual report furiously assails the existing order of civilian rule, under which the troops cannot act except when called upon by the civilian authorities. This supremacy of the Philippine Commission, he says, illustrates "the extremely unfortunate condition of affairs in these islands." Instead of their being in a peaceful and happy condition, as the Administration would have us believe, Gen. Carter affirms that there has been an attempt at insurrection or revolution made in his own department. Moreover, he declares that "it is not unlikely that such efforts may be repeated from time to time by malcontents." Under the present system, he thinks such an uprising might attain very serious proportions before the troops could be called out. Moreover, this military subordination "delays the Americanization of the islands." He calls loudly for permanent barracks on the astonishing ground that "temporary construction and makeshifts of every kind only serve to develop and confirm in the minds of the Filipinos the idea that the Americans do not intend to hold the islands permanently." Evidently, Gen. Carter is a long way behind the times, and does not realize that we are in the midst of a Presidential campaign. Somebody ought to cable him quickly extracts from Secretary Taft's latest speeches hoping for Filipino independence at some time in the future.

The colonies are taking Mr. Chamberlain about in the way he is shrewdly suspected to be taking himself. They affect the greatest enthusiasm for imperial federation and its corollary, preferential trade between the mother country and themselves, but go ahead with their practical affairs as if these were projects to be discussed only out of business hours or on the stump. Reduced to the baldest terms, Mr. Chamberlain's original message to the colonies was this: We will apportion the business of the Empire, and you shall raise the crops, while we at home do the manufacturing. That is, "secondary industries"—manufactures—were out of place in the colonies, and it was hoped the latter would appreciate the fact. To be sure, the late Colonial Secretary has recently been telling the farmers of Great Britain he was going to do something for them; but this has not raised a rumpus in the colonies—scoffers will perhaps say it was because nobody there takes the Chamberlain proposals seriously, anyway. An amusing feature of this whole business is that the Canadian Manufacturers' Association is considering a proposal to open an office in London for the exhibition of Dominion manufactures. The "secondary industries" part of the Chamberlain scheme appears, indeed, to have been entirely overlooked by the Canadians. It is to be feared that the Tariff Commission will have to issue an appendix, bringing the "dumping" question up to date.

The congress of the International Socialists at Amsterdam pretty well resolved itself into a contest between M. Guesde and M. Jaurès. The leader of the "Reds" pressed constantly before the meeting the famous Dresden resolution of 1900, which declares the essence of Socialism to be the war of classes, and condemns all compromises between Socialist groups and existing political parties. This was primarily a blow at M. Jaurès, the chief of the "Yellows," the ally of a Radical Ministry, and practically the leader of M. Combes's composite majority. Incidentally, it was a rebuke to most of the English delegates, who, in advanced constituencies, are always ready to combine with the Liberals; it touched also the Belgian and Italian Socialists, who generally are ready for any coalition that promises benefit to their class. In fact, under any strict reading of the Dresden resolution it is doubtful if any Socialists except the Germans could qualify as orthodox. M. Jaurès's whole career as an opportunist was so clearly at stake that it is not surprising that the occasion called out all his powers as an orator. He ridiculed, with more truth than tact, the doctrinaire attitude of the French Reds and the German Social Democrats. These latter, he observed, had neither given their lives on the barricades nor their wits in Parliament. They lay helpless with their doctrines under a feudal and oppressive rule. In France, on the contrary, Socialism might build on the Revolution and on universal suffrage; nay, it owed a duty, while furthering the complete liberation of the proletariat, to reform also the bourgeois State.

It was an eloquent appeal for what has been the successful socialism of the past, and must be of the future, if indeed the future lies at all with these visionaries; but it was an error unworthy of an opportunist to raise odious comparison between France and Germany at an international conference. At this point internationalism broke down, and Herr Bebel took up the cudgels for the *Vaterland*. To Jaurès's boast of the superiority of the French Republic, Bebel retorted caustically: "Napoleon's *Coup d'État* gave you back the universal suffrage you had lost; Bismarck gave you your Republic." Naturally, such passages at arms hardly made for fraternity. A conciliatory motion was lost by a tie vote; the Dresden motion, shorn, to be sure, of its more drastic verbiage, was passed by an overwhelming majority. Jaurès's fling at the Germans had turned what might

have been a mere filibustering motion of the Guesdists into a substantial rebuke. International socialism stands to its theory of no compromise with the bourgeois State, and of unrelenting proclamation of the war of classes. But it would be foolish to take this action literally. The same convention that condemned gradual conciliatory methods practically voted against the principle of the international strike—surely an effective method of fomenting class enmity. And one should not forget that the fact that opportunism could be calmly debated at a Socialist convention shows that the party has gone far from Marx and Prudhomme. There is no likelihood that the resolution condemning the opportunists will be of the slightest practical effect. Jaurès, beaten in the congress by Guesde, will continue to control the Socialist arondissements and to make his bargains at the Palais Bourbon. In fine, the reaffirmation of the Dresden resolution emphatically does not mean a return to a revolutionary programme.

Baron von Mirbach has at last been forced to resign his positions as secretary of the German Empress's cabinet, administrator of her funds, and head of her church-building societies. Ever since the criminal failure of the Pommern Bank of Berlin and the revelations that his societies had received very large sums from the bank wreckers, there has been a widespread demand for his retirement. This he met by declaring that he never read the newspapers or paid any attention to them. There were also well-authenticated rumors that when he offered his resignation to the Emperor some time ago, he was met with the remark: "You don't think that I would sacrifice you to public opinion?" But the Von Mirbach scandal grew worse instead of better. Revelations of his activity as a collector of charitable funds by means of Government agencies and officials, as well as by the judicious bestowal of decorations, came from all quarters. All efforts to excuse him only brought out new facts, which, among other results, seriously besmirched the Prussian Minister of the Interior, Baron von Hammerstein, whose connection with the matter is to be investigated by the Chamber of Deputies. Furthermore, Von Mirbach has figured in the courts in connection with the settlement of an estate of which he was the administrator. Not even in Germany could such an official be retained in office.

German newspapers abound in horrifying tales of the ill-treatment of soldiers by brutal officers and non-commissioned officers. In Pillau an artillery lieutenant has been punished for making a soldier carry a heavy part of a breech apparatus around the drill ground in his mouth. In Glogau a military court has been investigating the death of a soldier who was so barbarously treated that he threw himself before an express train to escape his tormentors. It was proved that a sergeant had ill-treated him no less than 137 times. In nearly every case this brute struck his victim, and now and again he starved him. Altogether the sergeant was punished for 251 offences by imprisonment for only a year and a half, while a corporal of the same company went to jail for one year for 240 offences—both ridiculously light sentences in view of the devilish tortures inflicted. There is a general outcry in the liberal press against these and similarly inadequate sentences. This feeling of dissatisfaction has been increased by a remarkable order (recently published by the *Vorwärts*, the leading Socialist organ) in which the Emperor ordered secrecy in trials similar to that of Lieut. Bilse, the author of the now famous novel, 'In a Small Garrison.' It is rightly held that the army can be properly purged of wrongdoers only by letting in the light of day and by focussing public attention upon the evils complained of.
